"It is as right for the National Government to make the streams and rivers of the arid region useful by engineering works for water storage as to make useful the rivers and harbors of the humid region by engineering works of another kind. The storing of the floods in reservoirs at the headwaters of our rivers is but an enlargement of our present policy of river control, under which levees are built on the lower reaches of the same streams."

And—

"The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and Mississippi Valleys brought prosperity to the Atlantic States. The increased demand for manufactured articles will stimulate industrial production, while wider home markets and the trade of Asia will consume the larger food supplies and effectually prevent western competition with eastern agriculture. Indeed, the products of our irrigation will be consumed chiefly in upbuilding local centers of mining and other industries, which would not otherwise come into existence at all. Our people as a whole will profit, for successful home making is but another name for the upbuilding of the Nation."

The question which I wish to discuss and analyze at this meeting is the question whether President Roosevelt was correct in the view expressed in his message to Congress in 1901, recommending the reclamation act, or whether the practical results obtained on the Federal reclamation projects prove that President Roosevelt was wrong and that the development of the West should stop for the purpose of preserving a better market for the farm products of the East and Middle West.

A few days ago in Seattle I had occasion to discuss with the chief engineer of one of the largest corporations on the Pacific coast a recent article by Doctor Mead urging State and local cooperation in preparing for the settlement of the Kittitas project in that State. The engineer with whom I was talking, after commenting on this article, which appeared recently in the newspapers, and the apparent difficulty in securing State and local cooperation in irrigation development, said: "This is an industrial country. We can not afford to develop farm lands in competition with the cheap land and cheap labor of Brazil, Argentine, and other foreign countries. What we will have to do is to export manufactured goods and import food products." That was an offhand opinion and not one which I believe would have been expressed after a more careful analysis of the situation.

The plan of importing food products and raw material and then exporting manufactured goods is the one which has prevailed in Great Britain, Belgium, and some other countries for several centuries; not by choice, but by necessity. Because of the large population and small amount of tillable land available in these countries it was impossible to produce all of the food and raw materials needed, and therefore it was a matter of necessity to import food products and also to import raw materials and to manufacture the imported raw materials and then send them to all parts of the world in exchange for the necessary food products and raw materials.

The result of this policy, however, which was forced upon Great Britain by necessity, has not been a happy one. The wages of workmen in Great Britain are only about half what they are in this country, and in Belgium only about one-third what they are in this country; and there are several millions unemployed in England to-day. This is the condition which prevails in time of peace, and during the World War, notwithstanding the fact that Great Britain had a navy double that of the enemy countries, and in addition had the cooperation of the navies of the United States, France, and other allies, the dependence of the British people on imported foodstuffs came very near to resulting in that country being forced into submission through the operations of the submarines of Germany. If we may judge the results of stopping agricultural development and depending on imports of food products and the export of manufactured products to maintain the life of the Nation, from what has occurred in Great Britain where that policy has prevailed for more than 100 years, we certainly would not wish to see that condition duplicated in this country; and, indeed, the British people themselves would never have adopted or carried on that policy if it had not been forced upon them by necessity.

The population of this country is increasing at the rate of about a million and a half each year, and the population of the world is increasing at the rate of about 20,000,000 a year. With the increase of our population we are also steadily reducing the fertility of our lands. The heavy rains of the East and Middle West wash much of the best soil of our plowed lands into the Gulf of Mexico and the Atlantic Ocean, and the production of the staple grain crops makes a steady draft on the fertility of the land which is only partly replaced by the rotation of crops and application of fertilizer. It is true that through the use of better seed, better methods of cultivation, and better strains of livestock there is a temporary tendency toward an increased production per acre; but this can not be permanent or long continued, for better seed and better methods of cultivation merely increase the rate at which we are drawing the fertility from the soil.

It is also true that the substitution of motor power for horsepower has reduced the number of horses and mules in this country to such an extent that 4,000,000 acres of land previously used for the production of horse feed are now available for the production of food for human consumption, but it is only a question of a few years when the steady increase in population will have more than offset this surplus production temporarily made available by substitution of motor power for horsepower and by improved seed and methods of cultivation and improved breeds of livestock.

We are, in fact, burning our candle at both ends by a rapid and steady increase in population and by a steady and rapid exhaustion of the fertility of our lands through the washing away of much of our best soil and the growth of grain crops which take from the soil far more of fertility than is being replaced.

In the arid section irrigation is the permanent and fundamental industry. Mining always tends to exhaust itself and abandoned mining camps are common throughout all sections where metal mining was once the prevailing industry. Timber furnishes a leading industry in some parts of the West, but in most cases the timber is being cut at a far more rapid rate than it is being produced, and we are already in sight of the time when the timber industry will be much reduced in volume. But the farming industry, which in the arid region means irrigation, furnishes a permanent foundation for our Government and civilization and is the foundation on which our manufacturing and commercial industries are based and maintained.

Of those who think that there would be no serious danger in stopping our agricultural development and becoming dependent upon imports of food from abroad, because we could export our industrial products in payment for food and raw material as is done by several of the countries in western Europe, it may be well to ask: If we stop our agricultural development and import into this country the surplus food products of the Argentine, Canada, and Australia, who then will feed the nations of Europe who are now using the farm products of these countries for their support, and who will take care of the requirements of the eighteen and a half million annual increase in population in other countries of the world outside of the United States? If we do not in this broad land take care of our own increase of a million and a half a year, have we any reason to suppose that we will have a free hand in shipping into this country the surplus farm products of Canada, South America, and Australia to the exclusion of the countries which are now dependent on these sources of supply?

It is possible that those who oppose the development of the West by irrigation may reply that it is possible that the time will come when our surplus of wheat and other farm products is exhausted and when we would be obliged to depend on other countries for our food products, but it will be time enough to proceed with our irrigation development when that condition has arrived, and in the meantime nothing should be done to add to or continue the production of a surplus of farm products, and therefore that no more irrigation projects should be constructed. This argument, of course, loses sight of the fact that the construction of large irrigation projects requires many years for the completion of the necessary reservoirs, canals, and other works and additional years for the conquest of the land—the leveling, seeding, ditching, building, and fencing which is necessary before production on a substantial scale can come about. In most cases large irrigation projects initiated at this time will take 10 years to reach a stage where any substantial contribution to farm products will be available, and in the meantime the construction work itself creates a market for farm products as well as all other products.

But the fundamental and final answer to the objections which are raised against irrigation development in the West, as I see it, lies in the fact that when these irrigation projects finally reach a stage of abundant production the class of products grown is so different from the prevailing staple farm products of which we have a surplus that the general effect of the irrigation development is to improve the markets for our staple farm products of the rainfall sections rather than to impair such markets.

As an example, I wish to take a typical reclamation project devoted to diversified farming of a sort which prevails in most of the irrigated sections. For the purpose of this analysis I am taking the Minidoka project in Idaho, because that is a typical project and also because the Minidoka project was developed entirely under the Federal reclamation act in a section where there was no irrigation and no settlement of any kind until this project was constructed. In many cases the Federal projects have been built in communities where there were already towns and some irrigated lands before the Federal project was built. In such cases it is somewhat difficult to determine how much of the growth of the towns and the general development of the whole community was due to the Government project and how much to the private irrigation outside of the Government project. But in the case of the Minidoka project this difficulty does not exist, for this project was located in a section where there was no settlement, no towns, and no irrigation until the Government project was built. This project is also typical and representative in the class of farm products grown.

The figures given here concerning the Minidoka project are taken from the 1927 crop report, which is the latest now available. We find from this report that in 1927 the Minidoka project contained 2,390 farm units. On these 2,390 farm units there were 7,091 residents, and there were 7,950 residents in the project towns. You will see that the number of people supported in the project towns by the development of this project is slightly larger than the number of residents on the farms, the number being 7,091 on the farms and 7,950 in the project towns. It is evident that each of the 2,390 farm units of the Minidoka project supports two families, one family on the farm and one family in the towns of the project.

In addition to these two families supported on the project by each farm unit, it is also certain that the purchases of the two families keep a third family employed in the industrial and commercial centers of the East, Middle West, and Pacific coast, so that each farm unit supports three families—one on the farm, one in the project towns, and one in the industrial and commercial centers of the East, Middle West, or Pacific coast. Of these three families all are consumers of farm products, but only one is producing farm products.

Now, let us see the nature of the prevailing farm products of the project and whether the prevailing effect is to improve the markets for the staple products of the rainfall section or to increase the competition in such markets. On the Minidoka project, as well as on nearly all of our reclamation projects, the crop most extensively grown is alfalfa hay. The project also produces a limited amount of wheat, which is one of the farm crops of which we have a surplus for export. But the acreage in alfalfa and clover is about three times as much as the acreage in wheat.

The figures as to acreage are given separately for the gravity division of the Minidoka project and the pumping division of the project and are as follows:

	Acres
On the gravity division:	
Alfalfa hay	21,992
Alfalfa seed	1,065
Clover hay	468
Clover seed	1,356
On the pumping division:	
Alfalfa hay	15,701
Alfalfa seed	269
Clover hay	1,473
Clover seed	3,130

For the whole project, the total of alfalfa and clover is 45,454 acres, and the total in wheat is 16,229 acres, or approximately three times as much in alfalfa and clover as in wheat.

The main product of the alfalfa and clover acreage is hay, but you will see from the above figures that there is also some alfalfa seed and some clover seed produced. Both alfalfa seed and clover seed are products which we import to a considerable extent, so it is reasonable to suppose that the effect of the production of alfalfa and clover seed is mainly to displace a certain amount of alfalfa and clover seed which would otherwise be imported from foreign countries. This replacement of foreign production by domestic production does not cause any surplus on the American market to depress prices but does have the effect of improving the home market for all other kinds of production, including other kinds of farm products, for the farmer who produces alfalfa seed or clover seed on the Minidoka project will buy at least 90 per cent of his purchases in the form of products, agricultural or manufactured, produced in this country. That is to say, for each dollar spent in buying clover seed or alfalfa seed produced in this country, at least 90 per cent goes back into the purchase of the products of other industries, including other classes of farm products; while if the dollar were expended in buying seed imported from Italy or the Argentine, the proportion would probably be reversed and we would probably sell the Italian or Argentine farmer not to exceed 10 per cent of the products which he would purchase with his farm income.

It is easy to see that this increase in home production in place of foreign production, has a tendency to improve our markets for all kinds of American products, both agricultural and manufacturing, for the workman who produces a sewing machine in Chicago to be used on the Minidoka project, or who produces an automobile in Detroit to be used on that project, buys and uses farm products produced in Illinois, Ohio, and Michigan, as well as the manufactured products of those States and all other States.

The same situation prevails with reference to the much larger acreage devoted to the production of hay, for by far the greater proportion of the hay produced on the Minidoka project and on most of our other irrigation projects, is used in feeding sheep, and we are importing about half of the wool consumed in this country and considerable amounts of lamb and mutton, so that the alfalfa of the Minidoka project, turned into wool, lamb, and mutton, merely replaces a like amount of wool, lamb, or mutton which would otherwise be brought in from abroad, and does not contribute to the production of any farm surplus in this country which would tend to depress prices in the markets of this country. But, on the contrary, the consumption of the three families supported by each farm unit of the Minidoka project increases and protects the home market for all kinds of American products, both manufactured products and the products of the farms of the rainfall belt. The same principle also applies to beef and dairy products, which are also imported.

This is equally true of the sugar-beet crop, which is another leading crop on our irrigated projects. This country imports large quantities of sugar from abroad, as well as wool; and here again the production of the project does not increase any farm surplus in this country, but does increase the markets of this country for all kinds of domestic products, including farm products.

It is true that we do produce on the Minidoka project and on some of the other irrigation projects a small amount of wheat, which is a surplus product in this country, but the amount in wheat compared to the total production of the project is very small and the general effect of the project as a whole is to increase and improve the markets for the farm products of the rainfall section to a greater extent than the limited amount of wheat produced can increase competition in such markets. Indeed, it is generally known and recognized that the irrigation projects are not adapted to wheat production and that such production is not generally or permanently profitable under irrigation and tends to eliminate itself as the project progresses and develops along the lines to which it is best adapted.

In this connection I might have said that the total production under irrigation is such a small proportion of the total farm production of the country that the effect on world markets or national markets could not be very noticeable, but that would be merely a question of degree, and it is more to the point to go to the heart of the matter and analyze the crop situation on the irrigation projects to determine whether the effect (whether great or small) is generally beneficial or detrimental to market prices for the staple crops of the rainfall sections. This we have attempted to do with reference to the products of the Minidoka project, which is a typical irrigation project engaged in general diversified farming, and the conditions prevailing on this project are generally quite representative of those prevailing on most of the other projects.

This analysis of the classes of products chiefly produced on our irrigation farms very clearly demonstrates that the fear that the irrigation development will have a tendency to depress the markets for the products of the rainfall section is entirely unfounded, and that the prevailing effect of these projects is to improve the markets for the staple farm products of the Middle West rather than to depress such markets. So that even from the narrow and purely selfish standpoint of a producer of farm products in the Middle West the objection to irrigation development and the demand that the development of the West should stop is not justified; and surely from the standpoint of a broad national policy no American would wish to see this country reduced to the conditions which prevail in the countries of Europe, where conditions have made it necessary to depend on imported food products.

Fortunately for this country, the products of one section supplement those of another and tend to a balanced condition which is to the benefit of all sections. For instance, those of us who follow the market reports of the Portland livestock market often have occasion to notice that hogs are being shipped into the Portland market from Nebraska and other points in the Middle West by the train load. Undoubtedly if the northwestern section of the United States, and particularly the States of Oregon, Washington, and Idaho, had never been developed or settled the farmers of Nebraska and other States in the Middle West would not have a better but a poorer market for their surplus hog production.

Actual experience of the last 20 years in irrigation development, and careful analysis of the products of the irrigation projects have demonstrated that President Roosevelt was correct and farsighted when he wrote in his message to Congress in 1901:

"The reclamation and settlement of the arid lands will enrich every portion of our country just as the settlement of the Ohio and Mississippi Valleys brought prosperity to the Atlantic States. The increased demand for manufactured articles will stimulate industrial production, while wider home markets and the trade of Asia will consume the larger food supplies and effectually prevent western competition with eastern agriculture. Indeed, the products of our irrigation will be consumed chiefly in upbuilding local centers of

mining and other industries, which would not otherwise come into existence at all. Our people as a whole will profit, for successful home making is but another name for the upbuilding of the Nation."

It is also true that without exception all of the new projects and new divisions of projects undertaken by the Government in recent years have been undertaken largely, if not entirely, for the relief of settlers who are already on the land, have established their homes, and have their farms partially improved, but on account of shortage of water, high pumping lifts, or other adverse conditions are having a struggle to hold their homes and continue their development. This is true of the Minidoka extension division, or Gooding project, in Idaho, the Vale and Owyhee projects in Oregon, the Kittitas project in Washington, and the Salt Lake Basin project in Utah, which constitute the principal new projects now being constructed by the Government. Very similar conditions exist on a number of other proposed projects partially constructed by private enterprise, where the settlers are now urgently petitioning the Government to come to their relief by constructing the necessary works to provide an adequate water supply and to enable the settlers already on the lands to save their homes and the development already made. Such projects as the Stanfield project in Oregon and the Kennewick project in Washington come in this class.

With the entire country contributing money raised by taxation to build levees along the Mississippi River, so that farm crops may continue in that country, and providing appropriations to fight the corn borer in the Middle West, the boll weevil in the South, and the brown-tail moth in New England, it would seem ungrateful for the people of those sections to insist that there should be no help for distressed settlers on irrigation projects in the far West, especially if such help can be extended by the use of the reclamation fund, which comes entirely from the sale of western resources and does not impose any tax burden on any part of the country.

The variations in crops from year to year and the uncertainty of the weather, if nothing else, makes it impossible to produce the exact amount of any crop which is needed for home consumption. If there was no surplus in years of good crops, there would be a famine in years of poor crops. India and China have solved the problem of the crop surplus. They keep their population adjusted to the size of their crops by having a famine every time there is a poor crop. Similar conditions existed at one time in Ireland and on the continent of Europe, but were solved in a different way. The surplus population moved to New York and got jobs on the police force.

Thanks to our crop surplus, we do not know what famine is in this country, and, according to the old proverb, "You never miss the water until the well goes dry."

If a surplus of farm products is really such a bad thing, the most logical thing to do would be to abolish the Agricultural Department, for the Agricultural Department has been working for the last 50 years to check insect pests and to develop better varieties of seed and better methods of cultivation, all for the purpose of increasing the very crops of which we now have a surplus, while the irrigation projects are mainly engaged in producing commodities which we would otherwise import.

If the people of the Corn Belt really want to get rid of the crop surplus it can easily be accomplished. All they need to do is to let the corn borer alone for about three years, and he will take care of the surplus corn crop in fine shape.

It seems hardly consistent to ask the people of the far West to contribute funds to fight the corn borer and build levees along the Mississippi, and then tell us that we should not build any more irrigation projects in the West.

REPORTS OF COMMITTEES

Mr. PINE, from the Committee on Military Affairs, to which was referred the bill (S. 1513) granting travel pay and other allowances to certain soldiers of the Spanish-American War and the Philippine insurrection who were discharged in the Philippines, reported it with an amendment and submitted a report (No. 1329) thereon.

Mr. SACKETT, from the Committee on Commerce, to which was referred the bill (H. R. 12533) to authorize the Secretary of Commerce to dispose of certain lighthouse reservations and to acquire certain lands for lighthouse purposes, reported it without amendment and submitted a report (No. 1330) thereon.

Mr. FRAZIER, from the Committee on Indian Affairs, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

H. R. 7346. An act conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment thereon in claims which the Winnebago Tribe of Indians may have against the United States, and for other purposes (Rept. No. 1331);

H. R. 11983. An act to provide for issuance of perpetual easement to the department of fish and game, State of Idaho, to certain lands situated within the original boundaries of the Nez Perce Indian Reservation, State of Idaho (Rept. No. 1332);

H. R. 12312. An act for the relief of James Hunts Along (Rept. No. 1334); and

H. R. 13606. An act for the relief of Russell White Bear (Rept. No. 1333).

HEARINGS BEFORE THE COMMITTEE ON RULES

Mr. DENEEN, from the Committee to Audit and Control the Contingent Expenses of the Senate, to which was referred the Senate Resolution 274, submitted by Mr. CURTIS on the 5th instant, reported it favorably without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the Committee on Rules, or any subcommittee thereof, is authorized during the Seventieth Congress to send for persons, books, and papers, to administer oaths, and to employ a stenographer, at a cost not exceeding 25 cents per 100 words, to report such hearings as may be had on any subject before said committee, the expense thereof to be paid out of the contingent fund of the Senate; and that the committee, or any subcommittee thereof, may sit during any session or recess of the Senate.

ENROLLED BILLS PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that to-day that committee presented to the President of the United States the following enrolled bills:

S. 3325. An act for the relief of Horace G. Knowles; and

S. 4402. An act authorizing the Secretary of the Navy to assign to the Chief of Naval Operations the public quarters originally constructed for the Superintendent of the Naval Observatory in the District of Columbia.

MARKING OF GRAVES OF WIDOWS OF SOLDIERS, ETC.

Mr. VANDENBERG. I submit petitions from 11 boards of managers of soldiers' homes asking for new legislation which will permit an equality of Federal service in marking the graves of widows of veterans as well as veterans. I ask that the resolutions be printed in the RECORD and referred to the Committee on Military Affairs along with a bill on the subject which I introduce.

The VICE PRESIDENT. Without objection, it is so ordered.

The resolutions were referred to the Committee on Military Affairs and ordered to be printed in the RECORD, as follows:

(The following quotations—in the nature of petitions to the Senate—are taken from written communications from soldiers' homes in various States:)

MICHIGAN

We feel that in justice to the departed widows of defenders of our country that an amendment should be made to that law whereby markers be furnished by the Federal Government upon application made through proper channels. In the Michigan Soldiers' Home Cemetery we have some 135 widows buried and these graves are without markers.

HARRY W. BUSCH, *Chairman.*
GEORGE S. FARRAR, *Secretary.*

(Signed by entire board of managers of the Michigan Soldiers' Home at Grand Rapids.)

NEBRASKA

You may place us on record as reporting favorably for a bill of this nature. We have this same condition here in our home cemetery.

Signed by—

O. D. BOLSTER,
Adjutant Nebraska Soldiers and Sailors' Home, Burkett, Nebr.

ILLINOIS

I am heartily in accord with the movement to ask the Government to provide suitable markers for the graves for soldiers' widows who are buried in the several State homes and in the national home cemetery. The fact that these wives or widows of service men were compelled to spend their last days in the various homes is traceable to the services rendered by the husbands to their country. Therefore I feel it highly proper that the Government should see that the graves do not go unmarked.

Signed by—

O. C. SMITH,
Managing Officer Illinois Soldiers and Sailors' Home, Quincy, Ill.

SOUTH DAKOTA

Many of our widows' graves have no markers whatsoever. In our opinion this is a very undesirable condition, and I would like very much to see Congress take proper action and have this remedied.

Signed by—

R. B. MOBERLY,
Superintendent South Dakota State Soldiers' Home,
Hot Springs, S. Dak.

NEW JERSEY

We heartily approve of the proposed bill for the Federal Government to provide suitable markers for the graves of soldiers' widows.

Signed by—

BARTON T. FELL,
Superintendent New Jersey Memorial Home for Disabled Soldiers, Sailors, and Marines and their Wives and Widows, Vineland, N. J.

MINNESOTA

I have often thought that there were some widows whose graves should be marked either by the State or by the Federal Government.

Signed by—

S. H. TOWLER,
Commandant Minnesota Soldiers' Home, Minneapolis, Minn.

MISSOURI

I believe this to be a very appropriate movement. We have the same condition at this institution and are forced to use small wooden boards for markers for practically all the wives and widows.

Signed by—

O. D. HALL,
Superintendent State Federal Soldiers' Home of Missouri, St. James, Mo.

INDIANA

We have a cemetery fund out of which the markers for widows' graves are purchased. These are the same dimensions as the markers for the soldiers which the Federal Government furnishes. I believe the Federal Government should furnish the markers for the widows.

Signed by—

Col. CHARLES F. ZILLMER,
Commandant Indiana State Soldiers' Home, La Fayette, Ind.

OKLAHOMA

We have in our home cemetery about 20 unmarked graves of widows of ex-Union soldiers. I am in sympathy with the movement to have congressional action taken to have the Government provide suitable markers for the graves of widows of ex-service men.

Signed by—

N. D. MCGINLEY,
Superintendent Union Soldiers' Home, Oklahoma City, Okla.

NORTH DAKOTA

It is the general consensus of opinion in our board of trustees that this proposition is a proper one in so far as it applies to the graves located in soldiers' home plots, and we favor pushing such a proposition.

Maj. R. A. THOMSON,
Commandant North Dakota Soldiers' Home, Lisbon, N. Dak.

NEW YORK

We have little trouble obtaining suitable markers for widows' graves in our home cemetery, because they are provided through a special committee of the Woman's Relief Corps. Should the attitude of the corps change, however, in the course of a few years, we would be in a similar predicament. Consequently, I am very much in favor of a bill that would provide markers for the soldiers' widows' graves the same as for the veterans.

Signed by—

L. J. HUTCHISON,
Superintendent New York State Woman's Relief Corps Home, Oxford, N. Y.

The bill (S. 4740) to provide for the appropriate marking of the graves of widows of certain soldiers, sailors, and marines in national, post, city, town, and village cemeteries and in other burial places, was read twice by its title and referred to the Committee on Military Affairs, as follows:

Be it enacted, etc., That the Secretary of War is authorized and directed (1) to ascertain the location of the graves of widows of soldiers, sailors, and marines, and of soldiers, sailors, and marines of all wars, in national, post, city, town, and village cemeteries, in naval cemeteries at navy yards and stations of the United States, and in other burial places; (2) to provide for the making, erection, marking, care, and maintenance of appropriate headstones of durable stone or other durable material for the graves of all such widows; and (3) to cause to be preserved in the records of his department an accurate register of the names and places of burial of all such widows over whose graves such headstones are erected under the authority of this act. The Secretary of War is hereby authorized to make such rules and regulations as may be necessary for carrying out the purposes of this act.

SEC. 2. There is hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this act.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BRUCE:

A bill (S. 4728) granting a pension to A. K. V. Hull (with accompanying papers); to the Committee on Pensions.

A bill (S. 4729) giving civilian clerks, engineer service at large, the same military status as Army field clerks; and

A bill (S. 4730) to authorize Brig. Gen. William S. Thayer, Medical Reserve Corps, and Col. William H. Welch, Medical Reserve Corps, to accept such decorations, orders, and medals as have been tendered them by foreign governments in appreciation of services rendered; to the Committee on Military Affairs.

By Mr. MOSES:

A bill (S. 4731) authorizing the appropriation for the rental or purchase of automatic postage-service machines; to the Committee on Post Offices and Post Roads.

A bill (S. 4732) granting a pension to Catherine Ruddy (with accompanying papers);

A bill (S. 4733) granting a pension to Ruth Wyman (with accompanying papers); and

A bill (S. 4734) granting an increase of pension to Ida M. Knox (with accompanying papers); to the Committee on Pensions.

By Mr. WATSON:

A bill (S. 4735) granting a pension to Sarah Wilburn; to the Committee on Pensions.

A bill (S. 4736) for the repeal of the provisions in section 2 of the river and harbor act approved March 3, 1925, for the removal of a dam at Grand Rapids, on the Wabash River, Ill. and Ind.; to the Committee on Commerce.

By Mr. ODDIE:

A bill (S. 4737) to amend section 94 of the Judicial Code; to the Committee on the Judiciary.

By Mr. HALE:

A bill (S. 4738) for the relief of Elizabeth Foster Carter (with an accompanying paper); to the Committee on Claims.

By Mr. KEYES:

A bill (S. 4739) authorizing the Secretary of the Treasury to sell certain Government-owned land at Manchester, N. H.; to the Committee on Public Buildings and Grounds.

By Mr. JONES:

A bill (S. 4741) granting a pension to J. T. Arrasmith (with accompanying papers);

A bill (S. 4742) granting a pension to Martha Hansen (with accompanying papers); and

A bill (S. 4743) granting an increase of pension to Henry S. Stockford (with accompanying papers); to the Committee on Pensions.

By Mr. DENEEN:

A bill (S. 4744) granting the consent of Congress to the city of Aurora, State of Illinois, to construct, maintain, and operate a bridge across the Fox River within the city of Aurora, State of Illinois; and

A bill (S. 4745) granting the consent of Congress to the city of Aurora, State of Illinois, to construct, maintain, and operate a bridge across the Fox River within the city of Aurora, State of Illinois; to the Committee on Commerce.

By Mr. McKELLAR:

A bill (S. 4746) for the purchase of a post-office site and the erection thereon of a suitable public building at Brownsville, Tenn.; and

A bill (S. 4747) for the purchase of a post-office site and the erection thereon of a suitable public building at Manchester, Tenn.; to the Committee on Public Buildings and Grounds.

By Mr. BORAH:

A bill (S. 4748) granting a pension to Mary Coleman (with accompanying papers); and

A bill (S. 4749) granting a pension to Thadeus Cherry (with accompanying papers); to the Committee on Pensions.

A bill (S. 4750) for the relief of the Peckham-Case Furniture Co., of Caldwell, Idaho; to the Committee on Claims.

By Mr. BROOKHART:

A bill (S. 4751) granting an increase of pension to Lew Marek (with accompanying papers);

A bill (S. 4752) granting an increase of pension to Sarah C. Kikendall (with accompanying papers); and

A bill (S. 4753) granting an increase of pension to Laura B. Payne (with accompanying papers); to the Committee on Pensions.

By Mr. SACKETT:

A bill (S. 4754) to provide a 5-year building and extension program for the free public library system of the District of Columbia; to the Committee on the District of Columbia.

By Mr. SMITH:

A bill (S. 4755) granting a pension to Allan H. Browning; to the Committee on Pensions.

A bill (S. 4756) for the relief of Capt. William Cassidy; to the Committee on Claims.

By Mr. FLETCHER:

A bill (S. 4757) granting a pension to Jessie M. Harlan; to the Committee on Pensions.

By Mr. HAWES:

A bill (S. 4758) granting a pension to Clarissa Jane Snider (with accompanying papers);

A bill S. 4759) granting a pension to Emily Jane Martin (with accompanying papers);

A bill (S. 4760) granting a pension to Elizabeth Hahs (with accompanying papers);

A bill (S. 4761) granting a pension to Nancy S. Walker (with accompanying papers);

A bill (S. 4762) granting an increase of pension to Charles D. Coburn (with accompanying papers);

A bill (S. 4763) granting an increase of pension to Mary C. Morris (with accompanying papers);

A bill (S. 4764) granting an increase of pension to Annie Eliza Wilson (with accompanying papers);

A bill (S. 4765) granting an increase of pension to Elizabeth A. Kidd (with accompanying papers);

A bill (S. 4766) granting a pension to Lucy Ross Guffin (with accompanying papers);

A bill (S. 4767) granting a pension to Sarah F. Waid (with accompanying papers);

A bill (S. 4768) granting a pension to Nancy McHargue (with accompanying papers);

A bill (S. 4769) granting an increase of pension to Ellen Sullivan (with accompanying papers);

A bill (S. 4770) granting an increase of pension to Ginevra Miller (with accompanying papers);

A bill (S. 4771) granting an increase of pension to Emma Howsman (with accompanying papers);

A bill (S. 4772) granting an increase of pension to Louise Lee Cunningham (with accompanying papers);

A bill (S. 4773) granting an increase of pension to Jennie Gabelman (with accompanying papers);

A bill (S. 4774) granting an increase of pension to Susan A. Jones (with accompanying papers);

A bill (S. 4775) granting an increase of pension to Nancy E. Lindsey (with accompanying papers); and

A bill (S. 4776) granting an increase of pension to Jackson St. John (with accompanying papers); to the Committee on Pensions.

By Mr. NEELY:

A bill (S. 4777) authorizing the Atlantic & Pacific Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River, at or near Wellsburg, W. Va., to a point opposite in Ohio;

A bill (S.4778) authorizing the Moundsville Bridge Co. to construct a bridge across the Ohio River from a point at or near the city of Moundsville, Marshall County, W. Va., to a point opposite in Belmont County, Ohio; and

A bill (S. 4779) authorizing the Baltimore & Cleveland Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River, at or near Sistersville, W. Va., to a point opposite in Ohio; to the Committee on Commerce.

By Mr. BROOKHART:

A bill (S. 4780) granting a pension to Chalmers A. King;

A bill (S. 4781) granting a pension to Charles H. McCoy (with accompanying papers);

A bill (S. 4782) granting an increase of pension to Mary E. Jefferson (with accompanying papers); and

A bill (S. 4783) granting an increase of pension to Arminda Harlan (with accompanying papers); to the Committee on Pensions.

By Mr. PHIPPS:

A bill (S. 4784) granting a pension to Ethel M. Opper (with accompanying papers); to the Committee on Pensions.

By Mr. NYE:

A joint resolution (S. J. Res. 174) providing for the appointment of a joint committee on the Philippine Islands; to the Committee on Territories and Insular Possessions.

By Mr. SMOOT:

A joint resolution (S. J. Res. 175) to authorize the Secretary of the Treasury to cooperate with the other relief creditor Governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States; to the Committee on Finance.

CIVILIAN ASSISTANTS TO GOVERNOR GENERAL OF THE PHILIPPINES

Mr. BINGHAM submitted an amendment intended to be proposed by him to the bill (S. 2292) providing for the employment of certain civilian assistants in the office of the Governor General of the Philippines, and fixing salaries of certain officials, which was ordered to lie on the table and to be printed.

REFERENCE OF EXECUTIVE MESSAGES

Mr. CURTIS. Mr. President, I ask unanimous consent for the adoption of the order which I send to the desk.

The VICE PRESIDENT. The clerk will read the proposed order.

The order was read, as follows:

Ordered, That on calendar days of the balance of the second session of the Seventieth Congress when Executive messages transmitting nominations or treaties are received and there is no closed executive session of the Senate, the President of the Senate is authorized, unless objection is made, to refer to the proper committees, as in open executive session, such messages, with the accompanying nominations or treaties.

Mr. BRUCE. Mr. President, I am not sure that I understand the purpose of the request of the Senator from Kansas.

Mr. CURTIS. The object is simply to save time, so that we need have no executive sessions for reference when messages come in from the President, but they may be referred to the proper committees in open session, if there is no objection.

Mr. BRUCE. They are simply to be referred?

Mr. CURTIS. Yes.

Mr. BRUCE. But they are not to be reported until there is an executive session?

Mr. CURTIS. The Senator is correct. The order will save going into executive session for this purpose when we have a late open session.

Mr. BRUCE. We should have an opportunity for a full discussion of executive matters. What I apprehended was that this might be a move in the direction of doing away with executive sessions behind closed doors.

Mr. CURTIS. Not at all. It is only intended for the reference of nominations to the proper committees without the necessity of going into executive session.

Mr. BRUCE. I have no objection.

The VICE PRESIDENT. Without objection, the order is agreed to.

THE NEW RESPONSIBILITIES OF ORGANIZED LABOR

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the junior Senator from New York [Mr. WAGNER] at the convention of the New York State Federation of Labor. The subject is The New Responsibilities of Organized Labor.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEW RESPONSIBILITIES OF ORGANIZED LABOR

I deem it a great honor to be invited to address an audience composed of the distinguished leaders of the labor movement in our State. What pleases me especially is the knowledge that I am in the midst of a fireside circle of friends. It is for that reason that I shall discard all attempts at oratory and speak with you intimately and frankly of some of the problems that confront the labor movement to-day. There is ever present in the midst of our labor leaders, a certain militancy and a fighting spirit for progress, which are stimulating. It is this fighting spirit which has made New York foremost in its labor laws enacted to protect our workers in industry. In the course of my work as a legislator in Albany and Washington, I have ever sought and received the advice and help of the men who head the labor movement. Their cooperation and the reasonableness of their attitude have been the largest contributing factors in the enactment of beneficent labor laws in our State and Nation.

I can not agree with those who see dark clouds ahead on the horizon of the American labor movement. On the contrary, I prophesy the increasing importance of organized labor in this country. I am convinced that trade-unionism is bound to acquire a far greater share in determining the economic policies of industry. The time has arrived for labor to contribute to the framing of economic policy and to assume responsibility, with the employer, for its successful application. I have an abiding faith in you. I know that you have not only wisdom to accept such responsibility but the vision to strive for and capture it. Necessarily the whole present relationship of organized labor to industry must change. Instead of a tug of war we shall have a joint venture, instead of conflict we shall have cooperation.

In place of the old relation of master and servant the new day demands a partnership between corporate industry and organized labor. You may say this is a utopian dream. I think it is real. I see only two major obstacles to its realization—obstacles which can be overcome. The first is the labor injunction.

At the outset I should like to make my position clear. There are legal objections to the use of the injunctions in a labor dispute. There are also moral objections, in the sense that its use does not constitute fair play. To-night I should like to emphasize another—the utter folly of the use of the injunction from the point of view of the employers themselves. The shortsightedness of the labor injunction has not been given much attention, and that is the reason I underscore it this evening. One does not require a diploma from the school of prophecy to see that in the long run the injunction can not stop the organization of labor. Organization springs from the most profound needs of human nature. You can not destroy the desire to organize; you can only balk it for a time. But just as surely as mankind has been marching slowly but irresistibly toward the goal of political democracy, just as surely and just as irresistibly are the workers going ahead to win for themselves greater rights in business and industry.

What is the effect of the injunction? I am still looking at it from the point of view of the employer. Its effect is just to postpone the formation of an adequate labor organization. It is keeping the labor movement in its fighting period; it is preventing the labor movement from coming to full maturity and assuming the tasks and responsibilities for which it is preeminently fitted. Cooperation is a hollow word as long as the threat of the injunction hangs over lawful unionization. The lamb and the lion can never cooperate. The lamb may be docile or the lion generous but cooperation is given only to equals. To match the huge aggregates of modern capital the wage earner must be organized before he is ready to give cooperation to his employer. Many farsighted employers of labor know the truth of what I say and practice it. They are not enjoying the full benefit of their wisdom because of the conduct of their narrow-minded brethren. To the employers who speak of cooperative effort and apparently appreciate its value, I must say: Sweep the writs of injunction out of the pigeonholes in your desks—injunctions and cooperation are deadly enemies.

I have heard lawyers plead for a labor injunction and speak of it with such awe and reverence, as if it were one of those inalienable human rights for whose preservation the Declaration of Independence was written and the Revolutionary heroes fought and died. The Constitution, in fact, does not mention labor injunctions. It does speak of freedom of press, of freedom of speech, of freedom of assemblage. These are rights guaranteed by the Constitution and curtailed by the injunction.

The first Supreme Court decision dealing with a labor injunction is, to my knowledge, the famous Debs case of 1895. It sustained an injunction prohibiting, among other things, forcible interference with the transportation of United States mails.

During the 33 years that have since elapsed that court has sustained many varieties of labor injunctions. For every labor injunction case that reaches the United States Supreme Court dozens literally are granted by the district courts. Throughout the country we find labor organizations writhing under stifling restrictions against conduct which every open-minded man must call innocent. Such a condition can not safely endure. I intend no criticism of the courts; none is necessary. The decisions of the Supreme Court foreclose all discussion as to what the law is. They never foreclose discussion as to what the law ought to be. It is clearly within my province as a member of the United States Senate to help bring about a change in the law, because right now the law is not what it ought to be. As a matter of fact, a substantial minority of the Supreme Court itself believes the law ought to be otherwise. Many of you are probably familiar with the Hitchman case. In that case the workmen were employed with the understanding that they were not to become identified with a union. Labor organizers were none the less persuading the men to join. They were prohibited from doing so by a district judge. The circuit court of appeals reversed the decree of the district judge, but the Supreme Court agreed with him. The litigation took 10 years. The Supreme Court itself heard argument twice and held the case under consideration for a year and 10 months. Three judges dissented. They realized the consequence of that decision. There wasn't any serious disagreement between the minority and majority on the law applicable to the case. They differed as to what was good governmental policy. Time has undeniably demonstrated that the three were right. That decision has since become the model and inspiration for a host of injunctions based upon a promise not to join a union.

To my way of thinking, it is contrary to the spirit of our free institutions to prohibit a workman from associating with his fellow citizens for the purpose of improving his conditions. To the wage earner the union represents bargaining power, better living conditions for his wife and children, even a sense of security. Is the law to become the ally of the employer who wants to prevent his employees from attaining these ends?

I have heard these injunctions defended on the ground that the sanctity of contracts must be maintained. Of course, contracts must be given full protection under the law. But what a mockery it is to call these antiunion promises contracts. Before you can call such a promise a contract you must assume that there is in fact a mutual understanding between the parties who enter it; that there is a possibility of bargaining between them. You have to assume that it is sound public policy to have a workman surrender his God-given right, guaranteed by the Constitution, freely to associate with his fellow craftsmen for their mutual benefit. You have to assume that it is good policy to prevent workmen from banding themselves together to reduce somewhat the risks and insecurity of their employment. Every one of these assumptions is obviously false. There is no genuine bargaining, because no bargaining is possible between the lone, unorganized laborer and the large corporate employer. It is as un-American to forbid a man to identify himself in a union with his fellow workmen as it would be to forbid him to join a political party of his fellow citizens. To enforce an antiunion promise by injunction is as unsocial in policy as it would be to prevent an employer to exact a promise from a workman not to buy life insurance. There are, after all, limitations upon the price the employer may demand in return for the job. If he exacts from the workman, under economic pressure, every right and liberty guaranteed by the Constitution, he should not invoke that Constitution to enforce his unholy bargain.

One of the objectionable aspects of the injunction is that the harm it does is irreparable.

In the Hitchman case, for instance, 10 years elapsed between the issue of the injunction and the final determination by the Supreme Court. What good would a reversal have accomplished? By that time the fight was over. The injunction had already served its purpose. In the case of American Steel Foundries *v.* Tri-State Central Trades Council, the injunction forbade picketing and persuasion. Seven years later the United States Supreme Court modified the injunction by permitting a single picket. I don't suppose the picket was posted, as I am told that the strike had ended seven years earlier. These instances destroy the argument that the injunction maintains the status quo. It does nothing of the sort. The status quo is a dispute and the injunction gags one of the debaters.

It is hardly necessary for me to say that I am not referring to injunctions to prevent imminent violence where the police can not or will not cope with it. I have in mind injunctions against peaceful unionization, against publicity, against persuasion, and against other well-known lawful methods of trade-unionism.

This type of injunction represents an intrusion by government in industry—not a constructive but an obstructive intrusion. It enters not to solve the problem but to prevent its solution by the parties to the controversy. The use of the injunction is squarely opposed to the popular demand for a minimum of government in business.

I never could quite see with what consistency a small group of employers of labor could shout for less government in business and at the same time ask for more and more injunctions from the judicial branch of the Government.

If the injunctions were out of the way a really adequate and all-embracing labor movement could be developed which would serve as real power for efficiency and security. As long as labor has to fight for its existence, it can not and will not worry about the problems that confront the industry. For the good of industry, and for the benefit of the intelligent mass of employers of labor, as well as for the protection of the rights and liberties of our workmen, legislation must be adopted to do away with the injunction abuse.

Without committing myself to the particular bill, I am personally in hearty accord with the principle underlying the draft of the anti-injunction law prepared by the Judiciary Committee of the United States Senate.

Earlier in my remarks I spoke of two major obstacles in the path of a greater future for organized labor. The one, the injunction, is a legal reality; the other is a state of mind.

Many are guilty of the habit of thought that the wage earner has no stake or interest in business and is not concerned with its efficiency or prosperity. One bold statistical fact ought to dispel this notion. I have examined the pay rolls and dividend totals of six outstanding business organizations. The average stockholder was paid a dividend of $176, the average wage earner $1,759. In other words, the average wage earner secured from the corporation ten times as much as the average stockholder. In the face of such figures is it fair to say that only the stockholder has an interest in business and that the wage earner has none? My comparison is not yet complete. You should further consider that the wages constitute the workman's total income, whereas the dividend is in most cases only a fraction of the stockholder's income. Then, again, compare how easy it is to sell the stock of one corporation and buy that of another, and how difficult it is to quit work in one plant and obtain it in another. If you take these elements into consideration, you come to realize how real an interest the wage earners have in the plant in which they work.

Let me state my view plainly: I believe that organized labor must become responsible for efficiency in production and progress in industry.

It can not be otherwise. As soon as organized labor is accepted as an integral and necessary part of our social structure, and the ill-advised efforts to destroy it are abandoned, and the struggle for mere existence terminated, labor will naturally turn to these newer tasks and to this greater vision. Capital, on the other hand, admits that responsibilities and risks must have their compensation. Labor will naturally refuse to assume them unless it feels confident that it will enjoy the benefits of success.

Our thinking on the subject, I believe, would become clearer if we no longer spoke of wages as costs. As soon as costs are mentioned the efficiency expert jumps to the conclusion that he has to bear downward. But wages must not be kept down.

The true highway to prosperity is along the road of high wages. Wages, like dividends, represent that which is taken out, not that which is put into industry. Good management has as its aim not only high dividends but high wages. Good management recognizes that in organized labor there is the greatest untapped source of efficiency, high wages, and high dividends. I do not hesitate to say that to my mind the nation which first succeeds in fully establishing the new relationship between capital and organized labor will have an incalculable advantage in securing to itself the economic mastery of the world.

With all the earnestness at my command let me call your attention to our gravest industrial problem, the malady of unemployment. No other business problem is more urgent or more important and none other has been so woefully neglected. Many of our leaders and statesmen seem afraid to talk of unemployment. Apparently the subject is unpopular. Others have the naive faith that denying the existence of enforced idleness will create a wave of optimism which will start the silent machines into life again. Modern unemployment is not quite as simple as that. Silence and neglect will never bring about its elimination. It will take sound information, wise planning, and scientific coordination beyond anything dreamt of to-day.

Thus far the Government has not taken even the first stride. We have had two acute attacks of unemployment in the last seven years. No practical application has yet been made of the sorry lessons we should have learned.

The information published by the Government is startlingly inadequate. For reasons unknown to me there are two bureaus which publish reports on unemployment. For July the Commissioner of Labor Statistics reports a further decrease in the number at work and an even greater decline in the amount of the pay roll.

On the other hand, the Director General of United States Employment Service, as usual, sees nothing but bright prospects. Which of the two bureaus is right no one knows.

Government building operations and other projects have been prosecuted without regard to whether employment was scarce or plentiful. No concerted attention has been paid to the multitudes of workmen whose jobs have been taken by machines. So far as the Government is concerned, the word unemployment is taboo.

Here, then, is a task for organized labor. It can prod the Government into action. It may attempt some remedy itself. It is unnecessary at a labor meeting to describe the cruel effects of idleness upon the man without a job. But I believe it is time to remind you of the threat which it holds to standards established by the efforts of organized labor.

Longer hours and lower wages do not cure unemployment; on the contrary, they aggravate it. As long as there are idle men on the streets pressure in the downward direction will be exerted. Organized labor must resist that with all the power at its command. It should insist that wage earners be given enough buying power to purchase the product of their efficiency. Let the laborer insist on more leisure in the form of shorter hours, in freedom from work for his wife or children, prolonged education, and more comfortable retirement. On a national scale the loss in time is the same whether caused by unemployment or leisure. But the one breeds poverty, the other life and happiness; the one builds citizens, the other public wards. The one can be accomplished by cooperative understanding with a well-organized, well-disciplined, far-visioned labor movement, the other is a child of chaos.

There are great tasks ahead for an enlightened labor movement. It must first achieve for itself an impregnable status, legal and economic. Necessarily it will have to secure a voice in the formulation of business policy. It is called upon to assume the leadership in withstanding the encroachment of poverty upon progress. Under your present leadership you are on the road to achieve these ends. I wish you Godspeed, because with your success is bound up the happiness of the next generation.

BOULDER DAM

The VICE PRESIDENT. Morning business is closed. The calendar under Rule VIII is in order.

Mr. JOHNSON. Mr. President, I ask that the unfinished business be laid before the Senate and proceeded with.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

The VICE PRESIDENT. The pending amendment is that offered by the junior Senator from Arizona [Mr. HAYDEN] to the substitute amendment offered by the Senator from California [Mr. JOHNSON].

Mr. JOHNSON. Mr. President, in order that the Senator from Nevada [Mr. PITTMAN] may be here, as he desires to address the Senate, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	McMaster	Smith
Barkley	Frazier	McNary	Smoot
Bayard	George	Metcalf	Steck
Bingham	Gerry	Moses	Steiwer
Black	Gillett	Neely	Stephens
Blaine	Glass	Norris	Swanson
Blease	Glenn	Nye	Thomas, Idaho
Borah	Goff	Oddie	Thomas, Okla.
Bratton	Gould	Overman	Trammell
Brookhart	Greene	Phipps	Tydings
Broussard	Hale	Pine	Tyson
Bruce	Harrison	Pittman	Vandenberg
Capper	Hawes	Ransdell	Wagner
Caraway	Hayden	Reed, Mo.	Walsh, Mass.
Copeland	Heflin	Reed, Pa.	Walsh, Mont.
Couzens	Johnson	Robinson, Ark.	Warren
Curtis	Jones	Sackett	Waterman
Dale	Kendrick	Schall	Watson
Deneen	Keyes	Sheppard	Wheeler
Dill	King	Shipstead	
Edge	Locher	Shortridge	
Fess	McKellar	Simmons	

Mr. NORRIS. I desire to announce that my colleague [Mr. HOWELL] is unable to be present on account of illness.

Mr. BLAINE. I wish to announce that my colleague the senior Senator from Wisconsin [Mr. LA FOLLETTE] is unavoidably absent.

Mr. SHEPPARD. My colleague the junior Senator from Texas [Mr. MAYFIELD] is absent on account of illness. This announcement may stand for the day.

The VICE PRESIDENT. Eighty-five Senators having answered to their names, a quorum is present.

SENATOR FROM NEW MEXICO

Mr. BRATTON. Mr. President, I present the credentials of Hon. OCTAVIANO A. LARRAZOLO, Senator elect from the State of New Mexico, and ask that they may be read.

The VICE PRESIDENT. The credentials will be read.

The credentials were read and ordered to be placed on file, as follows:

THE CANVASSING BOARD OF THE STATE OF NEW MEXICO.

To all to whom these presents shall come, greeting:

This is to certify that OCTAVIANO A. LARRAZOLO was duly and regularly elected in accordance with law to the office of United States Senator (short term ending March 4, 1929) at the general election held in the said State of New Mexico on the 6th day of November, in the year 1928, as shown by the returns of said election on file in the office of the secretary of state and as declared and determined by the State canvassing board, consisting of the governor, the secretary of state, and the chief justice of the State of New Mexico.

In testimony whereof we have hereunto set our hands and caused to be affixed the great seal of the State of New Mexico this 3d day of December, A. D. 1928, and of the independence of the United States the one hundred and fifty-second.

R. C. DILLON,
Governor of New Mexico.
FRANK W. PARKER,
Chief Justice of New Mexico.
[SEAL.]
JENNIE FORTUNE,
Secretary of State of New Mexico.

Mr. BRATTON. Mr. President, the Senator elect is in the Chamber and prepared to take the oath of office.

The VICE PRESIDENT. The Senator elect will present himself at the Vice President's desk to take the oath of office.

Mr. LARRAZOLO, escorted by Mr. BRATTON, advanced to the Vice President's desk; and the oath prescribed by law having been administered to him by the Vice President, he took his seat in the Senate.

On motion of Mr. REED of Pennsylvania and by unanimous consent, it was

Ordered, That Mr. LARRAZOLO be assigned to membership upon the Committees on Agriculture and Forestry, Public Lands and Surveys, and Territories and Insular Possessions.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower

Colorado River Basin, and for the approval of the Colorado River compact, and for other purposes.

Mr. JOHNSON. Mr. President, there was a colloquy between the Senator from Utah [Mr. SMOOT] and myself the other day in respect to the ability, as it were, of the Reclamation Service engineers to construct dams within the estimates made by the department. I have before me the figures as to the dams which have been constructed. At that time it was asserted by the Senator from Utah that excepting in one instance the cost had always exceeded the estimates, and quite as vigorously as he asserted it I denied that that was the fact.

The facts are these: The American Falls Dam was estimated to cost $8,500,000 and was actually constructed for $7,300,000.

The Arrow Rock Dam was estimated to cost $6,250,000 and was actually constructed for $4,496,000.

The Avalon Dam was estimated to cost $162,000, but for various reasons, which are stated and that hereafter I shall put into the RECORD, the cost was $315,000.

The Belle Fourche Dam was estimated to cost $1,040,000 and cost $1,259,000.

Mr. KING. Mr. President, will the Senator yield?

Mr. JOHNSON. I yield.

Mr. KING. Do the figures the Senator is now giving cover merely the cost of the dam or the cost of the entire project, including the laterals, canals, and so on?

Mr. JOHNSON. I am speaking solely of the dams. The Black Canyon Dam at Boise was estimated at $1,800,000, and the actual cost was $1,492,000.

The East Park Dam was estimated to cost $198,000, and the actual cost was $196,000.

The Echo Dam was estimated to cost $1,394,000, and the actual cost was $1,125,000.

The Elephant Butte Dam was estimated to cost $5,600,000 and actually cost $5,004,000.

The Gibson Dam was estimated to cost $1,826,000, while the actual cost was $1,566,000.

The Guernsey Dam was estimated to cost $1,780,000, and the actual cost was $1,700,000.

Without reading the figures as to all the dams, I ask permission to put in the RECORD, unless the Senator from Utah desires me to read it, the statement as to each one of them, with the estimated cost and the actual cost.

Mr. SMOOT. Mr. President, I could not follow satisfactorily the statement read by the Senator. I have no objection to having the figures put in the RECORD, but some of the dams to which the Senator has referred as costing less than the actual estimate have not been completed.

Mr. JOHNSON. I am reading the figures that have been given by the Reclamation Service.

Mr. SMOOT. I understand that, and I have no objection to the Senator doing so.

Mr. JOHNSON. Very well.

The VICE PRESIDENT. Without objection, the table will be printed in the RECORD.

The table entire is as follows:

Principal dams constructed or under contract by the Bureau of Reclamation

Name	Project	Estimated cost	Actual cost
American Falls [1]	Minidoka	$8,500,000	$7,300,000
Arrowrock [1]	Boise	6,250,000	4,496,731
Avalon	Carlsbad	162,000	[2] 315,989
Belle Fourche	Belle Fourche	1,040,416	[3] 1,259,515
Black Canyon	Boise	1,800,000	1,492,305
East Park	Orland	198,000	196,120
Echo	Salt Lake Basin	[4] 1,394,590	[5] 1,125,098
Elephant Butte [1]	Rio Grande	5,600,000	5,004,216
Gibson	Sun River	[4] 1,826,129	[5] 1,566,240
Guernsey	North Platte	1,780,000	1,700,351
Kachess	Yakima	712,000	661,000
Keechelus	do	[6] 1,069,000	[7] 1,892,778

[1] Dam and reservoir.
[2] Increase due to use of concrete core wall instead of sheet piling, two new tunnels to increase spillway capacity, and an additional spillway of reinforced concrete. These changes cost over $100,000.
[3] Failure of contractors delayed work two years, and this, together with additional construction of a gravel berm and installation of auxiliary valves, increased the estimated cost.
[4] Engineer's estimate of cost of principal construction. Does not include gates, cement, or other accessories and materials furnished by the United States.
[5] Contractor's bid.
[6] Modified by board report of Dec. 16, 1913, to $1,337,000.
[7] Difficulty of obtaining suitable material increased cost by $240,000. Other changes which greatly increased the original estimate were riprapping, inclusion of concrete cut-off wall, changes in tunnel scheme, increased excavation for spillway and heavier concrete lining, additional road construction and clearing and logging reservoir—the latter item alone costing $290,000.

Principal dams constructed or under contract by the Bureau of Reclamation—Continued

Name	Project	Estimated cost	Actual cost
Laguna	Yuma	$972,455	[8] $1,980,462
McKay	Umatilla	2,500,000	2,116,828
Pathfinder [1]	North Platte	[9] 1,000,000	[10] 1,794,366
Roosevelt	Salt River	[11] 3,750,000	[12] 3,806,277
Shoshone	Shoshone	[13] 1,000,000	1,439,135
Stony Gorge	Orland	[4] 609,524	[5] 518,904
Tieton [1]	Yakima	4,020,000	3,756,256
		44,184,180	42,422,571

[1] Dam and reservoir.
[4] Engineer's estimate of cost of principal construction. Does not include gates, cement, or other accessories and materials furnished by the United States.
[5] Contractor's bid.
[8] The surface of the dam was paved with concrete instead of rock as originally intended, due to poor quality of rock obtainable. Notwithstanding predictions of geologists, the rock uncovered in the quarries was found unsuitable for such paving, and its use had to be abandoned in favor of concrete. Sluiceways were also paved with concrete for the same reason. There was considerable waste in quarrying, at times 50 per cent, due to poor quality of rock, thereby greatly increasing excavation quantities. Use of sheet piling had to be considerably increased. The river break into Salton Sea increased transportation difficulties by rendering the river unnavigable. There was a large increase in cost due to increase in price of labor and materials.
[9] No detailed estimate found, but early board reports show $1,000,000 allowed for Pathfinder Reservoir.
[10] Increase partly due to the building of an additional outlet tunnel, and changes made in north tunnel, both together amounting to $641,000.
[11] 190-foot dam.
[12] 220-foot dam.
[13] No detailed estimate found, but early correspondence gives $1,000,000 as the preliminary estimate.

Mr. JOHNSON. I have a letter, which I will read, from the Commissioner of the Reclamation Service. It is dated as late as December 6 and is addressed to me. It is as follows:

UNITED STATES DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, December 6, 1928.

Hon. HIRAM JOHNSON,
United States Senate.

MY DEAR SENATOR JOHNSON: In reply to your telephone request of yesterday, I am having a compilation made showing a comparison of the engineer's estimate with the actual construction cost of the major dams constructed by this bureau. In addition to the list of 19 dams contained in the table on page 87 of the Reclamation Era for June, 1928—

It is that page of the Reclamation Era which I have just asked to have printed in the RECORD, and for which consent has been granted—

we have had time this morning to look up only the following:

Strawberry Dam, Strawberry Valley project

Estimated cost	$262,000.00
Actual cost	271,724.08

This dam overran the estimate due to difficulties encountered in excavating the trench for the concrete core wall and increase in the price paid for teams during construction.

Gerber Dam, Klamath project

Estimated cost	$341,000
Actual cost	336,241

Willwood Dam, Shoshone project

Estimated cost	362,000
Actual cost	352,948

OWYHEE DAM, OWYHEE PROJECT

Contract was recently awarded for this dam, which is to be higher than any existing dam, involving 490,000 cubic yards of concrete. Bids were received from seven contractors, the prices bid ranging from $295,000 below the engineer's estimate to $1,214,000 above. On the basis of the contract as awarded to the General Construction Co., the comparison of actual and estimated costs is as follows:

Estimated cost	$5,242,513
Actual cost	4,947,716

Figures on other dams constructed by this bureau are being compiled and will be furnished you as soon as they can be assembled.

Yours very truly,

ELWOOD MEAD, *Commissioner.*

Mr. PITTMAN rose.

Mr. JOHNSON. Mr. President, I understand that the Senator from Nevada [Mr. PITTMAN] desires to proceed at this time.

Mr. PITTMAN. I will say to the Senator from California that I have a short analysis of the report of the commission appointed to investigate the Boulder Dam which I desire to read at some convenient time.

Mr. JOHNSON. I yield the floor to the Senator from Nevada.

Mr. PITTMAN. Mr. President, a favorable report as to the safety and the economic and engineering feasibility of the proposed Boulder or Black Canyon Dam on the Colorado River has been submitted to the United States Senate by the special commission appointed by the Secretary of the Interior, with the approval of the President, under Senate Resolution 164. As to the engineering feasibility of the project, the commission reports that—

> The engineering feasibility of the proposed dam across the main stream of the Colorado River at Black Canyon or Boulder Canyon is basic.

I take it that that settles all of the doubts which may have been created with regard to the engineering feasibility of the project.

Mr. ASHURST. Will the Senator pardon me if I request him to read that again? There was so much confusion in the Chamber that I could not well hear the statement.

Mr. ROBINSON of Arkansas. Mr. President, let us have order.

The VICE PRESIDENT. The Senate will be in order.

Mr. PITTMAN. Mr. President, I have simply prepared a short analysis of the report of the commission appointed by virtue of a resolution of the Senate to report upon the engineering, geological, and economic feasibility of the proposed Boulder Dam. The reason I have done that is that a statement has appeared in one of the daily newspapers, attributed to the senior Senator from Utah, questioning the economic soundness of this proposed structure. As I recollect, in his speech at the last session he questioned not only its economic soundness but its engineering and geologic feasibility.

Mr. SMOOT. As reported to the Senate at that time and as reported by Mr. Weymouth.

Mr. PITTMAN. At that time the Senator from Utah spent considerable time trying to prove the site was within an earthquake belt. The commission also discussed that question.

I think it is well to have a brief analysis and synopsis of that commission's report, as undoubtedly it will have a tremendous bearing upon the action to be taken by the Senate.

As to the engineering feasibility, the commission reports that—

> The engineering feasibility of the proposed dam across the main stream of the Colorado River at Black Canyon or Boulder Canyon is basic.

That ends that question.

The commission favors the Black Canyon site. This is the dam site recommended by the Department of the Interior and adopted in the pending legislation. In selecting the Black Canyon site the board declares—

> The board is of the opinion that the Black Canyon site is suitable for the proposed dam and is preferable to that of the Boulder Canyon.

Mr. ROBINSON of Arkansas. Mr. President, may I ask the Senator a question?

Mr. PITTMAN. Yes, sir.

Mr. ROBINSON of Arkansas. How far removed is the Black Canyon site from the Boulder Canyon site?

Mr. PITTMAN. I will answer that now, as I anticipated that the question would be asked.

Mr. ROBINSON of Arkansas. Very well.

Mr. PITTMAN. It will be remembered that these two dam sites are only 30 miles apart, and are both situated in what is generally known as Boulder Canyon. The Department of the Interior first examined Boulder Canyon before selecting Black Canyon, and therefore the name "Boulder" was continued to be used as descriptive of the dam to be built at Black Canyon.

In speaking of the geological formation, the commission says:

> It is an almost ideal rock for tunneling, is satisfactory in every essential, and is suitable for use in construction.

An effort was made to arouse doubt in the minds of Senators and others as to the safety of the proposed dam by reason of dangers from earthquakes. As to this the commission reports that—

> The district is recognized as having comparative freedom from present-day earth movements, and the conclusion is that danger from local earthquakes of enough violence to threaten a properly constructed dam in Black Canyon is negligible.

So that ends the earthquake scare.

Again, in connection with the proposed dam, the board gives its conclusions as follows:

> The board is of the opinion that it is feasible from an engineering standpoint to build a dam across the Colorado River at Black Canyon that will safely impound water to an elevation of 550 feet above low water.

The pending legislation provides for the building of a dam approximately 550 feet in height.

As to flood control looking to the protection of lands on the lower Colorado River in Arizona and California against flood menace and the destruction of Imperial Valley, which is imminent, the report of the commission is of vital importance. In fact, flood control is the primary purpose of such construction and imposes upon Congress the duty of immediate action. With regard to this matter, the commission reports that—

> A dam of 550 feet above low water, across the Colorado River at Black Canyon, impounding 26,000,000 acre-feet of water, will be adequate, in the opinion of the board, to so regulate the flow of the lower Colorado as to control ordinary floods, to improve the present navigation possibilities, and to store and deliver the available water for reclamation of public lands and for other beneficial uses within the United States.

In discussing the necessity for a large reservoir capacity to impound the waters of extraordinary floods the commission says:

> The high-water flow of the flood of 1884 is reported to have been 380,000 second-feet. Such a flood, or one of greater magnitude, is to be expected. * * * A flood of this magnitude could be so controlled at the dam as to limit the flow in the river below to about 160,000 second-feet.

It is evident that the commission considers that any lesser control of the floods of the Colorado River will fail to remove the dangers of flood menace. This decision eliminates further consideration of Topock or other reservoir sites further down the river as totally impracticable, because the reservoir sites below are not of sufficient magnitude to anywhere near impound the amount of water that the commission states it is essential to impound. In other words, the commission states that the flow on certain occasions has been as high as 380,000 second-feet of water. That means a cubic foot of water passing a given point in a second. It maintains that to be safe the flow must be controlled to 160,000 second-feet below the dam. In other words, it is necessary to control 220,000 second-feet of water, to restrain it in a reservoir. There is no other reservoir down the river from that dam that will impound any such quantity of water at all. I think the Topock Dam was mentioned, but it would not impound one-half of the water required, according to this report.

Mr. KING. Mr. President, will the Senator yield?

Mr. PITTMAN. Certainly.

Mr. KING. Are there any figures in the record—and, as the Senator knows, the record is very voluminous—showing exactly or substantially what may be impounded at Topock?

Mr. PITTMAN. The plan that they had on foot was to impound 10,000,000 acre-feet.

Mr. KING. Yes; I appreciate that; but I was wondering if the engineering reports, including Mr. Kelly's and Mr. Weymouth's and all, had indicated the height to which the dam might be built at Topock, and the ultimate capacity or the maximum capacity of any dam at Topock.

Mr. PITTMAN. As I recollect the Weymouth report and the others, the maximum economic dam—that is, reasonable cost dam—at Topock would impound 10,000,000 acre-feet of water, which is only about one-third of what will be impounded by the dam proposed in the legislation. The banks are low at that point; the hills are low and wide apart and slope off very rapidly. For every acre-foot that you increase the capacity you more than quadruple the cost; and no report has ever found that they could impound at that place over 15,000,000 acre-feet of water, which is only about one-half the amount proposed to be impounded in the present reservoir at Boulder Canyon.

Mr. KING. The Senator will recall that a number of the reports indicate that the amount which is to be impounded for flood control need not exceed 5,000,000 acre-feet. It has always seemed to me, however, that those reports did not deal with all of the factors involved, and that they were rather baseless as a foundation for any development of the river.

Mr. PITTMAN. They seem to be. This commission places a greater factor of safety not only in the dam but in the capacity of the reservoir. You will notice that the commission states that it will control the water below the dam in all of those exceedingly high floods to 160,000 second-feet. It has been held by some engineers that to control it to 50,000 second-feet would give substantial safety, taken into consideration with levees that might be erected. On the other hand, however, that is the lowest estimate. The engineers, for the sake of safety, have found it necessary not to consider the ordinary spring freshets but to consider the maximum flood, because it is the maximum flood that will cause the destruction when it comes, if it does come. Therefore they have stated the maximum safety point for the control of the flood below the dam in freshet season at 160,000 second-feet. In other words, they would have to hold back in the spring over half of the flood waters that come

down, over half of the 380,000 second-feet that in the past have come down and may come down again; and, in fact, there is evidence that there was 500,000 second-feet on one occasion. They must have a reservoir that will impound over half of that flood and stop it so as to let down only enough for safety.

Mr. KING. May I say to the Senator at that point, that if there is to be a repetition of floods of the magnitude just indicated, in view of the recommendation by the commission, that it would be unsafe and unwise to permit the floods to overflow the dam, it is obvious that unless there are proper spillways and sufficient tunnels to dispose of a flood of this magnitude, the dam would be jeopardized by permitting overflows.

Mr. PITTMAN. The commission recognizes that fact, takes it into consideration, and, through tunnels, doubles the spillway capacity provided by the Secretary of the Interior. The Department of the Interior provided spillways for 100,000 second-feet, while this plan provides for 200,000. In other words, the diversion tunnel around the dam will have twice the capacity that was estimated in the plan of the Department of the Interior. It is that and the strengthening of the dam that causes the increased cost in this matter.

Now we have disposed of the engineering and the geological features; we have disposed of what is essential to flood control, and of course that is the primary purpose of this legislation.

Mr. OVERMAN. Mr. President, I should like to know whether the report of the commission shows the character of the foundation upon which this great dam is to be erected, and whether it is the character of rock necessary to hold such a dam. I think that is very important.

Mr. PITTMAN. I will turn back and read what I had just read before the Senator entered the Chamber, because it is exceedingly important.

In the first place, the board says:

> The board is of the opinion that the Black Canyon site is suitable for the proposed dam and is preferable to that of the Boulder Canyon.

Then it goes on again to say:

> It is an almost ideal rock for tunneling, is satisfactory in every essential, and is suitable for use in construction.

The board also goes on and discusses the question of liability to earthquakes. I will read that again for the benefit of the Senator.

Mr. OVERMAN. I heard that.

Mr. PITTMAN. I have read that portion of the report—I am giving only a synopsis of it—which discloses the necessity for a large reservoir that will capture over half of the enormous freshet floods on that river. I thoroughly agree with them.

Now, let us get down to the economics of the situation. There has been more misunderstanding with regard to the economics affecting this than one can imagine. I have heard it estimated that this dam would cost as high as $250,000,000. Let us see what the commission says.

The commission, in a spirit of conservatism and to eliminate any possible danger of destruction of life or property by reason of possible insufficient strength of structures, has recommended certain structural changes in the dam, as well as enlarged spillways, which will entail a greater expense for such construction. This increased expense will not prevent the economic success of the project. I mean that, taking the cost of this new plan of the commission, the power sold at three-tenths of a cent per kilowatt-hour will pay for this whole dam project, the whole cost of the dam and the reservoir together, with interest on it at 4 per cent, in less than 25 years. Now, let me go on and prove that.

Mr. KING. Mr. President, will the Senator yield?

Mr. PITTMAN. I yield.

Mr. KING. I did not hear all the Senator said. The report indicates that in order to make the undertaking economically feasible, the cost of the all-American canal must be eliminated, and the cost that might be attributed to flood control would also be eliminated from the capital. So that the amount which would finally be a charge, and which would have to be repaid to the Government, would be only a fraction, of course a large fraction, of the cost of the entire enterprise.

Mr. PITTMAN. You will have to construe the language of the commission in that regard, which I am now about to quote, in connection with their figures; you can not get at anything until you do that. But as far as the all-American canal is concerned, the all-American canal is an entirely separate enterprise, as far as the repayment to the Government is concerned. Mind you, when this commission's report was undertaken, they were requested to consider the House bill, not the Senate bill, because the House bill had passed one body.

What was the difference between the House bill and the Senate bill? The House bill grouped the entire cost, not only of the dam and reservoir, but of the all-American canal, and primarily made the revenues from power derived from the waters impounded in this dam responsible not only for the payment to the Government of the cost of the dam and the reservoir, but also of the all-American canal.

Mr. KING. Mr. President, if the Senator will further yield, I concede the accuracy of the Senator's statement, but in the mind of the public, and I am sure in the minds of most of the Senators, this project has not been divided and segregated; it has been treated in its entirety, and the impression has been given out that the revenues to be derived from power, power alone, would pay for the entire project, which meant, according to the impression which many received, not only the construction of the dam and the power house, or the power machinery, but also of the all-American canal. But the report of this commission indicates that that is not true, that it would not be economically feasible, and, indeed, the report says that if you eliminate the all-American canal, and eliminate the cost of that part of the dam which might be attributable to flood control, and then call for returns only upon the residue, which would be something like eighty or ninety million dollars, possibly it might be economically feasible.

Mr. PITTMAN. I will have to read it later on, to get the Senator's language exactly correct. But, as a matter of fact, we are not considering the House bill; we are now considering the Senate bill, which has been accepted as an amendment to the House bill.

As I said before, the report was based on the House bill, which required sufficient revenue from power not only to pay for the dam and reservoir, but to pay for the all-American canal. The Senate bill does not do that. The Senate bill expressly provides that the cost of the all-American canal shall be borne exclusively by the land to be benefited, the same as on any other reclamation project. That is the bill we are considering.

What does the commission give as the cost of building this dam and reservoir? What are their estimates?—

> Dam and reservoir (26,000,000 acre-feet capacity), $70,600,000.
> One million horsepower development, $38,200,000.

Let me call attention to the facts. Let us see what the estimates of the Department of the Interior with regard to that same dam and that same electrical development are—

> Dam and reservoir (26,000,000 acre-feet capacity), $41,500,000.
> One million horsepower development, $31,500,000.

Both the commission and the Secretary of the Interior also made estimates as to the cost of the building of the all-American canal intended to supply water to the Imperial and adjacent valleys in California. The estimates were originally so made because the House bill, and the Department of the Interior originally, made revenues derived from the sale of hydroelectric energy primarily responsible for the amortization of the money invested by the Government, not only in the construction of the dam and reservoir but in the construction of the all-American canal.

This is what I want to call attention to: There was not any question in the minds of the commission that the Department of the Interior was right in its estimate of revenues to be received from power, because there is no question that a reservoir of that capacity and a dam of that size will provide 3,600,000,000 kilowatt-hours of power.

The total cost of the dam—mind you, the total cost—under the plans of the Department of the Interior, and of the all-American canal, and the power development, together with interest on the entire investment, would have been $125,000,000. They hold that that $125,000,000 could be paid back in less than 25 years from the sale of electric power at three-tenths of a cent per kilowatt-hour. There is no question about that being in the minds of the commission. If it is true that that power alone, at three-tenths of a cent, would pay $125,000,000 in 25 years, why will it not pay for the dam and reservoir, under the commission's report, because that is only $120,000,000?

Let me give the compiled figures. Here is the report of the commission on this proposed dam, which I say is stronger, which has greater spillway capacity. This is the estimate of the commission:

> Dam and reservoir (26,000,000 acre-feet capacity), $70,600,000.
> One million horsepower development—

That means the power house—

> $38,200,000.
> Interest during construction of above, $11,682,000.
> Total, $120,482,000.

That is less than the $125,000,000 which the Secretary of the Interior estimated could be reimbursed to the Government in 25 years from the sale of power. Now, let us see what the Department of the Interior said that power would pay in 25 years. This is what they said it would pay:

Estimated gross revenues from sale 3,600,000,000 kilowatt-hours power, at three-tenths cent, $10,800,000.

That is the gross receipts annually from the sale of that power.

Storage and delivery of water for irrigation and domestic purposes, $1,500,000.

That includes, mind you, what they might receive from the lands under the all-American canal. That makes a total of $12,300,000.

Estimated fixed annual charges for—
Operation and maintenance, storage, and power, $700,000.
Operation and maintenance, all-American canal, $500,000.
Interest on $125,000,000, at 4 per cent, $5,000,000.
Total, $6,200,000.
Estimated annual surplus, $6,100,000, sufficient to pay the entire cost in 25 years.
It will be observed that the allowances he makes for operation and maintenance are extremely liberal. The testimony points to costs being more favorable than thus indicated.

Mind you, as the Senate bill now under consideration eliminates the cost of the all-American canal as a burden upon the revenues received from power, therefore we must adjust the estimates as follows:

Annual receipts from the sale of power, $10,800,000.

Estimated fixed annual charges for operation and maintenance, storage, and power, $700,000.

Interest on the above expenditures—that is, the total amount estimated by the commission for the dam and power house—$2,920,000.

In other words, the annual net receipts on the investment, as provided by the commission, will be $7,180,000. That is the net.

The Secretary has held that $6,200,000 would amortize $125,000,000 in 25 years. Consequently it must be obvious that $7,180,000 will amortize $120,000,000, the estimated cost of dam and reservoir proposed by commission, in 25 years. Those are the figures. Those figures are not questioned by the commission at all, except in one particular.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER (Mr. THOMAS of Idaho in the chair). Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. PITTMAN. I yield.

Mr. NORRIS. I hope the Senator will pardon me. I was listening with great interest until the Senator had reached the point where he was giving the amortization period from the commission's estimate when I was interrupted, and I did not hear what the Senator said after that. Will he be good enough to repeat that last sentence?

Mr. PITTMAN. I will be very glad to repeat it. The Department of the Interior found that the annual revenues from the power alone would be $10,800,000 a year. That is the gross. That figure is not disputed by the commission, except that they throw doubt on it in the way that I will read later. The computation is not questioned.

Leaving out the all-American canal, either receipts from the land or expenditures, the cost annually for operation and maintenance, storage of water, and so forth, is $700,000 a year. The interest on the amount estimated by the Department of the Interior to build the dam and the reservoir, during the period of construction, would be $2,920,000, giving a total annual cost under the estimates of the Department of the Interior, leaving out the all-American canal, of $3,620,000. That would leave an annual profit of $7,180,000. What would that do, according to the estimates of the Department of the Interior? Leaving the all-American canal in, the Department of the Interior says the annual net profits would be only $6,100,000, but taking out the all-American canal the net profits will be $7,180,000. But the Department of the Interior reported that the annual returns of $6,100,000 would amortize the full loan or advance by the Government, the full $125,000,000 which includes the cost of the all-American canal, in 25 years. If $6,100,000 would amortize the total cost of $125,000,000, as estimated by the Department of the Interior, within 25 years, certainly the larger sum of $7,180,000 would pay off in 25 years $120,000,000 estimated by the commission as the total cost of the dam, reservoir, and power development according to their plans.

How do we get the $120,000,000? We get it by taking the estimated cost of the dam as prepared by the commission, which they say is $70,600,000. We take the cost of the power plant estimated by the commission, which they say will be $38,200,000. We compute interest on that amount at 4 per cent during the period of seven years that the commission say will be required for construction, and we find it amounts to $11,682,000. The total cost is $120,482,000. That is the total cost according to the plan of the commission. Of course, we admit that the estimate is enlarged by the commission for the sake of safety. We admit that they have doubled the spillway capacity as a safety factor. We admit that they have increased the cost enormously. But notwithstanding that, they have not increased the cost of the dam and the reservoir and the power house up to the cost of the total project, including the canal, which the Government expected to pay for from power under the House bill. Consequently, there is no doubt about it.

But let me read something else.

Mr. BRATTON. Mr. President, will the Senator yield?

Mr. PITTMAN. I yield to the Senator from New Mexico.

Mr. BRATTON. Neither has the commission questioned the capacity of the project to develop the amount of power to which the Senator has just referred nor the cost of operation, so that by mathematical calculation it is definite that the income and operating expense will be just what the department estimated it to be.

Mr. PITTMAN. The Senator is correct except in this way——

Mr. BRATTON. And that by mathematical calculation it is definite that the sum can be amortized within 25 years based upon the figures given by the commission and department.

Mr. OVERMAN. Mr. President, I would like to inquire whether the cost of the transmission lines has been computed and included in the cost of the dam?

Mr. PITTMAN. They have not, because there is no authority in the bill to construct transmission lines.

Mr. OVERMAN. But they have to construct them, do they not?

Mr. PITTMAN. Yes; municipalities, corporations, or others, to get the use of the electricity.

Of course, I want it understood that while the statement which has just been made by the Senator from New Mexico [Mr. BRATTON] and also by myself is true, it is subject to qualifications which the Senate is entitled to have in all fairness. There is no doubt that a reservoir of that capacity, having the fall of water that it will have, because it is the same according to both the commission plan and the Secretary's plan, the only change being in the structure of the dam and spillway, will create 3,600,000,000 kilowatt-hours. It will be the same under both plans. There is no doubt that the cost attached to it, meaning $700,000 for operation and maintenance, and the interest are substantially the same under both plans. There is no question about that. There is no doubt that the net receipts are accurately stated as $7,180,000. There is no doubt that $7,180,000 annually would amortize the $125,000,000 in 25 years. If it would amortize that amount in 25 years, it would amortize the cost of the dam and the power house, according to the reports of the commission, with interest, which is only $120,000,000.

But here is what I want to call attention to in all justice and fairness. The commission said this:

Within a 30 or 40 year period, even with the regulated reservoir, the power output may be reduced five-tenths or six-tenths of the capacity of the proposed plant during a long period.

In other words, during a period of 30 or 40 years there may be cycles of dry years which will reduce the water and the power probably one-half, we will say, during that particular dry period of time. But we will assume, for instance, that half of the time or half of the 50 years during which the amortization is to be taking place, it is such a dry period as they say. What would be the result? We would have five-tenths of its full capacity during, we will say, 25 years, and during the remaining 25 years of the 50-year amortization period we would have ten-tenths capacity. But in that event the figures will demonstrate that it will amortize entirely in 50 years because it would only be twenty-five one-hundredths or three-tenths reduction of the whole, and twenty-five one-hundredths or three-tenths reduction during 50 years would still leave an ample margin for amortization in 50 years.

But that is only a supposition of the commission that there might be dry years, so that even if that occurred the desired object would no doubt be accomplished. There is nothing in the last 20 or 30 years to indicate any such dry period. They go back to that time, however, and state there are evidences of periods of dry years before that time. So it is perfectly evident, I say, from this report, which I wish every Senator would read carefully for himself, that the commission has approved in toto the construction to be made under this legislation as economical, sound, and feasible; that from an engineering standpoint, as

well as from a geological and scientific standpoint, they have found feasible the dam site provided for in the bill; that they have found the elimination of the all-American canal as a burden on the power and transferring it as a burden on the land, as the bill does, is economically feasible. There is no question about it. They may recommend that a certain part of this expenditure shall be made by the Government, as in other flood-control projects, without cost to the project, but to be borne, as under flood-control measures such as on the Mississippi River, by all the taxpayers of the country. That may be a very fine thing to do, it may be a just thing to do, it might be in accordance with the policy of the country, but as far as being necessary to enable the Government to get its money back with interest from the hydroelectric power generated at the dam, as estimated and recommended by the commission, it is not necessary, and that is all there is to it. So we may eliminate that.

I am glad that the commission has reported. I am glad the commission was appointed. I am glad there is some definite authoritative report here. It was a disagreeable thing to stand on the floor of the Senate and hear estimates of $250,000,000 for the dam and power house. As a matter of fact, the commission has not questioned the estimate of the Department of the Interior as to the dam and power house which it proposed. All the commissioners have done is to say, in order that there may be no danger whatever, that they would strengthen the dam a little more than provided by the plan of the Secretary of the Interior; that they would give a larger spillway through tunnels, so there will never be any danger of the water flowing over the top of the dam. They doubled the spillway capacity and strengthened the dam, so there will be only 30 tons pressure to the square foot.

I do not blame them. Safety of life can not be estimated in dollars. The commission has been appointed for the purpose of assuring the Congress of the United States that when the dam is built it will stand substantially forever; that there will be no danger, if it can possibly be eliminated, of it washing out and destroying human life. They have taken all that into consideration and naturally have increased the cost for that work; but that cost only runs to $120,000,000, interest and all, and that is less than the total construction cost under the plan of the Department of the Interior, that had to be paid for out of power, and that power the Department of the Interior estimated would pay for it in 25 years.

But we do not have to consider the cost of the all-American canal, because under the bill it must be exclusively paid for as reclamation projects are paid for, by the lands to be benefited. Now we have come in this proposition to the point where we can pass a bill. There is nothing to consider here now whatever except justice to the seven States involved in the development of the Colorado River. That is all there is now left.

It is the duty of Congress to build the dam. It is a duty that is imposed upon them exclusively by the Constitution of the United States. It is the same duty that caused the Senate and the House of Representatives to appropriate out of the Treasury of the United States an enormous sum of money for flood control on the Mississippi River without a single direct or indirect charge against those living in the flooded area. We have to-day a greater danger in Imperial Valley from flood destruction than we ever have had on the Mississippi River or ever can have on the Mississippi River.

Tremendous destruction of property and life took place on the Mississippi River, but when the flood had receded the water flowed back off the land into the channel. If, however, there is ever a break into Imperial Valley—and all engineers agree that such a break may come during any spring freshet—a great flood will run down into that valley, which is from 200 to 300 feet below sea level and below the bed of the Colorado River. Do Senators realize that heretofore breaks on the Colorado River have occurred below the south rim of the valley, below the rim which separates the valley from the Gulf of California?

Of course, that area is almost flat, but it is below the rim, and when the river broke there, small levees would keep it from backing into the Imperial Valley, but in the last two years, where the reclamation diversion has been made, large willow weirs have been placed in the river to dam up and divert the water into the canals that carry water to irrigate the Imperial Valley. Now, the silt in the river has built up to the top of those weirs and extends for hundreds of miles up the river; in other words, the bottom of that river has been raised by those weirs up to the diversion point of those canals. If there is ever a break in such a neighborhood as that, if there is ever a break on the side of that river toward the Imperial Valley, the water will go down into that valley with a fall of 2½ feet to the 100 feet, and nothing on earth could stop it. Think, for instance, of 380,000 second-feet of water leaving the bed of a stream that is above its banks and flowing down into a valley below sea level where the fall is 2½ feet to the 100 feet. Senators must realize that it would be almost impossible for the people themselves to escape. Of course, there would be nothing saved.

There is a sacred obligation on the Congress of the United States under the Constitution to do this work. We have a report by an independent commission which shows that it is geologically, scientifically, engineeringly, and mechanically sound. If, however, it were not economically sound, if there were not a dollar to come back from this expenditure, it would still be the duty of Congress, as it was the duty of Congress with reference to the Mississippi River, to render the necessary protection. In this case, however, fortunately the power developed at three-tenths of a cent a kilowatt-hour will pay it all back, certainly, in 50 years and probably in 25 years, with the water flowing normally as it has in the last 10 or 15 years.

What is the difficulty? We have only minor questions involved here. There is practically nothing involved except a dispute between the States of Arizona and California with regard to the division of the increased water that will be impounded behind the proposed dam; that is all. An agreement has been entered into between the seven States interested in this river by which half of that water is retained to the four upper States and half of it let down to the three lower States. The four upper States have ratified the agreement. The question is now for Arizona to ratify the agreement. Arizona, as I understand, will ratify the agreement whenever there shall be a provision in the bill or a separate agreement between Nevada and Arizona and California dividing the water let down to the three lower States. Of the 7,500,000 acre-feet of water let down that river they have gotten together within 400,000 acre-feet. They have got to get together, and if they do not get together Congress should bring them together.

Mr. JOHNSON. Mr. President, there are some few things in relation to the distribution of the water of the Colorado River which I desire to place in the RECORD, and concerning which I also desire to take a very few moments in presenting to the Senate. Much has been said by the Senator from Arizona [Mr. HAYDEN] concerning the attitude of Arizona and the attitude of California respecting the division of water, and repeatedly, as I understood the Senator from Arizona, he said that Arizona had been very willing, indeed, to accept what the governors' conference had determined in regard to the distribution of water between the two States. I do not understand that that is at all accurate.

At the conference of the governors and the commissioners of the Colorado River Basin States in Denver, in 1927, in the consideration of the division of water among the lower basin States, there was disagreement. There never was, as I understand, an acceptance by the State of Arizona of the proposition made by the governors.

The governors and commissioners of the upper basin States, Wyoming, Colorado, Utah, and New Mexico, allotted 4,200,000 acre-feet to California, 3,000,000 acre-fee to Arizona, and 300,000 acre-feet to Nevada. The Senator from Arizona again and again has iterated and reiterated that this was accepted by Arizona, but rejected by California. The fact of the matter is that Arizona attached to her acceptance certain conditions which were not approved even by the upper basin States or the governors thereof. On this point, sir, in order that there may be no misunderstanding on the part of the Senate and that the State which I represent in part may not be charged with recalcitrancy, I read the testimony given by Governor Emerson, of Wyoming, and Mr. Francis C. Wilson, commissioner for New Mexico, who participated in the Denver conference, and whose testimony in this regard has never been questioned or disputed by any representative of the State of Arizona.

Governor Emerson testified regarding the matter before the House Committee on Irrigation and Reclamation on January 13, 1928, in answer to questions from Representative DOUGLAS of Arizona as follows:

Mr. DOUGLAS. Is it not a fact that the State of Arizona agreed to terms submitted by the upper basin States with reference to the allocation of water and further agreed that development should proceed on the Colorado River provided there was no power project constructed until the agreement relative to power had been consummated and effected?

Governor EMERSON. You have asked two questions.

Mr. DOUGLAS. That is true.

Governor EMERSON. I will try to answer them in order. Arizona did not agree to the division of water in all details.

Mr. DOUGLAS. It is true that there were certain interpretations of terms upon which there was no committal.

Governor EMERSON. There was one important feature upon which no agreement was reached, and that was in regard to the tributaries of the Colorado River in the State of Arizona. Arizona agreed to accept the specified division of water at Lee Ferry.

That is quoted from page 310 of the printed and bound records of the hearings on House bill 5773.

Before the same committee Commissioner Wilson testified:

A good deal has been said with reference to the fact that California would not agree and said that their minimum was 4,600,000 acre-feet. The mistake that California made, in my estimation, was not to have come there with a trading margin. They came there with an irreducible minimum, prepared to support it as such, but they gave themselves no trading margin. On the other hand, Arizona came there with a cross section of the State. They had their conservatives, their radicals, their independents on their commission, and while we could not see what was going on behind their closed doors, we could imagine, but when it came to a showdown they always came through together some way or other. Now, as to this 3,000,000 acre-feet, they said that they were not satisfied but they would accept it, placing upon it certain conditions. We met those conditions in the main, but the condition which they attached, that their tributaries should be released from the burden of the Mexican allocation which might be arrived at by treaty, that their tributaries should be free from that burden, we could not consent to, because in the compact there is no such distinction; the entire system, divided as I have read it to you, is subject to that burden when the United States reaches the point of determining by treaty with Mexico what Mexico's allotment or allocation should be.

That is quoted from page 292 of the printed and bound record of hearings on House bill 5773.

Commissioner Wilson on January 19, 1928, testified on the same subject before the Senate Committee on Irrigation and Reclamation as follows:

At the Denver conference Arizona accepted the proposals of the governors of the upper basin States on the allocation of water, but attached a condition to the effect that the tributaries of Arizona must be released and relieved from the burden which might be hereafter impressed upon them by virtue of any treaty between the United States of America and the Republic of Mexico.

* * * * * * *

The upper basin governors gave the matter considerable consideration and rejected Arizona's condition in this connection * * *.

That is quoted from page 193 of the printed and bound record of the hearings on Senate bill 728.

The Arizona Colorado River Commission, in reply to the proposal of the upper States, submitted in writing a document entitled "Response of Arizona to Proposal of the Governors of the Upper Division, Colorado River Basin States, Which Was Submitted to the Lower Division States Under Date of August 30, 1927," copy of which is found on page 349 of the printed and bound record of hearings on Senate bill 728.

In such response the Arizona Colorado River Commission, referring to conditions attached to Arizona's acceptance of the proposal submitted by the four upper basin States, including the condition for the exemption of Arizona's tributaries from any charge in meeting Mexican water demands. It is stated in reference to these conditions:

It must clearly be understood that it is only upon condition that they are resolved affirmatively that we will accept the first item of the proposal relating to the allocation of water.

The condition attached by Arizona to its acceptance of the proposal of the four upper basin States as to the division of water was rejected by those States, and therefore Arizona's so-called acceptance neither occurred nor could occur under the circumstances.

Now, Mr. President, just a word or two in respect to water. It is a sad thing to me that in speaking of a division of the water of the Colorado River we speak of division between the States. I think, unfortunately perhaps, in terms of peoples. There is no difference to me between the man who resides at Yuma just across the line between California and Arizona and the man who resides in the State of California just across the line between Arizona and California. They are men, human beings after all, and they are all entitled to some part of the water that may be necessary in order that they may follow that which has been their chosen vocation. These people are the ones that we want to keep in mind, in my opinion, rather than the impersonal entities to which we are constantly referring in discussing the division between the States. It may be unfortunate, too, Mr. President, that there are more people in the State of California utilizing water from the Colorado River than there are in the contiguous territory in the State of Arizona.

It may be unfortunate, also, that the first and the earliest and by far the most extensive developments have been in the State of California, and that these developments in the State of California, particularly in the Imperial Valley, have become a pride not alone to the particular State of which they are a part, but a pride, too, for all the Nation; for down into the Imperial Valley, Mr. President, went a certain hardy class of pioneers originally who typified the highest and the best that there is in American life and American manhood. These men treked down there into the Imperial Valley when it was a barren waste. By their effort, by their work, by their constant striving they have made there of what was a sandy and a desert waste one of the fairest and most fruitful parts of all this world, and these people in the Imperial Valley have but one means of sustenance, namely, water, and water from the Colorado River.

When these gentlemen speak of division of water between the States it seems to me they forget that there are in their State over at Yuma just the same sort of people as those in the State of California in the Imperial Valley; that those men and those women just across the line in Arizona are as much entitled to consideration as those across the line in the State of California. I never forget that fact, nor that those who have come there, who have, indeed, the prior right by virtue of life's effort, are the people that we must protect in a division of water; and it is perfectly useless to say that you will divide water into halves when half of that water can not by any possibility—I speak advisedly—be used within any generation that is now existent or will be three generations hence in the State of Arizona, and when, on the other hand, in the State of California it is necessary for the very life of the pioneers who have gone there and who built up that great territory. It is useless, therefore, to say that you will divide waters in halves. That can not be done. You must divide your waters in accordance with necessities and in accordance with the actually existing rights that have been perfected by these various communities and these different peoples.

Mr. HAYDEN. Mr. President, will the Senator yield?

Mr. JOHNSON. I yield.

Mr. HAYDEN. I am very much interested in the Senator's last statement—that necessity is the basis of the California claim for water.

Mr. JOHNSON. Oh, I do not say anything of the sort. I say that when you divide waters you must divide in accordance with necessities of peoples and their acquired and perfected rights.

Mr. HAYDEN. Does the Senator contend that the acquired and perfected rights that exist in the State of California to-day are perfected to such an extent that they cover the demand made in Denver for 4,600,000 acres of water?

Mr. JOHNSON. Substantially so; and as I proceed I think I will demonstrate that even to my distinguished friend from Arizona.

I recognize, of course, my friend's viewpoint. That is all right. I stand here just as strongly in defense of people in the State of Arizona as I trust I stand here in defense of people in the State of California. I would not deprive those who required it of what might be a necessity for their existence in your State, sir, any more than I would wish you to deprive the people who exist in the State that I represent in part of what is an absolute necessity for them.

You gentlemen from the West are familiar with Western law. You understand, I think, what the mode of appropriation is of water in the West. You realize, of course, that the prior right exists in the individual who has appropriated water to a beneficial use, and that that water having been put to beneficial use by an individual, gives to the individual a title and a right that of course neither equity nor law would under any circumstances take from him.

Mr. KING. Mr. President, will the Senator yield?

Mr. JOHNSON. Yes.

Mr. KING. The Senator is making an interesting and a very eloquent address.

Mr. JOHNSON. Do not say "eloquent," please.

Mr. KING. It is eloquent, because it is descriptive of the pioneers of Imperial Valley, their rugged character, and their achievements. Those things lend themselves to eloquent persons, even though their tongues might, upon other subjects, be rather silent.

Mr. JOHNSON. I wish I had the facility of expression of the Senator from Utah. Then I should indulge, possibly, in some eloquence; but now in only matter-of-fact fashion do I endeavor to present this situation.

Mr. KING. Waiving the compliments of the Senator—and I am sure they are sincere, as mine were in his behalf—may I

say to the Senator that there is no disposition upon the part of those representing the States in what has been denominated the upper basin to interfere with the rights of the people in Imperial Valley.

Mr. JOHNSON. I am sure of that.

Mr. KING. I sympathize with them in the vicissitudes through which they have passed and appreciate the flood menace to which they are subjected. However, it is a fact which I think the Senator recognizes that the Imperial Valley under the appropriation which has been made and the conditions under which such appropriation is exercised can not achieve the standard of development which is desired and which is possible. Indeed, some of the lands which have been heretofore irrigated find during some years an inadequate water supply. So Imperial Valley, if left to her own devices, could not further materially develop and could not irrigate all the lands which have been irrigated. Therefore the inhabitants of the valley are interested in securing more water—water which has not been appropriated and which can be used in Imperial Valley, unless reservoirs are built either at Boulder Canyon or Glenns Ferry or some other place on the Colorado River.

I rose, however, merely to emphasize the fact that there is no disposition upon the part of the upper States to interfere with the rights of the pioneers of Imperial Valley.

Mr. JOHNSON. I am very certain of that.

Mr. KING. But let me say to my dear friend, he is familiar with the fact that because of rather tragic conditions in our agricultural life we have been unable in Colorado, Utah, New Mexico, and Wyoming to develop lands which are as valuable intrinsically and inherently as the lands in Imperial Valley. We see the water which comes from the springs and from the melting snows in our States carried down the river into Mexico and into the Imperial Valley. The upper-basin States are not in a position to develop agriculturally as rapidly as is California and to improve and irrigate the great areas which will in time become the homes of thousands. If the Senator represented the fine people of the upper States—and we have pioneers there, too—he would look with deep anxiety upon the appropriations now being attempted by the lower States and he would regard them as a menace to such States. If we do not do something to protect our States, California, because of her superior advantages, because of her situation upon the lower stretches of the river, may appropriate or claim to have appropriated substantially all the waters of the river not heretofore appropriated as a result of which the future development of the upper States would be arrested.

We must in all fairness, it seems to me, visualize the situation not alone of California but of all other States embraced within the Colorado River Basin and approach this question in a fair, dispassionate, and just manner, protecting not only the rights of the people of Arizona and California, but recognizing the rights of the people of Utah, Wyoming, Colorado, and New Mexico. The upper States must have a part of the Colorado River waters.

They supply us 80 per cent of the entire flow. We do not want the water of the river and they are entitled to their "place in the sun" and to the chance to make future appropriations of the river flow. California must not strip them bare. Within a few years, when the upper States are ready to irrigate new lands, when economic conditions have changed and agricultural development is warranted, the upper States must be permitted to take from the river a portion of the flow and must be protected in the right to use such portion, regardless of the time of appropriation. They must be so protected that they will not be met at the threshold with the claim that all the water has been seized and used by the lower basin; that the water which flows through our States we may not touch, nor may we divert a single acre-foot for the development of our arid domain.

I know that my good friend, in a spirit of justice, must recognize that we have rights in the upper States which should be respected and protected. We should approach the consideration of this problem in a spirit of justice and with absolutely no desire to advantage one State at the expense of others.

Mr. JOHNSON. Mr. President, I quite agree with what has been said by the Senator from Utah. I insist that the upper basin States shall be protected, and protected to the full. Not only that, sir, but this measure has been written around the Colorado River compact; and for the benefit of those who may not be familiar with the subject, let me say what has been said again and again, that when the commissioners met some years ago in relation to the waters of the Colorado River they divided the States into two distinct entities—the entity that they called the upper-basin States, consisting of Wyoming, Colorado, Utah, and New Mexico, and the entity they called the lower-basin States, consisting of Nevada, Arizona, and California.

When they made their division of water at Lees Ferry, I believe, that division of water was made not as among seven States that were a part of the Colorado River Basin, nor were allotments given to individual States at all; but the division was made as between these four States constituting the upper basin and the three States constituting the lower basin; and when this bill was written it was submitted to many of those of the upper-basin States in the desire and with the design and the purpose to protect the upper-basin States—one of which is so ably represented by the Senator who has just spoken—to the full in every right that they have, and in every division and every decree that had been made by the commissioners concerning the Colorado River. In my opinion—it may not be shared entirely by others—in my opinion, and in the opinion of the legal minds that have subjected the bill to the test, this bill, written around the Colorado River pact as it is, protects to the full, and in the amplest fashion, every State in the upper basin.

What I was endeavoring to do, however, was not to descant upon the merits of one State or the merits of the other, but to show, in response to what has been said by the Senator from Arizona yesterday, why his suggestion of a division was not a reasonable one nor a just one as between Arizona and California, so far as California was concerned. Let me at the beginning and at the end of it say, protect your upper-basin States just as everybody wishes to do who is connected with this measure. Protect them fully. Give to Arizona all the water that it is within the realm of possibility that Arizona may use; but do not take from the State of California, which is practically using it to-day, and which within a brief period will put infinitely more water to use, the rights that are hers, through an unjust or an unfair division of that water.

There is actually being used in California to-day, by actual measurement, 2,159,100 acre-feet of water per year. The Imperial Valley appropriation was made in 1898 and at that time was made for 10,000 cubic feet per second "for the purpose of developing power and irrigation of lands in San Diego County, Calif., and in Lower California, Republic of Mexico."

At that time what is now Imperial Valley was San Diego County. Senators will recall that. Under this appropriation canals were constructed and are now in use for 515,000 acres in California, to which will be added 193,000 acres of known feasibility, requiring a use of 3,115,200 acre-feet per year upon a water duty of 4.4 acre-feet per acre.

The water was appropriated for the Yuma project in 1906. I have spoken before only of Imperial Valley. Sixty-four thousand five hundred acre-feet per year is now being used on the Yuma project in California.

Senators will bear in mind, please, that the Yuma project embraced a part of Arizona as well as a part of California.

Mr. FLETCHER. Mr. President, may I interrupt the Senator so as to get him to enlighten us on that subject?

Mr. JOHNSON. Yes.

Mr. FLETCHER. The Senator alludes to the canals built in the Imperial Valley. Were those canals built by the Federal Government?

Mr. JOHNSON. Oh, no. The largest irrigation district that there is in the world is the Imperial irrigation district, and the Federal Government has built none of the canals. They have all been paid for, and the district is bonded; I can not from memory state the sum, but for a very large sum of money.

Mr. SMOOT. Seventeen million dollars.

Mr. JOHNSON. Let me put one point, by way of illustration, that will indicate their hazardous position there. That is the only place in America that I know of where the farmer, with fruits and production beyond those of any other place on earth, can not borrow a dollar from a Federal farm loan bank because of the jeopardy in which he exists and the fear of flood that is ever impending. Not a penny can he get. He is in a position more hazardous and more difficult than his brethren in any other part of the country. The testimony is here if anybody queries my statement in that regard.

Mr. KING. Mr. President, will the Senator suffer an interruption?

Mr. JOHNSON. Yes.

Mr. KING. The Senator refers to additional lands in Imperial Valley, nearly 200,000 acres. I wanted to inquire whether those were entirely public lands, or whether some of them were in private ownership.

Mr. JOHNSON. If I answer the Senator offhand, I should say both; but I do not wish to have him take my answer as absolute, because I am not entirely clear. The information I will obtain for him.

Mr. KING. May I ask one further question?

Mr. JOHNSON. Certainly.

Mr. KING. Do the data which the Senator now has before him indicate the extent of the public lands that may be irrigated in the Imperial Valley?

Mr. JOHNSON. I think so.

Mr. KING. I have heard the statement made, and some of the data I have indicate that there are three or four hundred acres yet of lands which may be irrigated, and other information which I have limits it to 150,000 acres.

Mr. JOHNSON. I have divided them into two classes, and when I stated 193,000 acres a moment ago as that which might be added, I stated that that was 193,000 acres of known feasibility.

Mr. KING. Yes.

Mr. JOHNSON. There is another class of lands of doubtful feasibility.

I have just stated the needs of the Imperial Valley. I stated the needs of the Yuma project, situated in the State of California.

The Palo Verde Valley appropriation was made by Colonel Blythe away back in 1859. Much of that area has already been irrigated, and that for which the water was appropriated, and of known feasibility, under the canal system, amounts to 234,000 acre-feet per year.

The city of Los Angeles, on behalf of itself and other cities, made its appropriation of 1,095,000 acre-feet per year in 1924. We may eliminate, if you wish, whether or not ultimately against the Government or anybody else there could be a legal enforcement. There exists the claim that is made. There has been done everything that is required by the law to be done, and upon this the city of Los Angeles has expended up to to-day more than $1,000,000.

Do not think that this is any light project that is undertaken by the coastal cities of southern California for domestic water for that territory. It is estimated—and unquestionably it will be true—that to take this water at Blythe out of the Colorado River, as is contemplated by these coastal cities of southern California, will require, in the construction of the aqueduct there and in the pump lift of some 1,200 feet over the hill, an expenditure by the city of Los Angeles of something over $150,000,000.

When gentlemen talk about what California gets from this scheme at Boulder Dam sometimes I have little patience, for after all, sir, it is this territory that pays through the nose for everything that it gets out of Boulder Dam or the dam that shall be built at Black Canyon.

The city of Los Angeles has made its filings; it has expended its millions now in the endeavor to make its way over the hill and prepare for the water to be given to the coastal cities of southern California in conjunction with Los Angeles.

The other day at the election there was presented to the people of southern California—to all of the municipalities there—the question of whether they would join in a great municipal water district. I think that with the exception of one city every city there voted to join that metropolitan district. The need for domestic water in that territory is such that it must be accorded in some fashion, if it be possible to do it, and must be accorded within a very, very limited time. I break no confidence, I am sure, when I say that unless there be some place from which southern California coastal cities may obtain domestic water their progress, within a reasonable period, will be halted, and their prosperity for a time will be stayed.

Mr. Roosevelt said once that the highest purpose to which water could be put was for domestic use. All of us realize that fact, and all of us understand that when any man, any community, any city, or any State craves from the National Government that which must be had to sustain life—domestic water—the National Government has ever been ready to respond and anxious to do its part.

All this water can be obtained from just one place for these cities in southern California—just one place—the Colorado River. It can be obtained in just one way—by a high dam and great storage capacity at the Black Canyon. Who shall deny it? Who shall say, under these circumstances, where two and a half million people hold out in supplication to this Congress merely the prayer that they may give that which is accorded ever to those who seek it—who shall say that this water, in order that some State or locality may make a little more money, shall go rolling in waste to the sea?

I am certain that our friends here who represent the various States will be very glad, indeed, to unite in the necessities that exist in these coastal cities, in order that they may have their fair share of the potable water that may be accorded them through a high dam and by large storage, without harm to any people or to any State or to any locality.

Mr. HAYDEN. Mr. President, will the Senator yield?

Mr. JOHNSON. I yield.

Mr. HAYDEN. Everyone will agree with the senior Senator from California that domestic use is the highest use of water, and that if that water is needed by the municipalities of southern California, of course they should have it. But if there is not water enough to go around, if there is not water enough to irrigate all the land that can be irrigated in California and in Arizona, and it is necessary that certain areas of desert land be designated to remain forever as desert land, and not developed, our contention is that, in that event, the burden of leaving undeveloped the desert in order that the cities may have the water should fall equally upon California and upon Arizona. As I understood the figures presented to the Senate by the Senator from California, he laid claim to water now appropriated for use for the irrigation of additional areas of land now desert, and water for domestic purposes.

Mr. JOHNSON. I am going to take up the needs of Arizona in a moment as best I can.

Mr. HAYDEN. I want to inquire of the Senator whether he believes it is fair to impose the entire burden of supplying domestic water to the city of Los Angeles upon the State of Arizona by forever dedicating to the desert areas of land that can be irrigated?

Mr. JOHNSON. I answer with the utmost frankness; by no means, and I would not do the State of Arizona, were I cognizant of the fact, a particle of injustice in relation to the division of water, or in any other thing, so far as that is concerned. I would be delighted to unite in anything that means well for the State of Arizona, and in this instance I am insisting that the State of Arizona neither needs nor requires nor can use the water that it says it desires, and that that water already is under appropriation by various individuals and organizations in the State of California.

The appropriations to which I have adverted are in good standing, and the water requirement indicated is the minimum requirement for lands of known feasibility. They equal a total of 4,508,700 acre-feet per year for use in California. These appropriations are ahead of nearly all of the appropriations on the river, and there is no doubt about their validity and standing.

Under Senate Document 142, Sixty-seventh Congress, second session, under the all-American canal, within the area for which the Imperial appropriation was made, may be added 97,000 acres of what is classed as "doubtful feasibility" land. This doubtful land consists of land that is rough, either cut up by washes, or covered by hummocks. Those of us who have watched developments in Imperial Valley know that some of our finest land there was the last to be reclaimed, on account of the difficulty of leveling the same. We, therefore, have every confidence that much, if not all, of this doubtful land will be reclaimed. It is all under the Imperial Valley appropriation, and would add 416,800 acre-feet per year to the Imperial Valley rights or requirements.

It will be borne in mind, please, that we have been speaking only of lands for which appropriations have long since been made, with the appropriation for domestic use.

I presume that Senators who are not familiar with western law will understand that when an appropriation like 1896 is made from the Colorado River by a particular organization, district, individual, or the like, for the irrigation of a certain territory, if that water is put to beneficial use with reasonable diligence the amount may continue to be withdrawn for the irrigation or the use of all the land that has been included in the original filing. Thus it occurs that a filing like that of the Imperial Valley made in 1896, covering a certain prescribed territory used constantly and yearly and continuously for beneficial purposes in that territory, may continue to increase the amount of water to which legally Imperial Valley may be entitled and the increased use will constitute a perfected right.

Mr. HAYDEN. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Arizona?

Mr. JOHNSON. I yield.

Mr. HAYDEN. Can the Senator tell me how many acres are now being irrigated in Imperial Valley?

Mr. JOHNSON. Approximately 400,000.

Mr. HAYDEN. The district comprises a larger area?

Mr. JOHNSON. Very much larger.

Mr. HAYDEN. I understood the Senator to say 476,000 acres.

Mr. JOHNSON. The Senator may be right. Under the appropriation the canals constructed and now in use provide for about 515,000 acres.

Mr. HAYDEN. The reason why less than the total area under the canal is irrigated is, as I understand it, because with

the present unregulated flow of the river there is not water enough to irrigate those lands.

Mr. JOHNSON. That is true in large measure.

Mr. HAYDEN. So that it could not be reasonably expected that there would be any material increase in the area of land irrigated within the present limits of the Imperial irrigation district unless Boulder Canyon Dam were built.

Mr. JOHNSON. To a large extent that is true.

Mr. HAYDEN. So that whatever these water rights may be, although they may date back to 1896, there is no way in which the water to supply those lands can be obtained except by the construction of Boulder Canyon Dam.

Mr. JOHNSON. Adequate water, I will say. I think that is quite so. There are constant accretions and constantly new land, as the Senator knows, is being put under irrigation, but to take a large area I think we would need the storage capacity in order to accomplish the desired results.

Mr. HAYDEN. Warning in that respect has come to the farmers of Imperial Valley on more than one occasion, because they have suffered a shortage of water and have lost large sums in perishable crops.

Mr. JOHNSON. Quite so. In one year there was a drought, which, I think, caused a loss of $5,000,000.

Mr. HAYDEN. I am merely bringing out the fact to illustrate that however far back this water right may date—and it may go back to 1896, indeed—it is not a perfected water right in the sense that it supplies all the water necessary for the irrigation of the land in the Imperial Valley and that something must be done to perfect it, to wit, secure appropriations from Congress, build a dam and impound the water. It is the contention of the people of Arizona that under those circumstances it shall not be urged that the maximum amount applied for in 1896, which can not be obtained from the river's natural state, is the limit of California's water right.

Mr. JOHNSON. That is a very natural contention, too. I am not going to quarrel with the Senator about his contention in that regard. In fact, I would rather not quarrel with him at all. But the difficulty is that I think he makes it necessary. He thinks I make it necessary, and so there we are.

It will be borne in mind that we have been discussing only the lands for which appropriations have long since been made, together with the appropriation for domestic use. This, by no means, comprises the land susceptible of irrigation in California. To those amounts will be added all of the lands in the Coachilla Valley, of which 72,000 acres will be irrigated on the all-American canal by gravity, 18,000 acres in the Palo Verde Mesa, 44,000 acres in the Chucawala, besides many thousand acres in scattering tracts.

Mr. SHEPPARD. Mr. President, will the Senator tell us, if he can, how much land in Mexico is irrigated by water from the Colorado River?

Mr. JOHNSON. My information is that it is a little over 200,000 acres.

Mr. SHEPPARD. At present?

Mr. JOHNSON. Yes; and they are feverishly using water down there in order to get such rights as they think they may obtain.

Mr. BRATTON. Mr. President, will the Senator yield?

Mr. JOHNSON. Certainly.

Mr. BRATTON. Will the Senator tell us how rapidly the irrigated area in Mexico is being increased?

Mr. JOHNSON. Infinitely more rapidly than the irrigated area in the United States, but I have the tables, and I will submit them later, showing by years just how much has been the increase in our country and how much in Mexico; but it is proceeding more rapidly in Mexico.

Mr. BRATTON. I think the Senator from California and I are in accord that this is one of the dangers confronting all of us in the Colorado River Basin. It is one of the urgent reasons why we should put forward serious efforts to solve the problem now.

Mr. JOHNSON. The Senator is entirely right. It is a terrible situation that confronts us. It is an intolerable situation that confronts us. To solve that situation we have provided in the bill for the all-American canal. The unfortunate part of it is that in yielding to the insistence of my brethren upon the committee we have made that canal payable out of the lands that shall be benefited by it, which are already overcharged and overburdened. The landowners think they can do it; but, of course, before they can undertake it it has to be submitted at an election and they have to agree to undertake that additional expense. The all-American canal, it is hoped and believed, will solve this intolerable Mexican situation and enable us to control the waters of the Colorado for the United States without, indeed, doing injustice to Mexico.

Mr. BRATTON. May I say that the seven States as among themselves have different problems. We in the upper basin have a common interest in preserving the title to the water allocated to us under the Colorado River compact. The States in the lower basin have a common interest in using beneficially the water that is allocated to them under the compact. But we all have a common interest in protecting and preserving for the United States a heritage which belongs to us not to permit, through acquiescence and inactivity, another people to acquire a prior right to that which naturally belongs to us. In that regard we are all commonly situated and should unite our efforts. To me that is one of the grave dangers lurking in the whole problem which should concern all of us.

Mr. JOHNSON. I quite agree with the Senator. One of the unfortunate things that we did in the committee, concerning which I do not complain and by which I stand, was to charge this all-American canal to the reclaimed lands and therefore make much more difficult its construction than if the United States Government, dealing with an international situation and an intolerable one, had taken hold of it and built it itself.

Mr. BRATTON. Personally I have no criticism to make of those people south of the international border if they go forward and outstrip us and acquire prior equitable rights to the water. If we permit them to continue doing so we should criticize ourselves. To me it is one feature of the situation that should be persuasive to all of us in the basin to compose our differences and legislate upon the question in our common interest and defense as early as possible.

Mr. JOHNSON. I quite agree with the Senator.

Mr. SHEPPARD. Mr. President, may I ask the Senator another question?

Mr. JOHNSON. Certainly.

Mr. SHEPPARD. Will the tables which the Senator will place in the RECORD show how much land can possibly be irrigated in Mexico from the Colorado River?

Mr. JOHNSON. The tables do not show it. My recollection is that the testimony given before our committee was that there were over 400,000 acres of land immediately contiguous to the Imperial Valley susceptible at once of reclamation. I ask the senior Senator from Arizona if that is not what was testified?

Mr. ASHURST. Mr. President, I think the Senator is substantially correct in his statement that that was testified before the committee.

Mr. SHEPPARD. That is, in Mexico?

Mr. JOHNSON. Yes. In 1926 the total irrigated acreage in Mexico was 217,000 acres.

The peculiar situation that confronts us, of course, in Imperial Valley is so well known that I do not wish to take time in detailing it again; but it is a situation that cries to high heaven for relief just exactly as the Senator from New Mexico has said. What a horrid thing it is that our people in Arizona, our people in California, and the people in territory adjacent to both, who are seeking to do the best that can be done in life and to follow that which has been their vocation during all the time that they have been upon this earth, are placed in such a position. What a shame it is that there are others who go over the American line and buy tracts equaling 850,000 acres of land and while appropriating water which is the water of an American river flowing through the United States of America seek to impede or defeat legislation of this character. We seek by the all-American canal to remedy that situation and to make a canal that will be all in the United States and control the water that hereafter shall go to Mexico.

In saying this I do not want to be misunderstood, and I do not want to be put in the position of denying that which any Mexican landowner may be entitled to by virtue of law, even by virtue of morals. But I do say that such a bill as this presents a policy we all ought to uphold, and that we ought to end forthwith the policy of permitting American water to go over onto Mexican soil, so that whenever there is an acre irrigated there there is an acre of land denied that irrigation in the United States of America. It is, from the American standpoint, a situation with which we ought not to dally or delay and which we should be swift to remedy.

In the case of Winters *v.* United States (207 U. S. 564) it appears that an appropriation for the use of Indian lands is unnecessary, and that the United States will take the water where it finds it for the purpose of serving those Indian lands. There are about 15,000 acres of such land in California, which would add about 66,000 acre-feet to the water rights. In other words, California has a vested water right which can not be taken away to the amount of 5,091,500 acre-feet per year. This includes the Indian land and the so-called doubtful land, but

does not include many thousands of acres of irrigable land for which no appropriation has so far been made.

Mr. ASHURST. Mr. President, from what is the Senator from California reading?

Mr. JOHNSON. I am reading from notes of my own.

Mr. ASHURST. I beg the Senator's pardon.

Mr. JOHNSON. When I say "notes of my own," I might qualify that by saying notes of my own that have been thoroughly checked by certain gentlemen who are familiar with the situation.

This amount of 5,091,500 acre-feet per year is for actual use based upon water duty of 4.4 acre-feet per year as found by the Bureau of Reclamation to be necessary and set out in Senate Document 142. This does not include any waste. In a recent study by the Geological Survey of Salton Sea and its relation to use of water in Imperial Valley they found that 1.5 acre-feet per year is a reasonable amount of waste for ordinary maintenance purposes. This is approximately the amount that has heretofore been wasted. If that is a reasonable waste, then Imperial Valley appropriation would include 918,000 acre-feet per year for that purpose, or making a total aggregate now appropriated and with rights fully established to 6,009,500 acre-feet per year.

On the Arizona side we find approximately 135,500 acres of Indian land, a considerable portion of which is irrigable. The exact amount we do not know, so for the sake of fairness we class it all as irrigable. The only other appropriation is the Yuma, made in 1906, total area of 120,000 acres. While much of that will never be irrigated, for sake of fairness we will class that as irrigable land. With these assumptions, we find vested rights in Arizona to the amount of 922,500 acre-feet per year.

When California offered to make a compact on a basis of 4,600,000 acre-feet per year plus one-half of the surplus excess and allocated water, it was well recognized that California would be perhaps one and one-half million acre-feet short of its requirements unless a large amount of the surplus water should be available. In other words, California was willing to take a chance on obtaining surplus water and on the further chance that Arizona would not use the water allocated to her. She would, indeed, be surrendering established rights and substituting therefor simply a chance to obtain water.

In making the studies at Denver for the purpose of ascertaining the requirements in Arizona and California domestic water for the coastal cities was not considered at all. These studies were placed only upon irrigation requirements.

On a basis of supplying water to the two States by gravity, plus a pump lift of 50 feet, it was found that California had 944,300 acres and Arizona had 334,300 acres or of the total in both States, California has 73.8 per cent of the land and Arizona has 26.2 per cent of the land.

On a basis of supplying the lands in the two States by gravity, plus a pump lift up to and including 150 feet, it was found that California has 1,171,650 acres and Arizona has 463,000 acres, or of the total lands in the two States under a 150 foot pump lift, California has 71.7 per cent and Arizona has 28.3 per cent.

At Denver, California made the lowest offer she could make. Arizona made an offer of dividing the main stream equally between the two States and the upper basin governors, in effect, split the difference. There was no reason given for the figures used by the governors. If the water were divided on an economic basis, then California should have about three-fourths of the water of the main stream and Arizona about one-fourth. In other words, on an equitable basis of supplying the lands, California should have 71.7 per cent of water, but the proposal of the upper basin is to give California 58 per cent of the water.

There is another very interesting thing in that regard that must be taken into consideration, and that is the question in regard to tributaries. Far be it from me to advocate taking from them any water that Arizona might wish to use, but the tributaries of the Colorado River are in reality a part of the main stream, and in every computation that Arizona has made concerning her water demands from the Colorado River the tributaries she omits. When Arizona says, "Let us divide the water of the main stream that is remaining," when she has but a small acreage that really could be subjected to irrigation under that main stream, while half of the water would not be sufficient to irrigate the land actually under irrigation in California, it may sound like a fair proposition, because it would look as if Arizona might be accorded as much water under the circumstances as California.

Mr. HAYDEN. If I may interrupt the Senator, do I understand him to say that half of the water in the main stream would not be sufficient to irrigate the lands actually under irrigation in California?

Mr. JOHNSON. It would not be sufficient to supply the rights that now exist.

In the discussions relating to the use of water in California, in Denver, and, indeed, here and elsewhere, it is only the main stream, Senators will recall, that has been discussed. The tributaries of the Colorado River in Arizona have a flow of at least 3,500,000 acre-feet. Arizona has claimed in writing on some occasions that it amounts to as much as 6,000,000 acre-feet. So when it is proposed that California take 4,200,000 acre-feet and Arizona 3,000,000 acre-feet, plus one-half in each instance of the surplus water, it means in reality that California shall be accorded 4,200,000 acre-feet, plus one-half of the surplus water, and that at least 6,500,000 acre-feet, plus one-half of the surplus water, shall go to Arizona.

Mr. HAYDEN. Mr. President, will the Senator yield to me for a moment?

Mr. JOHNSON. I yield.

Mr. HAYDEN. Does the Senator contend that the State of California now possesses the right to use any of the water of the tributaries of the Colorado in the State of Arizona?

Mr. JOHNSON. As to the Gila, which is one of the main tributaries, I think there may be a very grave question, but I am speaking now of the waters of the Colorado. You may make the argument, if you please, that the tributaries which are all in Arizona belong to Arizona, and that may be a legitimate argument, though not entirely sound, but when you begin to think of the waters of the Colorado and take into consideration all of the waters of the Colorado you must consider the tributaries as well as the main stream, and that is exactly what I am doing.

Arizona endeavors to make it appear that she has been abundantly fair in dividing the waters of the river, but considering the figures of the division in the manner that I have just indicated it is anything but fair, and when you consider as well the perfected rights and the actual lands irrigated in the State of California as compared with those in Arizona it is less than equitable in any aspect.

Now, as a matter of fact, the Imperial Valley's diversion is below the Gila, and the Imperial Valley's appropriation covers the Gila water very likely, and is very likely senior to Arizona uses. To divide the main stream, 4,600,000 acre-feet to California and 2,600,000 acre-feet to Arizona, still gives Arizona more than 60 per cent of the water from the Colorado River or nearly two-thirds thereof.

So much for that, sir. On the question of water I have before me the studies of the State engineer of the State of Nevada. I do not wish to indulge in the reading of the tables concerning the lands that are now under irrigation and those which are susceptible of irrigation, but I do wish to put them in the RECORD, because they demonstrate conclusively, I think, that the water for which Arizona now asks, if accorded her, can not be used by Arizona at all. These figures are made not by a Californian; they have come to me only incidentally; they are made by a disinterested individual, the State engineer of the State of Nevada, Mr. George W. Malone. I ask permission, without reading, to put in the RECORD three of the tables that are here before me in respect of water.

Mr. HAYDEN. Mr. President, has the Senator had an opportunity to examine the study of the same situation made by the State engineer of the State of Utah?

Mr. JOHNSON. I have not; I am not familiar with it.

Mr. ODDIE. Mr. President——

Mr. JOHNSON. Mr. President, have I been given permission to put the tables to which I have referred in the RECORD?

The PRESIDING OFFICER. Without objection, permission is granted.

The tables referred to are as follows:

TABLE 10.—*Most feasible projects in California and Arizona*

[Net for United States irrigation use required for projects under way and projects not under way but of most feasible character]

Project	Arizona	Area		Water	
		California	Arizona	California	Total
Bullshead	500		1,500		1,500
Hardyville	2,300		6,900		6,900
Mohave Valley	24,000		72,000		72,000
Parker Valley [1]	110,000		330,000		330,000
Palo Verde		79,000		237,000	237,000
Yuma	93,000	15,000	396,000	63,750	459,750
Imperial Valley [2]		685,000		3,014,000	3,014,000
Coachella Valley [3]		72,000		306,000	306,000
Total	229,800	851,000	806,400	3,620,750	4,427,150

[1] Indian project.
[2] All-American, with Coachella Valley pumping area and West Side Mesa omitted.
[3] Coachella Valley, 72,000 acres, includes only gravity loads according to later surveys information furnished by Imperial Irrigation District.

NOTE.—Nevada's gravity lands, 11,000 acres—46,750 acre-feet.

TABLE 15.—*Colorado River projects below Boulder Canyon Reservoir*

Project and tract	Average pumping lift	Irrigation area	Acre-feet acreage	Total acre-feet	Arizona		California	
					Irrigation area	Consumptive use	Irrigation area	Consumptive use
	Feet							
Bullshead to Mohave Valley	80	9,000	3	27,000	9,000	27,000		
Mohave Valley	None.	25,000	3	75,000	24,000	72,000	1,000	3,000
Parker Reservation	None.	104,000	3	312,000	104,000	312,000		
Parker-Gila Valley project:								
Parker Valley	None.	12,000	3	36,000	12,000	36,000		
Blythe area	None.	50,000	3	150,000			50,000	150,000
Palo Verde Mesa	None.	12,000	3	36,000			12,000	36,000
Do	90	43,000	3	129,000			43,000	129,000
Chucawalla Valley	90	136,000	4.35	592,000			136,000	592,000
Gila Valley	235	632,000	3	1,896,000	632,000	1,896,000		
Palo Verde Valley	None.	79,000	3	237,000			79,000	237,000
Cibola Valley	None.	16,000	3	48,000	16,000	48,000		
Miscellaneous tracts	25	3,000	3	9,000	2,000	6,000	1,000	3,000
Yuma project (Valley)	None.	64,000	3	192,000	48,000	144,000	16,000	48,000
Yuma project (Mesa)	72	44,000	3	132,000	44,000	132,000		
Imperial irrigation district [1]	None.	515,000	4.35	2,240,000			515,000	2,240,000
All-American canal	None.	211,000	4.35	918,000			211,000	918,000
Do	80	59,000	4.35	257,000			59,000	257,000
City of Los Angeles				1,000,000				1,000,000
Total		2,014,000		8,286,000	891,000	2,673,000	1,123,000	5,613,000

[1] According to later surveys, by Imperial Valley, additional California lands: West side, 10,000 acres; West Mesa, 23,000 acres.

NOTE.—Nevada lands available for irrigation:

	Acres	Acre-feet
Gravity	11,000	46,750
Pump	69,000	293,250
Total	80,000	340,000

TABLE 16.—*Most feasible acreage*

State	Acres	Acre-feet
California	851,000	[illegible], 620, 750
Arizona	229,800	806,400
Nevada	15,000	63,730
Total	1,095,800	4,490,880

TABLE 17.—*Total irrigable acreage*

State	Acres	Acre-feet
California	1,123,000	[1] 5,613,000
Arizona	891,000	2,673,000
Nevada	80,000	340,000
Total	2,094,000	8,626,000

Includes 1,000,000 acre-feet domestic water.

Mr. ODDIE. Mr. President, will the Senator yield?

Mr. JOHNSON. I yield to the Senator from Nevada.

Mr. ODDIE. I should like to call the attention of the Senator from California to the fact that on May 29 of last year I put some very valuable data prepared by Mr. George W. Malone in the RECORD. I will add that he is chairman of the Association of State Engineers in the Western States and is a particularly able man. Before this discussion shall have ended I expect to put some more data of his in the RECORD which have recently been gotten together and which I consider will be particularly helpful in the consideration of the pending legislation.

Mr. BRATTON. Mr. President, will the Senator from California yield to me for a question?

Mr. JOHNSON. Certainly.

Mr. BRATTON. Does the engineer of the State of Nevada give the acreage under actual irrigation in the upper basin States and the acreage susceptible of irrigation in those States?

Mr. JOHNSON. No; the comparison is between Arizona and California.

Mr. BRATTON. Entirely?

Mr. JOHNSON. Yes; the upper basin States are not touched at all.

Mr. President, there is only one other thing to which I wish to devote a moment or two. Yesterday some question was raised concerning the amendment which was inserted in the Senate bill by which an option was given to the Government of the United States, in case the Government deemed it essential, to erect a generating plant at Boulder Dam. I stated the genesis of that amendment then, and I stated it accurately. I have somewhere before me here—and I shall obtain it in order that it may be read—various communications in regard to that amendment which passed between the Committee on Irrigation and Reclamation and the Secretary of the Interior.

It was the Secretary of the Interior, I insist again—and I can not iterate and reiterate it too often—under the present administration that inserted in this bill the provision regarding the right of the United States Government to build a generating plant at Boulder Dam. When, sir, a certain part of the press of this land assailed this bill, when certain aggregations of wealth in the city of Washington are attacking it in every conceivable fashion, and when there are others who, representing interests outside of this Chamber, endeavor to put upon those who sponsor this bill what they deem the stigma of Government ownership, I beg you, sir, and I beg the Members of this body to remember that the man who put in this bill the amendment by which the Government was accorded the right to build a generating plant at Boulder Dam was the Secretary of the Interior under the President of the United States, and that this bill with this amendment represents the attitude of the present administration of the Government of the United States in that regard.

To me, sir, it is a compliment rather than the reverse for some one to assail me for a desire to give unto people who require it one of the necessities of life, or even one of the comforts of life, by virtue of governmental activity. But in this instance, sir, even though I gladly plead guilty to the fault, the fault is not mine. The fault, sir, is that of the present Republican administration of the United States of America; and it is upon this bill, sir—this bill, with this option to the Government of the United States to erect this generating plant—it is this bill, sir, which is approved by the present President of the United States and the gentleman who has been elected by the people of this country to be the next President of the United States.

So, sir, when I am assailed, or those who stand with me are assailed, because it is insisted that we enter a realm that is forbidden by a great power trust, let me recall to you, sir, that we do not enter this realm ourselves of our own volition. We but follow Mr. Calvin Coolidge, the President of the United States, and Mr. Herbert Hoover, who has just been elected President of the United States; and when any gentlemen in this Chamber, as some of them do—absent now, perhaps—assail the activities in this respect that are ours, they are assailing not the authors of this bill nor its sponsors, not the gentlemen who are a part of it over on the other side of this Chamber; they are assailing the present administration of the Government of this country, and the administration that will assume its government on the 4th day of March next. Keep that in mind,

please; keep it in mind in the days to come, because the Government itself insisted that we insert this optional clause in this bill, and at the Government's instance it was so done.

Secretary Work, in writing to the Senator from Oregon [Mr. McNARY], the chairman of this committee, so distinctly demanded, and in writing to the chairman of the committee in the House likewise so demanded; and the bill which before that time, sir, had no such optional clause was amended to meet the requirements of the present administration concerning that very matter.

Now, of course, yesterday and day before, with an innocent expression that did him infinite credit, and that made us all wish to put around him the protecting arm of this great body, our friend from Arizona said that he was seeking, by prohibiting the Government of the United States from ever erecting a generating plant, to carry into effect the wishes of the President of the United States in his last message. What a charming thing for the Senator from Arizona to do. He stands here, sir, like a lion in the path, standing here in behalf of the present President of the United States and the President that is yet to be, and asking that the bill be amended only so that he might conform to the wishes of the President of the United States; and then subsequently, the innocent expression vanishing for the moment from his very comely countenance, in a very few moments our friend naively said, "Well, I wish to have private enterprise erect these plants, in order that Arizona may get some taxes out of the plants that are thus erected by private enterprise."

So take which you wish of the sides he presents. He is acting for the President of the United States in endeavoring to preserve intact and unsullied the favorite policy that now obtains with some gentlemen or he is acting for the purpose of obtaining a little more revenue for the State of Arizona by private power interests erecting, in opposition to the wishes of this administration, private power-generating plants at Boulder Dam.

Mr. President, I ask leave to insert in the RECORD, so that they may be with my remarks, the letters of the Secretary of the Interior relating to the particular subject matter to which I have adverted.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON subsequently said: Mr. President, I have found some of the letters of Secretary Work, and I should like to read into the RECORD a paragraph from one of them. This is a letter of January 12, 1926:

> The building of a unified power plant by the Federal Government in the place of allocating power privileges, as proposed in the bill, is regarded as more efficient and cheaper. It will obviate controversies between applicants and long delays in their adjustment. In the end the results will, I believe, be superior to those possible under an allocation of privileges. The area for the location of separate power sites is restricted. Allotments would not be equal in value. Some allottees would, therefore, have an advantage over others. It would result in the creation of operation and administration controversies to be avoided, and which a unified development will avert.

Mr. HAYDEN. Mr. President, in connection with the assertion that an appropriation of water for domestic purposes has been perfected by the city of Los Angeles, I desire to read extracts from certain documents that have been printed in support of the Swing-Johnson bill.

Many Senators have all observed in one of the entrances to the Senate Office Building a contour relief map which represents the situation in the vicinity of Boulder Dam, and thence on down the Colorado River. I saw that map for the first time last summer at an exposition in Long Beach, Calif. At that time there was handed to me, by a gentleman who was explaining the nature of the map, a pamphlet entitled "Boulder Dam Legislation," and in it I find these words:

> DOMESTIC WATER SUPPLY
>
> The water supply of Los Angeles and more than 30 other cities, with populations from 1,000 to over 1,300,000, is limited, and their future growth and development demands a new source of supply. No other than the Colorado exists! These cities are overdrawing the underground natural reservoirs of the region and immediate start of construction is necessary. If the water that is now wasted into the ocean is not held back by Boulder Dam—

I repeat those words:

> If the water that is now wasted into the ocean is not held back by Boulder Dam for domestic uses of our cities, they must stop growing and get along on an insufficient water supply.

Thus, the literature issued by the proponents of this legislation proves upon its face that the so-called appropriation of water for domestic use to which the senior Senator from California has referred is utterly vain and useless unless the Boulder Dam is built.

The Boulder Dam is to be constructed by appropriations out of the Treasury of the United States. It will be the property of all of the people of the United States. It is not to be built primarily to care for the citizens of southern California who may need a domestic water supply. For that reason, it appeals to us in Arizona that our State has just as much interest in that dam as the State of California. Arizona stands in the Union upon an equality with that State. We suffer no disability as a State in the Union as compared with the State of California. Under such circumstances, it seems to me that it is a very far-fetched statement to say that citizens of Los Angeles, represented by their authorities who have made a water filing on the Colorado River, have a vested right to the water of that stream which their own publications admit they could never obtain unless this great dam were built.

The document continues:

> Southern California cities are willing to pay for the cost of an aqueduct from the Colorado River, and have already voted $2,000,000 of bonds for that purpose for preliminary surveys and investigations. One million dollars has already been spent and the project has been found feasible and financially sound, and as soon as Congress authorizes the construction of Boulder Dam, to provide the water, and the power to pump it, $150,000,000 more will be spent on the aqueduct by the cities.

As soon as Congress authorizes the construction of Boulder Dam, to provide the water, and the power to pump it!

It seems to me that in no court could it be held that the kind of an alleged appropriation of water which the senior Senator from California has referred to—an appropriation of 1,095,000 acre-feet of water out of the Colorado River—would be considered a valid appropriation if it were dependent entirely upon the action of the Congress of the United States in building the dam to provide the water. The statement that I have read to you admits that the water does not now exist in the Colorado River to supply that appropriation.

I have here a more recent piece of propaganda issued by the proponents of this bill. Every Member of the Senate within the last few days has received a copy of this new argument in favor of the passage of the Swing-Johnson bill. From this document, entitled "The River of Destiny: The Story of the Colorado River," issued by the department of water and power of the city of Los Angeles, the author being Don J. Kinsey, I read:

> So rapid, in fact, has been the development of these great centers of population that we now find many of southern California's cities outgrowing their local water supplies. If they are to continue their expansion in the future, they must secure at once additional water to support the endless stream of home seekers moving westward.
>
> * * * * * * *
>
> As planned by Mulholland, the Colorado River Aqueduct will be by far the largest domestic water-supply system in the world. It will be 260 miles long and will be capable of delivering 1,000,000,000 gallons of water a day to the cities of southern California—enough to meet the domestic and industrial needs of 7,500,000 people.
>
> Construction of the Colorado River Aqueduct is to be financed directly by the cities benefited. It is not included in the river development work provided for in the Boulder Canyon project. Nevertheless, the building of Boulder Dam is a vital necessity so far as the aqueduct is concerned.

If I understood the senior Senator from California, he claims, as the reason why the State of California should have allotted to it 4,600,000 acre-feet of water in any division of water between the States of the lower basin, that there is now in existence a perfected, valid water right for 1,095,000 acre-feet of water, to be used for domestic purposes in the city of Los Angeles. Yet here again, in a pamphlet issued by the department of water and power of that city, it is freely confessed that the water could never be obtained from the Colorado River unless the Federal Government shall make the expenditures for the building of the Boulder Canyon Dam that are provided for in this bill. I again say that this is proof which clearly demonstrates that the city does not possess a perfected water right which could be sustained in any court as valid. And the evidence to sustain what I have said comes from the Los Angeles department of water and power, which probably made the very filing upon which the Senator from California relies.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator a question?

Mr. HAYDEN. I yield to the Senator.

Mr. SHORTRIDGE. Is it the Senator's contention as a matter of law that the water rights of California are perfected or not? Is it his contention that they are not perfected rights?

Mr. HAYDEN. I do not contend that there are no such rights in California. There are perfected water rights in California, but this is not one of them.

Mr. SHORTRIDGE. If they be perfected—and I have reference, of course, to the rights involved in this discussion—is it contended that the Congress can divest the State or its people of those rights?

Mr. HAYDEN. I insist that the Congress of the United States, in building the proposed Boulder Dam, should do so with a thorough understanding that the Secretary of the Interior will impound water that is now unappropriated and goes waste to the sea, and that therefore the Federal Government will have complete jurisdiction over the stored water. The Secretary of the Interior will be under no obligation to anyone, so far as that water is concerned, to deliver it to one person as against another, upon the basis of some alleged filing made years ago.

I shall place in the RECORD more than one statement from California sources to fully demonstrate that this alleged appropriation of water for domestic use does not consist of a perfected right. I read now from a pamphlet issued by the proponents of the Swing-Johnson bill during the last session of Congress, entitled "Boulder Canyon Project: Excerpts from Hearings Before the Committees on Irrigation and Reclamation of the Senate and House of Representatives." Here is a quotation from the testimony of Mr. Mulholland, the chief engineer of the city of Los Angeles. The heading is Any Plan for the Development of the River Must Include the Desilting of the Water. Mr. Mulholland's statement is as follows:

> One of the points in favor of the Boulder Canyon and in favor of our enterprise is this: That river has got to be desilted. The silt is the main cause of the trouble in the shifting qualities of this river. The water itself is a very important thing, * * * but the silt causes the trouble.
>
> A dam at Boulder Canyon would bring it down below the last muddy tributary that has any permanence. The Virgin River is the last one. As you go below that you get nothing but summer flashes of cloudbursts and torrents that are very fleeting things. They carry nothing into the river but very coarse material—gravel and bowlders and things of that kind—and would have no effect for any length of time.

This is from the testimony of Mr. Davis, at one time chief engineer of the United States Reclamation Service:

> One of the important functions to be fulfilled by a reservoir is the desilting of the river to relieve the heavy expense of cleaning irrigation canals, and especially to fit the water for domestic use, for which it will soon be required by the cities of southern California.

I read that testimony, Mr. President, to point out that if the Boulder Canyon Dam were not built, and if the filing made by the city of Los Angeles were a perfected water right, the water would have to be obtained from the Colorado River at a time when that stream is in flood, and carries tremendous quantities of silt. The effect would be that instead of pumping out clear water from the Colorado River to deliver to the municipalities in California, large quantities of silt would be pumped into the conduits. To avoid that it would cost a very large sum of money to desilt the water and make it available for use by the people within those cities.

Therefore, the Federal Government will perform two services to the cities of southern California which are essential to the success of their enterprise in conveying water from the Colorado River over the mountains to those cities. First, impound the water and make it available. Second, the impounded water will be cleared of its burden of silt as it leaves the reservoir. So that the domestic water-supply scheme, for which this filing was made, will not be a success unless the Boulder Dam is built.

Mr. SHORTRIDGE. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. SHORTRIDGE. Assuming all that to be true, is that any reason why this bill should not pass?

Mr. HAYDEN. It is a reason why the State of California should not make an exaggerated claim to perfected water rights as a basis for demanding a larger share of the water allocated by the Colorado River compact to the lower basin.

Mr. SHORTRIDGE. May I suggest to the learned Senator that if his argument be true that certain of these claims to perfected water rights are not valid, would not the misfortune fall upon California? And if that be so, why should it disturb the Senator or the Congress?

Mr. HAYDEN. It would not disturb the Senator from Arizona, and it would not disturb the Congress, but for the fact that there is pending as an amendment to this bill a provision which in fact allows the State of California to obtain 4,600,000 acre-feet of water out of the Colorado River, out of the main stream. The people of Arizona feel, and justly so, that that is a larger quantity of water than the State of California is entitled to receive.

If the Senate were merely considering a division of water of the Colorado River, based upon the needs of the lands that were to be irrigated in Arizona and California, there would be but little difficulty, but, superimposed upon the irrigation needs of California is a new demand, to wit, for 1,095,000 acre-feet of water for domestic purposes. In order to meet that demand it is essential that some land which would otherwise be farmed and made fruitful, which would be reclaimed by irrigation to become the homes of happy and contented people, either in Arizona or in California, for the land exists in both States, must be condemned forever to remain a desert, in order that the city of Los Angeles and the other municipalities of southern California may have water for domestic purposes.

We in Arizona say we have no objection whatever to granting all the water that the city of Los Angeles and the other municipalities in California need so long as it comes out of the quantity of water apportioned to the State of California. If it is necessary to deprive lands of water that would otherwise be irrigated in order to supply water for domestic needs, that land should be located in the State of California and not in the State of Arizona.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator another question?

Mr. HAYDEN. I yield.

Mr. SHORTRIDGE. It is not my custom frequently to interrupt Senators when they are making forceful addresses, but does the Senator have a fear that Arizona will be deprived of any necessary water for irrigation or for domestic purposes, in view of the topographical, physical situation of things? Does the Senator have a present fear that his great State will ever suffer because of the assertion of rights on the part of California to certain waters from that great stream?

Mr. HAYDEN. I do possess that fear, and that is exactly why I am objecting to the passage of this bill in the form in which it is reported to the Senate. What the bill does is to give to the State of California, by allocating to that State 4,600,000 acre-feet of water, a quantity of water sufficient to irrigate all of the lands susceptible of irrigation in that State from the Colorado River and on top of that supply more than a million acre-feet of water for domestic use. To do that it will be necessary that lands in Arizona which otherwise would be irrigated shall remain a desert.

Mr. SHORTRIDGE. I assumed the Senator took that position; but where are these lands in his great State that are susceptible of profitable reclamation? Where are they?

Mr. HAYDEN. They are located adjacent to the Colorado River.

Mr. SHORTRIDGE. Where, if the Senator will be good enough to be a little more specific?

Mr. HAYDEN. Principally in Yuma County, Ariz. The proposed diversion from the Colorado River below Boulder Canyon, as far as Arizona is concerned, would be at or in the vicinity of Parker, on the Colorado River Indian Reservation. Within that reservation itself there are more than 100,000 acres of land capable of irrigation with comparatively slight expense.

Mr. SHORTRIDGE. Around about Parker?

Mr. HAYDEN. That would be the commencement of a large irrigation project in Arizona.

Mr. SHORTRIDGE. Pardon me, and I will not interrupt much more. Do I understand the Senator to claim that it would be feasible and economic, from an engineering and practical business standpoint, to divert water from the Colorado River for irrigation of lands around about Parker, Ariz.?

Mr. HAYDEN. I so assert, and base that statement upon a very careful engineering investigation that was made by a bureau of the Department of the Interior, which I have had an opportunity to examine; and I believe it represents a feasible scheme of reclamation.

Mr. SHORTRIDGE. And there are other lands in the State——

Mr. HAYDEN. Vast areas of excellent land crossed by a transcontinental railroad—the Southern Pacific—lands not alkaline in character, lands well drained, lands with a wonderful winter climate, lands that will produce lettuce and winter vegetables, lands that will produce citrus fruits, lands

that will produce every crop that can be produced in the Imperial Valley.

Mr. SHORTRIDGE. In order to bring about that situation in that section of the State just mentioned, has not Arizona contended that the dam would have to be erected above the Grand Canyon?

Mr. HAYDEN. That is not at all necessary.

Mr. SHORTRIDGE. I have heard such a contention made here repeatedly.

Mr. HAYDEN. There have been various suggestions of that kind, but I am speaking solely of lands feasible of irrigation within the State of Arizona below the Boulder Canyon Dam, lands that would be irrigated with water impounded in the Boulder Canyon Reservoir. I say that if all of the demands of the State of California are granted with respect to the quantity of water which that State shall receive from the Colorado River, the inevitable result will be that lands below the Boulder Canyon Dam, lands susceptible of irrigation from that reservoir within the State of Arizona, will be prevented from becoming reclaimed.

Mr. SHORTRIDGE. Finally, referring to a point which was brought up, if these "perfected water rights," asserted by California, are invalid, as the Senator from Arizona contends, can not the fact of their invalidity be hereafter determined, and hence the danger which the Senator thinks overhangs his State be removed?

Mr. HAYDEN. The danger that overhangs my State is not that these alleged water rights will ever be validated by any court. It is that they are now being used as an argument for granting, under the terms of the bill, a larger quantity of water to the State of California than that State is entitled to receive.

If I may be permitted, I want to follow up the evidence from California sources, which I am placing in the RECORD to show that the claim that the city of Los Angeles has a perfected right to water is not well founded. I read now from another pamphlet issued by the proponents of this legislation, entitled "The Federal Government's Colorado River Project," issued by the Boulder Dam Association of Los Angeles, Calif. On page 19 we find, under the heading Domestic Water Supply, the following:

> Cities in Los Angeles, San Bernardino, Riverside, Orange, and San Diego Counties, in southern California, owing to a very large and rapid increase in population, are feeling the necessity of seeking additional water supplies for the domestic needs of their inhabitants. Investigations have shown that about 1,500 second-feet or about 1,000,000 acre-feet per annum of water will be required for these communities and that the only possible source is the Colorado River. Among these cities is Los Angeles, having a population of more than 1,000,000. The people of that city have already authorized a bond issue of $2,000,000 for preliminary investigation and construction.
>
> In order to carry through this great water project, it is proposed to incorporate the interested cities and communities into a municipal district and to build an aqueduct 260 miles in length, tapping the river at some convenient point below Black Canyon.
>
> The Boulder Canyon development, because of its large storage, opens the way for these cities to secure, at their own expense, of course, a supply of domestic water from the conserved flood waters of the river.

Is it not perfectly obvious from what I have just read that there never was any intention and there never could be any intention that the filing made by the city of Los Angeles for the right to divert 1,095,000 acre-feet of water from the Colorado River would ever be satisfied from the normal flow of that stream? It would be a useless expenditure of money for the city of Los Angeles to build an aqueduct to the Colorado River without the construction of Boulder Canyon Dam. During the major portion of the year the water would not be there to fill the aqueduct. During times of flood, as I have said, there would be water present, but it would carry such a large burden of silt that it would be a wholly impractical matter to attempt to transport it through the aqueduct to the city of Los Angeles. It would make necessary a vast expenditure for desilting work, and as soon as the flood subsided there would be no water available for the city of Los Angeles in the Colorado River, because prior appropriators in Imperial Valley and elsewhere would demand it for the needs of their crops.

It seems, Mr. President, unnecessary for me to offer much more evidence in this regard, but there is one more statement from a California source that I think I ought to put in the RECORD. That statement is from the Boulder Dam prosperity edition of the Evening Los Angeles Herald. I read from the issue of that paper of March 31, 1928, as follows:

> A high dam in Boulder Canyon will provide a domestic water supply for Los Angeles and a number of smaller southern California cities, which have united in forming a water district to erect an immense aqueduct from a point near Blythe to Los Angeles. This water will be seriously needed before the great enterprise can be completed.

That statement is predicated upon the fact that the city of Los Angeles can not obtain a domestic water supply unless a high dam is built at Boulder Canyon. If that is the truth, then this alleged filing, this claim to a perfected water right for 1,095,000 acre-feet of water, is utterly worthless and of no more value than any other kind of a paper filing made by anyone who might be seeking to promote some wildcat scheme of irrigation or reclamation elsewhere in the West.

Mr. PHIPPS. Mr. President, I do not intend to discuss the measure at length to-day, but I am now in receipt of a communication from the mayor of the city of Denver, in which he transmits a memorandum on the subject of the high dam on the lower Colorado River prepared by the special counsel for the city of Denver. I do not consider it necessary to read these communications at length, but do regard them of importance and therefore request that they be printed in the RECORD, including the letter from Mayor Stapleton and a copy of my acknowledgment, and the counsel's report.

The PRESIDING OFFICER (Mr. SACKETT in the chair). Without objection, it is so ordered.

The documents referred to are as follows:

CITY AND COUNTY OF DENVER,
December, 1928.

Hon. LAWRENCE C. PHIPPS,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: As mayor of the city of Denver, I ask a moment of your time respecting the Boulder or Black Canyon bill of Senator JOHNSON, being S. 728.

I want to let you know that while, of course, the primary purpose of the proposed high dam is flood and silt control for the benefit of the Imperial Valley and neighboring areas in California, and to some extent for certain of the lowlands of Arizona lying along the river, yet the bill, in solving the flood problem, would serve as a most important step in the solution of the Colorado River controversy. This controversy has been raging for years among the seven Colorado River States. Indeed, unless this bill or an equivalent bill providing for a high dam somewhere on the lower Colorado should be passed there would be no way under the peculiar interstate water law of our part of the country by which with legal certainty the upper States of the Colorado River Basin—Colorado, New Mexico, Wyoming, and Utah—with whose interests the city of Denver is identified, could secure a segregation of part of the water of the river for their future growth and expansion.

There is a rather common impression that the proposed project is of no advantage except to the flood areas above referred to, whereas the bill is needed almost as much, although for reasons different from those of flood control, by the upper States and their cities as well. I am aware that this bill does not follow in all respects the corresponding bill that has passed the House, but undoubtedly the differences would be adjusted in conference committee.

I inclose copy of memorandum filed by the city of Denver with the Colorado River Board showing, as its title indicates, "Why a high dam at some point on the lower Colorado is needed by the upper basin and by the city of Denver."

With thanks for your brief consideration, I am,

Sincerely yours,

BENJ. F. STAPLETON.

DECEMBER 7, 1928.

Hon. BENJAMIN F. STAPLETON,
Mayor, Denver, Colo.

MY DEAR MAYOR STAPLETON: Acknowledgment is made of your recent letter, without date, urging the enactment of S. 728, the bill for the construction of the Boulder Canyon project.

As a member and later chairman of the Senate Committee on Irrigation, I have studied this matter for many years and agree with you that satisfactory legislation for the construction of this dam, which would also bring about the ratification of the Colorado River compact, would be of substantial aid toward securing water from the stream for Colorado and other upper-basin States. From the start I have been most anxious adequately to safeguard Colorado's future, as well as present water rights, and have studied the problems involved always with that thought in mind.

I shall take pleasure in calling your indorsement of the proposed legislation to the attention of my colleagues in the Senate, and sincerely trust that a satisfactory bill for this purpose will be enacted during the present session of Congress.

Cordially yours,

LAWRENCE C. PHIPPS.

DENVER, COLO., *November 17, 1928.*

COLORADO RIVER ENGINEERING COMMISSION
(Maj. Gen. William L. Sibert, Chairman).

GENTLEMEN:

MEMORANDUM ON WHY A HIGH DAM AT SOME POINT ON THE LOWER COLORADO IS NEEDED BY THE UPPER BASIN AND BY THE CITY OF DENVER

(By L. Ward Bannister, special counsel for city of Denver)

* * * * * * *

DENVER'S INTEREST

Colorado's principal source of water supply to serve her future expansion is the Colorado River. Denver does not want to be left to the fate of being the capital city of a State forever limited in its economic development by shortage in water supply. Furthermore, Denver itself has initiated rights for transmountain diversion from the headwaters of the Colorado along several different routes for use of the waters within the city. Denver's interests in the Colorado River are identical with those of the upper States generally.

THE DANGER

The danger to which the upper States, including the city of Denver, are exposed arises from the nature of the law governing interstate streams and from the nature of the present and prospective uses of the water of the river. This combination of law and fact puts in jeopardy the chance of the upper States to increase their present uses of water unless a high dam should be built at some point on the lower Colorado.

THE LAW

The case of Wyoming *v.* Colorado (259 U. S. 419), which is the latest of the decisions of the United States Supreme Court, lays down the rule, with certain modifications which for purposes of a margin of legal safety need not be noticed here, that waters are to be divided between States which maintain the appropriation system of water law, as distinguished from the riparian system, according to seniority of use regardless of State lines. Under this rule the earliest users in the order of their seniority and no matter where situated have the first right to the waters to the extent of the necessities of their respective uses as originally established and the later users get what is left. Whether the latest users get anything at all depends upon whether anything is left after the water is supplied first to the satisfaction of the uses which are older than theirs. Since this rule works regardless of State lines, it would follow that if only the water uses in one State were early enough and the water scarce enough, the other State would go without water in the absence of special remedies to obviate such an unfortunate result. A high dam and the Colorado River compact ratified would constitute such remedies.

THE FACTS

Roughly speaking about one-third of the waters of the Colorado system have been put to use and the four upper States are using about the same quantity that the three lower States are using. The remaining two-thirds have not been put to use. During the period of low water each year the volume of the water in the river is no more than sufficient to take care of the present uses in the different States, and there have been several years lately when it was insufficient; in other words, when the natural low flow was overappropriated.

In the upper States there are no new water projects of great draft upon the river in sight for the near future. There are none of such significance for agricultural purposes among the lower States, except with proposed Government aid. There are power projects, however, proposed for the lower States and to be licensed by the Federal Power Commission sufficient in size to use all of the now unused waters of the Colorado River. Applications for these projects are pending already. If these projects should be licensed by the Federal Power Commission and built, they would be entitled, if the rule of priority, regardless of State lines, is to be applied, as contended by the lower States, to have all of the now unused waters of the river go down forever to the lower States to satisfy the requirements of those projects; in which event the upper States could not hold such waters back for use within their own limits, and in consequence the economic development of those States as far as depending upon the Colorado River would be at an end, unless special remedies are to be adopted to circumvent such a disaster. A high dam would be such a remedy.

According to a memorandum issued to me, under date of December 9, 1927, by Engineer E. B. Bebler, of the Reclamation Service, it appears that the low flow of the river is exhausted to a degree more serious to the upper States, if this memorandum is correct, than generally supposed. The head gate of the Imperial Valley ditch is below Yuma, and the capacity of that ditch is said by Mr. Debler to be 6,500 second-feet, with a water claim therefor of 10,000 second-feet. Yet it also appears that for 32 days in 1915 the flow dropped as low as 2,700 second-feet, and that the average flow for the same period was 4,400 second-feet; that for 24 days in 1919 the flow dropped to as low as 2,300 second-feet, with the average flow for the same period at 4,000 second-feet; that for 73 days, in the summer of 1924, the flow dropped as low as 1,200 second-feet, with the average flow for the same period at 3,300 second-feet; that for 35 days, in the summer of 1926, the flow dropped as low as 2,440, with an average flow for the same period of 4,600 second-feet. When I say that during any of these periods mentioned the flow dropped to a certain minimum I do not mean that this was true for the entire period, but only at some period of time within the period. The average flow for each period as a whole I have given.

The California priorities, including those for the Imperial Valley ditch, are, Mr. Debler informs me, old ones, dating for the most part back to 1900. He tells me that the same thing is true of many of the Arizona priorities. It is said that most of the priorities in the upper basin in point of aggregate of water are more recent. Assuming this situation to be true, it follows that if priorities regardless of State lines were to be strictly applied, the upper States, in default of some special remedy, such as interstate compact and the building of a high dam under act of Congress, would be obliged to allow some of the waters represented even by their existing priorities to go down to satisfy earlier priorities of California and Arizona. Of course, if some of the existing priorities in the upper States would be obliged to surrender water to earlier priorities in California and Arizona, it would be all the more true that such a surrender could be imposed upon priorities in the upper States not yet created but which are sure to come into existence as the upper States continue their development.

As far as present consumptive uses of the waters are concerned, California is more of a rival of the upper States than is Arizona. Under date of December 16, 1927, the same engineer, Mr. E. B. Debler, informs me by a letter that nearly all of the California and Arizona rights out of the main river, so far as volume of water claims is concerned, are older than 1900, and that of the water thus claimed, Arizona has 823,500 acre-feet per annum and California 4,917,000 acre-feet; and that in terms of peak flow per second of time Arizona's claims aggregate 3,633 cubic feet and California's 11,567 cubic feet. Clearly California's claim in terms of acre-feet being over five times that of Arizona, and in terms of second-feet being over three times that of Arizona, it follows that California is many times more dangerous, so far as existing rights in the main stream are concerned, than is Arizona and must be dealt with by upper States.

REMEDIES, INCLUDING THE HIGH DAM

Immense projects are in the offing for the lower States to be built under licenses to be sought from the Federal Power Commission, and with no projects of corresponding magnitude in sight for the upper States in the immediate future, and with the low flow of the river already overappropriated, and with some of the existing water rights of the upper States already in jeopardy because of the contentions which earlier appropriators in the lower States are making for a preference, it follows that the upper States must seek, if they would protect themselves, some remedy which, while affording a fair amount of the water to both groups of States, will not sacrifice the economic future of either group as it might be sacrificed under the rule of priority regardless of State lines without intervention of any kind.

The best remedies are those of interstate agreement, such as the Colorado River compact, and a high dam built under authority of the Congress at some point in the lower States, and with the validity of the compact reinforced as far as the Congress may have power to reinforce it by appropriate provision to that end inserted in the bill authorizing the dam.

The upper States can not get California to ratify the Colorado River compact unless a high dam be provided. Furthermore, if a high dam were built, the existing early irrigation rights in California and Arizona could be satisfied out of the flood flow of the river, leaving the low flow to be retained for use in the upper States.

California argues that while she would be glad to enter into a compact with the upper States for a division of water between the two groups of States, yet she can't do it with safety without a high dam, for the simple reason that the bulk of her existing priorities are earlier than the bulk of the priorities in the upper States, and therefore preferred, and that she would be sacrificing them by entering into an agreement to divide the waters unless a high dam were provided in order to supply them. The interest, therefore, of the upper States themselves requires that a high dam be built in order that they may obtain California's signature to the interstate agreement, and that the normal flow of the river may be retained more largely in the upper States and the flood flow used more largely in the lower States.

It does not matter to the city of Denver where the high dam is built, whether at Boulder Canyon or Black Canyon or elsewhere, as long as one is built. It does not matter whether the power at the dam is generated by the Government or by private enterprise. It does not matter whether royalties be paid to the States in which the dam is situated or not, although justice to these States would require some provision for income. From the standpoint of the city of Denver all of these questions, while important, are minor compared with the greater question of bringing about a division of the waters between the two groups of States through the building of a high dam and ratification of the Colorado River compact.

There have been proposals of a low dam instead of a high dam. A low dam would afford flood control, it is true, but it would not solve the Colorado River controversy, because it would not provide for the satisfaction of existing water priorities in the lower States the quantity necessary to induce California to enter into an interstate agreement. Indeed, the upper States would be compelled in their own interest to fight any congressional proposal for a low dam, because as the waters would be released they would be put to additional use in the lower States and additional rights would be claimed in the lower States by reason of this additional use, and the upper States would find themselves without any interstate agreement by which the additional use could be compensated by an increased use to the upper States.

The city of Denver is prepared to accept a project for a high dam, even though the Colorado River compact should not be ratified by more than six States, but hopes that interstate differences may be adjusted, so that all seven States may be included, thus satisfying all States and increasing the certainty of the legality of the division of water between the two groups of States.

I do not know with accuracy just what questions your commission will consider in reaching conclusions. But in behalf of the city I want to get before you the attitude of the city, as maintained by its mayor, the Hon. B. F. Stapleton, toward the proposed Boulder Canyon project, knowing that you will consider any points material to your labors and recognizing fully that all others will be disregarded.

Respectfully,

L. WARD BANNISTER,
Special Counsel for the City of Denver.

Mr. PHIPPS. Mr. President, I do not know of any Senator who has not been convinced of the necessity for the construction of a dam on the lower Colorado River, particularly for the purposes of flood control. The differences that have arisen center about the advisability of making it a high dam, and the arguments pro and con have been under consideration by your Committee on Irrigation and Reclamation for a term of years, including in its studies personal visits to the neighborhood and the site of the proposed dam, and the taking of testimony which now comprises almost a library in itself.

Personally I have found it one of the most interesting, but at the same time the most intricate and difficult, questions that I have been called upon to consider since becoming a Member of the Senate. There are so many ramifications, there are so many different points of view; and even with a bill that is presumably perfected, when we come to reread it we discover some point that has not been properly adjusted and an amendment is proposed to correct that situation, and we find again that that involves additional changes in some other feature of the bill.

I have gone on record heretofore as not only favoring a dam for flood control, but also a dam as high as could be constructed with safety in order that hydroelectric power might be produced there with a view to deriving a revenue that would, at least in part, pay for the cost of the structure and which would at the same time provide waters for irrigation and also for domestic use, need for which in the last two or three years has become more than ever apparent in the cities of the coastal plains.

Mr. President, I am not quite in accord with the view of the author of the bill in that he believes a certain power trust has been fighting the measure and that the power companies are opposed to it. His evidence may be satisfactory to him, but personally I will say frankly that nothing of that nature has ever come to me. I do know a little something about the business of the power companies serving that territory. I know that they are under the control of a properly constituted State utilities commission, whether known by the name of utilities commission or railroad commission. All power companies have their rates not only regulated, but fixed, at hearings by those commissions. On complaint by consumers of power, hearings will be ordered and rates will be considered and rulings made by the commission which the power company must observe. Over and above that, their properties are valued according to the investment, and on the showing of the value invested alone the companies are limited in their earnings to a fixed rate per annum which I believe in no case exceeds 8 per cent per annum. Considering the risks incident to the business, I do not think anyone would regard that an exorbitant ratio of earning when it is known that the same companies, in order to finance themselves, find it necessary to sell bonds for a certain proportion of property cost on which they have had to pay from 5 to 6 per cent for interest, and in times of money stringency have had to pay even higher rates.

Personally I believe that the power companies, which are experienced in the business and have their organization and managements that have grown up in years of service, are far more competent to erect to-day a large power plant such as would be required for this enterprise than would any set of employees we could find among the governmental forces of the United States at the present time. I stated just a day or two ago and I desire to repeat that the economies that can be effected by construction by private enterprise will more than exceed a difference in interest rates of, say, 1 per cent or the difference between Government money at 4 per cent and private money at 5 per cent.

The provisions of the Senate bill, which has been offered as a substitute for the House bill, would give first to the States, municipalities, or political subdivisions of States the right to construct a power plant; second, to private enterprise or corporations; and third, to the Federal Government. It seems to me that in that form the bill should be unobjectionable. I think that those provisions of the bill are wise, although perhaps unnecessary as regards the Federal Government; but there I think the judgment of the Senate should be the deciding factor. In other words, I believe that Senators should vote in accordance with their own view and opinion in the matter rather than accept the dictum of the Senate Committee on Irrigation and Reclamation.

Mr. President, the power companies which are now supplying the territory that could be served from plants at the Boulder Dam before building a line into new territory have to make a showing before the utilities board to the effect that it is a matter of convenience and necessity. Where one company has its lines in service and is supplying consumers in a district no other company may obtain permission to invade or enter into that same territory unless the new company can show that it is necessary for the convenience of the community to have the additional lines and service. These regulations have grown up out of years of experience, though they are at some times considered onerous by the power companies. It has sometimes happened that where a power company has extended its lines so as to serve a new development, such as mining, and then the project fails or is not a financial success, it has absolutely lost its line, had to tear it down and get what salvage it could out of it. So there are risks in the business; there is no doubt about that.

It would seem to me when this legislation shall have been perfected and the project can be gone ahead with, as I hope it may in the near future, the natural development of the power end of the project can be readily brought about through combinations of the companies now serving portions of the territory, by municipalities or other political subdivisions, or water users forming organizations, which would become political entities. I see no insurmountable difficulty in the way. All of those interests could get together, and each could figure what amount of power it required. Given the cost to produce, it is very easy to arrive at a percentage and to apportion the cost of the plant necessary to produce the amount of power required by the subscribers or contributors or partners. So it is just as easy to divide the expense of operation, including repairs and everything that goes with it.

Again, I notice the reading of the letter from the Department of the Interior—which was dated about January 12, 1926—in which it was endeavored to point out the difficulties that might arise in allocating the power privileges to different applicants and to different companies. Mr. President, I do not believe that the possibilities under the proposed dam would be developed piecemeal after any such manner. I believe the units in the unified system that would be adopted by those who know the business would be constructed one at a time as the demand for power would need to be met, and as the power demand increased additional units would be added.

It is estimated that it would require seven years time in which to construct the dam. Incidentally some of the work in connection with the power plant could be proceeded with, but the construction of the plant, with the exception, possibly, of the first unit, would, in my opinion, have to be deferred until the dam was well along toward completion. So I do not believe that power would be available other than for incidental use, partly in the construction of the dam itself and partly in the construction of the aqueduct lines if that work were far enough along to justify it, but there would be a rapidly increasing demand from time to time.

There would also be the necessity for the erection of transmission lines, which is no small undertaking. Eventually, when the new plants at the Boulder Dam were put into service, there would then be the opportunity of exchange or interchange of power as between that produced at Boulder Dam and that produced at seaboard or at some place in the high Sierras.

I do not regard as insurmountable the problems incident to the department contracting with those who could put to use the hydroelectric power that might be produced. In fact, I do not believe that they will be found very difficult. Given the fact that there is demand for and will be increasing demand

for power, particularly when we have in mind the very large block of power that will be required for the proposed Los Angeles aqueduct for pumping the water, the entire program should go along without very much friction; it should not prove to be a problem more difficult than many that have heretofore been met, worked out, and solved by the Federal departments.

The quantity of power that may be produced under the dam, I am pleased to note, has been found by the Colorado River Commission, headed by Major General Sibert, to be just the figure we have always been given; in other words, the new commission confirms and indorses the finding of the Reclamation Bureau of the Department of the Interior; that is to say, 550,000 horsepower, which would be considered as firm horsepower, or on a 55 per cent load factor, 1,000,000 horsepower. The quantity, of course, is large, and yet, with the rapid development and growth in California, particularly in southern California, and taking into consideration that eventually from 300,000 to 350,000 horsepower will be required for aqueduct pumping purposes, there is no question that any surplus produced there will be utilized to advantage and there will be a demand for it.

The question of the cost of production naturally enters into the problem. Arguments have recently been advanced to the effect that modern methods of production by steam, utilizing oil, coal, or coal dust or natural gas as fuel, have progressed to the point that hydroelectric power can not compete.

Mr. President, here we have the Colorado River, here we have a dam and power plants, and right near by a customer requiring over one-half of the normal output of the plant. To say that natural gas or coal dust or coal or oil at the seaboard—that is, at Long Beach or Huntington Beach—could compete with the hydroelectric power at Boulder Canyon Dam, or at the points where the power would be used for the aqueduct, does not appeal to me to be a reasonable proposition. I think that there is room for hydroelectric development. I believe it can be utilized at a cost at least equally as low, if not lower, than electricity produced by steam power could be delivered at the point of consumption.

It seems to me, Mr. President, that the adoption of the resolution under which the Colorado River Commission was appointed, and under which it has served and submitted its report, was a very wise move on the part of the Congress. It has cleared up several matters of doubt, in the minds of some of us, at least, and I think in the minds of many. The feasibility of the project is indorsed by the commission. It is declared to be not only feasible but safe, under precautionary conditions and measures. There, I believe, the commission has certainly gone to the extreme limit in order "to make assurance double sure" and to play on the safe side. The report necessarily was based upon House bill 5773, because that was the only piece of proposed legislation which had been adopted by one branch of the Congress. That bill as passed by the House differs from the Senate measure in one or two important particulars, one of them being as to the provision for the all-American canal, which, under the language of the House bill, is included with the dam and the power-producing plant so as to comprise one project. The Senate bill, however, separates the all-American canal from power and from the dam itself in that it definitely puts the all-American canal under the reclamation act as part of a reclamation project, the Government to be reimbursed not out of revenues derived from the power plant but from contributions from the lands that will be benefited by the all-American canal; so that necessarily in its findings the commission hesitated to say that the project would be self-supporting out of power revenues, because it conceived that the revenues would not be great enough to take care of the all-American canal as well as the dam structure and the power plants.

The estimates made by this commission are materially higher than those which had been made by the Department of the Interior, particularly with reference to the all-American canal. The information that I had on that subject is limited. I wish I might be in position to be more certain of my own views with reference to the all-American canal. I think it is a project that will be justifiable, that will come along in time. Whether or not we are ready for it to-day, whether or not the lands to be benefited could assume the burden of taxation that would be necessary to repay the Government for the project, is quite a problem. It might be that by the time the dam had been completed conditions would have changed to the point where it would be found really a necessity, and the work would be justified and should be done.

When it is gone ahead with, I have a strong feeling that we shall be able to avoid the very difficult, expensive route through the sand dunes not far from the Colorado River. I have been informed, although I have not had the opportunity really to check up on this information, that preliminary lines of survey are being made from a point higher up the river than the Laguna Dam which would give a canal line or aqueduct heading into the Coachella Valley that would put all of the water into both the Coachella and Imperial Valleys by a gravity flow. It would not be a very much longer line; it would certainly be a much less expensive line to construct than the one which has always been figured on through the sand dunes; not only less expensive to construct, but much less expensive in upkeep.

Mr. President, because I am not convinced that the commission's estimate of cost should have included an additional $11,000,000 to provide for the extension of the canal into the Coachella Valley, I have, in offering an amendment, adopted a total figure of $165,000,000 rather than the $176,000,000 suggested by the commission.

The indication given by the commission that the Federal Government might contribute something for the purposes of flood control tended to confirm a feeling I have had for some time in dealing with this bill, and that is that the main reason for the Federal Government treating with this problem at all is the obligation resting upon the Government to provide flood control for the territory in the lower reaches of the Colorado River. That obligation is just as strong, just as binding on the Federal Government as any that rests upon it to provide flood control in the Mississippi Valley. Estimates of the cost of flood-control dams have been made. The Topock Dam, for instance, came to a certain figure, on top of which very large additional allowances would have to be made for the destruction of property which would be inundated. Other estimates have been made. The most reliable one, and the one which probably would be nearer the mark in case a flood-control dam alone were under consideration, is, as I recall, $28,000,000.

In the amendment which I have had printed I suggest that out of the advances to be made by the Federal Government the amount of $25,000,000 be assigned to flood control, to be repaid only after the other advances made by the Government have been repaid. I think that is an allowance which could be properly accorded to this enterprise.

I think the Government, although it has already expended some money, time, and effort on this problem, is responsible for safety along the lower reaches of that river. I feel that the amount suggested, which is approximately what it would cost if the dam were constructed for flood control alone, is not out of line, and that that concession could be made, particularly in view of the fact that the revenues derived from the power, from the storage of water, or from other sources, would eventually repay the Government for the entire advances, including the $25,000,000.

Eliminating the repayment of the cost of the all-American canal, and assuming that the Government will contribute something, either the total amount or part, for flood-control purposes, the river commission expresses the view that the project would be self-supporting and the investment would be repaid within the term of 50 years. Of course, 50 years is quite a length of time; but the original estimates were that the cost of this entire project could be repaid within a period of 25 years. So, again, I feel that the commission in expressing its views has been at least conservative. I believe that the commission has given us a fair expression of opinion based upon at least six months of very arduous labor; and, as I said before, it has relieved some of the doubts that have been in the minds of Members of the Senate. We can go ahead with the project now with the assurance that it is not only justified from every standpoint but that it is worthy, and will in the end pay out for the expenditures incident to it.

Mr. President, there seems to be an unfortunate difference of opinion between two of the States, the two that are chiefly interested in this enterprise; the two to which it is most important, much more important than it is to the other five States of the basin. California and Arizona are not very far apart in the matter of water allocation. That difference should be composed. Personally I have tried to extend any assistance that I could to bring about that desirable result. I shall continue to do so; but it seems to me that the time has now come when those two States should get together. Frankly, I do not feel that the State of Arizona should stand off and say, "Well, if we get the water allocation fixed we will not consent until California and the Senate yield, and say that these power plants may not be constructed by the Federal Government."

In my judgment, with the alternative stated in the Senate bill, the right of the Federal Government to construct will be nothing more than a safeguard.

I believe that private enterprise, municipalities, and the Southern California Water Users' Association, or whatever it may be termed, can participate jointly in the construction of

the power plant and the division of the power to be produced. I do not see any great difficulty in the way of it. Therefore, I feel that Arizona should not make a definite objection to that provision of the Senate bill.

As to the upper basin States, naturally we are interested. I put in the RECORD to-day the expression of views of those representing the city of Denver, my home city; and I am in accord with the views expressed in those communications. The upper basin States are at the present time using something like two and three-quarter million acre-feet of water. The possibilities are such that those uses can be at least trebled. Experience has shown that taking the water out of the stream to any extent like that means that at least 50 per cent will return to the stream; so that the use for irrigation does not mean that if the upper basin States take out an additional 5,000,000 acre-feet during the period of a year, the flow into the lower basin will be diminished by that figure. As a matter of fact, it will hardly be diminished to the extent of 2,500,000 acre-feet, according to our best experience.

Mr. KING. Mr. President, will the Senator yield?

Mr. PHIPPS. Certainly.

Mr. KING. That depends entirely on whether the water is taken to another watershed. If it is used in the same watershed, and it finds its way back into the stream by percolation, then I think the deduction of the Senator is correct. But the Senator knows that if he takes the water to Denver, as we have taken it to Utah, into another watershed, then obviously it will not return to the Colorado River.

Mr. PHIPPS. The Senator is no doubt quite right about that. The fact is that Denver, as the Senator is aware, has her filings and absolutely will require water from the western slope of the mountains for her own domestic uses. She will be in just as great need of that water as Los Angeles will be of the water from the Colorado River. The amount to be diverted for domestic use, however, is relatively so small that I will be pardoned for having allowed it to escape my memory for the moment, because, as I recall it, it is only 100,000 or 120,000 acre-feet.

Mr. KING. Think of the fact that Denver is going to grow into a great metropolitan city some day!

Mr. PHIPPS. I appreciate the Senator's remark. I have that hope, because Denver has climatic advantages that are comparable with those of Salt Lake City or Ogden, and our communities, as the States, have not only always been neighborly but we have been really friendly. Now, we are hoping to make our contact even closer, because through this same tunnel that will bring water for the domestic supply of the city of Denver runs the Denver & Salt Lake Railroad, which, within a short period of time, we hope to see connected up by a short line or cut-off with the Denver & Rio Grande Western, which will give us a more direct entrance to Utah. In other words, we cut off from 125 to 175 miles of distance, and that, too, will mean something for transcontinental travel.

The upper basin States—perhaps I might more properly speak for Colorado alone—have only this selfish interest in the Boulder Dam proposal, other than a naturally friendly one. Their selfish interest is that, coincident with the authorization of the dam, must be an agreement under the compact of the seven States for division of the water of the Colorado River, which will prevent, for all time, discussions, disputes, and lawsuits which would go to every court up to the Supreme Court of the United States before they were determined. There are so many points which come in that even one lawsuit as between Colorado and Kansas does not decide all of the points involved, and, as the Senator from Kansas who sits before me [Mr. CURTIS] knows, our two States are to-day in the Supreme Court of the United States, and have just argued another case involving a water dispute.

We have had our differences with Wyoming, unfortunately, and while we have come into compact for division of the water of one of the streams that is interstate, and are endeavoring to cover the waters of another stream that flows through Colorado, through Wyoming, and into Nebraska, we have not yet been able to get together in an amicable settlement as to that river.

We are also endeavoring to arrange and have progressed in arranging for agreed divisions of water of the interstate streams flowing between Colorado and New Mexico. On one stream we have already agreed. As to others we are in negotiation.

It does seem reasonable, fair, and proper that where there is this God-given opportunity to use the waters of a stream to the best advantage, the States should use every endeavor to get together and agree amicably upon the division of those waters, rather than resort to struggles in the courts of the United States to settle their differences.

Mr. KING. Mr. President, may I interrupt the Senator?

Mr. PHIPPS. Certainly.

Mr. KING. I would like to supplement the observation just made by my distinguished friend. I think that, in relation to the Colorado River controversy, wisdom would have dictated that in the beginning there should have been a compact entered into by the States interested, and a Colorado River commission appointed, having plenary power to deal with the entire subject in a comprehensive way. New York, Pennsylvania, New Jersey, and perhaps Delaware, have recently exhibited a vast amount of wisdom in dealing with the waters of the streams in which they are mutually interested, and they have created a corporation to deal with those streams, which has quasi-governmental powers, and that corporation, in the New York case, has authority to issue bonds and to contract obligations.

It seems to me that as to these interstate streams there should be commissions created with authority to deal with the streams, to allocate the water, to determine the conflicting claims, to create obligations through a corporation, to borrow money, and to provide for the development of the streams.

If the Colorado River situation had evolved a plan of this character, and the upper States and the lower States had created a commission 10 or 15 years ago, and divided the water, and made provision for the building of dams, all of these controversies would have been avoided, and this question, instead of becoming so intricate, and involving so much of the time of the Federal Government, would have been solved long ago, and solved by the States themselves, as the States ought to solve these questions.

The States have rights in the rivers and in the waters of the rivers. Particularly that is true in those States where we have the law of appropriation, in contradistinction to the riparian doctrine, and where they do have those priorities, and there will be priorities that will be conflicting, there ought to be commissions created for the purpose of solving all the questions.

I hope that before this question shall be finally disposed of provision will be made for the creation of a commission, a Colorado River commission, to complete any work that will be left incomplete by the passage of this bill, because there will be other problems in connection with the river that will not be solved by the passage of the bill which is now before us.

I want to agree with the Senator in saying that the States themselves ought to have commissions for the purpose of controlling these interstate streams and avoiding conflicts that will take them into the courts, and involve litigation for a long period of years.

Mr. PHIPPS. Mr. President, I find myself pretty generally in accord with the views of the distinguished Senator from Utah. It is, of course, a difficult matter to persuade any State legislature to delegate to some inferior body its power to negotiate or to appropriate money or to incur obligations. The necessity for working out these problems of a division of water, however, is very important, very apparent, and I quite join with the Senator in expressing the hope that there may be some means devised that will avoid getting into the disputes that have been so interminable, so costly, and even so disastrous to our interests in the arid-land States.

Mr. President, at some future time I may desire to say something further before this bill comes up for final passage. Certainly I expect to discuss some of the amendments, including the one now pending, before it shall come to a vote.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

RECESS

Mr. CURTIS. I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and the Senate (at 4 o'clock p. m.) took a recess until to-morrow, Saturday, December 8, 1928, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 7, 1928

COAST AND GEODETIC SURVEY

To be aides with relative rank of ensign in the Navy

Laurence Wilbur Swanson.
Gilbert Rolland Fish.
Franklin Rice Gossett.
Ernest Bane Lewey.
John Clarence Mathisson.
Harold Joseph Oliver.
George Edward Morris, jr.

To be junior hydrographic and geodetic engineer, with relative rank of lieutenant, junior grade, in the Navy

Leonard Carl Johnson.
Emil Herman Kirsch.

UNITED STATES COAST GUARD

To be temporary ensigns

Raymond B. Newell.
William D. Wilson.
Petros D. Mills.
Frank E. Miner.
Leonard T. Jones.
Richard A. Haines.
Henry F. Garcia.

To be lieutenant commanders

Charles W. Dean.
Walfred G. Bloom.
Roderick S. Patch.

To be lieutenants, junior grade

Gaines A. Tyler.
Ira E. Eskridge.
Harry W. Stinchcomb.
Harold C. Moore.
Richard M. Hoyle.
Morris C. Jones.
Miles H. Imlay.
Francis C. Pollard.
Stanley J. Woyciehowsky.
Kenneth K. Cowart.

POSTMASTERS

ARIZONA

James H. McClintock, Phoenix.

ARKANSAS

Mamie L. Glasco, Bigelow.

CONNECTICUT

Martin M. Hansen, Mansfield Depot.
John R. MacLean, Pineorchard.
Mary L. VanCamp, Somersville.
James Service, jr., South Willington.

HAWAII

T. G. S. Walker, Kahuku.
H. Blomfield Brown, Lanai City.

IDAHO

John D. Wright, Homedale.
Spencer H. Lawson, Spencer.

KANSAS

Lloyd T. Erickson, Cleburne.
Albert H. Selden, Clyde.
John A. Dimmitt, Culver.

MAINE

Albert A. Marr, Hartland.
Henry W. Park, Mexico.
Joe S. Stevens, Millbridge.
Albert R. Michaud, St. Agatha.

MICHIGAN

Harry C. D. Ashford, Big Bay.
Marian A. Cleary, Clawson.
Fernando D. Petermann, Kearsarge.
Lempi M. Wertanen, Mass.
Elizabeth Riggs, Munith.
Jens H. Wester, Sawyer.
Louis J. Braun, South Range.
Hilda Webber, Trenary.
Arthur M. Gilbert, Wakefield.

OHIO

Zetta B. Shufelt, Bascom.
Joseph A. Link, Carthagena.
James R. Geren, Columbus.
Ensign C. Newby, Eaton.
Cora A. Emery, Gates Mills.
Bertram A. Bell, Genoa.
Elvah E. Unger, Gettysburg.
Clifford B. Hyatt, Killbuck.
Herbert L. Emerson, Kirkersville.
Jesse W. Huddle, Lancaster.
Franklin S. Neuhardt, Lewisville.
George C. Bauer, Maderia.
Ross E. Powell, Middleport.
Charles E. Phillips, Moscow.
George L. France, Powell.
Lloyd B. Folk, Rawson.
Ora M. Elliott, Twinsburg.
Worth D. Westenbarger, Wadsworth.
Alan R. Branson, Wellington.
Arthur C. Oberlitner, Whitehouse.

OREGON

Lewis B. Baird, Bend.
John Q. Buell, Chiloquin.
Jesse A. Crabtree, Tigard.

PORTO RICO

Felipe B. Cruz, Vieques.

TEXAS

Edward D. Fiero, Acme.
Carter H. Miller, Baytown.
William T. Reid, Blooming Grove.
George W. Dennett, Brownsville.
Robert G. Gribble, Crowell.
Lucile H. Pape, Gregory.
John W. McKee, Haslam.
Curtis Stewart, Hull.
Mattie Randolph, Iraan.
Edgar Lewis, Mesquite.
Carrie L. Thomas, Odell.
Hattie E. Eaton, Peacock.
Pennie S. Langen, Premont.
Guy G. Goodridge, Robstown.
Violet J. Polyak, Roxana.
Winnie Everitt, Shepherd.
Beatrice L. Paquette, Skellytown.
Nettie M. Farber, Sunset Heights.

HOUSE OF REPRESENTATIVES

FRIDAY, *December 7, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O Father of love and Father of mercy, how unsearchable are Thy riches; and they are past finding out. The whole realm of truth reechoes with the praise of our God. We thank Thee for the glory of the morning and for the radiance with which the firmament is filled, but especially do we bless Thee that in the glory of that light we discern the presence of the Lord. We ask that we may ever have the spirit of reverence by which these wonders may be opened to our gaze. Thou Merciful One, to whom all power, space, and wisdom belongeth, possess our minds and hearts to-day, that our conduct may be ordered by purposes that are pure, by aspirations that are uplifting, and by acts that are just. Let Thy Holy Spirit, dear Lord, harmonize our very beings with the best conceptions of truth and duty. In Thy blessed name we pray. Amen.

The Journal of the proceedings of yesterday was read and approved.

MEETINGS OF THE COMMITTEE ON WAYS AND MEANS

Mr. MACGREGOR. Mr. Speaker, I ask unanimous consent for the immediate consideration of a resolution which is at the Clerk's desk.

The SPEAKER. The gentleman from New York calls up a resolution, which the Clerk will report, and asks unanimous consent for its immediate consideration.

The Clerk read as follows:

House Resolution 252

Resolved, That the Committee on Ways and Means is authorized to sit during the sessions and recesses of the present Congress; to employ such expert, clerical, and stenographic services and to gather such information, through Government agents or otherwise, as to it may seem fit, in connection with the consideration and preparation of a bill or bills for the revision of the tariff act of 1922 and other customs laws; to purchase such books and to have such printing and binding done as it shall require, in addition to requiring the attendance of the committee stenographers; and to incur such other expenses as may be deemed necessary by the committee. All expenses of the committee incurred for any such purposes shall be paid out of the contingent fund of the House on the usual vouchers submitted by the chairman of the committee and approved by the Committee on Accounts.

The SPEAKER. Is there objection?

There was no objection.

The resolution was agreed to.

TREASURY AND POST OFFICE APPROPRIATION BILL

Mr. WOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 14801) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1930, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. SNELL in the chair.

The Clerk read the title of the bill.

The Clerk read as follows:

OFFICE OF THE SECRETARY

Salaries: Secretary of the Treasury, $15,000; Undersecretary of the Treasury, $10,000; three Assistant Secretaries of the Treasury, and other personal services in the District of Columbia, $146,275; in all, $171,275: *Provided*, That in expending appropriations or portions of appropriations contained in this act for the payment of personal services in the District of Columbia in accordance with the classification act of 1923, as amended (U. S. C., pp. 65–71, secs. 661–673, 45 Stat., pp. 776–785), the average of the salaries of the total number of persons under any grade in any bureau, office, or other appropriation unit shall not at any time exceed the average of the compensation rates specified for the grade by such act, and in grades in which only one position is allocated the salary of such position shall not exceed the average of the compensation rates for the grade, except that in unusually meritorious cases of one position in a grade advances may be made to rates higher than the average of the compensation rates of the grade, but not more often than once in any fiscal year, and then only to the next higher rate: *Provided*, That this restriction shall not apply (1) to grades 1, 2, 3, and 4 of the clerical-mechanical service, or (2) to require the reduction in salary of any person whose compensation was fixed, as of July 1, 1924, in accordance with the rules of section 6 of such act, (3) to require the reduction in salary of any person who is transferred from one position to another position in the same or different grade in the same or a different bureau, office, or other appropriation unit, or (4) to prevent the payment of a salary under any grade at a rate higher than the maximum rate of the grade when such higher rate is permitted by the classification act of 1923, as amended, and is specifically authorized by other law.

Mr. LAGUARDIA. Mr. Chairman, I could not follow the reading of the bill by the Clerk, and I ask unanimous consent for permission to offer an amendment to the first section, just previous to line 9.

The CHAIRMAN. On what page?

Mr. LAGUARDIA. On pages 2 and 3.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. LAGUARDIA. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LAGUARDIA: On page 2, strike out all of lines 6 to 25, both inclusive, and on page 3 all of lines 1 to 8, inclusive.

Mr. LAGUARDIA. Mr. Chairman, this proviso is what is known as the average of salaries and it is a system that has brought about a great deal of confusion and has resulted in dissatisfaction among the employees in all of the departments of the Government.

The former distinguished chairman of the Committee on Appropriations, the lamented Mr. Madden, at whose feet I sat for many years to absorb some of his wisdom and knowledge of governmental finances, recommended the repeal of this proviso in appropriation bills. In fact, he predicated his recommendation on a bill which he introduced, H. R. 47, and which is now, I believe, pending before the committee. This general average system is so involved and complicated that it has brought stagnation into the departments and has literally blocked the putting into execution of any salary bill that Congress has passed.

Mr. CRAMTON. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. CRAMTON. I would be interested to know under what circumstances Mr. Madden recommended the repeal of this proviso, which has been carried in every bill reported out under the chairmanship of Mr. Madden, and always with his approval, so far as I ever knew.

Mr. LAGUARDIA. Is the gentleman familiar with Mr. Madden's bill, H. R. 47?

Mr. CRAMTON. I am asking under what circumstances Mr. Madden ever recommended the repeal of this proviso, which was carried in every appropriation bill reported out by the committee under his chairmanship after the enactment of the classification law?

Mr. LAGUARDIA. If the gentleman is familiar with the bill which Mr. Madden introduced, H. R. 47, and his feeling toward this average proviso in recent years, I am sure it would make his question unnecessary. If the gentleman from Michigan can explain or give any sound, logical reason for this provision, perhaps it will assist not only Congress but it may assist in giving it intelligent interpretation. I believe it was put in during the war in the hope that it would keep down expenditures.

Mr. CRAMTON. It was not put in during the war at all. It was put in the first bill reported out by the Appropriations Committee after the classification act was enacted.

Mr. LAGUARDIA. Well, was it not put in for the purpose of trying out that classification act? Will the gentleman say this average proviso is necessary?

Mr. CRAMTON. It was put in for the purpose of retaining in the hands of Congress some control over the expenditure of funds under these salary rolls in order that it would not be possible for them to put everybody up at the top of the grade and give them an indiscriminate and wholesale salary raise.

Mr. LAGUARDIA. It has had exactly the contrary effect. It has permitted the placing of a few individuals in the higher grade and thereby keeping down all of the rest of the employees in the division.

Mr. CRAMTON. Oh, no.

Mr. LAGUARDIA. That is just what it does. It is not carrying out the original intent of Congress at all, and I am sure that anyone familiar with the subject will agree that it ought to be abolished, and the quicker it is abolished the better and easier will be the administration of the law and the more equitable and proper will be the expenditure of the money which Congress appropriates.

Mr. CLARKE. Will the gentleman from New York permit a question?

Mr. LAGUARDIA. Yes.

Mr. CLARKE. When was the bill H. R. 47 introduced?

Mr. LAGUARDIA. December 5, 1927.

Mr. CLARKE. By Mr. Madden?

Mr. LAGUARDIA. Yes; on the first day of the Congress, I believe.

Mr. CLARKE. And the purpose was to accomplish what the gentleman wants to accomplish by his amendment?

Mr. LAGUARDIA. Yes. Of course, I will say that if my amendment were adopted it would be necessary to enact the bill H. R. 47 at this session of Congress.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. WOOD. Mr. Chairman, in order that there may be no misunderstanding about the purpose of this amendment, I desire to call the attention of the members of the committee to what happened when this classification act was first passed.

The first thing that was done was to advance all the bureau chiefs to the maximum, and if this amendment is adopted we will see everybody being advanced to the maximum instead of going through the grades as they should go through them.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. LAGUARDIA].

The amendment was rejected.

The Clerk read as follows:

BUREAU OF PROHIBITION

For expenses to enforce the provisions of the national prohibition act, as amended, and the act entitled "An act to provide for the registration of, with collectors of internal revenue, and to impose a special tax upon, all persons who produce, import, manufacture, compound, deal in, dispense, sell, distribute, or give away opium or cocoa leaves, their salts, derivatives, or preparations, and for other purposes," approved December 17, 1914 (U. S. C., p. 742, sec. 211), as amended by the revenue act of 1918 (U. S. C., pp. 784–787, secs. 691–708), and the act entitled "An act to amend an act entitled 'An act to prohibit the importation and use of opium for other than medicinal purposes,' approved February 9, 1909," as amended by the act of May 26, 1922 (U. S. C., pp. 635, 636, secs. 171–184), known as "the narcotic drugs import and export act," and for carrying out the applicable provisions of the act approved March 3, 1927 (U. S. C., Supp. I, p. 9, secs. 281–281e), including the employment of executive officers, attorneys, agents, inspectors, chemists, assistant chemists, supervisors, gaugers, storekeepers, storekeeper-gaugers, clerks, and messengers in the field and in the Bureau of Prohibition in the District of Columbia, to be appointed as authorized by law; the securing of evidence of violations of the acts; the cost of chemical analyses made by others than employees of the United States; the purchase of such supplies, equipment, mechanical devices, laboratory supplies, books, and such other expenditures as may be necessary in the District of Columbia and the several field offices; cost of seizure, storage, and disposition of any vehicle and team or automobile, boat, air, or water craft, or any other conveyance, seized pursuant to section 26, Title II, of the national prohibition act, when the proceeds of sale are insufficient therefor or where there is no sale; cost incurred by officers and employees of the Bureau of Prohibition in the seizure, storage, and disposition of property under the internal revenue laws when the same is disposed of under section 3460, Revised Statutes (U. S. C., p. 546, sec. 1193); hire, maintenance, repair, and operation of motor-propelled or horse-drawn passenger-carrying vehicles when necessary; and for rental of necessary quarters; in all, $13,500,000, of which

amount not to exceed $713,420 may be expended for personal services in the District of Columbia: *Provided*, That not to exceed $1,411,260 of the foregoing sum shall be expended for enforcement of the provisions of the said acts of December 17, 1914, and May 26, 1922, and the Secretary of the Treasury may authorize the use, by narcotic agents, of motor vehicles confiscated under the provisions of the act of March 3, 1925 (U. S. C., p. 858, sec. 43), and pay the maintenance, repair, and operation thereof from this allotment: *Provided further*, That no money herein appropriated for the enforcement of the national prohibition act, the customs laws, or internal revenue laws, shall be used to pay for storage in any private warehouse of intoxicating liquor, or other property in connection therewith seized pursuant to said acts and necessary to be stored, where there is available for that purpose space in a Government warehouse or other suitable Government property in the judicial district wherein such property was seized, or in an adjacent judicial district, and when such seized property is stored in an adjacent district the jurisdiction over such property in the district wherein it was seized shall not be affected thereby: *Provided further*, That for purpose of concentration, upon the initiation of the Commissioner of Prohibition and under regulations prescribed by him, distilled spirits may be removed from any internal-revenue bonded warehouse to any other such warehouse, and may be bottled in bond in any such warehouse before or after payment of the tax, and the commissioner shall prescribe the form and penal sums of bonds covering distilled spirits in internal-revenue bonded warehouses, and in transit between such warehouses: *Provided further*, That moneys expended from this appropriation for the purchase of narcotics and subsequently recovered shall be deposited in the Treasury to the credit of the appropriation for enforcement of narcotic and national prohibition acts current at the time of the deposit.

Mr. LAGUARDIA. Mr. Chairman, I first reserve a point of order to the proviso on page 21 and I would like to have that pending while I am offering an amendment.

The CHAIRMAN. The Chair thinks the gentleman would better make his point of order before offering his amendment.

Mr. LAGUARDIA. If the Chair pleases, I would like to hear some discussion on the point of order, and if this can be distinguished from the general fund I would be inclined to withdraw my point of order, and therefore in the interest of good legislation I would like to reserve the point of order.

The CHAIRMAN. If the gentleman is going to offer an amendment, the Chair thinks he should first make his point of order, because if the language should go out on a point of order the amendment would not be necessary.

Mr. LAGUARDIA. My amendment is not related to the point of order. It relates to language before this.

The CHAIRMAN. The general procedure is that a point of order should be disposed of first where it affects a paragraph of the bill.

Mr. LAGUARDIA. Then I make the point of order that the proviso on page 21 is legislation; that it is not authorized by any existing law and would create a very dangerous precedent.

Mr. WOOD. I will say to the gentleman from New York that I believe when I explain the purpose of this proviso the gentleman will withdraw his point of order. The committee had its choice of two propositions, either to appropriate directly $60,000 or to permit the use of this $60,000 in the manner prescribed by the proviso; namely, that the moneys expended for the purpose of narcotics and subsequently recovered instead of being deposited in the Treasury under miscellaneous receipts may be turned back to the appropriation of the Prohibition Unit for the enforcement of the narcotic law.

To my mind and to the mind of a majority of the committee this is the most businesslike way of handling this proposition and will possibly result in the saving of money to the Treasury.

In the event this proviso is not adopted an amendment will have to be put on the bill providing for the $60,000 included in the proviso, and with this proviso in the bill there is an incentive to recover this money which they would not have if we made a direct appropriation of the same amount of money.

The CHAIRMAN. Will the gentleman from Indiana answer the question of the gentleman from New York as to whether this is new legislation or whether this is a new direction with respect to the disposition of certain money?

Mr. WOOD. I would say to the Chair that it does change the law solely with reference to the disposition of this money.

The CHAIRMAN. That is the only point before the committee at the present time, that it does change existing law, which is the point of order made by the gentleman from New York. Does the gentleman insist upon his point of order?

Mr. LAGUARDIA. Yes; I insist upon the point of order.

The CHAIRMAN. The Chair sustains the point of order, and the Clerk will read.

Mr. BACON. Mr. Chairman, may I ask the gentleman from New York [Mr. LAGUARDIA] to withhold his insistence upon his point of order for just a moment, so that I may further explain the matter?

The CHAIRMAN. The Chair has already ruled on the point of order.

Mr. LAGUARDIA. Now, Mr. Chairman, I have an amendment which I desire to offer.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LAGUARDIA: On page 19, line 25, after the word "Columbia," insert: "*Provided*, That the money herein appropriated for the enforcement of the provisions of the national prohibition act shall be proportionately expended in each of the several States of the Union, such proportion to be fixed by the Secretary of the Treasury, based on the population area of the several States."

Mr. WOOD. Mr. Chairman, I reserve a point of order on the amendment.

Mr. LAGUARDIA. Mr. Chairman, I shall not take any time in the discussion of the point of order, because I shall have an opportunity to do that when it is pressed. This is a national law, as I pointed out yesterday, and should be enforced in all of the States of the Union. They should not single out the cities of New York, St. Louis, Chicago, and San Francisco—five or six points in the United States—for the sole purpose of making grandstand plays, building up cases which will not hold in the courts, for that is not an honest attempt to enforce the law.

Now, gentlemen, you can increase this appropriation as much as you like and I will vote for it. If none of the dry champions move to increase the appropriation, I shall do so; but in all fairness and honesty you should stand for an honest enforcement in your own State and not single out New York for the expenditure of the greater amount of this money. Try to enforce the law equally in all of the States.

My amendment provides that the Secretary of the Treasury shall take the population and area of each State as a basis and allocate a proportionate amount of the money for the purpose of enforcement in each of the 48 States. Surely no "dry" can take exception to that. My amendment will make for national enforcement and make the law applicable to all of the States of the Union. In order to show that I am in absolute good faith, that I am not doing this solely for the purpose of dissipating the appropriation, I will, as I say, vote for any increase in the appropriation that may be asked. I am convinced that the law can not be enforced, but if some of our people still believe in prohibition, let us try it out for a while at least. When so-called dry States, where its representatives vote for enforcement and pretend to be dry, get a taste of enforcement in your district you will soon realize and be forced to admit that a change in the present system of prohibition is necessary. You will soon see the necessity of placing under strict regulation all traffic in alcohol.

Mr. McKEOWN. Would it not be fairer to distribute the money according to the violations of law?

Mr. LAGUARDIA. If that were true, the gentleman's State would receive a greater proportion than would the State of New York. When it comes to violations of law, let me say that there is less liquor consumed in the State of New York than in any other part of the United States proportionate to the population.

Mr. McKEOWN. Oh, no.

Mr. LAGUARDIA. Also remember that a great many people of your State and other States come to New York and drink it up. [Laughter.] I care not what State you come from, one can go into your district and find all the liquor one wants, and every man on the floor of this House who wants to be fair must admit that that is the truth.

I am in earnest about this. Here is an opportunity for you to show that Congress means business. Here is an opportunity to transform this law into something national, and here is an opportunity for every dry champion to stand up and vote for enforcement in his own State. Let enforcement commence at home.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. CRAMTON. Mr. Chairman, of course the amendment of the gentleman from New York is subject to a point of order, but I think the RECORD ought to carry a little comment on the amazing proposition offered by the gentleman from New York. His amendment, of course, would be disruptive of the effective use of the Federal funds. His amendment is based upon an entirely wrong theory of the problem of enforcement of prohibition in the country. It is based on the theory that the enforcement is the problem of the Federal Government alone, whereas the eighteenth amendment makes it very clear that the respon-

sibility resting upon the States is equal to the responsibility on the Federal Government. It is specifically provided that the States and the Congress have the authority to pass appropriate legislation for the enforcement of the amendment.

The State of New York, from which the gentleman comes, has repealed its only enforcement act. It has lain down on the job of enforcement. Furthermore, the city of New York, from which the gentleman comes, administering its affairs under the dictation of Tammany, also lays down on the job of enforcing this law. It is desirable for effective use of that money that it be distributed as needed, that it be used where most needed to carry out the Federal obligation. What is the Federal obligation?

Mr. LAGUARDIA. Mr. Chairman, will the gentleman yield.

Mr. CRAMTON. When I have finished. The Federal obligation primarily is to take care of those things of a Federal nature. For instance, to stop smuggling on the borders, and we have done that pretty well on the oceans through the increase of the Coast Guard; also, to stop the unlawful diversion of alcohol issued under permits for use in industry. Those are Federal problems, and the gentleman ignores all of those matters in his amendment. As a matter of fact, the gentleman from New York [Mr. LAGUARDIA], who protests that he is for enforcement, has offered an amendment that will hamstring enforcement.

I want to make this suggestion for the consideration of the gentleman from New York, and it is something that is worthy of the consideration of all you gentlemen from great cities. In making pets in the cities of the lawbreakers who violate the eighteenth amendment you have permitted them to multiply, to increase in number, to increase in financial resources, to organize, until there is coming upon the cities the curse of loss of life through gunmen and bandits and all of the racketeering, and so forth. All of those curses are coming upon the great cities of New York and Chicago and others and are the direct outgrowth of a policy of nonenforcement of the law against this one class of lawbreakers. In carrying out that policy you have brought about a general lawbreaking in your communities.

Mr. LAGUARDIA. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. If I have the time.

Mr. LAGUARDIA. Does the gentleman know that the city of Detroit, in the gentleman's State, is the funnel through which millions of gallons of liquor come into this country?

Mr. CRAMTON. Yes.

Mr. LAGUARDIA. And will the gentleman start enforcement in his own State?

Mr. CRAMTON. I will answer the gentleman. I do not want to cripple the Treasury Department so that the forces of enforcement can not be directed to the point on the border where there is need of money, and need of personnel. I want them to be able to use it, and not force them to send the money to some dry county in Oklahoma or in Kentucky.

Mr. LAGUARDIA. Then will the gentleman vote with me to give the Government sufficient funds to stop the leak in the city of Detroit?

Mr. CRAMTON. Anything the Federal Government needs, but I do not want the States and the cities relieved of their plain responsibility.

Mr. WOOD. Mr. Chairman, I insist upon the point of order.

Mr. SABATH. Will the gentleman not withhold it for a moment?

Mr. WOOD. No; we have had enough of this.

Mr. LAGUARDIA. What is the point of order.

Mr. WOOD. My point of order is that it changes existing law. The prohibition act provides and gives authority to the Secretary of the Treasury to enforce this law where enforcement is needed. If this amendment should prevail, it would take the discretion away from the Secretary of the Treasury, and instead of using his discretion and sending the money where it is most needed for the purpose of enforcement he will be compelled to send it where it may not be needed.

Mr. LAGUARDIA. Mr. Chairman, may I be heard upon the point of order?

The CHAIRMAN. Does the gentleman want further time on the point of order?

Mr. LAGUARDIA. Certainly. The Secretary of the Treasury is charged with the enforcement of the law in all of the States of the Union. The appropriation herein is for the purpose of enforcing the provisions of the national prohibition act, not the New York act or the Massachusetts act. There are plenty of precedents under the allocation of public funds for administrative and enforcement purposes. We have it in the matter of roads, and we have it in the matter of public buildings, and the statutes are replete with instances where appropriations are limited so as to compel expenditure in accordance with the population or the size of the various States. My amendment brings in no novel feature. It simply facilitates and puts a limitation upon the money herein appropriated to be expended by the Secretary of the Treasury under the provisions of the existing law.

Mr. WOOD. Mr. Chairman, I say in answer to the precedent which the gentleman has mentioned, public buildings and public roads, that the allocation provided there is found in the act creating the authority. It is not found in the appropriation bill.

Mr. LAGUARDIA. How about the corn borer?

Mr. WOOD. The same thing is true with reference to the corn borer. The prohibition act specifically provides that the enforcement of this act shall be lodged with the Secretary of the Treasury, and in consequence it would be a foolish thing to compel the Secretary of the Treasury to send this money into a State where perhaps a dollar of it would not be needed.

Mr. LAGUARDIA. It might be a good thing to send some of it to Indiana.

Mr. WOOD. I expect it might, but it would be far better to send most of it to New York.

Mr. LAGUARDIA. Of course, from the Indiana point of view. That is fine for you fellows.

Mr. WOOD. If all of the administrators of State governments had defied the prohibition act as New York has done, and if the governors of all the States had defied it as the Governor of the State of New York has done, we would have ten times more violation of law than we have to-day.

Mr. BLACK of New York. Will the gentleman yield? What has happened to the last two Governors of Indiana?

Mr. WOOD. Oh, our governors are getting along pretty well. They are all out now. [Laughter.]

The CHAIRMAN. The Chair is ready to rule. The amendment offered by the gentleman from New York states that the money used under the enforcement provision shall be expended in each of the several States of the Union, such proportion to be fixed by the Secretary of the Treasury based on the population and area of the several States. This amendment definitely takes away from the Secretary of the Treasury all discretion in enforcing the prohibition act and gives him definite instructions as to what he shall do and such instructions or duties that have not heretofore been authorized by law. There is no doubt in the mind of the Chair that this is new legislation on an appropriation bill and the point of order is sustained.

Mr. SABATH. Mr. Chairman, I offer the amendment which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. SABATH: On page 19, line 23, after the word "of," strike out the figures "$13,500,000" and insert in lieu thereof "$14,500,000."

Mr. SABATH. Mr. Chairman and gentlemen, as you observe, I am not trying to reduce the appropriation; I am trying to increase it, and I hope that the increase, if that amount will be agreed to, will be utilized as requested and advocated by the gentleman from New York notwithstanding the objection and opposition of the gentleman from Michigan [Mr. CRAMTON]. For several years I have been listening nearly every week to the gentleman from Michigan upon violations of the prohibition law, and if there is one State in which there is a larger number of violations than his State I would like to know. Invariably he starts referring to the State of New York or city of New York and pays his compliments to the city of Chicago. The trouble with the gentleman is that he does not realize that most of these violations are due to the fact that nearly ninety times as much alcohol such as he has been advocating and pleading for here yesterday is being used to-day than before prohibition days.

In those days we used about 1,000,000 gallons of alcohol for manufacturing purposes, and the report shows that last year 90,000,000 gallons of alcohol was withdrawn for manufacturing purposes. Now, have our industries increased ninety times in the last few years? They might have increased some, but the use of alcohol since prohibition has increased ninety times. What is this alcohol being used for? I know that most of that alcohol is being used for the manufacture of beverages, and those gentlemen who have succeeded in convincing the gentleman from Michigan that it is absolutely necessary to have this alcohol I am sure have failed to prove to him for what purposes all this alcohol is being used. I know that most of the violations are due to the unusual withdrawal of alcohol that is being used after it is poisoned by the Government or under Government instruction by people to manufacture all kinds of concoctions for beverage purposes. So I say to him that notwithstanding the publicity which Chicago has been receiving at his hands that there are less violations in the city of Chicago, notwithstanding the Republican administration that

we have, than in the outlying districts and in the towns and in the counties, not only adjoining but all over the State, and that applies all through the United States. Now, I have traveled quite a bit, and I know that there is no enforcement of the prohibition laws in the small towns, in the villages through the country. In any place I would stop, whether it would be in my own State or in the State of Michigan or any State in the West or South, I could obtain all the beverages and all the drinks I could possibly wish for. During these visits I made inquiries as to enforcement, and invariably I would be informed that the prohibition law is being looked upon as a joke. Yes; here and there we hear about indictments.

For instance, in McHenry County, which is about a hundred miles from the city of Chicago, some time ago there were about 27 people indicted, but that is the only effort made that I know of in our State outside of Chicago, and I feel when and if placed on trial that the jury will find them not guilty. That grand jury in every county in my State and every other State if so inclined and desired could secure enough information to indict a majority of the people of their respective counties, but they do not do so, because they recognize that a trial jury will not convict.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SABATH. May I have five additional minutes? I have not taken up much time.

The CHAIRMAN. Is there objection?

Mr. TARVER. I object, Mr. Chairman.

Mr. LAGUARDIA. Mr. Chairman, I make the point of order the objection is not properly made, inasmuch as the gentleman did not rise to his feet and make the objection.

Mr. TARVER. I have risen, and I object.

Mr. LAGUARDIA. That is the way to do it.

Mr. LUCE. Mr. Chairman, I desire to rise in opposition to the amendment chiefly to correct the RECORD in the matter of a statement made yesterday by the gentleman from Missouri [Mr. LOZIER] which appears on page 193 of the RECORD of this morning.

He then said that the great State of Massachusetts—and I do not demur to the use of that adjective "great"—had never enacted a State enforcement law. On the contrary, what we know familiarly as the "baby Volstead Act," unless my memory is wrong, was adopted by a referendum. We do have an enforcement law in Massachusetts; and, apropos of what the gentleman who has taken his seat [Mr. SABATH] has said, I would inform him that there are many communities in my part of the country where the prohibition law is enforced just exactly as well as it was enforced when the same places voted "No" under local option. The gentleman from Missouri is wrong in his information, and the gentleman from Illinois is wrong in his observation.

Mr. LOZIER. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Missouri moves to strike out the last word.

Mr. LOZIER. Mr. Chairman and gentlemen, my distinguished friend from Massachusetts [Mr. LUCE] has called attention to what he claims is a misstatement made by me yesterday in debate, to the effect that the State of Massachusetts had never adopted a State enforcement law.

My colleague from Massachusetts stated that his State by a referendum adopted a prohibition enforcement provision. The gentleman is a distinguished citizen of Massachusetts and of course is prepared to speak with authority and I accept his statement. However, I am quite confident the State of Massachusetts was very tardy in enacting laws to supplement and aid in the enforcement of the eighteenth amendment and the Volstead Act. I recall having found in one of the cyclopedias published in 1925 a statement as follows:

> Connecticut and Rhode Island are the only States which have not ratified the prohibition (eighteenth) amendment. Massachusetts and Maryland are the only States which have not enacted codes to enforce national prohibition concurrently with the Volstead law.

Within the last few months I read an article in one of our periodicals which discussed the extent to which the several States had enacted State enforcement laws in aid of the eighteenth amendment and the prohibition enforcement act, and in which article reference was made to a note accompanying the opinion of Justice Brandeis in the case of Jacob Ruppert *v.* Caffey (251 U. S. 264), in which note the statutes of the several States in reference to intoxicating liquor were collated, and at that time the laws of Massachusetts defined intoxicating liquor as any beverage which contains more than 1 per cent of alcohol by volume, and certain other liquors were deemed intoxicating without regard to alcoholic content. I realize that this note was prepared shortly after the Federal enforcement act went into effect, but it seems that the Legislature of Massachusetts for years failed to pass a State enforcement statute, and finally the people of Massachusetts had to invoke a state-wide referendum to secure a State enforcement act. The statement I made yesterday in debate was based on articles in a standard periodical and cyclopedia of well-recognized authority, and was no doubt correct when these publications were issued, but I understand from my colleague from Massachusetts, that in comparatively recent years enforcement acts were adopted in Massachusetts by the direct vote of the people in a state-wide referendum, and not by the Legislature of the State of Massachusetts. I am glad to modify my statement of yesterday as I have just indicated. I am glad the people of Massachusetts finally enacted this legislation, although it would seem that they took this action with extreme reluctance.

But I want to emphasize the argument I made yesterday to the effect that our Federal Government had shamefully and shamelessly failed to enforce prohibition and, in fact, made no worthwhile effort to enforce this provision of the Constitution. As one who, in an humble yet earnest way, helped to create and crystalize the sentiment that resulted in the adoption of the eighteenth amendment, and as a consistent and lifelong advocate of prohibition, I wish to assert what is an obvious fact that in the last seven years no honest, aggressive, sincere, wholehearted effort has been made by the Federal Government to enforce the provisions of the eighteenth amendment and acts of Congress in support of this constitutional provision.

On the other hand, probably more than three-fourths of all prosecutions initiated in the United States in the last seven years for the violation of liquor laws have been initiated and prosecuted by local, State, and county officers, under State statutes, and not initiated or carried to a consummation by Federal enforcement officers under the eighteenth amendment or under the Volstead Act.

The time has come for the National Government to discharge the responsibility which it assumed when the American people committed to it the enforcement of the eighteenth amendment of the Constitution. That law has never had a fair trial. Its pretended enforcement has never been in friendly hands. Its pretended enforcement has been so half-hearted, sporadic, insincere, and inefficient that prohibition has in reality not had a fair trial in the United States. Mr. Hoover was probably justified in saying that prohibition was "an experiment," because those in charge of our great Government had been faithless in its enforcement. If the Harding and Coolidge administrations had given us efficient enforcement, many of us believe prohibition would not be "an experiment," but an established fact. By allowing the Constitution to be flouted and ignored, these administrations have done the cause of prohibition irreparable injury, and until the Federal Government is as industrious, efficient, and aggressive in enforcing national prohibition as the various States in the Union have been in enforcing State prohibition laws, national prohibition will never have a fair test or a real trial; and with such half-hearted, insincere, and inefficient enforcement as we are getting from the Federal Government, national prohibition will be a serious disappointment to its friends and ultimately a failure. The men appointed to enforce national prohibition have in a majority of cases been unfriendly to prohibition and have made no honest effort to enforce it, although I concede that a small minority of the enforcement officers and agents have honestly tried to efficiently enforce the law. My colleagues certainly remember that President Harding, in one of his messages to Congress, denounced prohibition enforcement as a national scandal.

I appeal to the dry forces of this Nation to place criticism and blame where criticism and blame are due, namely, upon the national administration, which under our form of government is charged with the solemn responsibility of enforcing all laws and which has stood for seven and a half years with folded arms and looked with complacency upon the flouting of this law and the trampling under foot of these constitutional mandates.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. LOZIER. Yes.

Mr. LAGUARDIA. But the gentleman did not take that attitude yesterday.

Mr. LOZIER. Yes; I did.

Mr. LAGUARDIA. Not in his speech.

Mr. LOZIER. Oh, yes, I did; most emphatically.

Mr. COCHRAN of Missouri. Will the gentleman yield?

Mr. LOZIER. Yes.

Mr. COCHRAN of Missouri. Is it not true that Federal prohibition agents assigned to Missouri never visit the gentleman's congressional district?

Mr LOZIER. That is largely true. Federal enforcement officers seldom visit the eight counties in my district, where

99 per cent of prohibition enforcements is under State laws, by local, county, and State officials, in State courts. Out of 114 counties in Missouri, the presence of a Federal enforcement officer in 110 of them is a rare occurrence. Federal enforcement officers seldom visit the rural districts of Missouri, or the rural districts of Michigan, or the rural districts of Pennsylvania or Kansas, or the rural sections of other States. Their activities in Missouri are confined almost exclusively to St. Louis, Kansas City, St. Joseph, and a few smaller cities.

And throughout the Nation their activities are largely confined to the great cities of New York, Philadelphia, Boston, Chicago, Cincinnati, and other great centers of population, and they seldom visit the rural districts of any of the States, and practically all the enforcement of liquor laws we get in the rural districts of America is from the local, county, and State officers operating under State laws in State courts. The time has come for the dry forces of America to point their finger at the distinguished and well-meaning gentleman who occupies the White House and, in the language of the prophet, Nathan, say, "Thou art the man" on whom rests the responsibility for the nonenforcement of national prohibition. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired. The question is on the amendment offered by the gentleman from Illinois.

Mr. SABATH. Mr. Chairman, may the Clerk again report the amendment?

The CHAIRMAN. Without objection, the Clerk will again report the amendment.

There was no objection.

The Clerk again reported the amendment.

Mr. WOOD. Mr. Chairman, all I wish to say in answer to the argument made by the gentleman from Illinois—and he did not say anything about his amendment—is to beware of Greeks bearing gifts.

Mr. SABATH. Mr. Chairman, I have voted for every appropriation that the gentleman's committee—— [Cries of "Regular order!"]

The CHAIRMAN. The regular order is demanded. The question is on the amendment offered by the gentleman from Illinois.

The question was taken, and the amendment was rejected.

Mr. BLACK of New York. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendments offered by Mr. BLACK of New York:

"Page 18, line 9, after the word 'of,' strike out all down to the words 'the act' in line 10.

"Page 18, line 24, after the word 'act,' strike out all down to the words 'the securing' in line 6, page 19.

"Page 19, line 12, after the semicolon, strike out all down to the words 'hire' in line 20."

Mr. BLACK of New York. Mr. Chairman and gentlemen of the committee: I have always had a great deal of respect for the shrewdness of the gentleman from Michigan, and I never could understand why he always was so highly excited on this prohibition question, because to me he always seemed a most practical gentleman, too practical to be a fanatic on anything, when lo and behold, I read the hearings on this bill and I found that his State, the State of Michigan, is the spray of the United States, and here he stands on the floor of the House with his right hand not knowing what his left hand is doing. With his right hand he introduces poison into domestic alcohol and with his left hand he says to the leading city of his State, Detroit, go to it. In other words, he has created by the infusion of poison into alcohol a poison tariff for the protection of Michigan's leading industry, the importation of Canadian alcohol into the United States.

The hearings on this bill indicate that Detroit is the great offender of the United States. It is the great threshold of alcoholic sensation in the United States, and it is in his State, the State of the gentleman from Michigan, Mr. CRAMTON.

Now, on the State of New York Doctor Doran testifies that he has had a great deal of help from the State troopers. Well, I do not give the State troopers anything for that myself. He has had a great deal of help, he said, from the New York City police in minor cases, and then he says, "It is no use bringing any more cases into court, because we have not enough courts to try the cases."

Let us look the facts in the face. It is quite evident on this prohibition question that we have reached a stalemate. The drys will not stop hoping and the wets will not stop drinking.

The United States is now spending about $30,000,000 a year to please the drys and to make liquor more expensive for the wets. This money is of little effect in enforcement and amounts to an indirect subsidy to bootleggers.

The Volstead Act, according to Doctor Doran, is the law that made Detroit famous. [Laughter.]

Doctor Doran testified that for Federal enforcement we should need $300,000,000 a year and Federal police courts. I suggest to the drys that they back him up on this, unless they would be called nullificationists.

President Coolidge, by Executive order, tried to make village, city, and State police Federal agents, and there was such a protest over this that he dropped his Executive order like a hot flapjack.

It seems to me we must spend one-half a billion dollars a year on enforcement or make the eighteenth amendment a dead letter. Considering the loss of revenue, this would make prohibition cost over a billion dollars a year and would be entirely too extravagant an outlay to enthrone fanaticism in the land of the free.

There is no use appropriating $30,000,000. That is just so much waste. Doran says the courts can not handle any more cases. I believe that instead of devoting to prohibition the money in this bill for that work that we should switch this money to enforce the laws against narcotics. There is unanimity of opinion in this country on the narcotic question, and the money used in that way would not be wasted.

The gentleman from New York [Mr. LAGUARDIA] succeeded in his point of order against establishing a revolving fund for antinarcotic work. It seems now that the narcotic bureau can not function because it has not money for evidence. It was clearly the purpose of the committee by the legislation in this provision to help the narcotic bureau. The gentleman from New York [Mr. LAGUARDIA] was within his rights, I think, in making his point of order.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. BLACK of New York. Surely.

Mr. LAGUARDIA. My point of order was simply that the money recovered should go into the general fund of the Treasury in accordance with law, and not permit any bureau to build up its own fund.

Mr. BLACK of New York. I understand perfectly the position of the gentleman from New York; but because of the way this has been presented, and because of his insistence on observing the rules of the House, unless this appropriation is increased——

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. BLACK of New York. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BLACK of New York. Unless this appropriation for narcotic enforcement is increased the narcotic bureau is going to be hampered.

My amendment takes all the money away from prohibition and sends it into narcotic enforcement, and I believe, and I honestly believe, that this should be done. There is no question at all about how we feel in this country about narcotic enforcement. There is a sharp division on the question of prohibition enforcement. There is a confession on the part of the drys that prohibition can not be enforced. There is a statement in the record here that if they had the money the Narcotic Bureau could function 100 per cent, and I propose that we give the money to them.

The position of the gentleman from Michigan this morning, the position of Doctor Doran, indicates that there has been a retreat on the part of the drys. Now, let us end the farce. Let us get down to business, let us stop the nonsense, let us stop the waste, and let us put this money where it can do something in the interest of the American people and have the American public opinion back of it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York [Mr. BLACK].

The amendment was rejected.

Mr. LAGUARDIA. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LAGUARDIA: Page 19, line 23, strike out the figures "$13,500,000" and insert in lieu thereof "$250,000,000."

Mr. LAGUARDIA. Mr. Chairman, this amendment is not subject to a point of order and is not a pro forma amendment, neither do I claim any originality nor do I claim any pride of authorship for it.

This is less than the amount suggested by the Director of Prohibition, Doctor Doran, in the hearings before the Committee on Appropriations if the National Government is to make a real, honest effort with respect to enforcement and the police duties incidental thereto.

Mr. O'CONNELL. Will the gentleman yield?

Mr. LAGUARDIA. In a moment. Neither is the amendment hastily submitted, because when this amendment is adopted, if the sincere drys of the House will vote to agree to it, it must be followed in the appropriations for the Department of Justice by appropriations for at least 100 more judges, for at least fifteen hundred more assistant district attorneys, for at least 3,000 additional deputy marshals.

Now, gentlemen, we were all impressed by the splendid, sincere statement made by the gentleman from Arkansas [Mr. WINGO]. If all drys were to take that attitude, there would be no trouble in going through with this experiment, and then if it was found to be a failure, getting together on what is the best thing to do. The present condition of partial enforcement in a few spots, while the greater part of the country has no Federal enforcement is manifestly unfair, discriminatory, and has proved to be a complete failure.

If prohibition is to be tested, let it be tried effectively all over the United States, and it will take over $250,000,000 to commence an attempt at enforcement.

As pointed out by my colleague from New York [Mr. BLACK], the dry champions get unduly excited when the failure to enforce is shown up, and every year we go through the same performance in the consideration of this appropriation. I submit that never in the history of the whole world has it been witnessed that the sponsors, the champions of a principle of law will run away from it, and that is exactly what you are doing. If you stop to consider the habits of the people, if you stop to consider the existing conditions, if you stop to consider the conditions on the border line of Canada and the Mexican border, if you consider the size of the country and the fact that we have a population of 120,000,000 people, you must necessarily have to admit that an appropriation of only $13,500,000 to enforce the law is not only ridiculous but a legislative evasion of the law.

Now, champions of the drys, here is an opportunity to stand up and be counted, or else forever refrain from taking a drink. [Laughter.] If you are going to be for enforcement, stand up and vote for the necessary funds to employ the men required to stop the flood of liquor coming over the borders, from the Pacific coast, from the Atlantic coast, and send prohibition agents into such regions as the gentleman from Missouri says exists in his State, where there are only four counties that have prohibition agents, and send an army into the city of Detroit, the Nation's funnel, where millions of gallons pour in from across the border.

Mr. O'CONNELL. Will the gentleman yield?

Mr. LAGUARDIA. Certainly.

Mr. O'CONNELL. Does the gentleman think that $250,000,000 would enforce the law?

Mr. LAGUARDIA. No; but it will demonstrate to the American people that the law can not be enforced, that it is impossible to enforce it. Prohibition can not be brought about by legislation until fermentation can be stopped by an act of Congress.

Mr. O'CONNELL. And change the habits of the people.

Mr. LAGUARDIA. Yes; and wipe out the hypocrisy of the prohibitionists.

Mr. GREEN. Mr. Chairman, I rise merely to call upon my Republican colleagues to keep faith with the American people on prohitition. When we reflect on the submission of this question to our people recently, and see their acclaim for prohibition, then we turn over another page and see the personnel that has the enforcement of prohibition in charge—I refer to the Secretary of the Treasury—it seems to me that on one side you have the vice and on the other side the virtue. What I would like to see my Republican colleagues do is to clean out, if there exists bribery and graft in this department, to clean it out. If you have wet men undertaking to enforce the dry law you are not keeping faith with the American people. When your next President undertakes to appoint the Secretary of the Treasury to enforce prohibition, make it so imperative that he will appoint a dry man to do it.

If you have had, as the newspapers say you have in the past, an enforcement administrator who says that the enforcement would be helped by a law to allow the sale of wine and beer, I say that no such individual should represent the law enforcement of this Nation. You can not enforce dry laws with wet men. If you wanted to get a sheriff for your county you would not go to the penitentiary. If you wanted a constable for your precinct you would not go to the penitentiary. If you want the dry law enforced you need not expect wet people to enforce it. What I would like you to do is to bear in mind three-fourths to four-fifths of the people of this country are dry, not only by abstaining from the use of intoxicants as beverages but dry by law and dry by conscience.

I deny the statement that a large majority of the Members of Congress vote dry and drink wet. I deny the statement that a large majority of the people of the various States vote dry and drink wet. My friends, that is no more true with reference to prohibition laws than is the case with reference to other laws of our land.

I believe that a majority of our American people are law-abiding. I believe that they think that laws should be enforced. I believe that our people are a moral people; that they are conscientious and are religious. I believe they are tired of mockery if same has existed heretofore in the enforcement of our prohibition laws. It is a part of the law of the land, the same as our other laws; and you fail to keep faith with your constituents, my friends on the Republican side, when you fail to see to it that individuals are placed in high positions who will enforce the prohibition laws. I call upon you as representatives of the party in power to see to it that these things are brought about. The dry forces of the Nation demand and expect rigid enforcement.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. SABATH. Mr. Chairman, I introduced my amendment for the purpose of increasing the appropriation, realizing that the prohibition law is not being enforced, as has been stated by the gentleman from Missouri, in most parts of the United States. The prohibitionists on this floor whenever they wish to attack, select the city of New York or the city of Chicago, and fail to pay attention or call the country's attention to the violations throughout the entire United States. You can pick out any newspaper from any section of the country outside of Chicago or New York and you will find in every issue notice of violations in these respective sections of the country. I believe that the department should have all of the money that it requests. Notwithstanding the statement of the gentleman from Indiana [Mr. WOOD], I say that I have voted for every appropriation during the last seven years to give the department a chance to enforce the law, feeling, as the gentleman from New York [Mr. LAGUARDIA] and others do, that it is impossible to bring about a real enforcement of the law. Many of you are under the impression that it has not had a fair chance. I am willing that it should have an additional two years, and I am willing to vote an additional $10,000,000, $25,000,000, or even $50,000,000. I would like to see the law enforced to the same extent in small towns and in the country sections as it is enforced in the large cities such as New York and Chicago. I think it is manifestly unfair to the people residing in large cities to make the public believe that violations are being committed only in the large cities, when it is a fact that can not be truthfully denied that there is just as much violation going on in every hamlet of the United States in proportion to population as there is in the cities of Chicago, New York, or Detroit.

You can visit any small town or small city and within a few minutes you are invited to have a drink. You can have all of the drinks that you want, and you can not attend a luncheon or a dinner, whether it is by this organization or that society or club, without your first being asked to join in a drink or two. We must concede that prohibition is not being enforced, that it can not be enforced, but in view of the conditions, I am willing, and I pledge myself to vote for any appropriation that any gentleman feels we should have to bring about the real, honest enforcement of the law. I know what the result will be. The moment we start to enforce the law in the State of Michigan or in the State of Ohio or in Pennsylvania or in the South or along the coast, as it should be enforced, or as some of these gentlemen advocate, that very moment the people will rise up in arms and demand a modification or a repeal of this law which has done more harm to the American people than any other law ever enacted by the Congress.

Mr. SABATH. Mr. Chairman, in accordance with the unanimous consent and leave granted me I herewith insert the following editorial from the Chicago Tribune of December 6 on that question, which I feel might be of interest to the prohibitionists:

Mrs. Mabel Willebrandt, the firebrand of the Attorney General's office, in charge of prohibition enforcement, wrote the section of the annual report of that office relating to this enforcement. She gives the figures of export from Canada to the United States as obtained from the Canadian Department of Trade and Commerce. This admit-

tedly is not the total of liquor shipped into the United States. Much of it is not declared in the customs. In 1925 the declared trade amounted to 665,000 gallons. Last year it was 1,169,000 gallons.

In the attempts at enforcement of Volstead to stop this import of illegal intoxicants the Government employs reckless and lawless coast guards and agents from the Prohibition Unit. They kill citizens, innocent or not, and shoot up boats. They have made life unsafe along the border. They have been encouraged by the Government to disregard all normal considerations of prudence, discretion, and ordinary humanity.

In spite of this, in spite of the brutality of enforcement, and probably because of the corruption of it, the trade in contraband beverages increases by great leaps from year to year.

Prohibitionists have been allowed to write their own ticket as to the methods of enforcement. They have been allowed virtually to select the chiefs in charge of it. Congress responds to their demands by giving appropriations in the sums asked. It has cost $300,000,000. The consequences are as reported by Mrs. Willebrandt.

Enforcement becomes more expensive, more brutalized, and less able to control the traffic. As the agents become more lawless, as the punishment becomes more severe when there is punishment, and as Congress appropriates more money, more liquor comes in and is consumed by the American people.

Each year proves that this is a disastrous and not a noble experiment. It does not have that consent of the people which law in a democracy requires. What does the country propose to do about it? Continue to become more savage in futile efforts to fasten the will of some citizens on the lives of others? Or repeal the Volstead Act and return to sanity and moderation in government?

We know what the prohibition zealots want. It is more savagery. They are as fanatical people have always been. As resistance to them becomes more stubborn they become more frantic in their search for repressive measures of greater cruelty. This is illustrated in Michigan, which has a law sending liquor law violators to the penitentiary for life under a habitual criminal act. Two men have been so sentenced and now a woman faces that possibility in court.

The zealots want more and longer prison sentences. More shooting by the Coast Guard. More boats sunk on the suspicion that they might be carrying liquor. More victims added to the 200 already shot. By such procedure the Government of the United States will be still further brutalized and corrupted. Its people will become more resentful, violent, and lawless. And more liquor will be brought in and used, law will fall further in the esteem of the citizens and the sorry spectacle of a Nation guided by unreason will continue.

As a footnote to the record there may be added that prohibitionists in Virginia have asked that special agents be assigned to the University of Virginia, the school founded by Thomas Jefferson to promote ideas of individual liberty, to restrain the students, regulate their habits, and keep them away from the bootleggers, possibly a small irony, but a stinging one.

As a dominant clique goes to its downfall it becomes more hysterical in its attempts at repression, just as the New England clericals did, just as the old federalist aristocrats did, and just as the slave traders did.

Repeal the Volstead Act. It is the cause of national demoralization and the enemy of sobriety of thought and habit in American life.

Mr. WOOD. Mr. Chairman, I move that all debate upon this amendment do now close.

The motion was agreed to.

The CHAIRMAN. The question now is on the amendment.

The amendment was rejected.

Mr. PALMISANO. Mr. Chairman, I move to strike out the paragraph. In the last Congress on several occasions I spoke on this question. In my remarks I asked this House to investigate the conditions under the prohibition administrator in Maryland. I find that in the hearings Doctor Doran says that he gets no cooperation from Maryland, and that Maryland, and Baltimore city, in particular, is more or less an outlaw. In Baltimore city, although we do not enforce the eighteenth amendment by the police department, yet we do not have the condition that exists to-day in Chicago and in Pennsylvania, where the police enforce the Volstead Act. We do not want that sort of thing in Maryland, and that is one reason why we do not have the enforcement of that law by the police department of the city of Baltimore. In Baltimore city whenever a police officer is indicted for committing a crime, whether it is a misdemeanor or a felony, he is suspended immediately, pending the trial of that charge.

Under the prohibition administrator when a man in his department is charged with murder, that man is continued in office and may go on in his effort to enforce the Volstead Act. In the State of Maryland when a man is indicted and sentenced to the Maryland penitentiary for robbery he is not permitted to go free, armed, about the streets, but under the Federal Government that man is permitted to put into his pocket a blackjack and a gun in order that he may proceed in continuing his robbery and to enforce the Volstead Act. That is the reason that we in Maryland can not tolerate this law. In the last Congress I offered an amendment to eliminate from the benefit of the appropriation all men in the department who have been convicted of a felony or who have been indicted for a crime or a felony, and where were the dry Members then, and where was Doctor Doran and his friends? Where were the dry Members at that time? Not a one voted for it, and unless, Mr. Chairman and members of the committee, you eliminate the criminals in that department you can not ask the American people to have respect for the law. During the campaign I was attacked on my maiden speech in this House because I suggested, and I say it now, if the Members of this House are sincere—the dry Members, I am speaking of—if you are sincere, put an amendment to the law that any man who represents the Government in a judicial capacity and who is convicted of violating the eighteenth amendment or acquiesced in a violation of that law, be impeached—and I say that applies also in the rooms of an embassy—I proposed at that time that every Member of Congress, every district attorney, and every judge who is convicted of a violation of the law or acquiesces in a violation of the law, shall be impeached and for 10 years thereafter shall hold no office under the Federal Government.

I say, Mr. Chairman, that is the proposition which Congress ought to consider, because the working-class people consider that the Volstead Act was enacted to prevent them from obtaining a drink as the rich are able under the present law to obtain any liquor that they were able to obtain prior to the eighteenth amendment and the Volstead Act, and that accounts for the lack of respect for a law which is considered by a vast number of the American people to be class legislation.

Mr. LAGUARDIA. Mr. Chairman, I have two amendments to offer, and because I have taken a good deal of time, I shall only take five minutes on them.

The CHAIRMAN. The question is on striking out——

Mr. PALMISANO. Mr. Chairman, I ask unanimous consent to withdraw it.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. LAGUARDIA. Mr. Chairman, I offer the following amendment. Page 19, line 23, I move to strike out the figures $13,500,000 and insert in lieu thereof the figures $13,600,000.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

Amendment by Mr. LAGUARDIA: Page 19, line 23, strike out "$13,500,000" and insert "$13,600,000."

Mr. LAGUARDIA. Mr. Chairman, my purpose in offering this amendment is to provide the fund which the chairman says may be necessary by reason of the proviso which was stricken out on the point of order. I do not want in any way to impair the enforcement of the narcotic law, but I do not want to establish the vicious precedent of having revolving and special funds, and that is the reason I pressed my point of order.

Mr. WOOD. Mr. Chairman, I hope this amendment will not prevail for this reason. In all probability, the proviso stricken out by the gentleman from New York will be inserted on the other side. If the amendment prevails which is now offered by the gentleman from New York, we will not only have an additional $100,000 but we will also have the proviso stricken out also in the bill, so we have not got what the committee desires they should get but will have $100,000 in addition.

Mr. LAGUARDIA. I think in orderly legislation, we can not anticipate what another body will do, especially when something is written in an appropriation bill which is clearly improperly there, and I think the prudent and unwise thing to do is to provide this additional fund so that a proper enforcement of the narcotic law can be carried on. Surely, I do not want the responsibility to rest on my shoulders.

Mr. WOOD. If that is the case, the gentleman ought to have withdrawn the point of order.

Mr. LAGUARDIA. No; but we have the law and rules of the House which must be followed, and there is not a Member in this House who approves of a situation where separate funds are created in various departments of the Government to be used without the usual and proper check up. Now, here is an opportunity to provide the funds for the very purpose suggested by the gentleman in his provisio, which was clearly improperly in the bill. I am not going to permit any undercover system to be reestablished, no matter how carefully it may be camouflaged. My amendment provides the fund for doing the work lawfully.

Mr. BLACK of New York. Mr. Chairman, I would like to be heard on the amendment. I hope Members will understand

what is about to be done in the amendment. This is a very serious proposition. The record is replete that the Narcotic Bureau can not function in the detecting of the big narcotic criminals; that they can not break up the big conspiracies to sell narcotics because they are hampered by a lack of funds. There is no more serious crime committed in the country than the illegal distribution of narcotics, and the gentleman from New York [Mr. LAGUARDIA] has very wisely and in the most orderly fashion offered an amendment to provide the Narcotic Bureau with adequate funds. I wonder if this House at this time is going to think more of throwing away money on prohibition enforcement than of providing sufficient money for the Narcotic Bureau.

Mr. BYRNS. Mr. Chairman, will the gentleman yield?

Mr. BLACK of New York. I yield to the gentleman.

Mr. BYRNS. I certainly agree with the gentleman as to the importance of the enforcement of the narcotic law. The Committee on Appropriations is inserting an item in this bill which was requested by the Prohibition Department and the gentlemen in charge of the narcotic law, an item which they said would give them additional funds for its enforcement. That provision is inserted at their request. I do not think it lies within the powers of the gentleman, after striking it out on a point of order, even if it is justified under the rules of the House, to then get up and say we want to increase this appropriation.

Mr. LAGUARDIA. If money is required, it goes into the general fund, and the money is lost by striking out the proviso. The gentleman himself has on many occasions taken exception to this suggested proviso; he has done it on other occasions.

Mr. BYRNS. The gentleman knows that when it goes into the general fund it must be reappropriated. Here was a proposition to throw it into the narcotic board, where he claimed they could enforce this law to a better and greater extent than before. Of course, it was entirely within his rights to strike it out.

Mr. BLACK of New York. Mr. Chairman, the situation is plain. No matter how you feel about that point of order, if this bill passes without the LaGuardia amendment the Narcotic Bureau will be hampered. We are not giving them proper funds, adequate funds, to enable them to function. The duty of this House is to provide proper funds for the Narcotic Bureau. It is idle to wait on the Senate. We waited for the Senate to act on a deficiency bill for a year, and then nothing happened. It is up to us to say whether or not this Congress wants to enforce the provisions of the narcotic act. It is the usual way of providing legislation of this kind.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from New York.

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. LAGUARDIA. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded. The question is on agreeing to the amendment.

The question was again taken, and there were—ayes 4, noes 27.

So the amendment was rejected.

Mr. LAGUARDIA. Mr. Chairman, I offer another amendment.

The CHAIRMAN. The gentleman from New York offers another amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. LAGUARDIA: Page 19, line 25, after the word "Columbia," insert: *"Provided,* That none of the money herein appropriated shall be used for the payment of services, transportation, or disbursements to persons not in the employ of the United States Government."

Mr. LAGUARDIA. Mr. Chairman, the House will recall that two or three years ago this country was shocked at the system then in vogue and in practice in the Prohibition Department in their so-called "under-cover" system of engaging irresponsible people to go out and entrap persons into the violation of the law. That system was stopped on a point of order which I made on a proviso in the appropriation bill which permitted the use of public lands for such purposes.

As I informed the House yesterday a bill was introduced at the time to legalize the spy—under-cover—system and went before the Committee on Ways and Means. When that committee went into the question they refused to report out the bill. Now, under the practice in the department, agents are encouraged to use their wives as decoys; and we have had instances, as I learned from testimony given in the Federal courts, where agents in distant cities were ordered to incur transportation and expenses for their wives, which expenses were paid out of this fund, and the wives were used as decoys to induce persons to violate the law in an attempt to make a case of conspiracy.

Now the appropriation you have is so small that you can not afford to expend any funds in such joy rides and orgies as agents and their wives have indulged in during the past year. The law is specific on the point and provides that no service shall be accepted by any person not employed by the United States.

The persons employed as decoys under the present system are not responsible to anyone. They are not sworn officers of the law. They are hired for the job and given public funds to squander. They are simply hired mediums to send out and encourage the violation of the law, and they have been spending large amounts of money which deplete to a large extent the appropriation long before the fiscal year is over.

Now again I appeal to the chairman of this subcommittee that if he is really anxious to carry out the suggestion made by the Director of Prohibition in the hearings had before his own committee, the time is ripe now to prevent such things as took place not many months ago in the city of New York, by the adoption of my amendment.

It is simply disgraceful for Government agents to go out and be able to employ their own wives or other irresponsible people and send them into hotels and give them public funds to buy liquor and expect any jury to believe the testimony of such people. Mr. Chairman, every case that has gone to a jury, where evidence was obtained under the conditions I have now related, has been thrown out; and not one single, solitary conviction has been obtained.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. WOOD. Mr. Chairman, I move that all debate upon this amendment and on the paragraph close in five minutes.

The motion was agreed to.

Mr. BLACK of New York. Mr. Chairman and gentlemen of the committee, I want to make an observation with reference to the standing vote on the LaGuardia amendment to enforce the narcotic law which, I hope, will be taken in good part by the House. It was no surprise to me that those who voted to enforce the narcotic law were largely the well-known wets of the House while those who voted against the enforcement of the narcotic law were largely the drys of the House.

In commenting on this amendment, let me call your attention to the fact that there is nothing in the Constitution of the United States which permits a Federal officer to buy orchids for Texas Guinan. We in New York realize that Texas Guinan has done a great deal to make New York celebrated as well as the United States, but there is no reason in the world why prohibition agents should use Federal funds to decorate the lady with the latest in orchids. It took them a long, long while to get evidence against the comfortable night clubs of New York. They can get it in a little while against a little speak-easy, but they had to play around a little bit in the night clubs in order to get evidence.

Now, the gentleman from Michigan criticizes the New York State officials. What about the Federal officials in New York? What about the Federal prohibition administrator? Why do they have to bring orchid-buying agents from outside the jurisdiction of New York into New York City to get evidence? What was the matter with the prohibition enforcement agents in New York?

Mr. McKEOWN. Will the gentleman yield?

Mr. BLACK of New York. I will yield in about two minutes.

Mr. McKEOWN. I just wanted to ask what had become of all these wet votes in the last election? I looked for them.

Mr. BLACK of New York. There were 16,000,000 wet votes in the last election and we are appropriating to-day $13,000,000 to enforce the prohibition law or about 75 cents a vote.

Mr. LAGUARDIA. A year.

Mr. BLACK of New York. A year. The gentleman from Michigan spoke about the racketeers and bandits. They are the collateral creation of prohibition. They say that politics makes strange bedfellows, but what about prohibition? We have a dry in bed with a racketeer. The dry has under his pillow a vial of poison and the racketeer has a gun. But they do not drink out of that bottle, although there is a little bottle on the table out of which they both drink.

Mr. HUDSON. Will the gentleman yield?

Mr. BLACK of New York. I always am glad to yield to the gentleman from Michigan.

Mr. HUDSON. Does the gentleman make the observation here that the 16,000,000 votes he spoke about a moment ago represented violators of the eighteenth amendment?

Mr. BLACK of New York. Oh, no. I think the other 22,000,000 were the violators, as a rule. They have been trying out this noble experiment day after day and they rather like it.

The amendment offered by the gentleman from New York [Mr. LAGUARDIA] ought to prevail. There is no reason in the world why the wives of Federal agents should be used as an enticing force to entrap violators of the law. If you refused to pass—I am getting to be LAGUARDIA's second lieutenant, I guess—the LaGuardia amendment for the enforcement of the narcotic law, and thus made yourselves ridiculous before the country, at least redeem yourselves a little bit and raise your general standard before the public by accepting the amendment he has just offered.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

MINTS AND ASSAY OFFICES

For compensation of officers and employees of the mints at Philadelphia, Pa.; San Fancisco, Calif.; Denver, Colo.; New Orleans, La.; and assay offices at New York, N. Y.; Boise, Idaho; Helena, Mont.; and Seattle, Wash., and for incidental and contingent expenses, including traveling expenses, new machinery and repairs, cases and enameling for medals manufactured, net wastage in melting and refining and in coining departments, loss on sale of sweeps arising from the treatment of bullion and the manufacture of coins, not to exceed $500 for the expenses of the annual assay commission, and not exceeding $1,000 in value of specimen coins and ores for the cabinet of the mint at Philadelphia, $1,635,500.

Mr. LEATHERWOOD. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Utah offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. LEATHERWOOD: On page 34, line 14, after the word "Montana," insert "Salt Lake City, Utah."

Mr. LEATHERWOOD. Mr. Chairman and gentlemen of the committee, I assume when the committee left out the Salt Lake City assay office it was upon the theory of economy. With reasonable economy I am in full accord, and if I can be led to believe that it is to the best interest of my Government to leave this office out I shall make no complaint.

I am not offering this amendment, Mr. Chairman, simply because if it should be granted it may furnish employment for two people in Salt Lake City. I am offering it, Mr. Chairman, because I believe it is of vital importance to a great industry in my State, and if I shall fail to bring forth reasons for that statement then the action of the committee should prevail.

I regret that it was not possible for those of us who come from the mining States to be here at the hearings when this matter was taken up. Let me say that I am not offering this amendment, and nothing that I shall say will be in criticism of the action of the committee. With the facts that were before the committee, its action might be justified by those unfamiliar with mining conditions.

It seems that this office, as I read the hearings, was eliminated upon the theory of importance and that it was deemed unimportant because there had been a comparatively small amount of bullion deposited in the office for mint purposes. Another reason, it seems, that was urged as to its not being an important office, was that it would be just about as easy for the people in Utah to do this business in San Francisco or in Denver as it would be at home.

In the hearings I find that my good friend, the Director of the Mint, again falls into error with reference to the geography of our country out there, and I understand he claims to be a westerner. He speaks of San Francisco as being a night and a day from Salt Lake City. I do not know why he did not translate it into moons and say it was so many moons from Salt Lake City.

As a matter of fact, the director, if he is a westerner, knows that San Francisco is 800 miles from Salt Lake City; and, as a matter of fact, if he is a westerner and a Coloradan, he knows that Denver is more than 600 miles by rail from Salt Lake City.

Mr. Chairman, the importance of one of these assay offices is not measured by what is deposited there or by what is expended.

If it is because the outlay in this office is greater than the income, then I ask why did not the Director of the Mint, in all fairness, come before the committee and ask to have the New York office abolished, the New Orleans office abolished——

The CHAIRMAN. The time of the gentleman from Utah has expired.

Mr. LEATHERWOOD. Mr. Chairman, it is very seldom I claim the time of this House. I ask unanimous consent that I may at this time be permitted to proceed for 10 minutes to present this matter, probably for the last time.

The CHAIRMAN. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. LEATHERWOOD. I say, if it is on the question of the deficit, why should not the Director of the Mint come in and call attention to the condition at New York, where they ran behind $54,672; New Orleans, $12,491; Carson City, $5,000; Boise, $6,518; Helena, $5,785; Seattle, $23,559; Salt Lake City, $3,492. So far as that comparison is concerned, the Salt Lake City office is the lowest in the list.

I do not want any of my friends from these other States to get nervous. I am not going to make any invidious comparison or to urge that their offices be taken away from them, but I do ask them to treat us with the same degree of fairness and consideration which they claim for themselves.

I said a moment ago that these offices are not measured by what comes into the office or by what goes out of the office. These offices are created as an incentive and as an inducement in the promotion of the great industry of mining. The picket men, the outposts of all the great mining properties in the West, are the fellows who go out and prospect, and it is to these assay offices that many of these men come with their samples, and it is in this way that many great properties have been built up.

I would like to know why the Director of the Mint is so concerned about the abolition of the office at Salt Lake City when he takes into consideration the importance of that district.

Within a radius of 100 miles, Mr. Chairman, of the Salt Lake City office there is mined a greater tonnage of ore bearing the precious metals than in any other given area of the United States. There is smelted within a radius of 30 miles of the Salt Lake City assay office a tonnage of ore bearing precious metals greater than any other district in the United States or any other point in the world at the present time. Then you tell us out there in that country that it is an unimportant matter and does not mean anything!

If, Mr. Chairman, we measure this question simply by the dollars and cents handled in the office, as a business matter it might not justify itself; but let us note what is at stake and what the development of this great industry is doing for the country. I pause and would like to have an opportunity to interrogate, if it were possible, the Director of the Mint as to why he has never asked to have the Boise office abolished. We are not asking to have it done, but it has never made a much better showing than the Salt Lake City office, and why does he come asking that our office be abolished and yet he has never raised his voice against the Boise office or the Helena office? And I am informed by one of the most responsible citizens of Salt Lake City that only within the past few months the Director of the Mint came to Salt Lake City and professed to be a great friend of the Salt Lake City office, and said it would be too bad to abolish it, and yet he comes back here and says things which would damn it in the sight of this committee. Does Utah's lack of representatiion on the Appropriations Committee enter into this question?

I ask the attention of the Appropriation Committee for a minute. You are are perfectly willing to leave the assay office at Helena, Mont. What does Montana contribute to the wealth of the Nation through her mines? In 1927 the value of her contributions was $48,078,000. What does the State of Idaho contribute to the wealth of the Nation? You are leaving an assay office at Boise. She contributed $28,469,000 from her mines. What does Utah contribute, where you now seek to strike down this little office which costs the Government the gigantic sum of $4,200 a year? What did she contribute in 1927, from her mines? She contributed $74,348,000, and from that there was paid throughout the United States to the people of the country in dividends between eighteen and twenty million dollars. I had the pleasure only a few months ago of showing one of my friends from the House where he got his dividends from on Utah copper stock.

Mr. BACON. Will the gentleman yield?

Mr. LEATHERWOOD. Yes.

Mr. BACON. If you are doing so much business why do you not use the assay office more? There were only 43 deposits last year, less than one a week.

Mr. LEATHERWOOD. I will answer the gentleman in a minute, and I hope he will not let me get away from it. In addition in 1927 we produced 7,700,000 ounces of silver—more than the next higest State, which was Montana. In other words, we were first in production of silver.

I have been asked by the gentleman from New York, whom I take it is a member of the committee, why the showing of the assay office in Salt Lake City is so low. I invite his attention

to the fact that in 1925 the Salt Lake City assay office was taking a march forward. There was deposited at that time during that fiscal year bullion for minting purposes to the amount of over $112,000. I invite the gentleman's attention to the fact that the production of gold—and that is what this is based on—varies from time to time throughout the mining country. I am coming now to the real answer to the gentleman's question, which is a fair question and ought to be answered fairly.

In 1925 the Director of the Mint had set his heart on killing this little assay office. When the director came before your committee he could tell you how many days and nights it was from Salt Lake City to San Francisco, but he could not tell you how many miles. He did not know that Boise was much nearer, he did not know that Helena was much nearer. He did not tell you in this hearing why he is adverse to the Salt Lake City office.

I will tell you. The cold and unsympathetic hand of bureaucracy reached out with a view to striking down our assay office. I speak advisedly. I have in my possession the paper which shows that in order to break down and make a poor showing from this assay office the Director of the Mint practically doubled the assay charges, and yet in spite of all that, and in the face of all that, I invite your attention to the fact that we had 452 deposits last year. We assayed 1,065 samples coming from 31 States.

The CHAIRMAN. The time of the gentleman from Utah has expired.

Mr. LEATHERWOOD. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Utah asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. LEATHERWOOD. The Salt Lake office received 452 samples and made 1,065 assays last year for nonmintable purposes. What did Boise do—and you leave her assay office in? She had 843 samples and 1,408 assays. What did Helena, Mont., do? She had 485 samples and 1,299 assays.

So I say that the avowed purpose after partaking of our hospitality and telling us what good people we were, and that it would be too bad to take the office away from us, was to destroy the office by raising the assay fees. That accounts for the showing that we made last year.

Now, gentlemen, in all fairness do you think it is just the thing to take this little agency of the Government away from the people of my State?

We have never had much from the Government. We went over the top every time you called us during the war, and we went over ahead of time. You took our money and spent it elsewhere. The Government never has maintained very many of its agencies in my State. This is an agency which is vital to a great industry which turns back to the country from $18,000,000 to $20,000,000 in dividends, and that added last year to the wealth of the country $89,000,000. Why do you leave out the Boise office? The great bulk of the tonnage of Idaho is in the panhandle country, which is practically inaccessible to Boise except for three or four months of the year. We think in all justice, in all fairness, gentlemen of the Committee on Appropriations, that it is not right to take from us this little help which the Government is giving us, and I ask the members of this committee in all fairness to treat this matter as a business proposition.

I am not making this appeal as a pro forma matter, or to preserve any record. I am making a plea for an industry of my State that produces three times more wealth from our mines than is produced from the mines of any other of the intermountain States.

Mr. WOOD. Mr. Chairman, in answer to the very eloquent and earnest plea of the gentleman from Utah [Mr. LEATHERWOOD], the only purpose this committee has in abolishing this office is based on the fact that the office is not needed. The gentleman from Utah stated himself that if we were to consider this purely as a business proposition, no defense could be made in its behalf.

Mr. LEATHERWOOD. With the facts before you.

Mr. WOOD. Yes; with the facts before us.

Mr. LEATHERWOOD. And I tried to give you some facts.

Mr. WOOD. It was on the basis that the Deadwood office in Dakota was not needed that we abolished it at the last session of Congress. These institutions were established many, many years ago when the means of transportation were not what they are to-day, and when there was more necessity than there is to-day for their existence, and after once more being established, the communities, of course, are loath to give them up. Since I have been a Member of this House we had to fight three or four different sessions to get rid of the subtreasuries, when it was admitted by the Treasury Department, as it is admitted now, that they were not needed; but they were establishments that had a few employees and they added a little bit of business interest to the community and were a little bit representative of the affairs of Government, and the various communities wanted to retain them. I remember very well when we used to have some 17 or 18 pension commissioners scattered around over this country. They might have been needed at one time, though that was doubtful, but the time came when they were not needed, and yet every State that had one of them, on this floor fought to maintain them because they did have them. If we are to proceed in this way, then we are going to be constantly confronted with just criticism by the public for paying out money for useless agencies.

The gentleman from Utah stated that this territory is producing some $78,000,000 of national wealth, but it does not go into that mint. There were only $34,000 that went into that mint last year, and there were less than three and a half samples there in a month—only 40 through the entire year. The only defense that can be made for the further maintenance of this office is that they have it there and they want to keep it there. None of the ore that goes into this office is minted there. It goes from there to San Francisco. It necessitates a reshipment, expensive both to the Government and to the producer of ore, so why not send it directly to San Francisco in the first place? It is not sufficient to say that we have not abolished these other offices. We will abolish them as the showing comes, or attempt to abolish them, against the opposition, of course, always, of the States that have them. There is no pleasure, I assure the gentleman, so far as this committee is concerned, to recommend the abolishment of this office, but we would be entirely derelict in our duty if we did not bring to the attention of this House the fact that this is a useless thing and we are paying out more than $3,000 a year in excess of the money that comes in. Only about $750 comes into this office in the course of a year, and from a business viewpoint it is absolutely indefensible. If this Congress, with the facts before it, wants to keep this office merely as a sort of accommodation to the gentlemen out there, merely because of the fact that they have enjoyed it throughout these years and hate to give it up, all well and good, but we can not justify ourselves in keeping it because it is a useless expense to the Government and adds nothing to the efficiency of the service.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Utah.

The question was taken; and on a division (demanded by Mr. LEATHERWOOD) there were—ayes 11, noes 27.

So the amendment was rejected.

Mr. WELCH of California. Mr. Chairman, I move to strike out the last word.

The gentleman from Indiana [Mr. WOOD], who has referred to the bill which bears my name as a "monstrosity," has clearly overlooked the fact that to repeal the bill in accordance with his suggestion, while it might take away one or two million dollars from the higher-paid employees, will at the same time deprive the lower-paid employees of from eighteen to twenty millions of dollars from their already inadequate pay. He offers no substitute to improve existing conditions. It is well known that many inequalities existed prior to the passage of the Welch bill, but these inequalities can be corrected only by a thorough classification of the entire service as provided in section 2 of my bill, a report on which is expected to be filed with Congress about January 1. In the meantime my bill was designed to grant some temporary relief. First, the House leaders drastically reduced the rates from those carried in the original bill and would not permit the bill to come to a vote except under suspension of the rules, which prevented any liberalizing amendments. Next, the decision of the Comptroller General reduced the benefits for the lower-paid employees and increased those for the higher-paid employees. Lastly, the department heads denied to the lower-paid employees the relief which they were authorized to grant, and in some instances the effective date of the application of the act was deferred. I will willingly join with the gentleman from Indiana in the repeal of my bill if he will guarantee to secure the enactment of a bill which will contain rates as carried in my original bill, before the emasculation of it by the President of the United States, the House leaders, the Comptroller General, and the department heads charged with its administration.

The bill which I had the honor to introduce at the last session of Congress after consultation with the officers of the National Federation of Federal Employees had for its purpose the in-

crease of the compensation of Government workers, particularly those in the lower salary ranges. The bill as finally enacted into law materially reduced the rates as originally presented and was not satisfactory to me nor to its proponents. As finally enacted it represented the best possible obtainable at the last session of Congress, in view of conditions then existing.

Probably the most poorly paid group in the entire Federal service are the men and women known as custodial employees, who make up the maintenance forces in public buildings throughout the country. In spite of the slashing of the rates proposed in my original bill, the bill as finally enacted into law did carry uniform increases in all of the lower grades in the custodial service of $180 per annum, notwithstanding which we find, on page 1045 of the President's Budget as transmitted to Congress at the opening of the present session, House Document 375, a striking illustration how even the inadequate relief clearly intended in the Welch bill as enacted into law was further reduced by administrative action. For the fiscal year ended June 30, 1928, 1,286 firemen received an average of $1,211 per annum.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WELCH of California. Mr. Chairman, I ask unanimous consent to proceed for five additional minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. WELCH of California. For the current fiscal year, with the increases obtained in the Welch bill, as applied by the Treasury Department, which has jurisdiction over these employees, 1,327 firemen received an average of $1,311 per annum, indicating an average increase of only $100 per annum, notwithstanding the provisions of the bill calling for an increase of $180 per annum, and there is a still gloomier outlook for the next fiscal year, the estimate for which calls for 1,344 firemen with an average salary of $1,299 per annum, forecasting an average decrease of $12 per annum. The table referred to further shows that during the fiscal year ended June 30, 1928, there were 2,199 laborers receiving an average salary of $1,112 per annum. For the current fiscal year 2,301 laborers, with an average salary of $1,198 per annum, showing that the increase to this group under the Welch bill amounts to only an average of $86 per annum, with an average cut of $4 per annum forecasted in the estimates for the next fiscal year.

Charwomen, a group of employees whose work is laborious, and whose pay is always meager, have apparently received even less consideration. During the fiscal year ended June 30, 1928, 1,131 of these employees received an average wage of $634 per annum. For the current fiscal year, with such increase as was allowed them by the department, 1,149 charwomen are receiving an average of $679 per annum, showing an average increase of only $45 per annum, and the prospect for the next fiscal year is for an average decrease of $1 per annum from the miserable pittance now being paid them. To make a bad matter still worse, it was the original intention of the Treasury Department to deprive the custodial employees of any increase under the Welch bill on July 1, 1928, and to delay the effect of the act until July 15. The situation of these employees was called to the attention of the Treasury Department by Mr. Luther C. Steward, president of the National Federation of Federal Employees, under date of July 30, 1928, and I desire to include in my remarks copies of Mr. Steward's letter, together with reply thereto from one of the Assistant Secretaries of the Treasury.

I feel that it is clearly the duty of the House of Representatives to take steps during the present session of Congress by the enactment of amendatory legislation which will grant a fuller measure of justice to the lower-paid Federal employees.

JULY 30, 1928.

The SUPERVISING ARCHITECT,
Treasury Department, Washington, D. C.

DEAR SIR: Confirming our personal interview had on the 28th instant, we desire to cite for your consideration reasons which in our judgment demonstrate the clear intent of Congress to substantially increase, as effective July 1, 1928, rates for custodial employees in effect prior to that date.

The rates for the lower grades in the custodial service receive a larger increase under the terms of the Welch Act than the rates contained in the lower grades of the other services enumerated in the classification act of 1928. The decision rendered by the Comptroller General under date of June 2, 1928, also bears out this statement.

With respect to the field service, the Comptroller General, under date of June 21, 1928, ruled as follows:

"The heads of the several executive departments and independent establishments are authorized to adjust the compensation of certain civilian positions in the field services, the compensation of which was adjusted by the act of December 6, 1924, to correspond, so far as may be practicable, to the rates established by this act for positions in the departmental services in the District of Columbia.

"The act of December 6, 1924 (43 Stat. 704, 705), specifically applied to the Interstate Commerce Commission. Said act provided as follows:

"'The appropriations herein made may be utilized by the heads of the several departments and independent establishments to accomplish the purposes of this act, notwithstanding the specific rates of compensation and the salary restrictions contained in the regular annual appropriation acts for the fiscal year 1925 or the salary restrictions in other acts which limit salaries to rates in conflict with the rates fixed by the classification act of 1923 for the departmental service.'

"This act has been extended through each subsequent fiscal year. For the fiscal year 1929, see section 2 of the act of March 5, 1928 (Public, No. 93). These statutes have heretofore been construed and applied as authorizing the administrative office to adjust the compensation of positions the salary of which had theretofore been specifically fixed by other statute. (4 Comp. Gen. 582; id. 625.) The provisions of the act of May 28, 1928, do not automatically increase the rates of compensation of any field position, whether the rates were or were not specifically fixed by other law, but there is for administrative consideration such action, if any, as may be necessary to adjust the rates of compensation for field positions 'to correspond, so far as practicable, to the rates established by the classification act of 1923 for positions in the departmental services in the District of Columbia,' as amended by the act of May 28, 1928, fixing the new schedule of salary rates."

The relation of employees in the field services to employees in the District of Columbia remains the same under the Welch Act as it was subsequent to the passage of the classification act of 1923 and the special appropriation act of December 6, 1924. Section 3 of the Welch Act authorizes heads of departments to adjust the compensation of field employees to correspond, so far as may be practicable, to the rates established for positions in the District of Columbia. Where a differential was established for field positions under the act of December 6, 1924, and where, in the judgment of the head of the department, certain field positions were, under the act of December 6, 1924, paid more than similar positions in the District of Columbia, it necessarily follows that under the provisions of section 3 of the Welch Act the same differential in favor of certain field positions should be maintained.

During the entire time that the Welch Act was under discussion in Congress the custodial group, and a need for adjustment upward of the rates of compensation paid to the members of this group, received a greater amount of attention at the hands of the Members of Congress than any other feature of the bill. Since the passage of the act and the issuance of the Comptroller General's decision of June 2, all departments and independent establishments, with the exception of the Supervising Architect's Office, have taken steps to apply the terms of the Welch Act, effective July 1. In the War Department and the Interior Department, where there are substantial numbers of maintenance employees who are comparable to the custodial employees of the Treasury Department, the terms of the Comptroller's decision of June 2 have been applied in toto.

It is with sincere regret that we have to point out to you the very painful impression that will be created by the Supervising Architect's Office standing alone; first, as the only bureau in the Government which has failed to grant its employees increases authorized by the act, reinforced by the terms of the Comptroller General's decision of June 2, and, second, that the Supervising Architect's Office should be the only bureau in the entire Government that failed to apply the terms of the Welch Act as of July 1, 1928, thereby depriving the lowest-paid employees of small sums, which deprivation creates friction out of all proportion to the amount involved.

In certain bureaus where the actual increase of field employees will be contained in the pay for August, official notification has already been sent to field offices that the effective date of the increases was July 1. As to the effective date as to the applying of provisions of section 3 of the Welch Act, effective July 1, 1928, desire to call your attention to decision of the Comptroller General issued under date of January 3, 1925, appearing in volume 4, Decisions of the Comptroller General, commencing at page 582, in which discussing the effective date of the application of the act of December 6, 1924, he holds that there can be no doubt that the rates of compensation to be fixed were intended to apply for the entire fiscal year.

We are receiving in substantial volume, particularly from metropolitan centers, a demand that the action of the Supervising Architect's Office, in respect of the application of the Welch Act to custodial employees, be taken up at once with the entire membership of Congress while they are at their homes, and we fully recognize the interest in this subject by Members of both Houses, but before proceeding any further we desire to place the entire matter before you, feeling sure that with the additional information above set forth action will be taken to bring about the adjustment contemplated by the Welch Act.

Fraternally,

LUTHER C. STEWARD, *President.*

TREASURY DEPARTMENT,
CUSTODIAN SERVICE,
Washington, July 31, 1928.

Mr. LUTHER C. STEWARD,
President National Federation of Federal Employees,
Labor Building, 10 B Street SW.,
Washington, D. C.

SIR: The receipt is acknowledged of your communication of the 30th instant relative to the application of the Welch bill to employees in the custodian service assigned for the care, maintenance, and repair of Federal buildings.

Action on your letter must be held in abeyance pending the return of the Undersecretary of the department and the Assistant Secretary in charge of the Office of the Supervising Architect.

The department has reconsidered its action in authorizing increases in compensation of the custodian force effective July 16, and instructions will be given to custodians authorizing same as effective July 1, 1928.

Respectfully,

S. LOWMAN,
Assistant Secretary of the Treasury.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

Mr. ARENTZ. Mr. Chairman, I have offered an amendment, which is at the desk.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 34, line 14, after the word "Montana," insert "Carson City, Nev."

Mr. ARENTZ. Mr. Chairman, all that has been said relative to the Salt Lake City office can also be stated about the Carson City assay office. I need not go into the details of the necessity for the retention of this office, except to say in regard to the $6,000 appropriation last year for this purpose, that I believe a similar amount should be appropriated this year, and it will be necessary within the next year or two to appropriate three or four times this amount to carry on the cooperative work with the State in the exploration of new ore deposits, a question that has been very seriously considered by the United States Geological Survey and Bureau of Mines. And when the question of the Carson City assay office came up, Mr. THATCHER, a member of the Committee on Appropriations, asked Mr. Grant, the Director of the Mint, if there was any reason over and above that given for the retention of the assay office in Salt Lake City that could be applied to the Carson City office, and the answer given by Mr. Grant to the committee was that there were many more reasons why the Carson City office should be retained.

Mr. BYRNS. If the gentleman will permit, my recollection is that the director stated that a bill had been introduced in Congress which sought to turn over that building for a Federal prison. Is that correct?

Mr. ARENTZ. At the present time, Mr. BYRNS, there are Federal prisoners from many points in the United States who are sent to Nevada prisons, both county jails and State penitentiaries, for retention. And I will also say if the Federal Government continues to send prisoners to our State prisons and county jails, it is going to be necessary for the Federal Government to do something to prevent the overcrowding of those places.

Mr. BYRNS. I was just wondering whether the gentleman or either of the two Senators from Nevada, had introduced a bill, as I understood the director to say, to turn over this assay building for a Federal prison?

Mr. ARENTZ. I will say, if there is any kindly disposition on the part of members of the Appropriations Committee, to change this institution to a jail or a Federal penitentiary——

Mr. BYRNS. That is not my question. It was whether the gentleman, or one of the Senators, had introduced a bill.

Mr. ARENTZ. I do not know at the moment what the Senators have done relative to this matter. I do recollect having introduced a bill to that effect, and I will say I think this assay office, a thick-wall stone structure, if it is going to remain unused through the action of your committee in cutting off this appropriation, would be a good place to put Federal prisoners if they continue to send them to Nevada.

Mr. BYRNS. Does not the gentleman think, in view of the statement made by the director as to the loss incurred in the retention of this office, that it could be put to a better advantage, under the circumstances stated by him, than continued as an assay office?

Mr. ARENTZ. I will say, in view of the production of precious minerals in the State of Nevada and the mining industry, that the small amount of $6,000 is a trifle when it comes to the consideration of the benefits which will accrue to my State through its retention. The Committee on Appropriations could well afford to continue the assay office at Carson City even if for a year or two its receipts may be insufficient to cover the expenditure made by the Government, because I can assure the gentleman from Tennessee in a year or two we may be receiving millions of dollars in bullion in this assay office. I heard the gentleman from Utah here on his feet make a plea—and a splendid plea—for an appropriation of $4,500. I am now pleading for $6,000, and surely the merits will justify a great deal larger appropriation than this insignificant amount. I hope the committee will favor this amendment and adopt it.

Mr. WOOD. I desire to say a word in reference to the Carson City office and furnish some facts for the consideration of the gentleman.

Carson (Nev.) Mint has functioned for some time only as a minor assay office. The amount eliminated from the appropriations on that account is $6,440, which covers the salaries of three employees and the incidental expenses of running the office. During the fiscal year 1928 the business of the office consisted of 209 deposits, and the coining value of the gold and silver received was $234,811.70. The income received at the office was $460.48, and the expense amounted to $5,847.56, an excess of expenses over income of $5,387.08.

Carson is only 12 hours from San Francisco, where the Government has a very large mint and assay facilities. As it is now, all of the gold that comes into Carson now is reshipped to San Francisco. The business of the office is not sufficient to justify its continuance and the Director of the Mint has told the committee in the hearings this year that the assay office at Carson was not of sufficient benefit to the State or to the Government to keep it running for the amount that it costs and that no hardship would result through the abolishment of the office.

Carson City is distant a day and a night from San Francisco. There the Government has a very fine mint and assay facilities. The condition of the office at Carson City is not such as to satisfy the judgment of the Director of the Mint, and we were told in the hearings that the best interests of the Government and the Treasury in the transaction of its business would be subserved by the elimination of this office.

Mr. LEATHERWOOD. Mr. Chairman, will the gentleman be gracious enough to yield?

Mr. WOOD. Certainly.

Mr. LEATHERWOOD. I notice in the hearings that the Director of the Mint seems to hold out some hope to the people of Nevada that if the office at Carson City is abolished it will be converted into a jail. I wonder if we in Utah can have such a prospect?

Mr. WOOD. If the people in Utah need a jail, I am in favor of it.

Mr. LEATHERWOOD. I thought perhaps we might get a recommendation of that from the head of the committee. [Laughter.]

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Nevada.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Baltimore, Md., post office, etc., continuation.

Mr. McKEOWN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Oklahoma moves to strike out the last word.

Mr. McKEOWN. Mr. Chairman and gentlemen of the committee, you know that for a long time I have been disappointed in the matter of appropriations for public buildings. I feel that Oklahoma has not received what she is entitled to have appropriated to her.

I had a talk with the gentlemen who have this matter in charge, and they convinced me that they were doing the best they could to fairly locate these buildings. But it will be of interest to you to know that in this bill there are 12 States that are getting 1 building each, 13 States that get 2 buildings, 8 States that will get 3 buildings, 3 States that will get 4 buildings, 4 States that will get 6 buildings, and 1 State that will get 10 buildings.

I am hoping that the department will make a survey of the State of Oklahoma for this reason: Oklahoma is a new State. It had no Representatives in Congress except for a short time, and during all the years in which public-building programs had gone forward in the past Oklahoma had received but scant consideration because she was not then a State. Now Oklahoma is pouring into the National Treasury large sums of money from the revenues derived from oil and other great resources

that are being developed. Oklahoma is one of the States whose Federal income and whose Federal taxes are greatly increased each year.

We are limited in this bill to only one small building, and Oklahoma people do not understand why she is not given more consideration. In my district there are two small public buildings, although we have a number of good cities, some of which are designated as United States court towns. We have at least nine cities in my district which comply with the requirements authorizing them to have a public building. They are growing, prosperous cities. They are not merely boom towns, places that have grown overnight, that will disappear to-morrow. They are substantial places. My own city is a United States court city, a city of 15,000 people. We are growing every day. Oil fields are developing and land values in these cities are growing. We feel that those in charge of these buildings ought to bear in mind the fact that the real estate which I could have bought when the House was good enough to pass a bill once to give us $10,000 to buy a site—that site sold a few days ago for $25,000, and if the United States Government waits a long time it will have to pay a greater price for suitable locations for buildings. These are the cities in my district that ought to have public buildings, namely: Sapulpa, Holdenville, Ada, Wewoka, Drumright, Bristow, Okemah, and Seminole.

Our citizens go through the other States and see the fine public buildings located at almost every crossroad and they come back to their home State and can not understand why their Congressmen can not secure for them public buildings in keeping with the growth of their cities.

Mr. BACON. Are they first-class cities?

Mr. McKEOWN. They are first-class cities in every respect.

Mr. BACON. Have they first-class post offices?

Mr. McKEOWN. I have got cities down in my district that have no post-office building, and yet they have over $50,000 postal receipts.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. McKEOWN. Mr. Chairman, I withdraw the pro forma amendment.

The CHAIRMAN. The pro forma amendment is withdrawn. The Clerk will read.

The Clerk read as follows:

Washington, D. C., Department of Agriculture buildings: For continuation of the construction of the central part of the administration building.

Mr. KETCHAM. Mr. Chairman, I move to strike out the last word. I do this for the purpose of asking the chairman of the subcommittee a question concerning a statement he made yesterday. My understanding of the matter is that this simply lists the towns where, in accordance with legislation already passed, buildings have either been constructed or are about to be constructed and work carried on. They are in process.

Mr. WOOD. They are in process, and there may be some of them for which even a site has not been secured.

Mr. KETCHAM. But in no case is there a new project that has not already been included in a previous act.

Mr. WOOD. No. They have all been passed upon heretofore.

Mr. KETCHAM. My further understanding is that the new projects which are contemplated in the next year are to come in a subsequent report from the Budget Bureau, and that they will be included in a deficiency bill.

Mr. WOOD. Either in a deficiency bill or in a separate bill.

Mr. KETCHAM. In a separate bill or in a deficiency bill later on.

Mr. WOOD. That is correct.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn.

There was no objection.

The Clerk read as follows:

Washington, D. C., Archives Building: Toward the construction of building and acquisition of site, and the Secretary of the Treasury is authorized to enter into contracts for the entire estimated cost of such building and site, including stacks, for not to exceed $8,750,000, in lieu of $6,900,000 fixed in act of July 3, 1926.

Mr. BLACK of Texas. Mr. Chairman, I make a point of order against the paragraph, and I will state to the Chair that the act of July 3, 1926, fixed a limit of cost of $6,900,000 for this particular structure and that the present paragraph undertakes to raise that limit of cost $1,850,000, making the total limit of cost $8,750,000. I make the point of order that there is no authorization of law for that increase.

Mr. WOOD. Mr. Chairman, I will call the gentleman's attention to the Elliott bill, which gives us the very authority he is denying we have:

Provided further, That unless specifically provided for in the act making appropriations for public buildings, which provision is hereby authorized, no contract for the construction, enlarging, remodeling, or extension of any building or for the purchase of land authorized by this act shall be entered into until moneys in the Treasury shall be made available for the payment of all obligations arising out of such contract, and unless the said act making appropriations for public buildings shall otherwise specifically provide, as hereinafter authorized, appropriations shall be made and expended by the Secretary of the Treasury in accordance with the estimates submitted by the Bureau of the Budget.

The act to which the gentleman refers, the act of July 3, 1926, is an appropriation act.

Mr. BLACK of Texas. Yes; but it fixes a limit of cost for this particular building and site of $6,900,000.

Mr. WOOD. Under the Elliott bill, if the gentleman listened to what I was reading——

Mr. BLACK of Texas. I listened.

Mr. WOOD. We have a right to fix the limit of cost ourselves.

Mr. BLACK of Texas. I doubt if the language is broad enough to give the Appropriations Committee that right, and that is the point of order I make.

Mr. WOOD. It was certainly the intention of Congress to give it. If the language means anything it means that the Appropriations Committee has that right.

Mr. BLACK of Texas. Under the general rule of the House the Appropriations Committee has no right to bring in a provision of law that changes existing law, and I do not believe that the language in the Elliott bill is sufficient to change that rule.

The CHAIRMAN. The Chair would like to ask the gentleman from Indiana if this is within the limit as suggested or brought in by the Bureau of the Budget?

Mr. WOOD. It is.

The CHAIRMAN. From a direct reading of that law it is the Chair's opinion that the Committee on Appropriations is within its rights, and he overrules the point of order.

Mr. DALLINGER. Mr. Chairman, I move to strike out the last word. I want to make some inquiry about this archives building. I noticed in one of the Washington papers that the site chosen for the archives building was bounded by Ninth, Tenth, C Streets, and Louisiana Avenue. I went down there the other morning and I do not see how you are going to put a big building on that little piece of land. It is almost a triangular section; and I wondered whether the newspaper account was incorrect.

Mr. WOOD. That is the location.

Mr. DALLINGER. Then I do not see how you are going to put a $9,000,000 building on that small site, and evidently there will be no chance for expansion. It seems to me that an archives building, of all buildings, should be constructed on a lot that would permit of expansion. I am heartily in favor of an archives building, and I was one of those who tried to get one authorized years ago, but if we are going to have one it ought to be built, it seems to me, on a lot large enough to house the archives of the Government and permit of further expansion as necessity requires.

Mr. BLACK of Texas. Will the gentleman yield?

Mr. DALLINGER. Certainly.

Mr. BLACK of Texas. Originally the plans called for two blocks, and they would have cost the Government $700,000. Now they have changed that and propose to erect the structure on one block and pay $1,325,000 for that one block, thereby getting much less land in area and paying $625,000 more for it.

Mr. DALLINGER. May I ask the chairman if he has any map showing the size of the lot?

Mr. WOOD. I have no map here showing the size of the lot, but I will say to the gentleman that the Public Buildings Commission itself changed the location. They now propose to acquire block 381, located between Ninth and Tenth Streets, C, and Louisiana Avenue, and they propose to acquire 38,000 square feet.

Mr. DALLINGER. It seems to me that 38,000 square feet is altogether too small, and it is out of proportion to the other buildings they are erecting.

Mr. WOOD. That is pretty nearly an acre of ground, and you can put up a fair-sized building on an acre of land.

Mr. REED of New York. The Congressional Library is on a lot containing 4 acres.

Mr. DALLINGER. May I ask the gentleman from Indiana if he knows what disposition is to be made of the square lot farther to the south and whether this will be left open so they

could bridge across Louisiana Avenue and extend this building if necessity required it?

Mr. WOOD. I would say to the gentleman that I suspect that would be possible, for the reason that the Government owns all the land around this proposed site in the triangle.

Mr. DALLINGER. Then they are not contemplating putting any other Government building between the site and the Mall?

Mr. WOOD. I do not think so.

The pro forma amendment was withdrawn.

Mr. BLACK of Texas. Mr. Chairman, on page 46, line 1, I move to strike out the figures "$8,750,000" and insert in lieu thereof "$6,900,000" and to strike out the balance of the paragraph.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. BLACK of Texas: Page 46, line 1, strike out the figures "$8,750,000" and insert in lieu thereof "$6,900,000" and strike out the remainder of the paragraph.

Mr. BLACK of Texas. Mr. Chairman, the act of July 3, 1926, authorized this archives building to be constructed at a total cost, including the cost of the site, of $6,900,000, and the Public Buildings Commission in looking about for a site selected a site that was to cost $700,000. It was to be located on blocks 294 and 295.

It is now proposed to change the site and acquire another block, block 381, and pay $1,325,000 for this one block, an increase in this item alone of $625,000.

It is also proposed to increase the cost of the building by something more than $1,000,000, and yet according to the testimony of the Supervising Architect himself it is not known now just what this building will be used for and just what sized building will be needed.

On page 601 of the hearings Mr. WOOD asked the Supervising Architect this question:

What is it proposed to do with this archives building? What is its purpose?

Mr. Wetmore, the Supervising Architect, said:

That is difficult to say, because Congress has not designated yet just what class of archives should go into that building and just how it is to be operated.

Now, we have the testimony of the Supervising Architect himself that we are asking Congress to increase the limit of cost by $1,850,000 for a building that Congress has not yet designated just what class of archives should go into it and just how it is to be operated. If that is good business policy, then I have an inadequate understanding of what it takes to constitute good business policy.

The Supervising Architect, continuing, said:

But the idea of the Treasury officials is that the character of the archives that go into the building should be limited to those that have a permanent value or some historic interest; that it should not be used simply as a storehouse for old archives. With that in view we have circularized all the departments to find out what their requirements are, and the cubage that is given here would accommodate the archives of the various departments.

Mr. Chairman, I submit, in view of the uncertainty of the situation and in view of the fact that the Government can acquire two blocks at a valuation of $700,000, we ought to insist on the original limit of cost and that is the purpose of my amendment. I can see no justification for increasing the limit of cost of this building by $1,850,000. If the proper economy is used, I believe that the original limit of cost of $6,900,000, is every cent that is necessary to purchase the site and construct this archives building. President Coolidge, in his message, talked a great deal about economy and the savings of the Bureau of the Budget, but here is an instance where some of this economy might well be put into effect.

Mr. WOOD. Mr. Chairman, I desire to say in answer to the gentleman from Texas that the very question the gentleman has raised here, was raised in my own mind, and I asked the Supervising Architect what would be the advantage of putting this building on the new site rather than putting it where it was originally to be located, and he said that it would not fit in at all with the triangle plan as worked out by the architects who were engaged by the Secretary of the Treasury to lay out that whole triangle development. The improvement there is according to a plan which they think is not only one of utility but also artistically what it should be with reference to not only this improvement, but to the other proposed improvements, and the additional cost is not all for the difference in the price of the ground.

The testimony shows that the proposed building under the $6,900,000 estimate contemplated a stone-faced structure containing approximately 7,980,000 cubic feet, which, together with the cost of stacks, had been estimated to cost $6,200,000. Revised data from the several departments show additional requirements, bringing the total to approximately 11,312,100 cubic feet, which at the rate of 64½ cents per cubic foot will increase the probable cost of construction, including stacks, from $6,200,000 to $7,425,000, a difference of $1,225,000.

Mr. BLACK of Texas. Will the gentleman yield?

Mr. WOOD. Yes.

Mr. BLACK of Texas. And yet, according to the admission of the Supervising Architect, those increased figures are all made without any knowledge whatever of what kind of records Congress shall direct to be kept in this building.

Mr. WOOD. With reference to the character of the records, there is a diversity of opinion in the various departments with respect to the records that should be kept there. Some are insisting that all records, whether of any consequence or not, should be kept in this archives building. Others are insisting that only those of a historic or otherwise of a practical value should be kept there. But here is something that we should not overlook. This building is not only going to be built for present needs but, I trust, it will be built for the needs of a future of 150 years.

I have long been an advocate of an archives building. Some of the most valuable records we have in this Government are to-day stored in cellars. They are not protected at all. They are all in danger, if you please, to destruction by fire.

I do not think we should hamper the gentlemen who have the building of this structure in their charge. The Public Buildings Commission and the committee of architects that were appointed for the purpose of making this triangle improvement are of the unanimous opinion that the blocks that were originally selected would not be suitable at all for this archives building and would materially interfere, so far as their scheme of improvement is concerned, with what their desire is with reference to the whole improvement in the triangle.

Mr. BLACK of Texas. Mr. Chairman, will the gentleman yield?

Mr. WOOD. Yes.

Mr. BLACK of Texas. I realize that aside from the increased cost of the site that the provision in the bill authorizes an increase of more than a million dollars in the building on account of the increase in size, but would it not be the sensible thing to do to defer the consideration of this building until Congress by some law has decided what records shall be preserved? According to the testimony of the Supervising Architect himself he has no adequate data upon which to figure, because Congress has made no affirmative declaration as to what records shall be kept in this Archives Building.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

The amendment was rejected.

The Clerk concluded the reading of the bill.

Mr. WOOD. Mr. Chairman, I ask unanimous consent to return to page 14, line 8, for the purpose of correcting a date.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WOOD. Mr. Chairman, I offer the following amendment which I send to the desk.

The Clerk read as follows.

Amendment by Mr. WOOD: Page 14, line 8, strike out "1929" at the end of the line and insert in lieu thereof the figures "1930."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WOOD. Mr. Chairman, I move that the committee do now rise and report the bill back to the House with the amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. SNELL, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 14801) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1930, and for other purposes, and had directed him to report the same back to the House with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

Mr. WOOD. Mr. Speaker, I move the previous question on the bill and amendment to final passage.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the bill was passed was laid on the table.

ORDER OF BUSINESS

Mr. SNELL. Mr. Speaker, it is expected that the Committee on Rules to-morrow may report out some rules for the consideration of certain business on Monday next. In the event that the House does not meet to-morrow, I ask unanimous consent that I may file those rules with the Clerk of the House in lieu of reporting them from the floor while the House is in session.

The SPEAKER. The gentleman from New York asks unanimous consent that he may have the privilege of filing certain reports with the Clerk of the House rather than introducing them in the regular way. Is there objection?

There was no objection.

THE PRESIDENT'S ARMISTICE DAY ADDRESS

Mr. WINGO. Mr. Speaker, on last Armistice Day the President of the United States delivered a very remarkable and able address. I ask unanimous consent to extend my remarks in the RECORD by publishing that address.

The SPEAKER. Is there objection?

Mr. TILSON. Mr. Speaker, I am informed that the Senator from Kentucky placed that in the RECORD to-day.

Mr. WINGO. Very well; I shall withdraw my request. I just wanted to have it embalmed in the RECORD.

LEAVE OF ABSENCE

Mr. DRIVER. Mr. Chairman, I ask unanimous consent for indefinite leave of absence for my colleague, Mr. TILLMAN, on account of serious illness.

The SPEAKER. Without objection, it will be so ordered.

There was no objection.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 4402. An act authorizing the Secretary of the Navy to assign to the Chief of Naval Operations the public quarters originally constructed for the Superintendent of the Naval Observatory in the District of Columbia.

ADJOURNMENT OVER UNTIL MONDAY

Mr. TILSON. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet on Monday next.

The SPEAKER. The gentleman from Connecticut asks unanimous consent that when the House adjourns to-day it adjourn to meet on Monday next. Is there objection?

There was no objection.

ADJOURNMENT

Mr. WOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 52 minutes p. m.), in accordance with the order heretofore made, the House adjourned until Monday, December 10, 1928, at 12 o'clock noon.

COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Saturday, December 8, 1928, as reported by the clerks of the several committees:

COMMITTEE ON APPROPRIATIONS

(10.30 a. m.)

War Department appropriation bill.

State, Justice, Commerce, and Labor Departments appropriation bill.

COMMITTEE ON NAVAL AFFAIRS

(10.30 a. m.)

To regulate the distribution and promotion of commissioned officers of the Marine Corps (H. R. 13685).

For Monday, December 10, 1928

APPROPRIATIONS COMMITTEE

War Department appropriation bill.

COMMITTEE ON AGRICULTURE

(10 a. m.)

To amend the packers and stockyards act, 1921 (H. R. 13596).

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

649. A letter from the Secretary of the Navy, transmitting draft of a proposed bill, "Authorize an increase in the limit of cost of two fleet submarines"; to the Committee on Naval Affairs.

650. A letter from the Secretary of the Navy, transmitting draft of a proposed bill, "To amend the act of May 4, 1898, as amended by the act of March 3, 1899, relating to the number of acting assistant surgeons in the Navy to be appointed by the President"; to the Committee on Naval Affairs.

651. A letter from the chairman of the Federal Radio Commission, transmitting the Second Annual Report of the Federal Radio Commission for the year ended June 30, 1928, together with a supplemental report for the period from July 1, 1928, to September 30, 1928; to the Committee on the Merchant Marine and Fisheries.

652. A letter from the chairman of the National Advisory Committee for Aeronautics, transmitting a copy of the Fourteenth Annual Report of the National Advisory Committee for Aeronautics for the fiscal year 1928; to the Committee on Military Affairs, Naval Affairs, and Interstate and Foreign Commerce.

653. A letter from the chairman of the United States Board of Mediation, transmitting copy of the Second Annual Report of the Board of Mediation to the Congress; to the Committee on Interstate and Foreign Commerce.

654. A letter from the Secretary of the Interior, transmitting information, that under the terms of a joint resolution approved June 7, 1924 (43 Stat. 688), the Secretary of the Interior was authorized and directed to submit to Congress, reports on several projects in Natrona County, Wyo., but as other investigations have been undertaken, reports from the above resolution can not be made at this time; to the Committee on Irrigation and Reclamation.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. HAWLEY: Committee on Ways and Means. H. J. Res. 340. A joint resolution to authorize the Secretary of the Treasury to cooperate with the other relief creditor governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States; without amendment (Rept. No. 1930). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 14687) granting a pension to Martha B. Beldin; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 14851) granting a pension to Cornelia A. Parsons; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. GARNER of Texas: A bill (H. R. 15005) authorizing the Donna Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande at or near Donna, Tex.; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 15006) authorizing the Los Indios Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande at or near Los Indios, Tex.; to the Committee on Interstate and Foreign Commerce.

By Mr. COCHRAN of Missouri: A bill (H. R. 15007) to regulate the construction of bridges over navigable waters of the United States, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HOGG: A bill (H. R. 15008) to include in the credit for time served allowed substitute clerks in first and second class post offices and letter carriers in the City Delivery Service time served as special-delivery messengers; to the Committee on the Post Office and Post Roads.

By Mr. JOHNSON of Indiana: A bill (H. R. 15009) for the repeal of the provisions in section 2 of the river and harbor act approved March 3, 1925, for the removal of a dam at Grand Rapids on the Wabash River, Ill. and Ind.; to the Committee on Rivers and Harbors.

By Mr. McSWAIN: A bill (H. R. 15010) to provide for the retirement of disabled nurses of the Army and Navy; to the Committee on Military Affairs.

By Mr. SEARS of Nebraska: A bill (H. R. 15011) authorizing Charles B. Morearty, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Omaha, Nebr.; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 15012) authorizing Charles B. Morearty, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near South Omaha, Nebr.; to the Committee on Interstate and Foreign Commerce.

By Mr. STALKER: A bill (H. R. 15013) to amend the act entitled "An act to authorize the Board of Managers of the National Home for Disabled Volunteer Soldiers to accept title to the State Camp for Veterans at Bath, N. Y.," approved May 26, 1928; to the Committee on Military Affairs.

By Mr. McLEOD: Joint resolution (H. J. Res. 341) authorizing the President to call a conference on questions relating to the construction of an inter-American highway; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALDRICH: A bill (H. R. 15014) granting an increase of pension to Roena Matteson; to the Committee on Invalid Pensions.

By Mr. AYRES: A bill (H. R. 15015) granting an increase of pension to Mary M. Geist; to the Committee on Invalid Pensions.

By Mr. BUCKBEE: A bill (H. R. 15016) granting a pension to Julia Todd; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15017) granting an increase of pension to Margaret Mekeel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15018) authorizing the Secretary of War to award a Congressional Medal of Honor to John E. Andrew; to the Committee on Military Affairs.

Also, a bill (H. R. 15019) granting an increase of pension to Nancy Jane Lockwood; to the Committee on Invalid Pensions.

By Mr. CHINDBLOM: A bill (H. R. 15020) granting a pension to Augustus W. Nohe; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15021) for the relief of William S. McWilliams; to the Committee on Military Affairs.

By Mr. COCHRAN of Missouri: A bill (H. R. 15022) granting a pension to Ruth Moseley; to the Committee on Pensions.

By Mr. COCHRAN of Pennsylvania: A bill (H. R. 15023) granting a pension to Charles H. Nason; to the Committee on Invalid Pensions.

By Mr. DAVENPORT: A bill (H. R. 15024) granting a pension to Esther Dibble; to the Committee on Invalid Pensions.

By Mr. ELLIOTT: A bill (H. R. 15025) granting a pension to Daisy Andrews; to the Committee on Invalid Pensions.

By Mr. ENGLEBRIGHT: A bill (H. R. 15026) granting a pension to William A. Ott; to the Committee on Pensions.

Also, a bill (H. R. 15027) to renew and extend certain letters patent to Frank White; to the Committee on Patents.

By Mr. ROY G. FITZGERALD: A bill (H. R. 15028) granting a pension to Chester Shartzer; to the Committee on Pensions.

Also, a bill (H. R. 15029) for the relief of Edward A. Burkett; to the Committee on Military Affairs.

By Mr. GIFFORD: A bill (H. R. 15030) granting a pension to Jonh Stoll; to the Committee on Pensions.

By Mr. GREEN: A bill (H. R. 15031) to provide a preliminary survey of the Suwannee River in Florida and Georgia with a view to the control of its floods; to the Committee on Flood Control.

By Mr. GUYER: A bill (H. R. 15032) for the relief of the Smith-Leavitt Coal Co.; to the Committee on Claims.

Also, a bill (H. R. 15033) for the relief of the Smith-Leavitt Coal Co.; to the Committee on Claims.

By Mr. HALE: A bill (H. R. 15034) providing for the promotion of Chief Boatswain Edward Sweeney, United States Navy, retired, to the rank of lieutenant, on the retired list of the Navy; to the Committee on Naval Affairs.

By Mr. HASTINGS: A bill (H. R. 15035) for the relief of Frank J. Boudinot; to the Committee on Indian Affairs.

By Mr. HOGG: A bill (H. R. 15036) for the relief of George Adams; to the Committee on Military Affairs.

Also, a bill (H. R. 15037) granting an increase of pension to George C. Keller; to the Committee on Invalid Pensions.

By Mrs. LANGLEY: A bill (H. R. 15038) granting a pension to Mrs. L. D. Farler; to the Committee on Invalid Pensions.

By Mr. LEECH: A bill (H. R. 15039) for the relief of Winston W. Davis; to the Committee on Claims.

By Mr. LOZIER: A bill (H. R. 15040) granting a pension to Lillian Fessant; to the Committee on Pensions.

Also, a bill (H. R. 15041) granting a pension to George K. Baker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15042) granting a pension to James A. Shelton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15043) granting a pension to America E. Watson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15044) granting a pension to M. S. Durham; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15045) granting a pension to Nancy Shatto; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15046) granting a pension to Louisa Goodson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15047) granting a pension to Lydia A. Mock; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15048) granting a pension to Laura Coulson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15049) granting a pension to Julia Miller; to the Committee on Invalid Pensions.

Also, a bill (15050) granting a pension to Clara V. Gilmore; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15051) granting an increase of pension to Susan Lovell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15052) granting an increase of pension to Louisa Ridgell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15053) granting an increase of pension to Comfort E. Booher (Elizabeth Booher); to the Committee on Invalid Pensions.

Also, a bill (H. R. 15054) granting an increase of pension to Nettie Rose; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15055) granting an increase of pension to Eliza Oster; to the Committee on Invalid Pensions.

By Mr. MOORE of Ohio: A bill (H. R. 15056) granting a pension to Harry L. Dye; to the Committee on Pensions.

Also, a bill (H. R. 15057) granting a pension to Elizabeth Francis; to the Committee on Invalid Pensions.

By Mr. MOREHEAD: A bill (H. R. 15058) granting a pension to Victoria Merritt; to the Committee on Invalid Pensions.

By Mr. MURPHY: A bill (H. R. 15059) granting an increase of pension to Elizabeth Conaway; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15060) to reinstate Charles Robert Conroy in the West Point Military Academy; to the Committee on Military Affairs.

By Mr. PEAVEY: A bill (H. R. 15061) for the relief of Mrs. A. K. Root; to the Committee on Claims.

By Mr. THOMPSON: A bill (H. R. 15062) granting an increase of pension to Harmon E. Deck; to the Committee on Pensions.

By Mr. VESTAL: A bill (H. R. 15063) granting an increase of pension to Martha C. F. Blankenbeker; to the Committee on Invalid Pensions.

By Mr. WARE: A bill (H. R. 15064) for the relief of Isaac F. Skelton; to the Committee on Claims.

By Mr. WELCH of California: A bill (H. R. 15065) granting a pension to William F. Buckley; to the Committee on Pensions.

By Mr. WOLFENDEN: A bill (H. R. 15066) for the relief of Thomas J. Parker; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7892. By Mr. COCHRAN of Pennsylvania: Petition of Bessie Bilby and 30 residents of Ridgway, Elk County, Pa., urging the passage of the Lankford Sunday rest bill for the District of Columbia (H. R. 78); to the Committee on the District of Columbia.

7893. Also, petition of C. S. Crawford and 22 residents of Ridgway, Elk County, Pa., urging the passage of the Lankford Sunday rest bill for the District of Columbia (H. R. 78); to the Committee on the District of Columbia.

7894. By Mr. ENGLEBRIGHT: Petition of American Federation of Labor, indorsing Dale-Lehlbach retirement bill (S. 1727); to the Committee on the Civil Service.

7895. Also, petition of California Dairy Council, favoring $100,000 appropriation for the United States Bureau of Animal Industry; to the Committee on Agriculture.

7896. By Mr. FITZPATRICK: Petition of the Star Democratic Club of the Bronx, requesting immediate and favorable consideration of the Dale-Lehlbach retirement bill; to the committee on the Civil Service.

7897. By Mr. LETTS: Petition of citizens of Davenport, Iowa, requesting the enactment of House bill 78, the Lankford Sunday bill; to the Committee on the District of Columbia.

7898. By Mr. McCORMACK: Petition of Boston Branch Railway Mail Association, W. E. Bradley, secretary, 60 Ainsworth Street, Roslindale, Mass., protesting against enactment of Senate bill 860; to the Committee on the Post office and Post Roads.

7899. By Mr. O'CONNELL: Petition of the International Association of Machinists, Arsenal Lodge No. 81, Rock Island, Ill., favoring the passage of the Letts bill, to permit one Government department to submit fixed bids for supplying such material as may be required by another Government department; to the Committee on Military Affairs.

7900. By Mrs. ROGERS: Petition from Lewis J. White and 38 ex-service men, now railway-mail clerks, of 1703 Northampton Street, Holyoke, Mass., opposed to Senate bill 860 and House bill 10422 as they now read; to the Committee on the Post Office and Post Roads.

7901. By Mr. YATES: Petition of Pyle-National Co., of Chicago, Ill., urging that the railways be allowed to charge the "Pullman surcharge"; to the Committee on Ways and Means.

7902. Also, petition of Branch 2759 of National Association of Letter Carriers, by Willard Dorset, its president, and Julius B. Isaak, secretary, urging passage of Senate bill 3027, to increase letter-carriers' pay; to the Committee on the Post Office and Post Roads.

7903. Also, petition of Mrs. (W. C.) Henrietta Adams Starck, Springfield, Ill., chairman Home Economics of the Illinois Congress of Parents and Teachers' Association, urging passage of the George-Menges Agricultural home economics bill; to the Committee on Agriculture.

7904. Also, petition of Gardner & Co., Chicago, Ill., protesting against Senate bill 2751, because it helps only a few manufacturers of candy; to the Committee on Ways and Means.

7905. Also, petition of Chicago Trades Union Label League, urging passage of Dale retirement bill; to the Committee on the Civil Service.

7906. Also, petition of Central Council of American Legion Auxiliaries, of Cook County, urging that Congress indorse the President's request for cruisers, and that House bill 11526 be passed promptly; to the Committee on Naval Affairs.

7907. Also, petition of Frank Morrison, secretary American Federation of Labor, urging early action on the Dale-Lehlbach civil service retirement bill (S. 1727); to the Committee on the Civil Service.

7908. Also, petition of Margaret Hopkins Worrell, League of the American Civil Service, Washington, D. C., urging amendment of the Welch Act; to the Committee on the Civil Service.

7909. Also, petition of R. G. Tonne, secretary Chicago & North Western Railway Employees' Club, of South Pekin, Ill., urging that Congress should regulate all transportation, including motor busses; to the Committee on Interstate and Foreign Commerce.

7910. Also, petition of John L. Harrison, 3353 Ogden Avenue, Chicago, urging passage of postal clerks bill, the 44-hour bill; to the Committee on the Post Office and Post Roads.

7911. Also, petition of Ladies Auxiliary No. 57, G. N. A. L. C., urging passage of Senate bill 1727; to the Committee on Naval Affairs.

7912. Also, petition of Mrs. E. W. McNick, 500 Diversey Parkway, Chicago, Ill., urging legislation to exempt dogs from vivisection; to the Committee on the Judiciary.

7913. Also, petition of Timothy Hennessy, 1421 East Sixtieth Street, Chicago, Ill., urging passage of the bill giving credit for military service to ex-service men in the Postal Service; to the Committee on the Post Office and Post Roads.

7914. Also, petition of Cigarmakers Union No. 14, 166 West Washington Street, Chicago, Ill., protesting against the Cuban parcel post bill (H. R. 9195) amending sections 3402 and 2804 of the Revised Statutes, because it would throw many cigarmakers out of work; to the Committee on Ways and Means.

7915. Also, petition of Daisy Sandridge, 1510 Church Street, Evanston, Ill., urging prompt ratification of "the multilateral treaty"; to the Committee on Foreign Affairs.

7916. Also, petition of Chester W. Church, lawyer, 77 West Washington Street, Chicago, Ill., protesting against some of the provisions of bill (S. 2751) concerning slot machines, etc., urging that the law is now ample as to lotteries; to the Committee on the Judiciary.

7917. Also, petition of National Federation of Federal Employees, protesting against construction given to Welch bill by Director of Veterans' Bureau, based upon decision of Comptroller General; to the Committee on Labor.

7918. Also, petition of Mrs. W. E. Foster, of Auburn, in Sangamon County, Ill., protesting against any change in the Army promotion law, and urging that Congress vote for the Reed furlough bill and against the Black-McSwain bill; to the Committee on Military Affairs.

7919. Also, petition of Chicago Post Office Clerks' Union, No. 1, by P. H. Seegard, chairman legislative committee, urging passage of civil service retirement bill (S. 1727), a more liberal retirement act for the old employees than the one now existing; to the Committee on the Civil Service.

7920. Also, petition of Chicago Trades Union Label League, by John P. Hoff, secretary, urging defeat of House Resolution 9195, because this bill if adopted will cause a great harm to the organized cigar makers in the United States; to the Committee on Ways and Means.

7921. Also, petition of John W. Engen, 954 East Fifty-fifth Street, Chicago, Ill., urging passage of following bills: The McKellar bill, giving employees credit for military service; the Dale retirement bill; and the La Follette 44-hour bill; to the Committee on the Civil Service.

7922. Also, petition of Mrs. Maurice C. White, secretary Old Fort Hall Chapter, Daughters of American Revolution, Blackfoot, Idaho, urging passage of Resolution 11, known as "Our flag code"; to the Committee on the Judiciary.

7923. Also, petition of Bristol Chapter, Daughters of American Revolution, Bristol, R. I., indorsing Resolution 11, joint resolution to adopt an official flag code; to the Committee on the Judiciary.

7924. Also, petition of Thomas E. Gill, lawyer, Rockford, Ill., urging that to do away with the surcharge by railroads on Pullman passenger traffic would be a foolish step, because it would reduce railroad earnings by $40,000,000, which deficit would have to be made up by other rates—passenger or freight; to the Committee on Ways and Means.

SENATE

SATURDAY, *December 8, 1928*

(Legislative day of Friday, December 7, 1928)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed a bill (H. R. 14801) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1930, and for other purposes, in which it requested the concurrence of the Senate.

CALL OF THE ROLL

Mr. JONES. Mr. President, I make the point of no quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	Locher	Simmons
Barkley	Frazier	McKellar	Smith
Bayard	George	McMaster	Smoot
Bingham	Gerry	McNary	Steck
Black	Gillett	Metcalf	Steiwer
Blaine	Glass	Moses	Stephens
Blease	Glenn	Neely	Swanson
Borah	Goff	Norris	Thomas, Idaho
Bratton	Greene	Nye	Thomas, Okla.
Brookhart	Hale	Oddie	Trammell
Broussard	Harris	Overman	Tyson
Capper	Harrison	Phipps	Vandenberg
Caraway	Hawes	Pine	Walsh, Mass.
Copeland	Hayden	Pittman	Walsh, Mont.
Couzens	Heflin	Ransdell	Warren
Curtis	Johnson	Reed, Pa.	Waterman
Dale	Jones	Sackett	Watson
Deneen	Kendrick	Schall	Wheeler
Dill	Keyes	Sheppard	
Edge	King	Shipstead	
Fess	Larrazolo	Shortridge	

Mr. NORRIS. I desire to announce the junior Senator from Nebraska [Mr. HOWELL] is detained from the Chamber by illness.

Mr. SHEPPARD. My colleague the junior Senator from Texas [Mr. MAYFIELD] is unavoidably detained on account of illness. This announcement may stand for the day.

The VICE PRESIDENT. Eighty-one Senators having answered to their names, a quorum is present.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate a resolution adopted by the Athenaeum Study Club, of Kansas City, Mo.,

favoring the ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

Mr. EDGE presented the petition of Mrs. Claudia W. Thompson and sundry other members of the Women's Republican Club, of Elizabeth, N. J., praying for the ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

Mr. SHEPPARD presented a resolution of the Highland Park Browning Club, of Dallas, Tex., favoring the ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

He also presented a telegram in the nature of a petition from the board of directors and members of the Young Women's Christian Association, of San Antonio, Tex., praying for the ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

Mr. KEYES presented a petition of sundry citizens of North Weare and vicinity, in the State of New Hampshire, praying for the prompt ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

He also presented a resolution adopted by the Nashua-Milford Ministers' Association, in the State of New Hampshire, favoring the prompt ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

LEAH FRANK, CREEK INDIAN

Mr. THOMAS of Oklahoma. Mr. President, I desire to submit three reports from the Committee on Indian Affairs on House joint resolutions which are similar in character. I am sure there will be no objection to them, and I will ask unanimous consent for their immediate consideration. If any objection should be interposed, of course, I would withdraw the request.

First, from the Committee on Indian Affairs I report back favorably without amendment the joint resolution (H. J. Res. 76) for the relief of Leah Frank, Creek Indian, new born, roll No. 294, and I submit a report (No. 1335) thereon. I ask unanimous consent for the immediate consideration of the joint resolution.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

Whereas Leah Frank, Creek Indian, new born, roll No. 294, having lost the allotment of land which the United States attempted to assign her and having received from the tribal funds no payments for the satisfaction of such rights: Therefore be it

Resolved, etc., That there is authorized to be appropriated the sum of $860, out of the tribal funds of the Creek Nation, in full satisfaction of her rights to an allotment of Creek tribal lands: *Provided*, That from the said amount there shall be deducted any equalization payment that may have heretofore been made to Leah Frank.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The preamble was agreed to.

ELOISE CHILDERS, CREEK INDIAN

Mr. THOMAS of Oklahoma. From the Committee on Indian Affairs I report back favorably without amendment the joint resolution (H. J. Res. 260) for the relief of Eloise Childers, Creek Indian, minor, roll No. 354, and I submit a report (No. 1336) thereon. I ask unanimous consent for the present consideration of the joint resolution.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

Whereas Eloise Childers, Creek Indian, minor, roll No. 354, having lost the allotment of land which the United States attempted to assign her and having received from the tribal funds no payments for the satisfaction of such rights: Therefore be it

Resolved, etc., That there is authorized to be appropriated the sum of $1,213.24, out of the tribal funds of the Creek Nation, in full satisfaction of her rights to an allotment of Creek tribal lands.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The preamble was agreed to.

EFFA COWE, CREEK INDIAN

Mr. THOMAS of Oklahoma. From the Committee on Indian Affairs I report back favorably without amendment the joint resolution (H. J. Res. 261) and I submit a report (No. 1337) thereon. I ask unanimous consent for immediate consideration of the joint resolution.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

Whereas Effa Cowe, Creek Indian, new born, roll No. 78, having lost the allotment of land which the United States attempted to assign her and having received from the tribal funds no payments for the satisfaction of such rights: Therefore be it

Resolved, etc., That there is authorized to be appropriated the sum of $1,101, out of the tribal funds of the Creek Nation, in full satisfaction of her rights to an allotment of Creek tribal lands.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The preamble was agreed to.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

The VICE PRESIDENT. The question is on the amendment proposed by the junior Senator from Arizona [Mr. HAYDEN] to the substitute amendment of the Senator from California [Mr. JOHNSON].

Mr. ODDIE. Mr. President, I want it to be known that I am a strong supporter of the Boulder Dam legislation and that I favor the present bill as presented by the Senator from California [Mr. JOHNSON] in its amended form. I hope an agreement will be reached between the various lower-basin States involved which will result in the withdrawal of opposition to the passage of the bill. I think the various States are so nearly in agreement now that we may hear the good news shortly.

There are certain fundamentals connected with the legislation that have been mentioned in various ways that will bear repeating. I feel sure that the Members of the Senate will study the problem seriously when it comes to the final vote. When we consider the question of the great Imperial Valley in California, with many millions of dollars of property constantly menaced by the danger of flood and the thousands of people in that valley who are in danger of losing their lives and their property, I think we should make a special effort to waive technical points here and there in order to get the legislation through. The Colorado River problem has been studied carefully for many years by some of the very ablest engineers in the United States, by technical experts, business men, and economists. I am confident the legislation is sound.

We have heard much about the menace of the Colorado River, how it is flowing several hundred feet above the Imperial Valley and the Salton Sea, and how the river bed is being raised almost a foot a year by the deposit of silt. We know that that is creating every year a greater menace than has existed before, and that the torrent which may come down in any year during the flood season is liable to break the banks of that river and cause a calamity such as we have never known in the country.

It has been estimated that enough silt comes down the river every year in solution to cover 110,000 acres 1 foot deep if the silt were allowed to settle in one place. This amount of silt is equivalent in weight to the material that was taken out of the entire Panama Canal excavation. The proposed Boulder Dam will create a reservoir nearly 100 miles in length, which will collect and hold the silt, which will settle to the bottom, so the water that leaves the dam will be clear. Part of this silt is now being deposited over the Imperial Valley, causing serious loss every year. The canals and ditches in the valley have to be dug out frequently, and the result is that in places the piles of silt along those ditches are 12 to 15 feet high. The limit has almost been reached, and we can not afford to allow technicalities to prevent the passage of this legislation.

Mr. FESS. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Ohio?

Mr. ODDIE. I am glad to yield.

Mr. FESS. Would the Senator yield for a very brief statement from one who is not in that particular locality but who is greatly interested in the possibilities of the legislation?

Mr. ODDIE. Yes.

Mr. FESS. I have gone into the proposition as fully as the exigencies of the case would permit. I am thoroughly convinced that in the matter of flood control it is not only necessary but it might be regarded as more or less an emergency and ought to have attention at an early day. I do not agree

with the opposition that I have heard in the matter of the power. I think that can be adjusted. It should not extend to the point of defeating the problem. I am not especially interested in the additional matter of the increased tillable area. That could wait. It would seem to me, however, from statements which have been made on this floor and elsewhere, that we ought to do something especially with reference to flood control.

What is a Member of the Senate who comes from the State of Ohio or from the East and who is interested in this legislation to do when the men who are right on the ground and who know the facts are controverting the position? When the doctors differ what are Senators coming from other sections of the country and interested in the general welfare and development of the country to do? I should like to vote for this measure, but I am constantly being "left in the air" after listening to this controversy; and I think I am speaking the sentiments of a great many Members on this floor.

Mr. ODDIE. Mr. President, I am glad the Senator from Ohio has asked me that question and has made those comments. In reply, I will state that the problem is so large and the benefits to the entire country will be so great from the passage of this proposed legislation and the danger of terrible havoc being wrought to human life and property will be to such an extent averted that I consider the questions of difference, the questions in dispute, infinitesimal in comparison with the advantages that will be gained from the enactment of this legislation. I fully believe that our friends from Arizona and from California will in a short time be in complete agreement; and I know that Nevada stands ready to help and encourage any fair and practical effort looking to an agreement. I believe when such an agreement is reached the opposition will be so materially reduced that the bill may be put through. The question of power, I think, has been pretty clearly defined. I will not discuss that at this time.

Mr. WATERMAN. Mr. President, will the Senator from Nevada yield for a question?

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Colorado?

Mr. ODDIE. I yield.

Mr. WATERMAN. Since the so-called high water of 1884 in the Colorado River how many breaks have there been through the levees or banks into the Imperial Valley?

Mr. ODDIE. I can not give the Senator any definite information on this point except as to the break that occurred a number of years ago, which was in a large degree responsible for the forming of the Salton Sea.

Mr. WATERMAN. That break, which occurred in 1905 or 1906, was an artificial one, was it not?

Mr. ODDIE. I can not go into that question with the Senator in detail, but the break occurred, and I have seen the tremendous chasm caused by the flow of the river down through that break into the Imperial Valley and the Salton Sea.

Mr. WATERMAN. If the Senator will bear with me, I want to get at the vital propositions in connection with the question of so-called flood control. The break in 1905 was artificial, was it not, because the upper reaches of the ditch had filled with silt, the water was low in the river; people went down and broke through the levee in order to take water out of the river in Mexico and lead it into the Imperial Valley. The flood came from the Gila River during that process and it was not stayed for two years. Is not that correct?

Mr. ODDIE. I can not answer the Senator definitely as to whether or not it was an artificial break; I would rather not go into the question as to how the break occurred at this time; but the fact is that the break occurred and the harm was done; and I want to prevent the danger of another break.

Mr. WATERMAN. We can not avert artificial breaks unless we can control the people who make them. What I want to get at is the exact fact with reference to the so-called danger of floods. As I understand, if the Senator will permit me——

Mr. ODDIE. Certainly.

Mr. WATERMAN. The flood of 1905, which was closed by the Southern Pacific in 1907 or 1908, the river flowing into the Salton Sea, so-called, during that period, did not drown anybody; did not destroy any property in any particular proportion. That is the only break, and even if we include the flood of 380,000 second-feet in 1884 there never has been a break into the Salton Sea or the Imperial Valley except this artificial break and the break into Volcano Lake in about 1916.

I want to get at this menace of flood; and during this debate I am going to try to do it; and I want the Senator to help me; that is all. If he can throw any light upon this proposition as to the so-called flood menace I should like to have it come forth promptly.

Mr. ODDIE. Mr. President, in answer to the Senator's inquiry and comments, I will state that great amounts of money are being expended every year on the levees above the valley to hold the river within its banks and from breaking out. I have personally been over those levees, and I have seen the trainloads of rock being dumped into them to prevent a break in the future. That menace exists; otherwise this large sum of money would not be expended in protecting the Imperial Valley from a break which would cause a disastrous flood. That is a well-known fact.

Mr. NORRIS. Mr. President, may I interrupt the Senator on that point?

Mr. ODDIE. I am glad to be interrupted.

Mr. NORRIS. I should like to call the Senator's attention to the fact that the menace of a break and damage by floods from the Colorado River into the Imperial Valley is, I think, conceded by every student of the subject. Not only have millions been spent in building levees to prevent the break but the danger is acknowledged in the financial world, and to-day a farmer in the Imperial Valley can not borrow a dollar, even from a Federal loan bank created by Congress, because of the menace of floods from the Colorado River, recognizing that unless something is done the entire valley, being below sea level, will eventually become part of the Pacific Ocean.

Mr. ODDIE. I agree with the Senator in his statement. I can not see the object of spending enormous sums of money on those levees every year, as is spent, unless there is a peril there from floods. I have been over that region myself and I have seen that river, though not in an extreme flood, and, Mr. President, it is an ugly-looking river; and when one considers that the floor of the river is being raised something like 10 inches a year and that the Imperial Valley lies several hundred feet below it, the menace is apparent and serious. It has been recognized by the whole country for years. The question has been discussed by engineers, and I think all of the engineers who have reported, so far as I know, have covered that question. I am not going into that any further at this time, but I do feel that serious danger exists, and if we put this bill over to another year we may have to stand here and take the blame for a tremendous loss of life and property. I reiterate the personal hope that the Senate will look favorably on this proposed legislation.

Certain facts have been presented at various times, showing that the river is something like 1,750 miles in length and that it drains an area of 242,000 square miles, which is an enormous area. Careful measurements taken over a 27-year period show an annual discharge of nearly 17,000,000 acre-feet. The river varies in flow from year to year. For instance, in 1902 the run-off was about 9,000,000 acre-feet, while in 1909 it was over 25,000,000 acre-feet. The seasonal variation of the river is also sharply marked, the flow ranging from more than 200,000 cubic feet a second, when the river is in flood, to as low as 1,250 feet a second during low water.

The Boulder Canyon Dam site has been the cause of confusion in the public mind to a certain extent for the last week because of the engineers' report which has recently been published. The committee has accepted the Black Canyon site as the proper site, and that is what this bill is based on, although it is called the Boulder Canyon site. The original Boulder Canyon site is a few miles from it, but both sites are located in what is called Boulder Canyon. The physical aspects of the work have been gone into thoroughly, and there is no question as to safety of this site for the proposed dam. The rocks rise almost perpendicularly to a great height in the canyon, and the location is an ideal one for a dam.

I expect within a few days, Mr. President, to put some tables in the RECORD compiled by the State engineer of Nevada, Mr. George W. Malone, which I believe will throw some additional light on this subject. I am not going into details now.

Mr. FESS. Mr. President, before the Senator concludes, will he allow me to ask him a question?

Mr. ODDIE. Certainly.

Mr. FESS. Are we to infer from the colloquy between the Senator from Nevada and the Senator from Colorado [Mr. WATERMAN] that there is no serious danger from floods along the Colorado River?

Mr. ODDIE. I think, Mr. President, that the Senator from Colorado will recognize that there is a danger from flood there; otherwise the work would not have been done which has been done in building and repairing the levees and which is being done every year to prevent the waters of the river from breaking through.

Mr. FESS. The suggestion that there was no such danger was rather a shocking bit of information to me.

Mr. JOHNSON. Mr. President, will the Senator from Nevada yield to me?

Mr. ODDIE. Yes.

Mr. JOHNSON. I have here the data showing that there is imminent danger, and therefore that this proposed legislation is of an emergent character. It is shown how the silt comes down this river in such a way as to fill up the bottom of the river and that the shifting sands washed from the levees that have been built there to protect it are a dangerous menace, constantly and continuously, to the Imperial Valley.

I am sorry I did not hear what was said by the Senator from Colorado, but I gather from what has been related to me since he spoke that he indicated there was no flood menace.

Mr. FESS. That was the inference which I drew.

Mr. JOHNSON. That is the first time in the history of this legislation—and it has been pending for eight years—that any soul either for it or against it has ever suggested such a thing, and this is the first occasion when any man in an official position has indicated that there was even a doubt of the menace of flood or the imminent danger of disaster to the people of the Imperial Valley.

As was cited by the Senator from Nebraska [Mr. NORRIS] a moment ago, and as I cited in speaking yesterday upon this subject, the menace is so acute that this is the only area in the United States I have ever heard of where the Federal farm loan bank will not lend a single dollar to the farmers because of the constant danger and constant threat of floods and inundation.

Mr. FESS. That statement was the one made yesterday that impressed me that there was some element of emergency in the legislation.

Mr. JOHNSON. Certainly.

Mr. FESS. If the Senator will permit me again, while it is true that it is impossible to tell when a flood will come, all insurance goes on the basis that it may come. It may be next year; it may be deferred. As I recall the history of the Mississippi Valley there was a flood in 1847 that was 5 feet higher than the flood of last year; and yet it did not do very much harm, because at that time people did not live in the inundated region. This year, however, a flood 5 feet less in height put 600,000 people out of their homes.

The Imperial Valley is quite densely populated. If there is any danger there, it seems to me that on the basis of insurance we ought to take action, and early action. If there is not any danger, the whole thing is changed so far as I am concerned. The matter of power is one that we can handle later on. The matter of irrigation can be handled later on. That is not emergent; but on the question of flood it seems to me we ought to have definite information, and if what I have understood is true it ought not to be delayed.

Mr. ODDIE. I am very glad to hear the Senator make that statement.

Mr. JOHNSON. Mr. President, will the Senator yield to me for just a moment?

Mr. ODDIE. Yes.

Mr. JOHNSON. I simply desire to read a very brief excerpt from our opponents in this legislation.

Governor Hunt, in his message to the Sixty-sixth Legislature of Arizona, said:

> The danger of the loss of life and destruction of property which hangs over the Yuma and Imperial Valleys, due to the menace of the uncontrolled flood waters of the Colorado River, makes it imperative that this menace be removed at the earliest possible time.

And the senior Senator from Arizona [Mr. ASHURST] and the junior Senator from Arizona [Mr. HAYDEN] have repeatedly and continuously expressed their view in common with mine, and that view has been echoed by every single, solitary man familiar with the situation, that an emergency exists in reality in reference to flood control, and that the flood danger to Imperial Valley and to Yuma is one that is ever pressing and hangs like a pall over the people there. I am shocked and astounded that any Member of this body should have indulged, if it has been so indulged, in the statement that there is no danger of flood in the Imperial Valley and at Yuma. Such a statement has never before been made in the history of all this legislation.

Mr. ODDIE. Mr. President, in addition to concurring fully in what the Senator from California has just said, I will state that I am glad to have the Senator from Ohio [Mr. FESS] make the comments that he has made. They show that he has studied this matter carefully. But there is a difference between the flood situation in the Mississippi Valley and that in the lower reaches of the Colorado River. Harm can come to an enormous extent from floods in the Mississippi River Valley, but it is a comparatively low and flat country. In case of a flood, the country will be covered over a few feet at most. Farms and homes will be damaged; people will be driven from their homes temporarily and great damage and suffering will result; but in the case of the Colorado River the danger is infinitely greater, because that river, if it breaks through again, will tear down with a drop of several hundred feet into the valley below it, and will wash a great chasm down to the valley, and will do damage that we dare not try to compute.

Mr. JOHNSON. Mr. President, will the Senator yield again?

Mr. ODDIE. Yes.

Mr. JOHNSON. May I explain and amplify what the Senator has said so very eloquently now?

The Colorado River runs as if upon the rim of a saucer. Down beneath is the Imperial Valley. It is the one place in America farthest below sea level; and the Colorado River gradually having risen, because of its silt deposits and the constant building of levees to hold it together and to hold it in check, flows up above the Imperial Valley around the rim of this saucer. All of the engineers and all of the experts are agreed that the limit of safety has been reached in levee construction.

I do not know that the Senator realizes just exactly what silt in a river does. I was born in the city of Sacramento, and for 35 years of my life I lived on the banks of the Sacramento River. In the mountains above us hydraulic mining was practiced. Down into that river came what we called débris. As a youth I saw the levees of the Sacramento gradually rise because the bottom of the river was gradually filled with the débris; and in some parts of our river channel now, where formerly the largest ships in the world could come, the channel is maintained only by virtue of the work that the Government does constantly, in conjunction with the State, in reference to that river.

The Colorado River, vagrant and meandering as it is, has made different channels during the time of its progress to the sea, and it has filled up gradually with the silt brought down. The levees which have been constructed for the protection of the people every engineer is agreed have reached the limit of safety.

No informed person can deny the danger of flood to the Imperial Valley, and none heretofore has ever been heard to deny it.

Mr. ODDIE. Mr. President, in this connection I should like to have placed in the RECORD a statement before the Committee on Irrigation and Reclamation of the Senate made on December 10, 1925, by Mr. Herbert Hoover, page 599 to page 605.

The PRESIDING OFFICER (Mr. SACKETT in the chair). Without objection, it is so ordered.

The matter referred to is as follows:

STATEMENT OF HON. HERBERT HOOVER, SECRETARY OF COMMERCE, WASHINGTON, D. C.

Secretary HOOVER. Mr. Chairman, I have the conviction that the committee, due to the many hearings that it has held in the Colorado River Basin and the large knowledge that the members of the committee possess of the problems outside even of that, probably do not wish me to traverse the whole complex of the Colorado River; and I am a little in doubt as to the points upon which I could be of assistance to the committee on.

But I prepared and have here before me a brief note as to one or two questions. I am not at all certain as to whether they are germane to matters on which I possibly can be of service.

I may say that the Colorado River problem does not lie in the lack of enormous resources in water, in arid land, and in power, or of private or public capital to develop it. The difficulties are the sharp conflicts of opinion of the people in the basin on a multitude of questions as to their rights, their interests, and the method of development of the river. And these conflicts have been in course of discussion, to my knowledge, for some 15 years. They have resulted in innumerable conferences, discussions, and appeals to legislation and to the courts.

The first of these conflicts, and the one that overrides all others, is the conflict over water rights between the seven States. The four States in the upper basin have, naturally, opposed any development in the lower basin until such time as they could have assurance of some fixed assurances of their water rights. As the committee is well aware, the application to beneficial use will give priority in water rights as between States, and, as the development of the Colorado River will take place in the lower basin long before any large development in the upper basin, therefore the upper-basin States have justifiably been resolute in their demands for some fixation of the rights before there shall be construction and thus extension of beneficial use down below.

In an attempt to solve this proposal some years ago a compact commission, representing the seven States and Federal Government, was established, and, as you are aware, I acted as the chairman of that commission. Hearings and sessions of the commission extended over a

matter of over 18 months, and the commission was composed not only of delegates from each of the States but the most of the sessions were attended by their attorneys general, and a number of the sessions by all but one of the then governors of the States.

After a great deal of discussion and negotiation a compact was arrived at subject to ratification by the State legislatures and by the Congress.

The compact did not attempt to solve any problem on the Colorado River except water rights, and it limited its action to a division of the water between the upper basin and the lower basin. It furthermore limited its action to a division of only a portion of the water of the river adjoining a further apportionment of the water to a considerable number of years in the future to await the character of development.

The compact commission believed that if progress could be obtained that far it would at least take the block off of the development in the lower basin and would reduce all other conflicts to purely local questions, which could be more easily settled with time.

The compact was ratified without reservation by six legislatures, the Arizona Legislature passing the compact with some reservations but approval was refused by the governor.

Subsequently, in order to try and lift the block on development in the lower basin, some of us suggested a six-State compact, or, rather, a ratification of the compact among six States as being sufficient to satisfy the upper-basin States. Under that proposal the compact was ratified by five States, and California made reservations which the northern States declined to accept. Due to the action of California, that proposal has failed in any practical result, so that at the present time we are still in the midst of the conflict over water rights.

One thing that I have been impressed with in all the discussion that has gone on for nearly three years since the compact was signed is that there has been very little substantial criticism as to the equities of the proposals in the compact. Colorado, Utah, Wyoming, New Mexico, Nevada, and California accepted them in full. The Arizona Legislature ratified the compact with reservations that did not again challenge the equities of the compact seriously. The quarrels over the compact have been due to attempts to force extraneous questions. I believe I can say that the commission arrived at an extraordinarily successful document when you consider the tremendous conflict and feeling over this question.

There have recently been conversations between California and Arizona in an attempt to agree upon their differences. A committee, partly appointed by the California Legislature and partly informal, has drawn up a pro forma compact to be signed between California, Arizona, and Nevada.

The main compact provides that the interstate rights between the States in the different basins shall be subsequently settled by further compacts. This action of the folk in the southern basin is entirely in line with the purpose of the main compact, and in their proposed lower basin compact they, of course, stipulate that it is subject to acceptance of the main Colorado River compact itself.

I am rather hopeful that that negotiation will succeed. They are starting on very sound lines as far as I can observe, and a settlement of that conflict might make it possible to reconvene legislatures and secure early ratification of the compact all along the lines. We would, in case of success of those negotiations, have practically settled what I regard as the most difficult of the conflicts.

The next most important line of conflict is over the character and location of the first works to be erected on the river. I believe the largest group of those who have dealt with the problem, both engineers and business folk, have come to the conclusion that there should be a high dam erected somewhere in the vicinity of Black Canyon. That is known usually as the Boulder Canyon site, but nevertheless it is actually Black Canyon. The dam so erected is proposed to serve the triple purpose of power, flood control, and storage. Perhaps I should state them in a different order—flood control, storage, and power, as power is a by-product of these other works.

There are theoretical engineering reasons why flood control and storage works should be erected farther up the river and why storage works should be erected farther down the river; and I have not any doubt that given another century of development on the river all these things will be done. The problem that we have to consider, however, is what will serve the next generation in the most economical manner, and we must take capital expenditure and power markets into consideration in determining this. I can conceive the development of probably 15 different dams on the Colorado River, the securing of 6,000,000 or 7,000,000 horsepower; but the only place where there is an economic market for power to-day, at least of any consequence, is in southern California, the economical distance for the most of such dams being too remote for that market. No doubt markets will grow in time so as to warrant the construction of dams all up and down the river. We have to consider here the problem of financing; that in the erection of a dam—or of any works, for that matter—we must make such recovery as we can on the cost, and therefore we must find an immediate market for power. For that reason it seems to be that logic drives us as near to the power market as possible, and that it therefore takes us down into the lower canyon.

The dam there is recommended by the reclamation engineers, and I believe their latest view is 540 feet in height. This would, I believe, serve the triple purpose of flood control, storage, and power, so far as we can see ahead, for the development of irrigation, domestic water supply, and need of power for a good many years to come.

I do not believe that construction at that point is going to interfere with the systematic development of the Colorado River for storage and power above and below. As I have said, I think the time will come when a storage dam should probably be erected below Boulder Canyon and that storage dams and flood-control dams will be erected far above. Those of you who have looked into the engineering problems involved will recognize that the operation of a single dam for the triple purpose is rather difficult and will not give the maximum power results. For instance, such a dam must be partly empty in anticipation of the spring flood and hence the power possibilities will be much diminished, and beyond this it will be necessary thereafter to lower the head for irrigation purposes. Thus the power production from such a dam will be rather irregular.

But, in any event, I do not believe that we can not now contemplate the expenditure of the several hundreds of millions of dollars necessary to carry out the theoretical plan; we should confine ourselves to what we can afford to spend now, and I do not believe we will destroy the possibilities of the river for systematic development by this course. We must await a settlement of population and their demands to create a need for the future development.

The proposed Black Canyon Dam of 540 feet, as estimated by the reclamation engineers, would cost about $41,000,000 or $42,000,000. The cost of an electrical generation plant to go with it would be about another $33,000,000. And the transmission lines to the power market would be somewhere about $27,000,000 more, or a total of from $110,000,000 to $115,000,000 for dam and equipment. The loss of interest during construction would be $10,000,000 more. The alternative plan of a 606-foot dam would require something like $20,000,000 more.

Now, the 540-foot dam would apparently develop, theoretically at least, about 550,000 primary horsepower and another 450,000 secondary horsepower. No engineer could say at the present moment what the actual power development will be, because none of us know until we have had experience how much the electrical power will need to be made subjective to flood control and irrigation in the manner I have referred to but in any event these theoretic figures are possibly near enough.

Now, a large part of the power developed will be needed to pump the water for the proposed domestic water supply plan for southern California and both the manufacturers and private power companies will need the surplus power. It seems to me we need some consideration here of making a settled financial plan if we are to expedite this very urgently needed development. The people of southern California have recognized that the folk in the Eastern and Central States will probably not be anxious for the Federal Government to find the whole of the $115,000,000 for this development, and they have already expressed their willingness to make a substantial contribution to it, both from the municipalities and from the private power companies. It seems to me that the Federal Government has a very substantial obligation in this matter. It has been traditional to provide flood control in the protection of our people at the cost of the Federal Government, and we, of course, have the reclamation funds for the development of arid land; so that here is a problem of the proper contribution from municipalities, irrigation districts, private power companies, and the Federal Government.

All this leads me to the belief that somebody ought to be given authority to negotiate a definite financial compact which could be laid before Congress for approval in connection with the construction of these works. It does not seem to me it would take long to do that, and it could possibly be laid on the table here before this session of the Congress expires. I believe that we should do all we can to expedite this matter. It is true that our path would have been smoother if we could have had more success in the ratification of the compact, but so long as we have these great conflicts and differences of view that I have mentioned we must expect difficulties. And in this connection I would remind you that it required, I believe, 10 or 11 years to secure a ratification of the Federal Constitution, and I doubt if there was as much emotion connected with that proposition as there is with water rights between seven States. So we may make progress more speedily than was made by the original thirteen States of this Union.

Now, Mr. Chairman, if there are any further points that I can help the committee on I shall be glad to have them brought to my attention.

The CHAIRMAN (Senator MCNARY). On the point you have been discussing, do you see any conflict, in the purposes discussed by you in connection with Boulder Canyon, that might prevent private capital from participating in this matter?

Secretary HOOVER. Pardon me, Mr. Chairman, but my attention was distracted and I did not catch your question.

The CHAIRMAN (Senator MCNARY). You spoke of the different purposes—flood control, irrigation, and power development. Are these

functions in which private capital would be interested, or is there a conflict, one with the other?

Secretary HOOVER. Some of them are functions in which private capital would not be interested. In the development of dams outside of Boulder Canyon there is not necessarily any question of Federal finance, the other developments of the river below the upper basin are predominantly power developments and could be carried out by private capital under Government control. You have a problem here of working out that relationship at Boulder Canyon. I think there have been some discussions in southern California as to the possibility of some arrangement between a municipal electrical power establishment and the private power companies distributing in southern California for mutual participation in the Boulder Canyon project. I do not know how far they have got, but in any event it ought to be possible to bring some conclusion out of that, and, through such arrangement, to secure financial support to the Boulder Canyon development. I do not think the Federal Government will ever want to build the electrical power works there, or the transmission lines, and get into the power business. But it is through the power side of the question that the Federal Government can secure a large contribution to the development and hope recovery of its own investment.

The CHAIRMAN (Senator MCNARY). Is it your opinion that the Government obligation consists only in the matter of erection of a dam for the purpose of flood control?

Secretary HOOVER. No; I think the Government can go further than that. While, of course, you can not very well say our reclamation policy is an obligation, yet it is a sound financial policy, and the proposed dam would be a very large contribution to the reclamation of arid lands. Therefore some contribution on that score would be in order.

The CHAIRMAN (Senator MCNARY). But, Mr. Secretary, you must bear in mind that there is a special fund for that purpose, under a specific act, which does not come out of the Treasury of the United States but from the resources of the States, while in this case the funds would come under a different plan.

Secretary HOOVER. My suggestion made here was that some sort of authority might be set up to make a plan and to negotiate out the contribution of all these different elements, even including the reclamation fund. I have no detailed plan in mind, but it does seem to me that we are in this position: Here are four or five sources which are willing or should contribute to the work, and we ought to get some sort of definite relationship established to it.

The CHAIRMAN (Senator MCNARY). Is it in your mind that there is a sufficient demand for electrical power to justify the erection of a dam at this time from that viewpoint alone?

Secretary HOOVER. The probable primary horsepower is something like 550,000. While I can not state precisely, yet it is my belief that the domestic water supply into Los Angeles will absorb about 200,000 horsepower for pumping purposes and which they will need to provide for; that would leave 350,000 horsepower, which I think could be absorbed in that market long before these works could actually be built. This offers a basis also for contribution to cost. I doubt whether there would be a kilowatt of power transmitted for five years if you should start to-morrow on this enormous work of construction. I do not know how far these contributions would go to the total cost. My proposal is that we should find it out.

The CHAIRMAN (Senator MCNARY). Have you looked into the matter of the domestic supply of water for southern California in regard to whether it should be taken from the Colorado River here or there, whether by lift as mentioned at Black Canyon, or by gravity system some place up the river?

Secretary HOOVER. I am not competent to speak of that. All I know about that matter is what I have read in the newspapers as to statements of various engineers.

The CHAIRMAN (Senator MCNARY). What sort of suggestion have you to make, or can you detail it a little more to the committee, that a commission should be designated to look into this matter? Do you mean to have it confer with the various States in order to get an allocation of water and power?

Secretary HOOVER. I have not gone into it in detail. My own thought was that we could expedite this whole development, and expedition is what we all want, by having some sort of commission with authority to make a financial plan and who could be helpful in bringing the States together in the matter of the compact.

Such a commission could lay out a financial plan with all the groups involved, and thus have some definite contract—subject, of course, to approval by Congress—then you gentlemen would have some finished thing to act upon. It seems to me pretty difficult for Congress to negotiate a thing of that kind, and the administration has no power to do it.

Mr. ODDIE. In this statement Mr. Hoover says very clearly that the primary purpose of this legislation is flood control; and he advocates a high dam, 545 or 550 feet high, primarily for the purpose of flood control. He states that the question of power is incidental to flood control, but he recognized the danger from floods, and he has been a student of this problem for many years. He was appointed chairman of the Colorado River Commission something like eight years ago. He has given a great deal of his time to the study of the matter and has brought his great engineering ability to bear on it. Those of us who admire Mr. Hoover—and I know that we all admire him as a man as well as his great ability—will recognize the strength of his statements on this matter.

I shall not discuss this question any further at this time, Mr. President, because I intend to make some more brief remarks later on when I introduce some technical data prepared by our State engineer. I do hope this legislation will pass promptly, and I feel that Congress will make no mistake in passing it, and that it will be doing a most humanitarian as well as necessary act if it passes this bill.

Mr. ODDIE subsequently said: Mr. President, I would like permission to make a statement in answer to the statement of the junior Senator from Colorado [Mr. WATERMAN] regarding the flood menace in the Imperial Valley and to have it follow my remarks heretofore made this morning.

As the danger from flood involves the lives of 100,000 American citizens and about $200,000,000 worth of property it becomes particularly important. The dam authorized, with the consequent large storage, will permit of the regulation and stabilization of the river's flow and completely solve the flood danger. Unless prompt action is taken, any year may witness a flood of very serious and possible disastrous consequences.

I have obtained certain information on this subject from the report of the committee to the Senate, and I ask now unanimous consent that further statements in regard to this matter may be incorporated in the RECORD at this point, as they completely answer the statements heretofore made by the junior Senator from Colorado [Mr. WATERMAN] regarding the danger from floods from the Colorado River.

The PRESIDING OFFICER (Mr. SACKETT in the chair). Without objection, it is so ordered.

The statements are as follows:

Mr. F. E. Weymouth, formerly chief engineer of the Reclamation Service, in his 1924 report recommending the project, stated in the plain and conservative language of the engineer, the physical conditions causing the acute flood menace which exists:

"In its present state of partial development, however, the river is a menace no less than it is a benefit. Each spring the snows accumulated on the mountain slopes of the upper basin melt with the advancing season until by the end of May the lower river has become a raging torrent. This flood usually reaches its peak in May or June, after which it ordinarily subsides; the floods have been known to continue into August.

"Annually the river carries past Yuma an average of 200,000,000 tons of silt. When the river is not in flood, this silt burden is largely carried to the gulf, but in times of flood when the river spreads beyond its banks, it drops its load of silt not only at its mouth but wherever along its course the velocity of the water is checked. Especially does this deposition of material occur along and near the banks of its low-water channel. These banks are thus built up by successive floods until they hold the waters to such an elevation that the main current of the stream eventually breaks through and finds a new channel in lower ground.

"In the delta region below Yuma, being less restricted by natural lateral barriers, this tendency finds widest scope. Here the river has built a conical fan-shaped ridge cutting off what formerly was the upper end of the Gulf of California. Along the crest of this flat delta ridge runs the river; one slope toward the south terminates at sea level at the present head of the Gulf of California, the other extending northerly on a much steeper slope reaches a depression 250 feet below sea level at the rim of the Salton Sea. The portion of the ancient gulf thus cut off constitutes the Salton Basin, the irrigated area of which, lying largely below sea level along the northward delta slope, is known as Imperial Valley."

Again referring to temporary means adopted by Imperial irrigation district for flood protection the report proceeds:

"Within a few years at the most the silt deposits will raise the elevation of this latter area to a point where the main current of the floods will again be thrown to the west and north, at which time the assaults of the river on the Volcano Lake Levee will be renewed, with assurance that sooner or later another break into the valley will occur.

"The menace in case of such a break is not limited as at Yuma and above to the loss of crops and improvements and the cutting away of a few or many acres of valuable land, serious as that menace is. Besides all this, the greater danger here is that the levee once breached and the river at flood turned into Salton Sea, the steep gradient of its course will induce the cutting through the soft alluvial soil of a gorge in which the flow may not be checked until a large part of the valley has become submerged beneath the waters of an inland sea." (Hearings on H. R. 2903, 68th Cong., 1st sess., pp. 711, 712.)

It should further be pointed out that, in addition to destroying crops and damaging lands, the Imperial Valley has the decided disadvantage of being below sea level and having no outlet for the water. Ordinarily, the flood waters from any stream finds its way back into the stream as the flood subsides. This is not the case in Imperial Valley. There the flood waters remain in the basin until taken out by the slow process of evaporation.

DANGEROUS SHIFTING CHANNELS

In 1905 the river turned northward from its channel on the crest of the delta and flowed into the Imperial Valley for nearly two years before the break could be closed, thus forming a lake of some 300 square miles known as the Salton Sea. Through heroic efforts on the part of the Southern Pacific Railroad Co., at the request of President Roosevelt, the break was closed in 1907 and the river returned to its channel. The United States then expended approximately $1,000,000 in the building of what is known as the Ockerson Levee to prevent another such disaster as that of 1905. This levee was barely completed, however, when in 1909 the river washed much of it away and turned westward into what is known as Bee River to Volcano Lake, still in Mexican territory, but in a lower depression on the delta. The river flowed on this course for 10 years and was kept there by means of an extensive levee system built by the people of Imperial Valley. By 1919, through its immense silt deposit, the river had filled the bed of Volcano Lake and Bee River to such an extent that it was again flowing on a ridge and the levees could no longer be made to hold it. The Imperial irrigation district then at an expense of approximately $700,000 constructed an artificial channel from Bee River to what is known as Pescadaro River and turned the river southerly into a triangular depression between Volcano Lake on the west and the old channel on the east. This is the area referred to by Mr. Weymouth in his report from which quotation is made.

This is the last remaining depression on the delta.

SILT AGGRAVATES FLOOD DANGER

The river has an annual discharge at Yuma of more than 100,000 acre-feet of silt. This silt greatly aggravates the flood menace. No temporary works can be built to hold it. It was the silt deposit that built the deltaic ridge on which the river now flows. It was the silt deposit that filled the Bee River and Volcano Lake, so that the river could no longer be held at that point, and the same silt deposit will quickly fill the depression where the river now flows.

The gradient to the north into Imperial Valley is much greater than that to the south into the gulf, and when the depression is filled there is no means known which, at any cost within reason, can prevent the river from again flowing into the Imperial Valley.

The dam proposed in this bill will catch and hold the silt. Most of the silt finding its way onto the delta is from and above the canyon section. If no other dams were provided on the river, the one proposed in this bill would retain all of the silt finding its way into the reservoir for a period of 300 years and for more than 100 years before its storage capacity and usefulness would be seriously interfered with. As other dams are constructed on the river they will catch and retain the silt, thereby further extending the usefulness of the Boulder Canyon Reservoir.

PAST FLOODS ABOVE IMPERIAL VALLEY

The Colorado River is subject to periods of great floods and great droughts. It has been known to reach a maximum discharge of more than 200,000 cubic feet of water per second and a low flow at the headworks of the Imperial system of 1,250 cubic feet of water per second.

This causes extremely serious flood situations all along the lower river. Floods above Imperial Valley, were they not overshadowed by the exceptional flood danger to Imperial Valley, would attract attention and call for remedial measures. In 1916 the water stood 2 feet deep in the streets of the town of Yuma and threatened its destruction. In 1922 the river inundated a large part of Palo Verde Valley and the water stood several feet deep in the town of Ripley in that valley, destroying much property and otherwise causing a large amount of damage. Other floods have submerged the Parker Valley and also done serious damage to the city of Needles.

The greatest flood danger, however, is to the Imperial Valley, lying far below the river's channel and with no outlet for flood waters once they enter the valley.

PAST FLOODS THREATENING IMPERIAL VALLEY

In 1914 the Volcano Lake Levee was breached and 10,000 cubic feet of water per second flowed through the levee into the Imperial Valley for many days before the levees could be repaired. More serious results were avoided by means of hundreds of men placing bags of earth on top of the levee.

In 1918 the Ockerson Levee, which had been rebuilt by Imperial irrigation district, was breached in two places. The flood water was successfully turned westward to Volcano Lake by other levees, but not until after several thousand acres of land had been inundated and the workmen and a Southern Pacific train marooned. In a course of two days the men were removed, but the train was held until the flood subsided some three months later.

In 1919, before the river was turned into Pescadaro Cut, the levees were again breached and 4,000 acres of land inundated before the opening could be closed. The river was so high and the water-soaked earth so soft that maintenance work could not be carried on by the usual means of dumping rock from trains operated for that purpose. This was found to be the case after a locomotive and cars had been lost in the attempt. Numerous smaller breaks have occurred. In 1925, with only 50,000 second-feet of water, the river turned against the levees and in two different places undermined and destroyed them for distances of several hundred feet. This again occurred in 1926. These smaller breaks are of annual occurrence and serious results have been prevented only by constant vigilance. Telephone communication is maintained throughout the entire length of the levees and numerous watchmen are constantly on patrol. Strings of dump cars are kept loaded with rock and during high water locomotives kept under steam for immediate use.

LEVEE SYSTEM

The Imperial irrigation district has about 78 miles of protective levees in Mexico. The Yuma project has about 30 miles in Arizona and California, built and maintained by the Government, and Palo Verde irrigation district has several miles of similar levees for the protection of Palo Verde Valley. These levees are of necessity built of loose silt upon a foundation of similar material. They are faced with rock, hauled long distances by dump cars upon standard-gauge tracks, maintained on the levees for that purpose. Levees thus constructed afford only partial protection. When the river strikes the levee it is not its overtopping that is so much feared, but the water will quickly eat away the loose material and the levee simply settles down and virtually disappears.

EFFECT OF FLOOD MENACE

Four hundred and sixty thousand acres are now being served with water by the Imperial irrigation district. There is not only the possibility of this land being inundated but there is a constant knowledge that a comparatively small break in the levee system could destroy irrigation works and cut off water for irrigation and domestic purposes. This creates a constant feeling of uncertainty. Property values are less than half of what its income would justify. Capital for full development can not be had, and where money is obtained it is obtained at an excessive rate of interest. The Federal farm-loan banks refuse to lend any money in Imperial Valley because of these conditions.

The happiness of the people, the security of their property, and the proper development of this highly productive area depend largely upon adequate flood control.

UNANIMITY OF VIEW AS TO FLOOD DANGER AND NEED OF QUICK RELIEF

An outstanding feature of the testimony before the committee was the unanimity of view respecting the existence of the flood danger, its seriousness, urgent need for quick action, and that storage up the river was the solution. Engineers like A. P. Davis, F. E. Weymouth, Gen. George Goethals, and William Mulholland joined with responsible executive officials like Mr. Herbert Hoover in voicing this idea. Admittedly and concededly, storage at Boulder Canyon as here authorized will effect the greatest measure of security against the river's floods which may be obtained.

NONENFORCEMENT OF PROHIBITION LAW

Mr. BLEASE. Mr. President, I desire to have printed in the RECORD five articles on the question of the nonenforcement of the so-called prohibition law.

The PRESIDING OFFICER (Mr. SACKETT in the chair). Without objection, it is so ordered.

The matter referred to is here printed, as follows:

[From the Fort Mill (S. C.) Times, Thursday, November 8, 1928]

COMMERCIAL LIQUOR STILLS FLOURISH IN SOUTH CAROLINA

By John K. Aull

COLUMBIA, November 7.—That there are at least 1,500 commercial liquor stills in South Carolina making liquor every day for sale to retailers, and that there are at least from 5,000 to 7,000 or 8,000 retail liquor joints in South Carolina selling liquor every day to consumers of it is a conservative estimate, based upon an actual survey of the various counties of the State, in the light of information given by those who know what they are talking about, because there is no doubt they themselves are engaged in the traffic. They have not said they were engaged in the traffic, and the writer didn't ask them, because for the purposes of this article he didn't want to know. They were giving the information with the knowledge that its sources would not be divulged.

By commercial liquor stills is not meant coffeepot stills and tin-can stills, but liquor stills engaged in regular business, under regular management, with a regular force of hands, and turning out, some of them, liquor at the rate of 2 gallons a minute, while others have considerably less capacity. Small stills that folks run for their own use or

for the use of two or three families are not included. By retail liquor joints is meant not hip-pocket blind tigers (the latter meaning those who keep a pint or two under the mattress), but people selling liquor day in and day out by the pint or half pint, or whatever quantity you want, and many of them by the drink—people who are making a living out of the sale of liquor, and some of whom are putting by considerable money.

This is the situation in South Carolina, in the face of the most vigorous enforcement program which the State has ever had. Governor Richards has used and is using the utmost powers of his office to check the violation of the prohibition law. Without his strenuous, uncompromising efforts the State would be running wet with a stream many times as broad and many times as deep. Federal officers are assisting. But with it all, and through it all, violations of the prohibition law in South Carolina have been on the increase—and a considerable increase at that—during the past year.

Some three months ago the writer asked a man whom he believes to be largely engaged in the illegal liquor business in this State as to just what the situation is.

"You don't know that I am having any dealings with liquor, do you?" this man inquired.

"No; I do not know it," was the response.

"Well, then, all right," he said; "I know you won't divulge the source of your information, and I will get it up for you. Have you ever seen how they deliver liquor here in Columbia?" he asked.

The writer never had seen it delivered—that is, to the retailers in bulk quantities, and so stated. He was asked to come down to a certain place the following night, at about 7.30 o'clock, for a purpose not stated. He went. Shortly after he reached the place the telephone rang, and he heard one end of the telephone conversation. "Yes; O. K.," was all the conversation at that end. Within 10 or 15 minutes a truck drove up, backed around a little, turned and departed.

"See that?" asked the man who will be designated as X.

"Yes; what about it?"

"Well, he left 80 gallons of liquor here. He brought 400 gallons into Columbia with him for three places. This place took only 80 out of the 400. He had already delivered to three other places. He telephoned on the road before coming into Columbia, and was told that it was O. K. Well, now, you have seen how it is delivered."

"But where did it come from?" X was asked.

"That came from another county in this State," he said. "We—they, I mean—used to get a good deal from Georgia, but they are making better liquor in South Carolina now, and they can sell it now as cheap as they can in Georgia."

The price of that particular load to the retailer, the writer was informed, was $2.75 per gallon delivered, $2.60 at the still, and 15 cents per gallon for the trucker, who that night had made $60 for hauling 400 gallons some 25 miles. Really, X stated, he thought the truckman had received $100 for the evening's work, his belief being that the man at the still had contributed 10 cents a gallon.

The liquor was to be sold by the retailer at 50 cents a half pint, $1 a pint, and $2 a quart—$8 a gallon, retail price—though if a customer wanted 2 or 3 gallons, or even as little quantity as 1 gallon, a discount was given. All transactions, from still to consumer, are cash—all transactions all the way through, except the consumer's doctors' bills and funeral expenses.

In and around the city of Columbia, X stated, there were some 300 places handling liquor. The quality of the liquor was all about the same, and the prices remained steady and stable. Some of the places made deliveries to homes or places of business between 10 o'clock in the morning and 12 o'clock at night.

Orders were taken by telephone, he said, and delivery was made anywhere in the city, without extra charge. Most of the sellers, he said, however, did not deliver. The consumer had to call or send for it. Of course the consumer or his agent had to be known to the seller. Even in Columbia it is sometimes difficult for a stranger to walk into a liquor place and make a purchase without being identified.

"Not a great deal of beer is handled in Columbia," he said, for sale. When it was sold its price was usually 20 to 25 cents a pint bottle. He pointed out that it was too easy to make beer in the home; that no cooking was necessary, with the preparations which can be bought in a grocery store; that after the paraphernalia, costing between $3 and $5, was secured, 50 bottles could be brewed for $2 or $3, and beer drinkers preferred to make it themselves. Lots of it was made in Columbia, he said.

"Now," continued X, "when you have the time, I will go over the situation in the State with you, and maybe take you around a little that you can observe for yourself how it is handled, and to what extent, in other cities and towns, and out on the country roads. And I will show you and tell you some more about Columbia. You will be surprised," he said. And the writer was considerably surprised, as he will relate hereafter in a series of articles dealing with the liquor situation in South Carolina in the face of the most vigorous, uncompromising prohibition law enforcement administration which the State has had.

[From the South Carolina Gazette, Columbia, S. C., Wednesday, November 14, 1928]

BOOTLEG LIQUOR BY SIP OR JUG—RETAIL JOINTS SAID TO AVERAGE ONE TO THE MILE ON SOME SOUTH CAROLINA ROADS

(This is the second of a series of articles dealing with the liquor situation in South Carolina from a careful survey of that situation in the various counties of the State.)

Sitting in a room near the geographical center of one of the smaller towns of the State, a citizen of that town, who knows his town and county well—a reputable, substantial citizen, and a law-abiding citizen, but one who knows conditions—was asked about the liquor situation in his county.

"Take up the town first," he said, "and let me count a little." Counting on his fingers and calling names—unfamiliar to this writer—as he went along, this citizen finally announced:

"Well, I can count 11 people within two blocks of where we sit who are selling liquor. There may be others I don't know about, but not many. Say there are 12 in town. They sell it at the same prices at which it is sold in Columbia. In the county there must be 75 places making liquor—75 commercial stills. Of course," he reflected, "the average is probably higher in this county than in most of the counties of the State. I understand that liquor is mighty scarce in Newberry."

Looking out the window, he said:

"I see somebody; come on and I will show you something."

Going outside the writer met one of the governor's constables, accompanied by another officer. Getting into the native citizen's automobile we drove on the outskirts of the town and stopped in front of a place of business.

"Anything doing?" the citizen asked.

"Not now," the proprietor answered. "A constable is in town and I have got all my stuff hid."

"But how did you know?" is asked.

"Oh, we always get information when they get to town or are coming this way," he said. "All of us are on the lookout and I got a phone message before the officer got to town."

The writer learned afterwards that all the places in that immediate vicinity were closed tight until 5 o'clock that afternoon. The State constable was there on other business, but the bootleggers were not taking chances.

The governor's constabulary does the best it can. Governor Richards has a good constabulary force. But in this particular county this citizen, who knew what he was talking about, estimated there were at least seven or eight commercial stills for every member of the governor's force. "Of course," he said, "all the liquor is not sold or used in this county. Most of it goes to various cities and towns in the State. Some of the 'stillers make the deliveries themselves, but in most cases the liquor is sent for by the retailers."

"How do they get tipped off?" he was asked.

"Oh, their friends do that when they see the officers coming, and then they notify each other—some of them."

It may be noted that this was not Berkeley County, which has been so much in the limelight recently, on account of the liquor situation over there, and where the sheriff was removed by Governor Richards on Saturday.

Newberry County will be mentioned by name, for the reason that there is little to tell about Newberry, except that it is remarkable for the small amount of illegal traffic. Liquor can be bought in and around Newberry, but the places handling it are comparatively few and far between. And there it is surrounded with a pall of secrecy. A stranger going to Newberry who wants a drink while he is there had better take his liquor along with him. By this it is not meant that liquor can not be procured in Newberry County. It can be. But, by comparison, Newberry is almost a desert. Liquor is drunk up there, but most of it is brought in from other counties and is delivered direct to the consumers. This is, of course, as stated, comparatively speaking.

Nor is there so much of the traffic in Edgefield County, though Edgefield is not as free of it as Newberry is.

Mr. X, referred to in a former article as having agreed to help in the survey of the situation in South Carolina, was told about the experience in the other county. "That," he said, "is pretty much the way it is in most of the counties, though the average of commercial stills will not reach 75 to the county, or anything like it. In some of the counties they are few; in some of the counties they are many."

He was asked about the country districts—about the facility with which liquor can be purchased along the country roads.

"Well," he said, "I know one road in South Carolina where the retail bootleggers will average one to the mile for some several miles; and I know another road where there is probably not a bootlegger, selling in a place of business along the road, for 40 miles."

Referring again to the city of Columbia he was asked if it was possible to buy any imported liquor here, or if any liquor from Government warehouses ever seeped through this way.

"You can get Irish and Scotch here," he said. "Irish at $5 a pint and Scotch at $8 and $10 a quart—sometimes cheaper. There will be a good deal of this fine liquor in here between now and Christmas. Orders will be taken ahead of time, and the liquor will be brought in and delivered direct to the consumers, or to them through their regular bootleggers. Possibly there will be some 5,000 quarts delivered in Columbia of this fine liquor between now and Christmas. Some folks take a case and some take only a quart. An order would not be taken for a quart, probably; but several will go together and form a pool.

"No; most of the regular bootleggers don't deal in anything but the homemade stuff—that is, I mean in corn liquor. Of course here and there one may be found who carries Irish or Scotch or rye liquor, but this is largely from those who make special trips here, or are passing through to the East."

"What proportion of the joints are selling liquor by the drink?" he was asked.

"Very few in Columbia," he said. "Out on the country roads you can find a good many places selling by the drink. But it is so much easier and quicker to deliver a package than a drink—and so much safer. And then there is no drinking on the premises, and no possible boisterousness to attract the attention of the officers or of the prohibitionists who might want to report to the officers."

"Talking about prohibitionists," he was asked, "Do they sell much of it to prohibitionists—or any at all?"

"We went into this thing with the understanding that I was not talking of my own personal knowledge," he said, "but my information is that a good deal of it goes to prohibitionists. It is also not frequent, my information also is, that a good deal of it is ordered over the phone by ladies, and delivered to their homes upon their order. Places out in the country can sell by the drink lots easier than places in town. And in the summer time, where they have ice-cold beer as a chaser, selling the liquor at 25 cents a drink and the beer at 20 cents a bottle, the profit is large for the seller and the effect is immediate for the purchaser, and everybody is satisfied. Of course, the profit by the bottle is large. The risk has to be figured in. They have got to make over 100 per cent. Most of them make 200 per cent, or at least a hundred and fifty.

"Most of the bootleggers are white men—that is, most of them dealing in it to any extent. There are a good many negroes engaged in it in a small way. The way they buy it, it costs them about $5 a gallon, and the profit is small. They deal mostly in half-pint or pint sales—hip-pocket or mattress blind tigers."

There was also being brought back, gradually, in some of the larger cities, he said, the old situation of women and liquor—vice joints accompanied with liquor sales. It was mighty hard for the officers to do anything about this, he said, unless rowdyism and boisterousness and disorderly conduct that would create a disturbance should call attention to a place of this kind. He said there were a very good many such places in Columbia, and that they were very quietly conducted.

"So far as women are concerned, however," he said, "they drift around among the hotels, for that matter, and more and more their presence in hotels is coming to be taken for granted. I am not speaking particularly of Columbia," he said, "but of the State at large. I don't know of any hotels in the State that are themselves handling liquor; in fact, I don't know of any where the management has any knowledge of either women or liquor in their hotels; but in many of the hotels in the State it is an easy matter to get all the liquor you want, at double the price you can walk down street or across the street, may be, and get it for."

"In what general sections of the State—not to bring in too close to names and places—is the most flagrant violation of the law, and in what general localities are the most stills and the most retail joints?" he was asked.

Mr. X went into some details, which will be published in a subsequent article.

[From the South Carolina Gazette, Columbia, S. C., Wednesday, November 21, 1928]

CAN'T BAIL OUT THE OCEAN WITH SPOON—BOOTLEGGER TELLS WHY GOVERNOR'S CONSTABLES ARE INADEQUATE TO STOP ILLICIT LIQUOR TRAFFIC—DEMAND IS TOO GREAT—"BEST CITIZENS" RESERVE RIGHT TO BUY FIRE WATER AND ARE WILLING TO PAY BIG PRICES FOR THE FORBIDDEN SPIRITS

By John K. Aull

(This is the third of a series of articles by Mr. Aull on the liquor situation in South Carolina. The fourth and final article on this subject will appear in an early issue. It will be a general résumé.—EDITOR'S NOTE.)

Mr. X, source of much of my information, who permits me to say that I am convinced he is largely interested in the big liquor traffic in South Carolina, on condition that I also state that I do not know this to be a fact, his information and the other information being given with the knowledge that its sources will not be divulged, was shown several newspaper comments upon the two preceding articles.

As to the suggestion of the Greer Citizen, that "it looks to us as if his (the governor's) hands are tied by political followers who select the constables, directly or indirectly," he said, "I know nothing about that. I believe the governor's constables are doing the best they can. But what can 12 men do?

"If the governor had two hundred times that many trained officers, the business could not be stamped out. And why? Because the best citizens of the State demand their liquor and they are willing to pay for it. And because the prohibitionists—even some of the most fanatical of them—do not regard it as wrong to keep a little illegal liquor in their own homes for 'sickness,' though it be against the law. Even the bootleggers respect Governor Richards for his earnest and Herculean efforts to enforce the law—the most rigid program of enforcement the State has ever had; but the illicit traffic will thrive so long as thousands of citizens demand their liquor and are willing to pay for it—and the bootleggers have no better friends than the dyed-in-the-wool prohibitionists who want absolute enforcement for the other fellow, with the right always to keep a little at home for themselves in cases of 'emergency.'"

The Spartanburg Journal and the News and Courier editorials interested Mr. X very much. "Maybe the News and Courier is correct," he said, "when it says that 'in fact Mr. Aull's estimates are ultraconservative—at least 1,500 commercial stills in operation in the State turning out liquor every day, and at least from 5,000 to 8,000 retail liquor joints handling the products—when measured by the public statement a few months ago by a Federal prohibition agent in Greenville that about 1,500 persons are employed in the business in and around that city and that from it 3,000 gallons of whisky are distributed a week.' I am now getting up for you," continued Mr. X, "a little list of the number of stills by counties and the number of retail liquor joints by counties, which I will give you in a day or two. That will be the number, as near as I can estimate them, and we will see then what the totals are."

Mr. X said the Greenwood Index-Journal was about right in its size-up of what would be necessary to stop the passing of liquor cars through Greenwood when it says: "It would take a force of not less than 25 men in Greenwood County alone at a cost of $50,000 annually, salary and expenses combined. This would be about $2,000,000 annually for the whole State, probably more instead of less."

"Talking about being ultraconservative," said Mr. X, "the Greenwood paper, now, is ultraconservative when it thinks 25 men might do the job in that county. Why, the people want the stuff, though they vote against it, and they are going to have it. What did the Calhoun Times, neighbor to Orangeburg, say about the Orangeburg Fair and the Carolina-Citadel game? Listen to this: 'The law was either suspended at the Orangeburg Fair or it was unknown to be existent to both the officers who were in evidence and to those who openly indulged in strong drink. Liquor was almost everywhere in evidence. Flasks were openly passed from one to another during the Carolina-Citadel football game. Drunks were everywhere about. * * * Their antics were a most disturbing factor,' * * *."

"The young folks at the colleges, and particularly the colleges located in the cities," continued Mr. X, "are drinking more liquor than was ever drunk by young people at colleges before. No reputable bootlegger will sell to them if he knows it," he said, "but there are lots of them that are not reputable. There was a very regrettable incident at one of the State colleges only a few days ago, as the result of a liquor party, staged not so much because the participants wanted to drink the liquor as because they wanted to be 'smart.' I will tell you about it, and you can print it if you want to. So far as I am concerned, I think these students who did the tattling ought to have gone along with those who were tattled on, if any had to go—but everybody to his own opinion as to the amenities of life."

(The writer will content himself with Mr. X's comment, so far as publication is concerned. The details are somewhat too intimate.)

"I am a little curious to know," I asked Mr. X, "how the liquor fellows felt toward the candidates in the last presidential election."

"Here in South Carolina," he said, "they didn't take much interest one way or the other. Whether Smith or Hoover should be elected, they felt there was no possibility of a change in the liquor laws during their lifetime, and they are very well content with these laws; they are making their living and putting by, most of them, considerable money. And it is a business which they do not care to hand down to their children, though a few of them make a family matter out of it, and a good many of them have their wives associated with them in the handling of liquor, and a lesser number have their sons engaged in it along with them—and a few of them, God help them, have their daughters assisting."

"Do you know anything about the mix-up down in Berkeley, which has been the subject of so much investigation, resulting in the dismissal of the sheriff from office?" he was asked.

"Yes; I know about it," he said, "and I will tell you, but that is not for publication. That is a mess you had better leave alone."

(I am taking the advice, absolutely and positively. I do not think the Spanish inquisition could drag from me the information I get along this line, and I trust that I will not talk in my sleep.)

"Of course, it is a dirty business," said Mr. X. "If Governor Richards had the support of the otherwise law-abiding citizens of the State he could stamp it out without Federal assistance. But he hasn't got it and that is what he is up against.

"By next week I will have for you the list, by counties, which will show the totals I have referred to, both as to stills and retail joints, home-made stuff, gooseberry brandy and beer, and you can use as much or as little of them as you have the nerve to use. And you can ask me all the questions you want at that time, and I will tell you what I know, or believe, and then I am through. One more article will be enough of the stuff anyway. There is getting to be entirely too much comment about it. And our next talk will have to be in some other town, too."

And he named the date and the place.

[From the Fort Mill Times, December 6, 1928]

LITTLE AID FOR GOVERNOR IN ENFORCING LIQUOR LAW

By John K. Aull

COLUMBIA, December 5.—Figures given by Mr. X, by counties, total 2,400 stills in South Carolina regularly making liquor, with a total of some 7,500 people engaged. (Mr. X is the writer's informant, upon condition that the source of the information be not divulged, and with the understanding that the writer has no knowledge that X is engaged in the liquor business, though the writer believes he is.)

"Recent activities of the officers in Newberry County," he said, "indicate that there is more of the illegal traffic up there than I thought there was." In fact, he had given Newberry County almost a clean sheet. "I have not figured in," he said, "what are known as coffeepot stills, where the owners are making liquor for personal use or the use of their friends. I have figured in only the commercial stills."

The figures were given by counties, but the counties will not be enumerated here. The number ran from 85 in one county on down the line to 2 or 3, and in one or two of the counties no stills were marked up. "I reckon there may be one or two of them," he said, "but my information is not definite."

"If there are 2,400 commercial stills in South Carolina, then how many retailers are there and how many people who make their living out of the liquor business?" was the all-important information which the writer wanted.

"I told you in the beginning," he said, "there were some 1,500 commercial stills and some 5,000 to 8,000 people engaged in handling liquor in the State and making their living out of it," he said. "I have revised my estimate since compiling the figures. With nearer 2,400 stills regularly engaged in making liquor, that gives about 7,500 people making their entire living, or part of it, by manufacturing liquor. There must be 10,000 retail liquor joints in the State at least where the selling of liquor is the main source of livelihood. There must be at least two people, on an average, connected with these 10,000 joints. That gives you 20,000, and add your 7,500 to it and you have 27,500 people, according to my estimate, who are making their living, or part of their living, dealing in liquor. Of course the 2,400 stills would supply more retail joints than that, but of these 2,400 stills there are several hundred of them that sell the stuff to consumers at the stills, and more of them that sell at the stills to picked consumers who they know will not drink liquor or become boisterous around the stills. You know the drinking of the stuff does not go along with handling it with any degree of success. The best and most successful handlers of liquor do not drink the stuff to any extent, and never while on duty. Of course a good many of the liquor fellows drink, but they don't last long. They are either soon caught and put out of business, or ruin their reputations as bootleggers by becoming common liquor heads."

"What's the way to enforce the law in South Carolina?" he was asked.

"I don't agree to try to figure out a way to put these fellows out of business," he said. "It's bad business, but think of the thousands of prohibitionists that are buying the stuff and demanding the best quality and are willing to pay the cash, and you will know why the business goes on. If everybody in South Carolina who votes prohibition and talks prohibition, one or both, would assist in the enforcement of the law, by example, if nothing else, it would be an easy job to enforce it. But there is just as much likelihood of that as there was of a lightwood knot blocking Sherman's march to the sea.

"The fellows don't have much to guard against except the efforts of Governor Richards. Now, really, what else is there? If it were not for his honest efforts—give him the credit—there is no telling what conditions would be in this rock-ribbed prohibition State. People talk a lots, and 'reformers' draw down salaries, but now, just honest to goodness, what stands between the bootlegger and his drinking constituency, including lots of prohibitionists, except the efforts of Governor Richards, and some of the local officers, of course?

"Now," concluded Mr. X, "judging from some of the newspaper clippings you have showed me, maybe I have talked too much already. Anyhow, for the present I am done. I can take care of myself. I reckon you can, too. Good-by; good luck. Have a drink? No? All right; glad you won't."

In this series of articles the people of South Carolina have been given the facts. There is no suggestion to be found in the facts that conditions are as bad as they were in saloon days. The only suggestion is that liquor flows freely, and that the Governor of the State has mighty little cooperation in the enforcement of the law.

[From the Greenville News, December 7, 1928]

FEDERAL AGENTS FIND 49 STILLS—OFFICERS CONFISCATE AND DESTROY OVER $10,000 WORTH OF PROPERTY IN MONTH

Federal agents during the past month destroyed 49 distilleries and arrested 51 persons for alleged violations of the Federal prohibition law, according to a report of activities during November made by Deputy Administrator J. A. Clifton, jr.

During the month 566 gallons of liquor were destroyed by the officers and seven automobiles were captured. They also destroyed 17,250 gallons of beer.

The total value of the property destroyed and confiscated is valued at $10,202. This work was done despite the interruption of courts attended and two men absent by reason of resignations from the force, it was said.

ADDRESS BY HON. ROY MILLER RELATIVE TO THE MISSISSIPPI RIVER SYSTEM

Mr. SHEPPARD. Mr. President, I present for publication in the RECORD an address delivered by Hon. Roy Miller, of Corpus Christi, Tex., before the Mississippi Valley Association at St. Louis, Mo., on November 26, 1928, together with a statement of the projects comprising the Mississippi River system, their authorized depths, the funds expended on or allotted to each, and the amounts required to complete them, as compiled by the office of the Chief of Engineers, United States Army.

There being no objection, the address and accompanying matter were ordered to be printed in the RECORD, as follows:

LET'S FINISH THE JOB

If I sense correctly the temper and disposition of this gathering, it is a fixed determination that the purpose we seek to accomplish shall be achieved without further delay. This is the tenth annual convention of a great organization which represents the commercial, industrial, and agricultural interests of an empire—the great Mississippi Valley, comprising approximately one-half the area of the richest and most powerful Nation in the world, and representing considerably more than half of its productive resources. For nearly a decade this organization has fostered and promoted an idea. Before its birth there were other movements of somewhat similar character seeking the same end. Indeed, for a quarter of a century there have been organizations of a more or less local character which have striven to improve local conditions by their advocacy of local projects.

But it remained for this splendid organization—the Mississippi Valley Association—to visualize the possibilities of a vast system in which each local project, coordinated and corelated, would have its proper place and render its full measure of service as an essential part of what, when it is completed, will be the greatest inland waterway system in the world.

WHAT HAS BEEN ACCOMPLISHED

While the progress we have made in the past has not always been as rapid as we should have liked, we find gratification in the fact that this great idea of a coordinated system of waterways that will serve every part of the Mississippi Valley has at last captured the imagination and inspired the vision of the American people, and that its final completion has become the adopted policy and fixed purpose of the Congress of the United States.

Under these circumstances it should be interesting as a matter of information and helpful as a basis for determination and decision respecting our plans and purposes to take stock, so to speak, of what has been accomplished toward the construction of this great waterway system in which we are interested.

I am indebted to the office of the Chief of Engineers and its talented and efficient personnel for the data which is here presented. It has been supplied to me in such interesting and extensive detail that time does not now permit a presentation of more than a general summary. For the information of those who may be interested, however, I have assumed the liberty of putting the entire statement in pamphlet form which is available for those who desire it.

THE CORPS OF ENGINEERS

In this connection I may be pardoned a brief digression. Because of my interest in certain Texas projects I have been permitted to enjoy close contacts with officers of the Corps of Engineers of the United States Army for many years and therefore to become familiar with their methods of procedure and the manner in which they discharge the obligation placed upon them by law in respect to river and harbor works. All of us will recall the days when river and harbor appropriations were in bad odor and when the cry of "pork barrel" was abroad in the land because of occasional ill-advised legislation authorizing the improvements of projects lacking in merit. Then Congress placed upon the Corps of Engineers the responsibility of reporting upon the commercial possibilities and economic justification of waterway projects as well as their engineering feasibility and construction cost. That marked the dawn of a new day in river and harbor work in this country. Service now is balanced against cost, and unless a project can stand the test of real service to commerce it need expect no consideration at the hands of the Government engineers. Congress, of course, may do as it pleases, but the record fails to disclose a single instance in recent years where it—the Congress—has authorized the construction of a waterway project which the engineers have said was not justified from the standpoint of its possible service. This is as it should be. The river and harbor development of the Nation is now on a sound business basis. It is in the hands of highly trained experts, selected from the most efficient group of engineers in this or any other country, who, because they are officers of the United States Army, can and do apply to the tasks to which they are assigned a character of service which is at once impartial and disinterested and always patriotic. Any effort to change the present method of executing and administering our river and harbor activities should be resisted by those who have the best interests of the Nation at heart.

THIRTEEN THOUSAND THREE HUNDRED AND NINETY-FOUR AND FORTY-TWO ONE-HUNDREDTHS MILES OF WATERWAYS

But to return to the "Mississippi river system": The data referred to show that it consists of approximately 70 projects with a total mileage of 13,394.42 miles. The system is made up, of course, of the great Mississippi and its various tributaries, which in turn are served by numerous feeders. Almost every State in what we call the Mississippi Valley is touched and served by the trunk line, its tributaries, or feeders. They cover the vast area from the Alleghenies to the Rocky Mountains and from the Great Lakes to the Gulf as the veins that pulsate through and vitalize the human body.

AMOUNT ALREADY EXPENDED

The tremendous sum of $452,270,217 has already been expended or allotted (to June 30, 1928) to make this great system available for navigation. This takes no account of $181,219,568 spent in flood control on the Mississippi, of which amount it is estimated that approximately $22,000,000 has been of benefit to navigation. It is also stated that approximately $30,000,000 of the $311,000,000 authorized by Congress at its recent session for further flood-control work on the Mississippi will be in the interest of navigation.

FUNDS REQUIRED FOR COMPLETION

So much for what has been spent on the projects comprising the Mississippi system. What will be required to complete them? Only the comparatively insignificant sum of $96,129,500. I say insignificant, since it represents only a little more than 20 per cent of what has already been expended or allotted, and until it is spent and the projects completed this great waterway system will be able to render but a fractional part of the service of which it is capable.

STANDARDIZATION NECESSARY

A study of the system with respect to the various and varying project depths reveals an interesting situation. One is at once struck with the lack of uniformity and standardization. While the main trunk lines, the Mississippi from New Orleans to St. Louis, the Ohio from Cairo to Pittsburgh, the intracoastal canal from New Orleans to Corpus Christi, and the Illinois River which, with the sanitary canal, will provide a through waterway from the Mississippi to Chicago, have an authorized project depth of 9 feet, we find that practically all of the other projects listed, except where no depth at all is specified, have depths ranging from 4 to 8 feet.

Attention is not directed to this situation for the purpose of urging standardization at this time of the entire system on the basis of 9 feet but merely to point out the advisability of a careful consideration of the system in its entirety with a view to a possible increase in channel depths in the case of certain projects which are a part of the system. Pending survey authorizations will provide the remedy in some instances. For example, the survey of the Mississippi River between the Missouri River and Minneapolis "with a view to securing a channel 9 feet deep, with suitable widths," if favorably reported and adopted by Congress, will not only complete the essential north and south trunk line but will give an outlet on the basis of a standardized depth of 9 feet to Chicago. Likewise, the similar survey of the Missouri River to Kansas City "with a view to a 9-foot channel" will, if favorably reported and authorized, complete the east and west trunk line from Pittsburgh to Kansas City.

It should be patent to anyone who views the matter in a business way and from the standpoint of a completed standardized system that these two improvements, namely, a 9-foot channel to Minneapolis and St. Paul and a like depth to Kansas City, are absolutely essential as a basis for and as a part of an adequate and fully serviceable system of waterways for the Mississippi Valley. Of course, the time will come when the entire system, with its various tributaries and feeders, should be standardized on the basis of an equal depth throughout, but it appears self-evident that the main arteries of the system should be standardized without delay.

THROUGH BARGE SERVICE

The barge which loads at Minneapolis or Kansas City with wheat, carrying the largest possible cargo (and the economy of water transportation exists in quantity of movement), should be able, utilizing the maximum of draft available, to move through to New Orleans, Houston, Galveston, or Corpus Christi. Likewise the barge loaded with steel products at Pittsburgh to the maximum draft available on the Ohio should be able to go through without breaking bulk and discharge its cargo at the Twin Cities or Kansas City. And so the barge loaded with sulphur at the mines in Texas on the intracoastal canal, or with petroleum products from the great refineries which line that waterway, with its 9-foot depth, ought to be permitted to enjoy the maximum economies of water transport by having a 9-foot channel to all of the great consuming and distributing centers in the valley territory, such as New Orleans, St. Louis, Pittsburgh, Cincinnati, Chicago, Minneapolis, St. Paul, and Kansas City. Why favor some and penalize others?

The benefits of water transportation are no longer a matter of conjecture or debate. Even though the question of economy in cost did not enter into the equation, none would doubt the advisability, indeed the necessity, of making our waterways available for transportation service in order that the progress and development of our country may continue apace. That transportation constitutes our greatest national problem is conceded by all who are cognizant of the facts. That at our present rate of progress our railroad facilities, which are not now being augmented to any appreciable extent, will shortly be inadequate, is admitted by leading railroad executives everywhere. That substantial decreases in transportation costs constitute the surest and safest measure of farm relief is nowhere disputed. That water transportation of heavy, bulky commodities, consisting largely of raw materials, will increase the profits of the producer and lessen materially the burden of the consumer is universally recognized.

ECONOMIES IN THE LONG HAUL

Permit me to illuminate these observations, which, I take it, are now generally accepted as truisms. The greatest economies in water transportation are realized in the "long haul." It is for that reason that the entire Mississippi River system should be completed as speedily as possible, for the longer the haul the greater the saving in transportation charges.

I live in Texas, a great State of almost limitless potentialities and indescribable possibilities, which through the Intracoastal Canal will participate in the inestimable benefits resulting from the completion of this wonderful waterway system. Corpus Christi, my home town, is approximately 2,500 miles from Pittsburgh, about 1,800 from St. Louis, 2,200 from Kansas City, and 2,500 miles from Minneapolis. These distances are by water via the Mississippi River system, of which the Intracoastal Canal is a part. The distances to Houston and Galveston are approximately 200 miles less.

CUTTING TRANSPORTATION COSTS IN HALF

Texas consumes 800,000 tons of steel products annually. The steel manufacturers themselves estimate that half of that, or 400,000 tons, will move into Texas by the Mississippi River system when it is completed, at a saving of $8 a ton, or a total of $3,200,000 annually.

Texas now produces all of the sulphur produced in the United States and about 80 per cent of the world's supply. The mines are located immediately on the Intracoastal Canal. In the territory served by the Mississippi River system 652,000 tons of sulphur were consumed last year. With short connecting railroad hauls every pound of it could be handled by barge on the Mississippi River system. The present rail rates range from $7.50 to $13.50 per ton. The barge will handle it at from $3 to $5 a ton. The consumer buys the sulphur at the mine and pays the freight. The completion of the Mississippi River system, including the Intracoastal Canal, will save the sulphur consumers of the Mississippi Valley territory (and there are 113 different uses of sulphur) not less than $2,500,000 annually. The cost of production of chemicals, insecticides, paper, automobile tires, rubber goods, steel products, etc., will be proportionately reduced.

The great oil refineries of Louisiana and Texas will use the system to reach the distributing centers of the valley territory. An official of one of the large companies, testifying before the Rivers and Harbors

Committee a year ago, stated that his company was planning to use the Intracoastal Canal, the Mississippi and Ohio Rivers to reach the Pittsburgh district, and that it expected to carry its products by barge from its refinery in Texas to Pittsburgh for less than one-half the present rail rate from Philadelphia to Pittsburgh.

One of the large steel companies is now transporting its products by barge from Pittsburgh to New Orleans, a distance of approximately 1,800 miles by water, for less than half the rail rate from New Orleans to Houston, a distance of 362 miles.

THE INTRACOASTAL CANAL

Congress has authorized the construction of the Intracoastal Canal from New Orleans to Corpus Christi on the basis of a 9-foot depth and a 100-foot bottom width, a distance of about 700 miles, at an estimated cost of $16,000,000. We are now seeking an authorization to extend it to the Rio Grande on the border of our sister Republic of Mexico, 140 miles south of Corpus Christi. An investigation of present transportation costs has revealed some startling facts. For instance, automobiles from St. Louis into the Rio Grande Valley now carry a rate of $2.485 per 100 pounds, or 43.10 mills per ton-mile. Agricultural implements from this territory pay a rate of 22.30 mills per ton-mile; machinery, 23.10 per ton-mile; coal from Cincinnati, 21.70 per ton-mile; pipe from Pittsburgh, 11.43 per ton-mile.

Compare these excessive charges with the average rates by water on the Mississippi, as shown in the annual report of the United States Inland Waterway Corporation, of 4.3 mills per ton-mile for the lower river and 4.78 for the upper river. Better still, the statement made to me recently by an official of one of the steel corporations now using water transportation on the system that their costs, including interest, depreciation, and terminal charges, are less than 2½ mills per ton-mile.

Is there any wonder that the people I represent, the substantial interests of the coast country of Louisiana and Texas, are so intensely concerned in the early completion of this great waterway system?

What is the conclusion of the whole matter? Is it not so clear as to be entirely self-evident that the system in its entirety should be completed at the earliest possible moment? Is it not also equally obvious that the system should now be considered in its entirety, that the many and varied projects which compose it should be coordinated, that the main trunk lines should be standardized on the basis of uniform channels, and that the whole should be henceforth regarded and provided for as one great system of transportation?

A NEW AND PROGRESSIVE LEADERSHIP

I believe the time has come when that will be done. I believe we stand on the threshold of a new era of progress and development so far as our internal resources are concerned, when, under the inspiration and guidance of a far-seeing and progressive leadership, we may look with confidence and assurance to the speedy realization of that splendid vision which for so many years has led us on.

We find that assurance in the stirring words of the President elect, uttered in the course of an address delivered at Seattle, Wash., more than two years ago:

"The time has come when we must take an enlarged vision of the future. We have arrived at a new era in this development. We have need that we formulate a new and broad national program for the full utilization of our streams, our rivers, and our lakes.

"Water is to-day our greatest undeveloped resource. Our streams and rivers offer us a possible total of 55,000,000 horsepower, and of this less than 11,000,000 has been developed. Of our 25,000 miles of possible inland waterways probably less than 7,000 are really modernized, and the utility of much of these 7,000 miles is minimized by their isolation into segments of what should be connected transportation systems. We still have 30,000,000 acres of possible reclaimable and irrigable lands.

"True conservation of water is not the prevention of use. Every drop of water that runs to the sea without yielding its full commercial returns to the Nation is an economic loss, and that loss in all its economic implications can be computed in billions."

Yes; the time has come to finish the job. The adopted projects should be completed without delay. Enlargements and extensions of the system should be made as rapidly as necessity may require. Above all, the surveys for navigation, flood control, power, and irrigation, authorized in the rivers and harbors act of January 21, 1927, which comprehend practically all streams in the Mississippi Valley, should be completed as soon as possible in order that this splendid waterway system which constitutes America's greatest natural resource may render its full measure of service to the Nation and to the world.

When these things have been accomplished, this mighty empire we call the Mississippi Valley will become not only the most populous and productive portion of this great Nation but the abiding place of a happy, prosperous, and contented people in whom, because of the beneficent endowments of a generous Government, will reside those virtues of citizenship which are the sole guaranties of the perpetuity of this Republic.

Projects comprising the Mississippi River system

Name of project	Project length (miles)	Project depth (feet)	Amount expended or allotted to June 30, 1928	Amount required to complete

[2] 9 to St. Louis, 6 to mouth of Missouri.
[3] 8 at bank full stage.
[4] 6 for 24 miles, 3 for 28 miles.
[5] 6 for 24.6 miles, 3 for remainder.
[6] 9.5 for 14.7 miles, 9.5 for 2.5 miles.
[7] 7 for 24 miles, 8 for 37 miles.
[8] 933 navigation projects.
[9] For flood control, not included in total spent for navigation.

SURVEYS PENDING

Red River, Ark. and La., from Fulton to the mouth.

Black River, Ark. and Mo.

Arkansas River and tributaries, Ark. and Okla.

Mississippi River between Missouri River and Minneapolis, Minn., with a view to securing a channel 9 feet deep with suitable widths.

Headwaters, Mississippi River, view to maintaining a minimum fixed head of water in all channels of system at all times.

Missouri River from Quindaro Bend to mouth, view to securing channel 9 feet deep with suitable widths.

Allegheny River, Pa. and N. Y., with a view to enlarging the present project.

Youghiogheny River, Pa., from Fifteenth Street, McKeesport, to West Newton.

Kiskiminitas and Conemaugh Rivers, Pa.

Little Kanawha River, W. Va.

Kanawha River, W. Va., from Lock 5 to its mouth.

Canal connecting Lake Erie with Ohio River, via the Miami and Erie Canal or other routes, including branch canal connecting Lake Michigan.

Waterway from point at or near Erie Harbor, Pa., by way of French Creek and Allegheny River, to the Ohio River.

Green and Barren Rivers, Ky.

Surveys for navigation, flood control, power, and irrigation, covering practically all streams forming a part of the Mississippi River system were authorized by the river and harbor act approved January 21, 1927, in accordance with House Document No. 308, Sixty-ninth Congress, first session, and as further modified by the flood control act approved May 15, 1928.

MILITARY DETAILS TO LATIN-AMERICAN COUNTRIES

Mr. KING. Mr. President, I offer a bill for the repeal of an act entitled "An act to authorize the President to detail officers and enlisted men of the United States Army and Navy to Latin-American countries." The act which is sought to be repealed reads as follows:

That the President of the United States be, and hereby is, authorized, upon application from the foreign governments concerned, and whenever in his discretion the public interests render such a course advisable, to detail officers and enlisted men of the United States Army, Navy, and Marine Corps to assist the Governments of the Republics of North America, Central America, and South America, and of the Republics of Cuba, Haiti, and Santo Domingo in military and naval matters: *Provided*, That the officers and enlisted men so detailed be, and they are hereby, authorized to accept from the government to which detailed offices and such compensation and emoluments thereunto appertaining as may be first approved by the Secretary of War or by the Secretary of the Navy, as the case may be: *Provided further*, That while so detailed such officers and enlisted men shall receive, in addition to the compensation and emoluments allowed them by such governments, the pay and allowances whereto entitled in the United States Army, Navy, and Marine Corps and shall be allowed the same credit for longevity, retirement, and for all other purposes that they would receive if they were serving with the forces of the United States.

If the interpretation which has been placed by some persons upon this act is correct, then it should be promptly repealed. The power of the President of the United States under the Constitution is very great. Indeed, his authority exceeds that of kings and rulers in many countries. He is the Commander in Chief of the Army and Navy and the executive head of the Government. Many thoughtful students of our Constitution and the workings of the Federal Government believe that too much power is lodged in the President, and that danger is to be apprehended to our political institutions by reason of the great authority possessed by the Chief Executive of our country. Persons familiar with our history perceive the gravitational forces operating in the Federal Government which result in devitalizing the States and drawing them more and more within the influence of the National Government. As the authority of the Federal Government increases its arm becomes longer and more powerful. There is less talk of democracy and the rights of local self-government and a growing desire to increase the power of the National Government and multiply bureaucratic organizations.

The eyes of the people are being turned to the Federal Government, to the President of the United States, and away from the States and the people themselves. And as the executive power is magnified there seems to be a growing purpose to strengthen its authority, to exercise material influence and physical power beyond the confines of our own country.

The enactment of the measure which I have read may not have been with the design to respond to this tendency, but it seems clear that under this law the President may project the United States into the affairs and concerns of other nations, perhaps to their disadvantage and probably to the disadvantage of our own country. Under the provisions of this law the President is authorized, upon application from either of the governments mentioned in the act, to send officers and enlisted men of the Army, Navy, and Marine Corps to the applying nation; and the officers and enlisted men so sent are to "assist the government" to which they are sent in "military and naval matters." There is no limitation upon the number of officers or men that may be "detailed" by the President for such purpose, nor are there any restrictions upon the character of assistance they may render the government to which they may be sent. They are "detailed" to "assist the government" to which the President may order them and to aid in "military and naval matters." The request for American officers and enlisted men may come from a revolutionary government, from a de facto or a de jure government. The President is to determine whether the application comes from a "government," and he may determine that certain factions constitute the "government" and order our officers and soldiers to assist such recognized government in "military and naval matters."

In the Republics to the south of us there have been instances where the United States has supported or recognized the revolutionary government as against the de jure government. It is thought by many that the United States erred in its recent Nicaraguan policy; that it recognized a faction which did not truly represent the will of a majority of the people of Nicaragua, and supported such faction as the legal and constitutional Government of Nicaragua. It is believed by many Americans that the course of our Government in intervening in

Santo Domingo, Haiti, and Nicaragua was unauthorized and unwarranted.

It may be that the act in question was not intended to authorize the President, "in his discretion," to send troops to any of the countries enumerated to assist in "military and naval" operations, but its terms would seem to indicate that he may do so upon "request" of either of said governments. It may be that the intent of the act was merely to authorize the President to supply to certain countries officers and men belonging to our military and naval forces to assist in training the military forces of such countries. If so, the language of the act is not sufficiently restricted and the purpose is not sufficiently indicated.

As I have stated, quite recently a "government" came into power in Nicaragua which many believe was illegal. The United States supported that Government and sent officers, soldiers, and sailors by the thousands to assist the recognized Government in its military and naval operations. Many of our naval vessels anchored in Nicaraguan waters and thousands of our marines engaged in military activities, carrying on war against military forces upon foreign soil. Many Americans believed that the act of our Government was an act of war, and that the United States waged war against a foreign power. In my opinion, our Government was not warranted in landing military forces in Nicaragua, Haiti, or Santo Domingo; and if the law which I suggest should be repealed authorizes the President of the United States to send officers and enlisted men to foreign countries upon request of any faction or government which he may recognize, to assist it in "military and naval matters," then such law may not be defended and its repeal should be immediate.

Mr. NORRIS. Will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Nebraska?

Mr. KING. I yield.

Mr. NORRIS. I did not hear the first part of the Senator's statement, and I shall be glad if he will briefly outline the particular law he seeks to repeal.

Mr. KING. If the Senate will pardon me for repeating, I shall briefly refer to the law in question.

The act provides that the President is authorized upon application from foreign governments in South and Central America and in the Caribbean region to detail officers and enlisted men of the Army, Navy, and Marine Corps to "assist" such governments in "military and naval matters." As I have heretofore stated, the government may be a revolutionary one. It may represent a political faction. The President is to determine whether it is a "government," and he may, upon application by such government, detail officers and soldiers to "assist" in "military and naval matters."

I repeat when I say that it may be a de facto or de jure government; it may be a Sacasa government in Nicaragua or a Chamorro government, or any other factional organization which the State Department or our Government recognizes as the government of such country.

Mr. NORRIS. Or it may be a government which we ourselves have set up.

Mr. KING. Exactly. It may be a government such as that we set up in Haiti, and which we buttressed by our military forces. It is not too much to say that the government which we recognized in Nicaragua was not a government of the people of Nicaragua, but one which existed only because of our marines and naval forces.

The act also provides that the officers and enlisted men so ordered to a foreign country may receive from the government of such country such "compensation and emoluments as may be first approved by the Secretary of War or by the Secretary of the Navy of the United States." By the act in question they may also receive the "pay and allowances" to which they are entitled by law when serving with the forces of the United States. In other words, the officers and men will receive "compensation" from the United States and "emoluments and compensation" from the countries to which they are sent.

Mr. WALSH of Montana. When was the act approved?

Mr. KING. May 19, 1926.

Mr. WALSH of Montana. I suppose the occasion for it was the sending of one of these advisory commissions to one of the South American or Central American countries. We have sent commissions, consisting of officers of the Army, to advise with them concerning military matters. We have sent naval commissions, and military commissions, as well, and I understood at the time—perhaps it was not this act, but some other—that we especially authorized them to accept compensation from the countries to which they were thus assigned. I think perhaps the Senator will agree that if that is the case, we ought to reserve the right to send officers, in an advisory capacity, or something of that kind, to the South American countries.

Mr. KING. I indicated a few moments ago that perhaps some Senators take the view that the act in question merely permits the President upon request to send officers, soldiers, and sailors to give expert advice to other countries in connection with the reorganization of their armies or navies or marine corps.

Mr. WALSH of Montana. I have some kind of a faint recollection of legislation of that character having been presented and some such explanation being made. I fully agree with the Senator that the policy of that act is indefensible, but if it were to be repealed the other matter, it seems to me, should be taken into consideration.

Mr. KING. I think the position of my friend is correct.

Mr. NORRIS. Mr. President, has the Senator read the entire act?

Mr. KING. Yes.

Mr. NORRIS. Has the Senator looked up the history of it?

Mr. KING. No.

Mr. NORRIS. I have inquired of Senators about me here and no one seems to have any knowledge that there was in existence such a law.

Mr. KING. I have a vague recollection of some measure being considered by the Senate authorizing the President to permit a limited number of Army and Navy officers to advise with foreign countries in training their military and naval forces. My understanding was, although, as stated, my recollection is indistinct, that we were to "loan" for a short time a limited number of officers to friendly nations to help them in the technique of organization and the training of their military forces.

Mr. WALSH of Montana. But, Mr. President, it never was contemplated that they should take part in actual military movements in such country.

Mr. KING. The Senator is absolutely correct.

Mr. WALSH of Montana. They were really to be teachers and advisers.

Mr. KING. Exactly, and a measure going no further than that might be entirely proper, although I confess that I am not greatly impressed with the view that the United States must be a military school-teacher and schoolmaster for the nations in the Western Hemisphere or in other parts of the world. I prefer that if we are to supply teachers to other nations, they teach the arts of peace. I should like to see our professors, scientists, and great educators find increased opportunities to carry to other nations the wealth of learning and knowledge which they possess, and I welcome the movement which contemplates the exchange of professors, teachers, and educators by the various nations. The cultural and educational advantages resulting from this course will be of incalculable benefit to all participating nations.

Mr. President, I ask that the bill which I have offered be referred to the Committee on Military Affairs.

The bill (S. 4792) to repeal the act entitled "An act to authorize the President to detail officers and enlisted men of the United States Army, Navy, and Marine Corps to assist the governments of the Latin-American Republics in military and naval matters," approved May 19, 1926, was read twice by its title and referred to the Committee on Military Affairs.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. METCALF:

A bill (S. 4785) for the relief of Charles E. Byron, alias Charles E. Marble; to the Committee on Naval Affairs.

By Mr. REED of Pennsylvania:

A bill (S. 4786) to amend section 47c, national defense act, as amended, relating to military training required to entitle members of the Reserve Officers' Training Corps to receive commutation of subsistence; to the Committee on Military Affairs.

By Mr. DENEEN:

A bill (S. 4787) to revive and reenact the act entitled "An act granting the consent of Congress to the State of Illinois and the State of Iowa, or either of them, to construct a bridge across the Mississippi River, connecting the county of Carroll, Ill., and the county of Jackson, Iowa," approved May 26, 1924; to the Committee on Commerce.

By Mr. NEELY:

A bill (S. 4788) granting a pension to Robert Martin; and

A bill (S. 4789) granting a pension to Thomas M. McDonell; to the Committee on Pensions.

By Mr. GEORGE:

A bill (S. 4790) for the relief of Elma Schneider; to the Committee on Claims.

A bill (S. 4791) to extend the benefits of the United States employees' compensation act to Melvin J. Oppenheim; to the Committee on Claims.

By Mr. TYSON:

A bill (S. 4793) granting the consent of Congress to the Highway Department of the State of Tennessee to construct a bridge across the Cumberland River in the vicinity of Harts Ferry, in Wilson and Trousdale Counties, Tenn.; to the Committee on Commerce.

By Mr. THOMAS of Oklahoma:

A bill (S. 4794) granting an increase of pension to Jotham J. Bebout; to the Committee on Pensions.

By Mr. SHORTRIDGE:

A bill (S. 4795) for the relief of Ellen B. Monahan; to the Committee on Claims.

By Mr. BARKLEY:

A bill (S. 4796) for the relief of Jesse J. Britton; to the Committee on Military Affairs.

AMENDMENTS TO BOULDER DAM BILL

Mr. BRATTON submitted two amendments intended to be proposed by him to the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes, which were ordered to lie on the table and to be printed.

HOUSE BILL REFERRED

The bill (H. R. 14801) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1930, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

COL. HARRY BURGESS, CORPS OF ENGINEERS, UNITED STATES ARMY

Mr. BINGHAM. As in open executive session I ask unanimous consent that the Committee on Territories and Insular Possessions may be discharged from the consideration of the nomination of the Governor of the Panama Canal submitted by the President and that this nomination may be referred to the Committee on Interoceanic Canals.

The PRESIDING OFFICER (Mr. SACKETT in the chair). Without objection, it is so ordered.

PRESIDENTS' PLAZA AND MEMORIAL AT NASHVILLE, TENN.

The PRESIDING OFFICER laid before the Senate the amendments of the House of Representatives to the bill (S. 3171) providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States, which were, on page 1, line 5, to strike out the word "part"; on page 1, line 5, after the word "contribution," to insert "on the part of the United States"; on page 1, line 8, to strike out "or monuments, or statues"; on page 1, to strike out all after the word "States" in line 10 down to and including the word "Tennessee" in line 13, page 2, and insert:

SEC. 2. There is hereby established a commission, to be known as the Nashville Presidents' plaza commission (hereinafter referred to as the commission), and to be composed of 15 commissioners, as follows: Three persons to be appointed by the President of the United States; 3 Senators by the President of the Senate; 3 Members of the House of Representatives by the Speaker of the House; the Governor of the State of Tennessee; the judge of the county court of Davidson County, Tenn.; the mayor of the city of Nashville, Tenn.; and 3 persons to be appointed by the Governor of the State of Tennessee. The commissioners shall serve without compensation, select a chairman from among their number, and appoint a secretary at such salary as the commission may fix.

SEC. 3. No part of the contribution on the part of the United States shall be appropriated until there has been raised within the State of Tennessee by private subscription and/or by public appropriation an additional sum of $300,000 as a contribution to the payment of cost of said memorial, and plans and specifications for the location and design of said memorial shall have been approved by the Joint Committee on the Library, with the advice of the National Commission of Fine Arts.

Mr. TYSON. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

PERMITS AND LICENSES UNDER FEDERAL WATER POWER ACT

The PRESIDING OFFICER laid before the Senate a communication from the Secretary of War, chairman of the Federal Power Commission, transmitting, pursuant to law, a statement showing permits and licenses issued under the Federal water power act during the fiscal year ended June 30, 1928, the parties thereto, the terms prescribed, and the moneys received during that fiscal year on account of permits and licenses, which, with the accompanying document, was referred to the Committee on Commerce.

CASPER-ALCOVA IRRIGATION PROJECT, WYOMING

The PRESIDING OFFICER laid before the Senate a communication from the Secretary of the Interior, submitted pursuant to law, stating that investigation of the Casper-Alcova irrigation project, Wyoming, has not as yet been undertaken and that report thereupon can not be made at the present time, which was referred to the Committee on Irrigation and Reclamation.

REPORT OF THE UNITED STATES BUREAU OF EFFICIENCY

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was read, and, with the accompanying report, referred to the Committee on Appropriations:

To the Congress of the United States:

As required by the acts of March 4, 1915, and February 28, 1916, I transmit herewith the report of the United States Bureau of Efficiency for the period from November 1, 1927, to October 31, 1928.

CALVIN COOLIDGE.

THE WHITE HOUSE, *December 8, 1928.*

FRANCHISES GRANTED BY PORTO RICAN PUBLIC SERVICE COMMISSION

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was read and, with the accompanying papers, referred to the Committee on Territories and Insular Possessions:

To the Congress of the United States:

As required by section 38 of the act approved March 2, 1917 (39 Stat. 951), entitled "An act to provide a civil government for Porto Rico, and for other purposes," I have the honor to transmit herewith certified copies of each of 15 franchises granted by the Public Service Commission of Porto Rico. The franchises are described in the accompanying letter from the Secretary of War transmitting them to me.

CALVIN COOLIDGE.

THE WHITE HOUSE, *December 8, 1928.*

ERECTION OF MEMORIALS, ETC., ARLINGTON MEMORIAL AMPHITHEATER

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was read and, with the accompanying paper, referred to the Committee on the Library:

To the Congress of the United States:

In compliance with the requirements of the act of Congress of March 4, 1921, I transmit herewith the annual report of the Commission on the Erection of Memorials and Entombment of Bodies in the Arlington Memorial Amphitheater for the fiscal year ending June 30, 1928. The attention of the Congress is invited to the renewal of the recommendation of the commission that the Tomb of the Unknown Soldier be completed and that the balance of the $50,000 authorized for the completion of said tomb, $47,500, is carried in the Budget estimates for the fiscal year 1930.

CALVIN COOLIDGE.

THE WHITE HOUSE, *December 8, 1928.*

REPORT OF SURGEON GENERAL OF PUBLIC HEALTH SERVICE

The PRESIDING OFFICER (Mr. SHEPPARD in the chair) laid before the Senate a communication from the Secretary of the Treasury, transmitting, pursuant to law, the report of the Surgeon General of the Public Health Service for the fiscal year 1928, which was referred to the Committee on Finance.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, and for the approval of the Colorado River compact, and for other purposes.

Mr. ASHURST. Mr. President, the junior Senator from Arizona [Mr. HAYDEN] spoke at length upon the pending bill, and with special reference to his amendment proposing some equitable division of the waters of the Colorado River. During the course of his able address he was interrogated by the Senator from Idaho [Mr. BORAH] as follows:

As a proposition of law, let us assume the Senator is correct; but, if that is true, are not the advocates of the bill taking the risk here and not the State of Arizona?

To which my colleague made reply:

Mr. HAYDEN. That is a correct assumption; but the last thing that the State of Arizona wants to do, and the last thing that the people of any of the seven States want to do, is to throw this controversy into long-drawn-out litigation in the courts.

Mr. President, my colleague, in giving expression to such sentiments, reached a high peak of statesmanship, and I join with him in the sentiment that the last thing Arizona desires to do is to resort to the courts. But if Arizona's constitutional rights and her valuable resources are to be taken from her without her consent and without due compensation, she has no other course to pursue except to retire behind the ramparts of the Federal Constitution and in the courts secure that meed of justice which the Congress would deny if it passed this bill in this form.

Some misconception exists as to what rights, if any, the Republic of Mexico has in or to the waters of the Colorado River. The United States has no treaty with Mexico respecting a division or a distribution of any of the waters of the Colorado River, and the United States would not be an independent sovereign power, but would indeed be a vassal nation if any other nation could compel the United States, in the absence of treaty, to send to such other nation any of the waters originating in the United States.

Down through the years, down through the centuries, from the earliest writers on law to this day, it is agreed that a nation would not be an independent, sovereign nation, but would be a vassal nation, if it were required, in the absence of treaty commitments, to send any of its water to a foreign nation.

I shall now read an opinion delivered by Attorney General Judson Harmon on this question. It is dated Washington, D. C., December 12, 1895.

The opinion of the Attorney General is as follows:

THE ATTORNEY GENERAL TO THE SECRETARY OF STATE

DEPARTMENT OF JUSTICE,

Washington, D. C., December 12, 1895.

SIR: I have the honor to acknowledge the receipt of your letter of the 5th ultimo, in which you refer to the concurrent resolution of Congress passed April 29, 1890, providing for negotiations with the Government of Mexico with a view to the remedy of certain difficulties mentioned in the preamble of such resolution which arise from the taking of water for irrigation from the Rio Grande above the point where it ceases to be entirely within the United States and becomes the boundary between the United States and Mexico. I have also the copy which you inclose of the note of the Mexican minister to yourself, dated October 21, 1895, in which he states at length the position taken by his Government.

You say:

"The negotiations with which the President, acting through the Department of State, is charged by the foregoing resolution can not be intelligently conducted unless the legal rights and obligations of the two Governments concerned and the responsibility of either, if any, for the disastrous state of things depicted in the Mexican minister's letter are first ascertained."

I have the honor, therefore, to call your attention to the legal propositions asserted in Mr. Romero's letter and to inquire whether, in your judgment, those propositions correctly state the law applicable to the case. In other words—

(1) Are the provisions of article 7 of the treaty of February 2, 1848, known as the treaty of Guadalupe Hidalgo, still in force so far as the River Rio Grande is concerned, either because never annulled or because recognized and reaffirmed by article 5 of the convention between the United States and Mexico of November 12, 1884?

(2) By the principles of international law, independent of any special treaty or convention, may Mexico rightfully claim that the obstructions and diversions of the waters of the Rio Grande in the Mexican minister's note referred to are violations of its rights which should not continue for the future and on account of which, so far as the past is concerned, Mexico should be awarded adequate indemnity?

I reply as follows:

(1) Article 7 of the treaty of Guadalupe Hidalgo, while it was declared to have been rendered nugatory for the most part by the first clause of article 4 of the treaty concluded December 30, 1853, and proclaimed June 30, 1854, was, by the second clause thereof, reaffirmed as to the Rio Grande (now Rio Bravo del Norte) below the point where, by the lines as fixed by the latter treaty, that river became the boundary between the two countries. Said article 7 is recognized as still in force by article 5 of the convention concluded November 12, 1884, and proclaimed September 14, 1886.

So far, therefore, as it affects the subject now in hand, said article 7, in my opinion, is still in force. I am unable, however, to agree with the minister in the interpretation which he gives it.

His statement is that the city of El Paso del Norte has existed for more than 300 years, during almost all of which time its people have enjoyed the use of the water of the Rio Grande for the irrigation of their lands. As that city and the districts within its jurisdiction did not need more than 20 cubic meters of water per second, which was an almost infinitesimal portion of the volume of water, even in times of severest drought, they had sufficient water for their crops until about 10 years ago, when a great many trenches were dug in Colorado, especially in the St. Louis Valley, and in New Mexico, through which the upper Rio Grande and its affluents flow, so greatly diminishing the water in the river at El Paso that except when rains happen to be abundant there is scarcity of water from the middle of June until March. In 1894 the river was entirely dry by June 15, so that no crops could be raised, and even fruit trees began to wither. The result has been to reduce the price of land and cause great hardships to the people, whose numbers in Paso del Norte, Zaragozza, Tres Jacalles, Guadalupe, and San Ignacio diminished from 20,000 in 1875 to one-half that number in 1894.

The minister further states that from a report of the assistant quartermaster general, addressed to the general in chief of the United States Army, dated September 5, 1850, it appears that Captain Lowe (meaning Love), United States Army, ascended the river in a vessel to a point several kilometers above Paso del Norte, showing that it was then navigable at that place. The minister has been misinformed. The original report, which is before me now, shows that Captain Love was instructed to carry "to the highest attainable point in the Rio Grande" his small keel boat, which "drew, with her crew, provisions, arms, etc., on board, 18 inches of water." He found this point at some "impossible falls" which he names "Brookes Falls." Carrying around them "the skiff which had accompanied his boat," he rowed 47 miles farther to other falls, which he named "Babbitts Falls." Beyond this point he "found it impossible to proceed with the skiff, either by land or water," and it was "about 150 miles by land below El Paso."

The minister contends that the irrigation ditches in Colorado and New Mexico, which result in diminishing the flow of water at El Paso, come within the treaty prohibitions of "any work that may impede or interrupt, in whole or in part, the exercise of this right" (of navigation), because, as he says, "nothing could impede it more absolutely than works which wholly turn aside the waters of these rivers." But Article VII is limited in terms to "the part of the Rio Bravo del Norte lying below the southern boundary of New Mexico." Article IV of the treaty of 1853 continues the provisions of said Article VII in force "only so far as regards the Rio Bravo del Norte below the initial of said boundary provided in the first article of this treaty." It is that part alone which is made free and common to the navigation of both countries and to which the various prohibitions apply. It is plain that neither party could have had, in framing these restrictions, any such intention as that now suggested. The fact, if such it were, that the parties did not think of the possibility of such acts, as those now complained of would not operate to restrain language sufficiently broad to include them; but the terms used in the treaty are not fairly capable of such a construction. They naturally apply only to the part of the river with which the parties were dealing and to such works alone as either party might construct on its own side if not restrained. Though equally divided, in theory, between the two nations, where it is their boundary, the river is, in fact, a unit for purposes of navigation, and therefore the treaty required the consent of both for the construction of "any work that may impede or interrupt" navigation, even though it should be "for the purpose of favoring new methods of navigation." (Art. VII.) Up to the head of navigation no such work could have been constructed save by one of the two Governments or by its authority. The prohibition was, therefore, appropriately made applicable to them alone and not to the citizens of either, "neither shall, without consent of the others, construct, etc." Above the head of navigation, where the river would be wholly within the United States, different rules would apply within the United States, different rules would apply and private rights exist which the Government could not control or take away save by exercise of the power of eminent domain, so that clear and explicit language would be required to impose upon the United States such obligation as would result from the construction of the treaty now suggested.

Moreover, the only right the treaty professed to create or protect with respect to the Rio Grande was that of navigation. The claim now made is for injuries to agriculture alone at places far above the head of navigation. Captain Love, in the report referred to, said, "The mouth of Devils River, which is about 100 miles below the mouth of the Puerco (Pecos) and 617 above Ringgold Barracks, is the head of steamboat navigation," and that "with some difficulty" navigation by keel boats was possible "to a point 56 miles above the 'Grande Indian Crossing,' or about 283 miles above the mouth of Devils River." So far as appears, the large and numerous tributaries below El Paso supply a sufficient volume of water for the needs of navigation.

In fact, the part of the treaty now under consideration merely expresses substantially the same rights and duties which international law would imply from the fixing of the middle of the river as the boundary, viz, free navigation of the entire stream below the point where it becomes common to both nations without any levy or exaction or the

construction of any work which might impede navigation without the consent of both.

In my opinion, therefore, the claim now made by Mexico finds no support in the treaty. On the contrary, the treaty affords an effective answer to the claim by the well-known rule that the expression of certain rights and obligations in an agreement implies the exclusion of all others with relation to the same subject.

It is not necessary, in order to bring this principle into play, that it shall appear that either party, or both, actually thought of the particular matter whose exclusion is asserted, although that fact, when it appears, may serve to emphasize the inference. I am not advised whether the subject of the use of the water of the Rio Grande for irrigation was mentioned during the negotiations or not, but it is stated that such use had long been made by the Mexicans, and it was known that agriculture could not be carried on in that region without it. It was known, too, certainly to Mexico, that this necessity existed also throughout the entire region watered by the upper Rio Grande and its tributaries; for, as a Province of Spain and then as an independent nation, Mexico had included both New Mexico and Colorado, and from the independence of Texas in 1836 down to the treaty of 1848 Mexico's eastern boundary was the Rio Grande to its source. By this treaty Mexico ceded to the United States the territory west of the Rio Grande and north of the southern boundary of New Mexico, just as she had abandoned to Texas all the territory east of that river, without any reservations, restrictions, or stipulations concerning the river except those above mentioned.

Settlements had long existed in the region of Santa Fe, and the probability of the ultimate settlement of the entire territory along the Rio Grande must have been apparent to both parties. Yet the treaty made no attempt to create or reserve to Mexico or her citizens any rights or to impose on the United States or their citizens any restraints with respect to the use of water for irrigation, although rights of property in the territory were secured to all Mexicans, whether established there or not. (Art. 8.)

The treaty of 1848 was a treaty of peace, and a different rule for the construction of such treaties is laid down by some writers. (Vattel, Law of Nations, Chitty's edition, p. 433.) If it be suggested that the circumstances under which this treaty was made bring its terms, as against the United States, within the operation of such rule, it is a sufficient answer that, even if the existence of the rule be acknowledged, it simply subjects provisions in favor of the United States to strict construction. Like all rules of construction, it has no application except in cases of doubtful meaning of language used and can not be made the means of introducing new terms. Moreover, the United States paid $15,000,000 for the territory acquired by the treaty (art. 12); and by the treaty of 1853, which was not a treaty of peace, Mexico ceded further territory in consideration of $10,000,000 (art. 3), repeating without enlarging the stipulations of the former treaty as to rights on the Rio Grande.

(2) I have given my opinion of the construction and effect of the treaty, because it is responsive to your general request, though not to your specific questions. That opinion, perhaps, in strictness makes it unnecessary for me to consider your second question; but as that question is not put alternatively or conditionally, I proceed.

An extended search affords no precedent or authority which has a direct bearing.

There have been disputes about the rights of navigation of international rivers but they have been settled by treaty. (For a list of such treaties see Heffter, Droit Int., Appendix VIII.) The subject is fully discussed by Hall (Int. Law, sec. 39), who denies that the people on the upper part of a navigable river have a natural right to pass over it through foreign territory to its mouth. Now, if such right be conceded, no aid is afforded for the present inquiry, because use for navigation, being common, would not curtail use by the proprietary country, while in the case now presented, there not being enough water for irrigation in both countries, the question is which shall yield to the other.

It is stated by some authors that an obligation rests upon every country to receive streams which naturally flow into it from other countries, and they refer to this as a natural international servitude. (Heffter, Droit Int., sec. 43; 1 Phillemore, Int. Law, p. 303.) Others deny the existence of all international servitudes apart from agreement in some form. (Letters of Grotius quoted 2 Hert., p. 106; Kluber, Droit des Gens Moderne, sec. 139; Bluntschli, Droit Int. Cod.; Woolsey's Int. Law, sec. 58; 1 Calvo, Droit Int., sec. 556.)

Such a servitude, however, if its existence be conceded, would not cover the present case or afford any real analogy to it. The servient country may not obstruct the stream so as to cause the water to back up and overflow the territories of the other. The dominant country may not divert the course of the stream so as to throw it upon the territory of the other at a different place. (See authorities, supra.) In either of such cases there would be a direct invasion and injury by one of the nations of the territory of the other. But when the use of water by the inhabitants of the upper country results in reducing the volume which enters the other it is a diminution of the servitude. The injury now complained of is a remote and indirect consequence of acts which operate as a deprivation by prior enjoyment. So it is evident that what is really contended for is a servitude which makes the lower country dominant and subjects the upper country to the burden of arresting its development and denying to its inhabitants the use of a provision which nature has supplied entirely within its own territory.

Such a consequence of the doctrine of international servitude is not within the language used by any writer with whose works I am familiar and could not have been within the range of his thought without finding expression.

Both the common and the civil law undertake to regulate the use of the water of navigable streams by the different persons entitled to it. Neither has fixed any absolute rule but leaves each case to be decided upon its own circumstances. But I need not enter upon a discussion of the rules and principles of either system in this regard, because both are municipal and, especially as they relate to real property, can have no operation beyond national boundaries. (Creasy, Int. Law, p. 164.) So they can only settle rights of citizens of the same country interesse. The question must therefore be determined by considerations different from those which would apply between individual citizens of either country. Even if such a question could arise as a private one between citizens of the country and those of another, it is not so presented here. The mere assertion of the claim by Mexico would make it a national one, even if it were of a private nature. (Gray *v.* U. S., 1 C. Cls. R. 391–392.) But the use of water complained of and the resulting injuries are general throughout extended regions, so that effects upon individual rights can not be traced to individual causes, and the claim is by one nation against the other in fact as well as form.

The fundamental principle of international law is the absolute sovereignty of every nation as against all others within its own territory. Of the nature and scope of sovereignty with respect to judicial jurisdiction, which is one of its elements, Chief Justice Marshall said (Schooner Exchange *v.* McFadden, 7 Cranch p. 136):

"The jurisdiction of the nation within its own territory is necessarily exclusive and absolute. It is susceptible of no limitation not imposed by itself. Any restriction upon it, deriving validity from an external source, would imply a diminution of its sovereignty to the extent of the restriction, and an investment of that sovereignty to the same extent in that power which could impose such restrictions.

"All exceptions, therefore, to the full and complete power of a nation within its own territories must be traced up to the consent of the nation itself. They can flow from no other legitimate source."

It would be entirely useless to multiply authorities. So strongly is the principle of general and absolute sovereignty maintained that it has even been asserted by high authority that admitted international servitudes cease when they conflict with the necessities of the servient State. (Bluntschli, p. 212; see criticism by Creasy, p. 258.) Whether this be true or not, its assertion serves to emphasize the truth that self-preservation is one of the first laws of nations. No believer in the doctrine of natural servitudes has ever suggested one which would interfere with the enjoyment of a nation within its own territory of whatever was necessary to the development of its resources or the comfort of its people.

The immediate as well as the possible consequences of the right asserted by Mexico show that its recognition is entirely inconsistent with the sovereignty of the United States over its national domain. Apart from the sum demanded by way of indemnity for the past, the claim involves not only the arrest of further settlement and development of large regions of the country, but the abandonment, in great measure at least, of what has already been accomplished.

It is well known that the clearing and settlement of a wooded country affects the flow of streams, making it not only generally less, but also subjecting it to more sudden fluctuations between greater extremes, thereby exposing inhabitants on their banks to increase of the double danger of drought and flood. The principle now asserted might lead to consequences in other cases, which need only be suggested.

It will be remembered that a large part of the territory in question was public domain of Mexico and was ceded as such to the United States, so that their proprietary as well as their sovereign rights are involved.

It is not suggested that the injuries complained of are or have been in any measure due to wantonness or wastefulness in the use of water or to any design or intention to injure. The water is simply insufficient to supply the needs of the great stretch of arid country through which the river, never large in the dry season, flows, giving much and receiving little.

The case presented is a novel one. Whether the circumstances make it possible or proper to take any action from considerations of comity is a question which does not pertain to this department; but that question should be decided as one of policy only, because in my opinion the rules, principles, and precedents of international law impose no liability or obligation upon the United States.

Very respectfully,

JUDSON HARMON,
Attorney General.

Having conclusively established, at least to my own mind, that the United States is not bound under any rule of international law or custom, in the absence of treaty commitments, to send into another country waters which originate wholly in the United States, the question arises, Have we any treaty obligations or commitments which would require us to send any of the waters of the Colorado River into Mexico? I answer positively there is no treaty requiring the United States to send into Mexico any of the waters of the Colorado River.

I now read a letter from the Department of State of the United States, dated July 17, 1919, signed by Hon. Frank L. Polk, Acting Secretary of State, and addressed to Hon. M. P. Kinkaid, sometime chairman of the House Committee on Irrigation:

DEPARTMENT OF STATE,
Washington, July 17, 1919.

MY DEAR MR. KINKAID: I acknowledge receipt of your letter of July 10, 1919, in which you state that the House Committee on Irrigation of Arid Lands desires for use in connection with the consideration of H. R. 6044, introduced by Mr. Kettner, for the relief of the Imperial Valley irrigation district, to be furnished with copies of any treaties which this country may have with Mexico bearing upon the question of the use of waters taken from the Colorado River for the reclamation of lands in the respective countries, and also copies of any official correspondence pertaining to the subject matter. I am advised that in a telephonic conversation with the solicitor's office of the department you have modified your request for information as to official correspondence, and have explained that your principal desire is to obtain copies of pertinent treaties, and that for the present you would be satisfied to receive merely brief reference to correspondence in the matter.

In reply you are informed that the United States and Mexico have never concluded an agreement relative to the distribution and use of the waters of the Colorado River for irrigation purposes. In 1912 this Government proposed to the Government of Mexico the concluding of a convention providing for the appointment of a commission "to study, agree upon, and report" the bases of distribution and appropriation of the waters of this river, the findings of the commission, if and when approved by the two Governments, to be embodied in a treaty. After an exchange between the Governments of several draft conventions a form of convention seems to have been practically agreed upon in May, 1913, but apparently because of the strained relations between this Government and the so-called Huerta administration in Mexico the convention was never signed, and the matter has since been in abeyance.

As having some possible bearing upon this question, in which your committee is interested, I inclose herewith copies of the following treaties between the United States and Mexico:

The treaty of Guadalupe Hidalgo, of 1848, inviting attention to the provisions of articles 5, 6, and 7.

The treaty of 1853, known as the Gadsden Treaty, inviting attention to the provisions of articles 1 and 4.

The boundary convention of 1884.

The boundary convention of 1889, together with the conventions of 1895, 1896, 1897, 1898, 1899, and 1900, extending the provisions of the said convention of 1889.

As of further interest to your committee there is also inclosed herewith a copy of a note from the Mexican Embassy, dated November 27, 1901, in which complaint is made of the alleged diversion of water from the Colorado River by the Imperial Canal system, of Los Angeles, Calif. It will be observed that this complaint is based on alleged contravention of the provisions of the said treaties of 1848 and 1853. The department's records appear to show that this complaint was communicated to the Attorney General, and that the conditions therein complained of formed the basis of a report made by Mr. Marsden C. Burch, a special attorney of the Department of Justice, which report was forwarded to this department by the Department of Justice on September 28, 1903, with the suggestion that because of the nature and bearings of the subject thereof, and because of the interest of various departments of the Government in that subject, it might be desirable to print the report for the information and use of the departments concerned. Accordingly, the report was transmitted to the Director of the Geological Survey on October 14, 1903, with the statement that it was so transmitted because the subject thereof appeared to be connected with the work of his bureau and in the hope that he might find it desirable to print it for the information and use of the departments concerned. The Director of the Geological Survey replied, on October 17, 1903, that it was proposed to embody the report in the Second Annual Report of the Reclamation Service.

I am, my dear Mr. Kinkaid,

Sincerely yours,

FRANK L. POLK, *Acting Secretary of State.*

Mr. President, such waters of the Colorado River as are used to irrigate lands in Mexico are those waters that flow into Mexico by amity, comity, and as a matter of grace. If the United States were to-day to take such action as would deprive the Republic of Mexico and the lands irrigated in that republic by the waters of the Colorado, of every drop of such water, Mexico, in the forum of international law, would not be heard to complain, because, I repeat, the United States would not be an independent sovereign nation if it were required to send into Mexico waters that originated wholly within the United States.

Several Senators have read extracts from the report of the Colorado River board on the Boulder Dam project. The report is dated Denver, Colo., November 24, 1928. Some Senators have put their own construction or interpretation upon the report. I ask consent to print all of the report in the RECORD as a part of my remarks.

In passing let me say that the report, in substance, states that every acre of land in Mexico irrigated by the waters of the Colorado River means that a like area in California or Arizona must forever remain arid. It is refreshing to find that the board recognized that fact, and with courage pointed out that for an acre of land irrigated in Mexico by the waters of the Colorado River, an acre either in California or Arizona must remain arid forever. I ask this so that the Senate and the country may have access to the entire report instead of excerpts therefrom. I do not fear to have the country read the entire report of the engineering board, and a careful scrutiny of this report will disclose that it fully sustains some of the criticisms of this proposed legislation, made by Representative DOUGLAS of Arizona, in the last session of Congress.

The PRESIDING OFFICER. Without objection, the report will be printed in the RECORD at this point.

The report is as follows:

[H. Doc. No. 446, 70th Cong., 2d sess.]

REPORT OF THE COLORADO RIVER BOARD ON THE BOULDER DAM PROJECT

Letter from the Secretary of the Interior transmitting report of the board of engineers appointed by the Secretary of the Interior, with the approval of the President, under authority of the joint resolution approved May 29, 1928, "To appoint a board of engineers to examine and report upon the dam to be constructed"

LETTER OF TRANSMITTAL

THE SECRETARY OF THE INTERIOR,
Washington, December 3, 1928.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIR: I have the honor to transmit herewith a copy of the report of the board of engineers appointed by the Secretary of the Interior, with the approval of the President, under authority of the joint resolution approved May 29, 1928, "To appoint a board of engineers to examine and report upon the dam to be constructed under H. R. 5773, the Boulder Dam bill" (S. J. Res. 164).

Very truly yours,

ROY O. WEST.

LETTER OF SUBMITTAL

DEPARTMENT OF THE INTERIOR,
COLORADO RIVER BOARD,
Denver, Colo., November 24, 1928.

Hon. ROY O. WEST,
Secretary of the Interior, Washington, D. C.

SIR: The Colorado River Board has the honor to forward herewith five copies (one by air mail) of its report on the Boulder Canyon project, made in accordance with the requirements of Public Resolution 65, Seventieth Congress.

Very respectfully,

WM. L. SIBERT,
Chairman Colorado River Board.

REPORT OF THE COLORADO RIVER BOARD ON THE BOULDER CANYON PROJECT

The board of engineers and geologists appointed in accordance with Resolution 65, Seventieth Congress, approved May 29, 1928, has the honor to submit the following report as to the matters enumerated in said resolution that were to be reported on prior to December 1, 1928.

The duties of the board, in so far as this report is concerned, are:

"To examine the proposed site of the dam to be constructed under the provisions of H. R. 5773, Seventieth Congress, first session, and review the plans and estimates made therefor, and to advise him (the Secretary of the Interior) prior to December 1, 1928, as to matters affecting the safety, the economic and engineering feasibility, and adequacy of the proposed structure and incidental works."

The structures proposed in H. R. 5773, Seventieth Congress, are:

"A dam and incidental works in the main stream of the Colorado River at Black Canyon or Boulder Canyon adequate to create a storage reservoir of a capacity of not less than 20,000,000 acre-feet of water and a main canal and appurtenant structures located entirely within

the United States connecting the Laguna Dam with the Imperial and Coachella Valleys in California."

The "incidental works" at the dam are construed to be a power house with its equipment of turbines, generators, and all appurtenant appliances needed in the generation and control of electric energy.

The "appurtenant structures" for the main canal are construed to be a higher dam at Laguna, an enlargement of the headworks and desilting basin, together with the necessary flumes, bridges, culverts, and other incidental structures along the line of the canal.

THE COLORADO RIVER

The Colorado River, one of the large rivers of the country, drains an area of about 244,000 square miles and has a total length from source to mouth of about 1,700 miles.

Its total fall is over 7,500 feet, or an average fall of about 4.5 feet per mile. The average rainfall on the drainage area is about 10 inches, over thousands of square miles less than 5 inches, and the average annual run-off is less than 1½ inches. Its main flow is derived from the melting of snow on the mountains of the upper basin. The principal characteristics of its flow are low waters during the autumn and winter months, with a normal flood from the melting snows, usually beginning late in April, reaching its maximum in June, and ending by the middle of August. This flow is modified and intensified by torrential floods of short duration, which come in general from its southern tributaries, and may occur during almost any month of the spring, fall, or winter. Its flood flows afford by far the greater quantity of water produced by the stream, and must be conserved and impounded in order to be successfully utilized for water supply and power production. Floods of 200,000 second-feet are not unusual, and much larger ones have occurred.

ENGINEERING FEASIBILITY

The engineering feasibility of the proposed dam across the main stream of the Colorado River at Black Canyon or Boulder Canyon is basic.

Selection of site

The board examined both sites in question, studied the available data concerning them, the geological formations surrounding them, and the seismic history of the region. Conclusions concerning these dam sites are embodied in the following statement:

Boulder Canyon site

The site in Boulder Canyon is about 40 miles distant from the nearest railway line passing through Las Vegas, Nev. The railway approach is comparatively easy to the vicinity of the canyon, where extremely rugged topography adds considerable, though not insurmountable, difficulties.

The canyon walls at this site rise to 1,000 feet above the river and the rock gorge is at least 150 feet deep below low-water level. It is 420 feet wide at the low-water line and approximately 1,020 feet wide at the crest of a dam that would impound 26,000,000 acre-feet of water.

The foundation rock is granite and associated granitic rock of excellent quality. Regular joints and more irregular fractures are very numerous, and there is an occasional fault zone. These weaknesses are prominent on the weathered surface, but test tunnels prove that they are of little consequence to within a few feet from the surface. On the whole, the rock is strong, substantial, durable, and the whole mass is essentially tight. It will stand well in tunneling. There is no danger of the rock failing to meet requirements as a dam foundation.

The rock of the vicinity is suitable for construction material, and there are local sources of good gravel.

If no other site were available, the Boulder Canyon site could safely be used so far as geological conditions are concerned. In comparison with the Black Canyon site, however, the latter has certain advantages.

Black Canyon site

The most favorable location in Black Canyon is about 40 miles distanct from Las Vegas, Nev., and the Union Pacific Railroad. The approach is comparatively easy to the vicinity and not particularly difficult to the site itself. A construction railway from Las Vegas would pass near available gravel deposits and the best quarry sites lie immediately adjacent to the dam site on the same line of approach. Despite the ruggedness of the surrounding country and the depth of the gorge, the terrain above the 1,500-foot contour, where the quarries, railway yards, shops, and camps would be located, is open, and its development into such use at reasonable cost is entirely practicable.

The canyon walls at this site rise to about 900 feet above the river and the central part of the rock gorge at this location is 110 to 127 feet deep below low water. The cross section of the gorge at the dam site is 350 feet wide at the low-water line and 880 feet wide at the crest of a dam that would impound 26,000,000 acre-feet of water.

The foundation is a volcanic breccia or tuff, originally an accumulation of fragments of many kinds derived from volcanic eruptions, and now transformed into a well-cemented, tough, durable mass of rock standing with remarkably steep walls and resisting the attack of weather and erosion exceptionally well. The whole rock mass is essentially impervious.

The rock formation is somewhat jointed and exhibits occasional fault displacements, which are now completely healed. It is an almost ideal rock for tunneling, is satisfactory in every essential, and is suitable for use in construction.

The associated rock formations at higher levels, more advantageously situated for development for construction uses, are also volcanic in origin, including both andesite flows and indurated andesitic tuffs, and are of excellent quality for that purpose. Near by there are deposits of angular gravels that have been proven by test to be suitable for use in construction.

Comparison of the two sites

In general, geologic conditions at Black Canyon are superior to those at Boulder Canyon. The Black Canyon site is more accessible, the canyon is narrower, the gorge is shallower below water level, the walls are steeper, and a dam of the same heights here would cost less and would have a somewhat greater reservoir capacity. The rock formation is less jointed, stands up in sheer cliffs better, exhibits fewer open fractures, is better healed where formerly broken, and is less pervious in mass than is the rock of the other site. The Black Canyon rock is not so hard to drill as that of Boulder Canyon, and it will stand better in large tunnel excavations with less danger to the workmen.

There is no doubt whatever but that the rock formations of this site are competent to carry safely the heavy load and abutment thrusts contemplated. It is well adapted to making a tight seal and for opposing water seepage and circulation under and around the ends of the dam. It insures successful tunneling and, so far as the rock is concerned, the general safety and permanence of the proposed structures.

The board is of the opinion that the Black Canyon site is suitable for the proposed dam and is preferable to that of the Boulder Canyon.

DANGER FROM EARTHQUAKES AND DEFORMATION

In former geologic times this district was subjected repeatedly to volcanism and deformation. These events must have been accompanied by earthquakes. Such evidence as there is, both to be observed in the field and to be gathered from records, indicates that these geological activities ceased long ago and that the region has been virtually undisturbed for a very long time. The district is recognized as having comparative freedom from present-day earth movements, and the conclusion is that danger from local earthquakes of enough violence to threaten a properly constructed dam in Black Canyon is negligible.

REVIEW OF PLANS AND ESTIMATES

The dam and incidental works

The board is of the opinion that it is feasible from an engineering standpoint to build a dam across the Colorado River at Black Canyon that will safely impound water to an elevation of 550 feet above low water. The cost, however, will be greater than that contemplated in the project authorized in H. R. 5773.

The dam: The dam proposed by the Bureau of Reclamation and assumed to be the one referred to in H. R. 5773 is of the gravity type, curved in plan, with allowable stresses as high as 40 tons per square foot.

It is the opinion of the board that a dam of the gravity type is suitable for the site in question, and that such a dam built across Black Canyon would be safe, provided the maximum stresses allowed do not exceed those adopted in standard practice.

The proposed dam would be by far the highest yet constructed and would impound 26,000,000 acre-feet of water. If it should fail, the flood created would probably destroy Needles, Topock, Parker, Blythe, Yuma, and permanently destroy the levees of the Imperial district, creating a channel into Salton Sea which would probably be so deep that it would be impracticable to reestablish the Colorado River in its normal course. To avoid such possibilities the proposed dam should be constructed on conservative if not ultraconservative lines.

Maximum foundation and structural stresses have until late years been limited, in the best practice, to about 20 tons per square foot. Until perhaps 20 years ago this practice was regarded as standard. The demand for high dams at reasonable expense has, however, induced more economical designs, and such stresses have been increased to 30 tons per square foot in numerous structures which have been in use a sufficient period to cause this practice to be considered conservative. Stresses in excess of 30 tons can not be considered conservative in a structure of this unprecedented magnitude and importance, failure of which would result in such an overwhelming disaster.

In consideration of these facts and possibilities, it is the judgment of the board that the dam should be designed for maximum calculated stresses not exceeding 30 tons per square foot. This will add materially to the cost of the dam, which increase will be included in the estimates.

Cofferdam construction and river diversion: To control the flow of the river during construction, the proposed plans contemplate the diversion of 100,000 second-feet of water around the dam site by means of tunnels through the canyon walls. The upper cofferdam height was planned to be such that water could rise against it until sufficient head was created to force this amount of water through three tunnels 35 feet in diameter.

The proposed work in this connection comprised:

The building of two rock-fill cofferdams, one upstream 79 feet high, the other downstream 29 feet high, above low-water level, involving the placing of 164,000 cubic yards of earth, the quarrying and placing of 757,000 cubic yards of rock; the making and unwatering of open excavations in the river bed about 125 feet below low water, involving 531,000 cubic yards of material (sand, gravel, and bowlders), with an uncertain amount of water; the preparing of foundations and placing of 235,000 cubic yards of concrete in the heel and toe of the dam in such a way as to form permanent cofferdams to protect the remainder of the work; all of the foregoing operations to be accomplished in one low-water season of less than nine months.

The board is of the opinion that it is not feasible, without undue risk to the men working in the excavations and on the dam, and to the inhabitants of the valley below, to carry out the plan as proposed. It is further of the opinion that the proposed diversion is inadequate and that provision should be made for diverting round the dam site, through tunnels, a flow of at least 200,000 second-feet. It is also the opinion of the board that the height of the water against the upper cofferdam should be ordinarily limited so as not to impound a volume which, if added to the flood waters, would, in the event of failure of the cofferdam, endanger life and property down the valley. This would limit the elevation of the water surface against the upper cofferdam to about 55 feet above low water, or 700 feet above sea level.

These modifications would not only add essential elements of safety but also would enable operations to proceed continuously through a normal flood season.

It is the opinion of the board that it is feasible to construct cofferdams of suitable height at this locality and make them reasonably tight.

Permanent spillway: The spillway capacity planned in connection with the proposed dam was about 110,000 second-feet without overtopping the dam. Floods reaching a maximum flow of 380,000 second-feet have been reported, and old high-water marks are said to indicate a possible flood flow of as much as 500,000 second-feet. The board is of the opinion that water in quantity should not be permitted to flow over a dam of this height.

A permanent spillway utilizing the increased capacity of the diversion tunnels provided in the revised plans will make it practicable to prevent any expected flood from overtopping the dam.

Excavation for the main dam: The purpose of the revised plans for cofferdams and river diversion is to avoid probable interruption and to insure the safety of the earlier stages of the work, including the excavation for the foundations of the main dam, through a mixed deposit of sand, gravel, and bowlders, which fills the lower section of the gorge to a depth of more than 100 feet.

The chief factor which may affect the progress of the work is that of water seepage into the excavation through the river fill under the cofferdams. Seepage into the excavation is to be expected. Its amount and rate can not be foretold.

The effect of water would be twofold. It would involve pumping to keep the pit unwatered and it would add to the difficulties and amount of excavation by causing the slopes to ravel and slump. If the flow of water is sufficient to cause excessive raveling and slumping, it may be necessary to intercept this underground flow by wells or galleries or by other means. In the event of extreme difficulties it may be necessary to use caissons to carry the excavation down to the rock bottom in the deepest portion of the section.

It is the judgment of the board that it is feasible to make the required excavation for the permanent dam, but it is their opinion that plans and estimates of cost should include provision for the control and handling of a considerable volume of water.

The power plant: While a power house must be fitted to a particular site and its equipment must be designed and selected for the particular conditions which obtain at such site, the entire installation will nevertheless be largely standard and offers no particular difficulties.

The board is of the opinion that the plans proposed are feasible from an engineering standpoint. Questions of cost will be considered in another part of the report entitled "Estimates."

The main canal and appurtenant structures

The bill provides for the construction of a canal connecting the Laguna Dam with the Imperial and Coachella Valleys, whereas the original estimate of $31,000,000 applies only to a canal reaching the distribution system of the Imperial Valley. The revised estimate will include the cost of constructing that portion of the canal leading to the Coachella Valley.

The Imperial Valley receives its water for irrigation and domestic purposes from the Colorado River by means of the Imperial Canal. The water is diverted from the river at Rockwood Gates, about 1 mile north of the international boundary, and is thence carried in a canal through Mexican territory and back into the United States to the Imperial Valley, thus avoiding the high mesa and sand-hill country north of the international boundary. In most of its 50-mile course in Mexico this canal follows the Alamo River Channel, which formerly led into the Salton Sea.

The main canal is to be entirely within the United States. Under the proposed plan the water is to be diverted from the river at Laguna Dam, the present intake of the canal for the Yuma irrigation project, 23 miles by river above the intake of the Imperial Canal. This will allow water to be taken from the river at the higher elevation necessary to permit the canal to serve its purposes.

From the intake the proposed line of the main canal leads southwest to a point near the river just north of the international boundary, thence west approximately parallel to that line, to a point about 10 miles west of Calexico, a total length of 75 miles, making connections with the Imperial Valley system. At a point on the east mesa a canal branches off and leads to the Coachella Valley.

Between the Colorado River and Imperial Valley the canal location, for a length of 10 miles, crosses a region of sand dunes, some of which reach a height of about 150 feet above the canal bed. For much of this distance the canal cut will be over 50 feet deep. The grade of this section of the canal is such that the water surface will be below the mesa level and hence below the bases of the sand dunes. Winds above a velocity of 10 miles an hour cause a movement of the surface sand, which increases with the velocity of the wind, and special provision should be made to prevent undue silting of the canal by the "blow sand" as well as for the removal of the sand that will drift into the canal prism. In order to observe conditions, the board visited the sand-dune belt several times, once during a sandstorm. Although it is clear that difficulties are presented by the drifting sand, it is the opinion of the board that it is feasible to construct, maintain, and successfully operate the canal. The overcoming of these difficulties will affect the cost, which has been allowed for in the estimates.

The board believes that the canal should be lined with concrete through the sand-dune region and should be given a slope sufficient to carry the in-blown sand to a suitable place for deposit and removal.

Estimates

The board in its review of the estimates for the proposed structures has reached the conclusion that such estimates should be modified so as to provide as follows:

Estimated cost

Dam and reservoir (26,000,000 acre-feet capacity)	$70,600,000
1,000,000 horsepower development	38,200,000
The all-American canal	38,500,000
Interest during construction on above	17,700,000
Total	165,000,000
In this revision stresses in the dam have been limited to a maximum of 30 tons per square foot, and a diversion capacity of 200,000 second-feet is provided. Should the canal to Coachella Valley be considered a part of the main canal, the above estimates would be increased by the sum of	11,000,000
This would make the total estimated cost for all items in H. R. 5773	176,000,000

These estimates are based on a construction period of seven years.

ADEQUACY OF PROPOSED STRUCTURES

A dam of 550 feet above low water, across the Colorado River at Black Canyon, impounding 26,000,000 acre-feet of water, will be adequate, in the opinion of the board, to so regulate the flow of the lower Colorado as to control ordinary floods, to improve the present navigation possibilities, and to store and deliver the available water for reclamation of public lands and for other beneficial uses within the United States.

The high-water flow of the flood of 1884 is reported to have been 380,000 second-feet. Such a flood, or one of greater magnitude, is to be expected. The flood of 1884 is the highest concerning which there is fairly definite information, and as far as can be ascertained, such a flood has occurred but once in the last 50 years. A flood of this magnitude could be so controlled at the dam as to limit the flow in the river below to about 160,000 second-feet. Should such a flow sweep down the lower Colorado River, following a long period of normal regulated flow, with the consequent encroachment of vegetation on the flood plain and the probable neglect of flood-protection works, it would be more destructive than a 160,000 second-foot flood under present conditions. It should be noted that the Boulder Dam project in no way affects the flood discharge of the Gila River. In the event of flood damage in the lower river valley from either river, regulation at the dam would permit repairs to be made on the return of a controllable flow.

The adequacy of the proposed hydroelectric plant to generate sufficient power to make the project authorized a self-supporting and financially solvent undertaking is treated in the section on economic feasibility.

THE WATER SUPPLY OF THE COLORADO RIVER

The flow of the Colorado River is one of the fundamental factors on which the success of this project depends. On the stream flow depends the amount of land that can be irrigated and the amount of power that can be generated. The information on which this flow has been estimated is inadequate to furnish an accurate or sound estimate on which to base an important project without using factors of

safety sufficiently great to make such estimates conservative and safe. Since the water supply is such a vital element in the problem, the board has inquired into the subject as thoroughly as the limited time would permit.

The estimates of flow on which this project has been predicated are the measurements of the flow of the river made at Yuma continuously since 1902. The methods used in gauging at Yuma were those common at the time the measurements were begun, and while improved methods of gauging were adopted at other gauging stations, these old methods were continued in use at Yuma until 1918, and with little improvement until 1926.

To determine the flow in the Colorado River above Laguna Dam there was subtracted from the Yuma gaugings the estimated flow of the Gila River, which joins the Colorado between Yuma and the dam. The flows of the Gila are based on information of very doubtful value and can be considered as little better than fair guesses, whether too large or too small can not be determined. To the reduced flow as arrived at above, the flow through the Yuma Canal was next added, to get the gross flow above Laguna Dam. The measurements of flow of the Yuma Canal are approximately correct.

From Black Canyon to Laguna Dam there is a loss in flow due to irrigation, evaporation, and possibly to seepage. Comparison of flow of the Colorado River at Topock and Laguna Dam gives some idea of the amount of this loss, but for most years it is so unsatisfactory as to be of little value. The gaugings, however, for 1926 and 1927, both at Yuma and Topock, are believed to have been fairly correct and give a reasonable basis for such an estimate. The figure used in the original flow calculations to represent this loss was 1,200,000 acre-feet per annum, and the addition of this amount to each yearly flow at the Laguna Dam gave the estimated depleted flow (or the normal flow of the river for that year less the water used for irrigation) at Black Canyon.

The information desired was the flow for each year at Black Canyon brought down to present conditions. To calculate this required that to each year's flow, estimated as above, should be added the amount of water used for irrigation that year, after which the amount of water used for irrigation at the present time was deducted. Neither of these quantities was known, and they had to be estimated. These estimates were based on the assumption that the net use or "consumptive use" of water per annum was 1½ acre-feet per acre irrigated. This is as good an approximation as can be made. The amount of irrigation from year to year was calculated on the basis of the census returns for 1902, 1909, and 1919.

In consequence of these methods, the net results arrived at in the original estimates for the flow at Black Canyon are exceedingly uncertain, and in the opinion of the board are too high.

YUMA GAUGINGS

The Yuma gaugings, covering the period from 1902 to 1922, have been used as a basis for the original estimate of water supply for the Boulder Canyon project, and were apparently considered to be applicable to the average annual flow for at least the 50-year period of amortization.

The average annual flow at Boulder Canyon is estimated by the Reclamation Bureau at about 16,200,000 acre-feet, with a corresponding annual flow at Laguna Dam of 15,000,000 acre-feet. These figures do not seem to have been questioned in any reports that have come to the attention of the board, except in the memorandum of Herman Stabler, United States Geological Survey, to the Secretary of the Interior, dated March 17, 1924, in which the average flow at Laguna Dam was estimated for the period 1878–1922 at 13,600,000 acre-feet, or about 10 per cent less than the amount estimated by the Reclamation Bureau.

A record of gauge heights for the river at Yuma is continuous from April, 1878, but no actual current meter gaugings were made at the station until 1902. In 1902 the Hydrographic Branch of the United States Geological Survey established a gauging station at Yuma which was maintained until the close of 1906, when the station was taken over for operation by the United States Reclamation Service in connection with the operation of the Yuma irrigation district.

In 1909 the Yuma gaugings were estimated by an engineer of the United States Geological Survey as probably too large, varying from nothing to 15 per cent, and he suggested improved methods, which were, however, not adopted until 1918, and the best modern methods were not installed until January, 1926. The opinion was also expressed to the board by officials at Yuma in charge of the gauging work that the measurements made prior to 1926 were in error and resulted in too high an estimate.

An estimate of the excess of the calculated flow at Yuma above the actual flow of the river could be approximately determined only by paralleling the present more exact methods of measurement with the methods formerly used, through two or more seasons of high-water flow, and thus determine the error involved. Any estimate without such determination is uncertain. In the opinion of the board the results of the Yuma gaugings are at least 10 per cent too high. These corrections would reduce the estimate made by the United States Reclamation Bureau of the average annual flow at Laguna Dam for the period 1902–1922 to about 13,500,000 acre-feet.

In this connection the estimates of Mr. Herman Stabler should be noted. His estimates, made from the long record of gauge heights and the measured flows at Yuma, were based on the assumption that the measurements at Yuma were correct. If the Yuma flows were corrected and reduced, Mr. Stabler's estimate would also be reduced. Since the board finds that the Yuma gaugings for the period 1902–1922 are at least 10 per cent too high, Mr. Stabler's estimate, based on these gaugings, should be correspondingly reduced. Thus modified, his estimate for the average flow of the period 1887–1904 of 10,420,000 acre-feet is reduced to 9,360,000 acre-feet.

One of the most important facts shown by these estimates is the existence of a long dry period in the Colorado River flow prior to 1906. This low period is clearly shown by an inspection of the Yuma gauge heights for that period. Further investigation of this matter has convinced this board that the flows of the Colorado River as determined by the gaugings from 1906 to 1927 are materially higher than the flow for the preceding 20 years, and that a long period of equally low flows must be expected to recur at any time.

STREAM FLOW RECORDS

The evidence on which the above conclusion is based is contained in the following records:

Green River

The average flow of the Green River at Green River Station, Utah, for the period 1906–1917 was 125 per cent of its average flow for the period 1895–1905, and about 143 per cent of its average flow for the 6-year period 1900–1905.

Grand River

The average flow of the Grand River at Palisade for the period 1906–1922 was 122 per cent of its average flow for the period 1897–1905, and 135 per cent of its average flow for the 6-year period 1900–1905.

Great Salt Lake

The average flow of the tributary rivers into Great Salt Lake, corrected for evaporation and depletion from irrigation, as given in the Weymouth Report, volume 4, for the period 1906–1922 was 134 per cent of the flow for the period 1889–1905 and 146 per cent of the 6-year period 1900–1905.

Rio Grande

The average flow of the Rio Grande at Del Norte, Colo., for the period 1906–1921 was 141 per cent of the flow for the period 1890–1905, and 178 per cent of the 6-year period 1899–1904.

The Colorado at Lees Ferry

The estimate of E. C. LaRue, United States Geological Survey, of the average flow of the Colorado River at Lees Ferry for the period 1906–1922 is 130 per cent of the average flow for the period 1886–1905, and 142 per cent of the average flow for the 6-year period 1900–1905.

The Colorado at Laguna

The estimate of Herman Stabler, United States Geological Survey, for the average flow of the Colorado River at Laguna Dam for the period 1905–1922 is 161 per cent of the flow for the period 1887–1904.

Salt River

The average flow of Salt River below the Verde River for the period 1905–1920 was 180 per cent of the average flow for the period 1889–1904, and 371 per cent of the average flow for the 7-year period 1898–1904.

RAINFALL RECORD

These foregoing several estimates showing deficient flow in the earlier period are in part confirmed by the following rainfall records:

The Great Salt Lake drainage area

The rainfall on the Salt Lake area at Corrine, at Ogden, and at Salt Lake City averaged for the years 1890–1905 13.92 inches, and for the period 1906–1922 16.78 inches, or 21 per cent in excess of the earlier period.

The Upper Colorado drainage area

On the upper Colorado River drainage area the average rainfall at Durango, at San Luis, and at Grand Junction for the period 1895–1905 was 11.83 inches, while for the period 1906–1918 it was 14.92 inches, or 20 per cent above the earlier period.

CONCLUSIONS AS TO STREAM FLOW

The estimated future flow of the Colorado River must be based on the flows of the past with the justifiable assumption that they will recur. Unfortunately, there are no actual measurements of the flows of the river for a longer period than 26 years, and these were made at Yuma. The use of these measurements for estimating the flow at Boulder Dam involves the necessity of considering various intervening gains and losses of water, the amounts of which are based on insufficient data, and result in final estimates which are unsatisfactory.

It is also known that the period from 1905 to 1927 was one of relatively high flow in the Colorado and also in neighboring streams, and that this period was preceded by about 20 years of flow much below the average of the whole period of measurement. Records also show that periods of high and low flow occur in cycles of very uncertain magnitude and duration. A low period similar to that which occurred from 1886 to 1905 is sure to recur, and may be expected at any time. It follows that, in addition to the 10 per cent reduction already referred to, the measured flow in the 26 years of record must be further materially reduced to care for climatic variation in order to arrive at a conservative estimate of the amount of irrigation and power that can be successfully maintained during a 50-year period by Boulder Dam.

The records of past performance of the Colorado River and of such other streams in this vicinity as seem pertinent furnish no basis for an exact estimate of long-past flows in the Colorado River. There is naturally considerable leeway in the interpretation of these data, and estimates based thereon may differ materially. The board, however, realizes that in determining the economic feasibility of this project its estimates should be on the safe side and it has consequently adopted the following figures for the flows at Black Canyon, without further depletion:

	Acre-feet
Average low flow for a period of 15 to 20 years	10,000,000
Average high flow for a similar period	14,500,000
Average of high and low periods	12,250,000

It is estimated that the present flow is depleted by water taken for irrigation in the upper basin by approximately 2,750,000 acre-feet, which amount, if added to the above estimated average flow, would increase it to about 15,000,000 acre-feet. This is the amount apportioned by the 7-States compact for division at Lees Ferry.

MINERAL SALTS IN THE RESERVOIR

The waters of the Colorado are normally high in dissolved mineral salts, chiefly carbonates, sulphates, and chlorides of calcium, magnesium, sodium, and potassium. The amount is well within the limits of accepted practice for irrigation purposes.

For domestic use the salt content is high, several times as high as it is in the water supply of Chicago, Boston, or New York. It is not an ideal water for such purposes, but the fact that it is usable is demonstrated by its use in the cities of the Imperial Valley and in Yuma and in other communities along the lower Colorado.

The waters impounded in the Black Canyon Reservoir will overflow, to a limited extent, lands in the Virgin Valley that contain beds of soluble salts, chiefly sodium chloride, sodium sulphate, and calcium sulphate. These salt beds will be dissolved at their outcrops, where submerged, and this will add appreciably at first to the salt content of the lower Colorado River waters. Much trouble of this kind, however, is not anticipated because most of the outcrops of these deposits lie either above the flow line or within the flood portion of the reservoir and in the backwaters of the Virgin Valley. They will be flooded only a small portion of the time, and all of the source formations below the water line will gradually be sealed off. This effect will be produced both by the silt deposited by the inflowing waters and by the slumping of the overlying shale beds.

It is the opinion of the board, in view of these controlling conditions, that the actual salt content will not be increased to an injurious amount, even in the beginning, and that in a comparatively short time the incoming silt will be so effective in blanketing the salt deposits that the salt content of the river waters will be reduced to about the present amount.

SILTING OF THE RESERVOIR

The Colorado River carries a heavy load of silt. This has enabled it to build the great delta which now constitutes the fertile lands of the Imperial Valley of California and the adjacent districts of Yuma, Ariz., and of Mexico.

If a great dam is built, all of the silt normally carried past its site will be deposited in the reservoir created, thus progressively reducing its capacity.

The best determinations available indicate that silt deposition in the proposed reservoir would be at the rate of approximately 137,000 acre-feet per year.

Silt will be deposited at all depths in the reservoir from the very beginning, thus continuously modifying the volumes set aside as silt, irrigation and power, and flood-control reserves. Probably the bottom portion, below the 940-foot contour, intended primarily for silt reserve, will receive and retain the largest quantity, and the top portion set aside for flood control will retain the least; but all will be affected.

When due allowances are made for distribution in the various reserve portions of the reservoir, it appears that approximately three-fourths of the effective reserve capacity for irrigation and power will still be available at the end of the first 50-year period and that a slightly larger proportion of the flood-reserve capacity will still be available.

Ultimately if there is no additional upstream reservoir development resulting in reduction of the rate of silt delivery, all of the remaining unoccupied portions of the reservoir would also be filled with the accumulating silt. To reach such an end would probably take about 190 years.

RIVER SILT BELOW THE DAM

The river below the dam, virtually throughout its course, flows on silt. A comparatively large amount of silt, with associated sand and gravel swept down by the river, is accumulated on the more open valley bottoms. Some of this, of course, is available for transportation on any favorable opportunity. When the dam is built and clear waters issue from the reservoir a new load of silt will be picked up along its course through these deposits. In the beginning this load is certain to be about as heavy as it is normally at present, but with the continuous regulation of river flow and the virtual elimination of high flood waters a tendency to silt stabilization will follow as the river becomes more deeply entrenched and develops a paved bed. As soon as this stage is reached along the larger part of the course above the diversion dam at Laguna, silt conditions will have improved. This improvement is certain to increase with time.

It is quite impossible to estimate the rate of improvement or the time it will take the river to reach such a condition of stability as to eliminate the silt burden. The quantities of silt along the river, however, are limited. Assuming that these silt beds will be attacked vigorously enough so that the river will carry its normal load for a few beginning years, it appears probable that so large a proportion of the immediately available supply will have been removed and the bed of the river will be so effectively paved with the residual coarser material that thereafter an increasingly smaller load will be carried. Ultimately the silt content will be virtually eliminated. We believe that marked improvement will be shown within the first 10 years, especially in reduction of the amount of extremely fine suspended silt which at present causes most damage to irrigated lands. Thereafter improvement will be gradual, though erratic, on account of occasional floods.

POWER

Based on the foregoing estimates of the variation of flow of the Colorado River, it is believed that under present conditions of irrigation a continuous output of 550,000 horsepower, or 1,000,000 horsepower on a 55 per cent load factor, could be maintained even during the years of normal low flow.

A fairly rapid irrigation development is, however, to be expected in the entire Colorado River Basin, provided the 7-States compact is consummated, and if the Boulder Canyon project is undertaken preparations for such development may be expected in both the upper and lower basins during the construction of such project.

As the use of water for irrigation increases the amount of water available for power will decrease, and a time will arrive when, during periods of low water, the full estimated amount of power can not be maintained. Within a 30 or 40 year period, even with a reregulating reservoir, the power output may be reduced to five-tenths or six-tenths of the capacity of the proposed plant during a long dry period.

This whole matter is further complicated by the proposed 7-States compact. It is quite probable that the compact attempts to apportion more water than the actual average undepleted flow of the river. The situation is still further complicated by the fact that the upper States are authorized to take more than an equitable proportion of the flow of the river, for any one or more of a series of dry years, provided they permit a total of 75,000,000 acre-feet to flow down the river in a period of 10 consecutive years.

In any event the upper basin has, by virtue of its location, first call on the water of the river. The withdrawal of the allotted share of the annual flow during any series of years of low flow may make it impossible to carry out the terms of the compact during the latter part of a low 10-year period. If the low flow continued for a considerable term of years, the proposed storage at Boulder Dam would be inadequate to provide sufficient water for the lower valley through such a period. The power output would also be seriously affected and might be reduced below the estimated minimum previously stated.

A 1,000,000-horsepower hydroelectric plant fully loaded and operating continuously on a 55 per cent load factor would generate annually 3,600,000,000 kilowatt-hours of current. In actual practice this theoretical output might be reduced by approximately 10 per cent.

With the uncertainties of the flow at Boulder Dam it is impossible to estimate closely the average annual output of power which would obtain during a 50-year period.

ECONOMIC FEASIBILITY

The time available for the investigation in preparation of this report has not been sufficient to permit the board to go into all phases of this subject in the detail necessary to fix its findings with the degree of exactness which might otherwise be practicable.

The board believes, however, that it has been able to review the available data with sufficient thoroughness to warrant the conclusions expressed in this report.

In considering the economics of this project the board recognizes the importance, among others, of the following factors:

1. While much land has already been brought under irrigation on the Colorado River delta in Mexico, it is evident that such development has been retarded by the lack of water available from the river during low-water periods. The storage of flood water in the Black Canyon Reservoir and its release during low-water seasons will make more water available in Mexico and will invite immediate expansion in irrigated acreage in that country. With the limited water supply available from the Colorado River, every acre permanently irrigated in Mexico will mean that an acre in the United States can not be irrigated. Such a limitation on lands would result in a corresponding limitation on possible income. It is the opinion of the board that it is of much economic importance in this project that an agreement limiting the amount of water assignable to Mexico should be made prior to the completion of the Boulder Canyon project.

2. The board believes that the growing demand for power in southern California, when considered on a conservative basis, will be sufficient to absorb the probable power output of the proposed hydroelectric plant.

3. As a sound basis for estimating the probable power output of a stream, it is necessary to know the flow of the stream for a long term of years covering periods of high and low flow of sufficient duration to furnish the low, average, and high flows for which the plant must be designed. Any less complete data throw doubt on the estimates, which becomes serious in proportion to the uncertainties in the data and the magnitude of the investment.

When this project was first proposed the cost of steam power in southern California was such as to leave a reasonable margin of profit above the probable cost of hydroelectric power generated at the proposed power plant. With the reduction in costs of power generated by steam, this margin has been greatly reduced.

The operation, maintenance, interest, and sinking fund for the Boulder Canyon project must be paid from the sale of power and of storage services, which latter has been estimated at $1,500,000 per annum by the Secretary of the Interior.

Based on the foregoing and the shortage of power which will occur at low flow, the board is of the opinion that if the Boulder Canyon project is completed and put in operation, carrying as it does the costs of flood-protection works and the all-American canal, it will be impossible to meet operation, maintenance, interest, and a sufficient sinking fund to retire the cost of the project within a 50-year period.

4. It is obvious that the power which can be generated from Boulder Dam is a valuable resource. If the income from storage can be reasonably increased and the capital investment reduced by the cost of the all-American canal, together with a reduction for all or a part of the cost properly chargeable to flood protection, it would be possible to amortize the remaining cost with the income from power.

COLORADO RIVER BOARD.
Maj. Gen. WILLIAM L. SIBERT, *Chairman.*
CHARLES P. BERKEY.
DANIEL W. MEAD.
WARREN J. MEAD.
ROBERT RIDGWAY.

DENVER, COLO., *November 24, 1928.*

Mr. ASHURST. Mr. President, the region known as the Colorado River Basin, drained by the Colorado River and its tributaries, embraces over 242,000 square miles.

The following table shows an interesting comparison of areas:

COMPARATIVE TABLE

Gross area in Colorado River Basin

	Square miles
Wyoming furnishes to basin	19,000
Colorado furnishes to basin	39,000
Utah furnishes to basin	40,000
New Mexico furnishes to basin	23,000
Nevada furnishes to basin	12,000
California furnishes to basin	6,000
Arizona furnishes to basin	103,000
Total area of Colorado River Basin	242,000

This area compares with the gross area of—

Maine	33,040
New Hampshire	9,341
Vermont	9,564
Massachusetts	8,266
Connecticut	4,965
Rhode Island	1,248
New York	49,204
New Jersey	8,224
Pennsylvania	45,126
Delaware	2,370
Maryland	12,327
South Carolina	30,989
West Virginia	24,170
Total	238,834

The Colorado River proper is formed by the junction of the Green and the Grand; the name of the Grand was, by act of Congress approved the 25th day of July, 1921, changed to the Colorado. The Green River from its source to its junction with the Grand is 700 miles long. The Grand River from its source to its junction with the Green is about 450 miles long.

Green River heads near Fremont Park in the Wind River Mountains, Wyo., in a group of alpine lakes fed by perpetual snows. The source of the Grand is in Colorado. Like the Green, it is fed by small alpine lakes that receive their waters directly from snow banks. Including the Green, the Colorado River is about 1,700 miles long and empties into the Gulf of California in latitude 31° 53′ and longitude 115°.

The Colorado River Basin—that is to say, the region traversed by the Colorado River and drained by its tributaries—is a land which embraces all the various diversities of topography and geology; it is a land of extreme variations in rainfall, in elevation, and in the character of the country. The northerly part of the basin is a land of cold winters, of deep snowfall, a region that stores up the snows of winter and pours them forth in the summer.

The middle section of the Colorado Basin is a territory of low rainfall, of high plateaus, and vast canyons. In no other place in the world are there such deep, marvelously colored, and beautiful gorges and canyons.

The southern portion of the basin is relatively low in elevation, with a scanty rainfall and of tremendous summer heat, 115° to 120° being not unusual temperatures over much of this southern area in the months of June, July, and August. The normal annual flow of the Colorado River is about 17,000,000 acre-feet, extreme years ranging from 9,000,000 to 25,000,000 acre-feet. Storage of water is therefore vitally essential, as irrigation is of tremendous importance to the proper development of the basin.

The Colorado River Basin contains mountains reaching to a height of 13,500 feet, belted at the base by forests of vivid green, and capped with gleaming snow; it contains playas and inland lakes below the level of the sea; it contains vast plateaus of rugged, black scoria; immense forests of pine, cedar, and pinion, and in these forests are hundreds of small parks, bowl-like gems of exquisite scenery; it contains the largest area of recent volcanic action to be found on the continent, "recent" being employed in its geological sense.

In the southwestern portion of the basin there is a real desert where the raw and scorching sun comes down as a pitiless flail, where the sand reflects the heat and glare and distresses the eye of the traveler, and where little dew or moisture is deposited, but where a wind, hot as a furnace blast, sometimes blows from the south.

Before a railroad was built through it a journey over this desert was at times dangerous and always fraught with discomfort. Day after day nothing was to be seen but an expanse of hot sand, with now and then a cactus lifting its thorny arms into the brazen heat. The loneliness of the pioneer pilgrim there seemed to sever him from human things and to remove him an infinite distance from the world, with its interests and its occupations, but nature, in one of her capricious moods, also placed in this same basin the richest agricultural lands in the Western Hemisphere.

In some parts of this basin, which were populous before the pyramids were built, ancient people builded cities not wholly lacking in grandeur. These peoples of antiquity wove and spun cotton and flax into gaudy tapestries before Romulus and Remus were suckled. They melted gold and silver into chieftains' ornaments and queens' girdles before Cæsar's legions brought tribute back to imperial Rome.

Centuries before the Knickerbocker set foot on Manhattan Island tribes of men now vanished irrigated the fertile sands of the lower basin of the Colorado River from canals and reservoirs finished with hard linings of tamped or burnt clay which in some degree possessed the endurance of our modern concrete. The origin of this people is enwrapped in the mists of antiquity. Nothing has been found of sufficient distinctiveness to enable us to do more than speculate and form ingenious theories as to whence they came, how long they enjoyed their tolerable civilization, and whither and why they went.

Within this basin and in Arizona is the Petrified Forest, whose trees lived their green millenniums and put on immortality in Triassic time, 7,000,000 years ago. The trees were of several kinds, most of them being related to the Norfolk Island pines. A small amount of iron oxide is distributed through the logs, which gives them their beautiful yellow, brown, and red tints.

Within the region traversed by the Colorado River and drained by its tributaries is the Painted Desert, in which at a distance you perceive the "sea of jasper" and the face of cliffs that gleam like jewels; you seem to descry fortifications with flags flying on their ramparts, and walled towers on conical hills amidst an admixture of light and shade.

Within this basin and in Arizona is the Grand Canyon, of wondrous colors, of bold escarpments, pyramids, swelling domes, mosques, minarets, and isolated mesas through which rolls and tumbles the Colorado River.

On the 5th day of January, 1886, in the Forty-ninth Congress, the first bill to make the Grand Canyon a national park was introduced in the Senate by Benjamin Harrison, then a Senator from Indiana, and subsequently President of the United States. This bill failed to become a law, and the project was presented to the Congress from time to time.

In the Sixty-fifth Congress I introduced a bill to make the Grand Canyon a national park.

The bill passed both Houses of Congress and was approved by President Wilson on the 26th day of February, 1919.

The Grand Canyon National Park represents an area of approximately 950 square miles, a greater part of which is within the walls of the canyon.

FUTURE OF THE COLORADO RIVER BASIN

What is to be the future of the Colorado River Basin, a country larger in area than the tract of land which Virginia, with princely liberality, ceded to the General Government in 1787, out of which five States were erected?

Of course, its forests will be utilized, its mineral wealth will be sought, its scenic beauties will be unfolded; but its greatest development, however, must come from its water resources, upon which the development of its other resources must largely depend. Without the water afforded by Colorado River and its tributaries, vast tracts of its land would remain unproductive and practically useless; but the Hand that formed this land, cleft its mountains in twain, filled their caverns with precious metals, painted its landscapes in colors warranted never to fade, and that replenishes this river, left it feasible for man not only to construct large irrigation systems and to build towns, cities, and prosperous agricultural communities within this basin, but to generate hydroelectric power for lighting, heating, industrial uses, and the transportation of freight and passengers.

I know the generosity of Senators will pardon me if I now presume to solicit their attention while I make a reference personal to myself. My forebears were members of that bold advance guard of pioneers who 50 years or more ago explored the Colorado River Basin. From the time of my youth to the present day I have wielded ceaselessly what strength was mine, which was modest and small enough, to bring about the development of the potentialities of the Colorado River. If the voice of justice and truth and the accuracies of science instead of greed and partisanship were to control, there would ultimately be brought forth within the United States the inland empire of the Colorado River Basin, an empire wealthier than that which Pizarro added to the dominions of Charles V and more splendid and more durable than that of the Cæsars. Unfortunately, however, the legislation now proposed by the Senator from California [Mr. JOHNSON] for development of the Colorado River is sectional in character, is wholly in the interest of California, and disregards the rights of Arizona.

In discussing the broader possibilities and problems of the Colorado River Basin there are hundreds, even thousands, of minor yet important possibilities of expansion that I necessarily must leave unmentioned, although these future minor auxiliary developments will have much local importance and in the aggregate true national significance. In general, such minor or auxiliary projects do not preclude the larger use of the river, but must be undertaken as part of that larger use.

Irrigation has enriched the American people. Irrigation projects charm the imagination with their wizardry. Their power to transform barren deserts into grain and cotton fields, into orchards and vegetable and flower gardens, makes the lamp of Aladdin and the purse of Fortunatus seem tame and prosaic. The wildest hyperbole would not overestimate the strength, wealth, beauty, comfort, and public order that would be added to this Nation were all the potentialities of the Colorado River scientifically utilized with scrupulous regard for and observance of the legal rights of each State within the Colorado River Basin.

It is a thousand pities that this bill, so narrow in its conceptions, so devastating to Arizona in its results, so flagrant in its disregard of the Constitution, has failed to rise to the grand opportunity of the hour, but I do not entirely despair; I realize that the active protagonists of this bill have fallen victims to that imponderable which inheres in those public men who surrender the good of the future to the expediency of the hour.

The alluring temptation to bring to existing constituents some temporary advantage; to placate those who can vote to-day; to achieve something immediate and tangible, which apparently is beneficial, although it be at the cost of sacrificing durable benefits and vital rights which could easily be preserved if justice instead of expediency were made the guide, has always been the Circean spell that has down through the ages distracted the mind, deflected the purpose, and weakened the fiber of statesmen.

TECHNICAL TERMS

In the discussion of the bill I shall be obliged to use many technical terms, and, therefore, at this juncture it may be helpful to translate some of these technical terms into common expressions:

One second-foot of water is a flow of 1 cubic foot of water per second.

One second-foot of water is approximately 7.5 gallons.

A flow of 1 second-foot for 24 hours would approximate 648,000 gallons. (There are 86,400 seconds in 24 hours.)

A flow of 1,500 second-feet of water daily approximates 3,000 acre-feet.

A flow of 1,500 second-feet daily would approximate 972,000,000 gallons daily.

The city of Los Angeles is now demanding and insists that it requires 1,500 second-feet daily of the waters of the Colorado River for potable purposes. Fifteen hundred second-feet daily of potable water would supply a city of 2,430,000 persons with 400 gallons daily per capita, or to employ Chicago's consumption of water as a basis of comparison, the 1,500 second-feet (972,000,000 gallons) would supply a city of 3,400,000 persons with 285 gallons per capita daily, and the highest present daily consumption of any city, so far as I know, is the city of Chicago, which is about 285 gallons per capita daily.

One acre-foot is a volume of water sufficient to cover 1 acre 1 foot deep; 16,400,000 acre-feet of water would submerge the District of Columbia over 400 feet.

A horsepower is a rate of work equal to lifting 33,000 pounds 1 foot per minute. Originally based on observation of dray horses, it greatly exceeds the average performance of an ordinary horse.

The combined peak demand on all power plants in the District of Columbia in 1920 was 95,000 horsepower.

The total development at Niagara in 1916 was 575,000 horsepower.

The installed substation capacity on the Chicago, Milwaukee & St. Paul Railway electrification is 180 horsepower per mile.

At 200 horsepower per mile, 4,800,000 horsepower would serve 24,000 miles of electrified railroad, which roughly approximates the total railroad mileage in Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming.

POWER

A vast amount of power is dissipated in the fall of the Colorado River. Imaginative France calls water power "white coal," and this brilliant characterization suggests a coal free from dust, cheaper, easier handled, a supply inexhaustible, which after used flows on to the projects below and may be used again and yet again.

Thus on the main stream of the Colorado River, below the junction of the Green and the Grand, known power sites on the river have 6,000,000 potential horsepower, and of this 6,000,000 potential horsepower 4,000,000 thereof would be developed and generated in the State of Arizona.

The percentage of water which the States within the Colorado River Basin contribute, respectively, to the Colorado River is about as follows:

	Per cent
Arizona	28
California	0
Colorado	53.7
Nevada	.3
New Mexico	1
Utah	7
Wyoming	10
Total	100

I now read the following letter, which is self-explanatory:

UNITED STATES DEPARTMENT OF THE INTERIOR,
GEOLOGICAL SURVEY,
Washington, April 2, 1926.

Hon. HENRY F. ASHURST,
United States Senate.

MY DEAR SENATOR ASHURST: In response to your letter of March 31, I am inclosing a statement in tabular form which I believe will supply the information you desire respecting the flow of Colorado River at Lees Ferry and points below. Attention is called to the fact that the averages for the stations at Bright Angel Creek and Lees Ferry are based on records extending over but three and four years, respectively, and are probably below a long-time average inasmuch as the years 1924 and 1925 were years of low run-off in Colorado River Basin.

Flow in second-feet may be converted into acre-feet by multiplying by the number of days that the flow existed and that product by 1.98. If

the rate of flow of a stream is 15,000 second-feet the run-off in one day will be 29,700 acre-feet; in a 30-day month it will be 891,000 acre-feet; and in one year 10,840,500 acre-feet. The computations may be reduced and results obtained within 1 per cent by using 2 as the factor instead of 1.98.

Yours very cordially,

GEORGE OTIS SMITH, *Director.*

Annual flow of Colorado River at points in Arizona

Gauging station	Years of record [1]	Second-feet			Acre-feet		
		Maximum year	Minimum year	Average	Maximum year	Minimum year	Average
Lees Ferry	1922-1925	22,300	15,800	19,400	16,100,000	11,400,000	14,000,000
Bright Angel Creek	1923-1925	23,500	16,100	19,200	17,000,000	11,700,000	13,900,000
Topock	1918-1925	29,800	16,200	22,900	21,500,000	11,700,000	16,600,000
Yuma	1903-1924	36,000	13,600	23,700	26,100,000	9,870,000	17,200,000

[1] Years ending Sept. 30.

The Colorado River is our most remarkable and dramatic river in its value for irrigation and hydroelectric energy. It combines concentration of fall, sites for power plants, reservoir sites for controlling the river flow, and a vast volume of water for irrigating several million acres of land.

Other rivers may be used, either for irrigation or for hydroelectric power, but no other river in the Western Hemisphere presents such opportunity for the use of waters for both irrigation and generating electrical energy.

In approaching the problems of a river so pregnant with possibilities for development it is important that all the factors connected therewith—engineering and economic—should be fully evaluated and that expediency shall play no part therein.

It is the opinion of all experts that there is no surplus water in the Colorado River, therefore, in any plan of developing that river extreme care should be exercised so that no practicable potentiality shall be needlessly sacrificed.

MAGNITUDE OF THE PROPOSED PROJECT

The project authorized by this bill is majestic in its proportions. The figures involved are stupendous.

The proposed dam will be 675 feet high from bedrock to its crest; 125 feet below and 550 feet above the present water level, or nearly twice as high as any other dam in existence.

It is stated in the Twenty-fifth Annual Report of the Bureau of Reclamation that the total capacity of all of the reservoirs at storage dams authorized by Congress to be constructed by the Bureau of Reclamation, and including reservoirs at dams on Federal reclamation projects which were financed and constructed by agencies other than the Reclamation Bureau, when completed will be only 13,863,123 acre-feet of water. The hydroelectric power now installed by the Bureau of Reclamation is 55,000 horsepower.

The Boulder Reservoir, when full, will hold 26,000,000 acre-feet of water and store 20,000,000 acre-feet. It is proposed to install machinery to develop 1,000,000 horsepower, of which 550,000 horsepower will be firm power; in other words, this dam will create a reservoir which will store approximately twice as much water as all the Reclamation Service reservoirs combined and will represent an electrical installation of ten times as much as that now installed by the Bureau of Reclamation.

The total construction cost of all of the projects constructed by that bureau as of June 30, 1916, was $166,532,562.36. The estimated cost of a portion of this project will be $125,000,000.

ARIZONA

Ninety-three per cent of the entire area of the State of Arizona is within and constitutes 43 per cent of the total area of the Colorado River drainage basin.

Arizona contributes about 28 per cent of the waters of the Colorado River. The population of Arizona residing within the Colorado River Basin and dependent entirely upon its waters is equal to, and probably exceeds, the combined population furnished to the Colorado River Basin by the other Colorado River Basin States.

Of the 6,000,000 firm horsepower of potential hydroelectric energy in the lower basin, seven-eighths thereof is in Arizona, but the Boulder Canyon plan of development, as proposed in S. 728, would deprive Arizona of the benefit of this hydroelectric power.

Of the lands in Arizona susceptible of irrigation, practically all thereof to be irrigated must obtain their water from the Colorado River or its tributaries in Arizona; they have no other waters from which to draw.

The Colorado River enters Arizona from Utah near what is called the Crossing of the Fathers and flows through Arizona on a meandered line 315 miles to the Arizona-Nevada State line, in Iceburg Canyon. From this point the river on a meandered line forms the western boundry line of Arizona for a distance of 400 miles to the point where it intersects the boundary line between Arizona and Old Mexico.

CALIFORNIA

Only 2½ per cent of the Colorado River drainage basin is in California.

California contributes practically no water to the Colorado River.

The Boulder Canyon plan of development allots to California 38 per cent of the estimated constant water supply of the Colorado River.

California has 18,000,000 acres of land irrigable by waters other than by the waters of the Colorado River.

Of the potential hydroelectric energy, California has 9,000,000 horsepower which may be developed within her borders on streams other than the Colorado River or its tributaries.

This bill sedulously and intentionally proposes to sever Arizona's jugular vein.

The bill is intended to be, and is, an attempt to coerce Arizona. One administration unsuccessfully attempted to coerce Arizona into joint statehood with New Mexico. Another administration unsuccessfully attempted to coerce Arizona upon certain provisions of her constitution, and those who are attempting by this legislation to coerce Arizona will ultimately discover that they have simply been standing like large locomotives on a sidetrack, without driving rods, wasting their steam in vociferous and futile sibilation.

STATEMENT OF SPECIFIC OBJECTIONS

I oppose this bill for the following reasons:

First. Because the bill authorizes an invasion of the State of Arizona without its consent and over its protest; it is a trespass upon the sovereignty of Arizona and is therefore unconstitutional.

Second. Because the bill proposes to deny to Arizona her right to use the public lands within that State for the purpose of building canals or other works, to enable citizens of that State to use the water which falls upon the soil and which runs in the brooks, creeks, washes, and rivers of Arizona, for domestic and agricultural purposes, and also proposes to deny to Arizona the use of public lands for the building of transmission lines for the purpose of delivering electrical energy developed on streams which are within the State, and also proposes to deny to Arizona the right to obtain a permit from the Federal Power Commission to build dams on streams wholly within Arizona, to utilize water for the development of electrical energy to which the citizens of Arizona have already acquired the right to the exclusive use thereof.

Third. Because if the bill were passed in its present form it would plunge the State of Arizona into expensive and protracted litigation. Because it denies the authority of Arizona to amend her own constitution.

Fourth. Because Arizona joins with the upper-basin States in asking (quoting Governor Dern, of Utah, Senate hearings on S. 728, p. 132) "that no legislation proposing the construction of any project upon the Colorado River should be enacted by Congress or otherwise authorized by any Federal agencies before the negotiations now in progress have been completed and every reasonable effort exhausted to reach such an agreement between the seven States."

Fifth. Because the construction of any large storage project on the main Colorado River in the absence of a specific allocation of water to Arizona will make water available for use in Mexico and thereby ultimately deprive the lands in Arizona of its use.

Sixth. Because the bill proposes the invasion of the State of Arizona by the Federal Government and the usurpation of the use of the bed of the Colorado River, its banks and the lands within the State, for the construction of a dam for the storage of water and the delivery of this water to another State to the detriment of Arizona. The water in question is a natural resource over which the State of Arizona claims the exclusive right (except as it affects navigation) to control within its own boundaries, and to share the control of its use where the river forms the boundary between Arizona and another State, subject only to the limitation that the water shall not be depleted in such an amount as to deprive a prior and beneficial user in another State, of the water appropriated by him. (Boquillas Cattle Co. *v.* Curtis, 213 U. S. 339, and Colorado *v.* Wyoming, 259 U. S. 419.)

Seventh. Because under the terms of the bill, Arizona will be deprived of the use of water essential for her future growth and

prosperity which could be made possible by the development of power and the irrigation of her lands.

Eighth. Because of the misleading language in the bill which, whilst declaring that a large irrigation project in California shall bear the cost of the canal and of appurtenant structures necessary to irrigate the lands in California, the provisions of the bill, in truth and in fact, will require the power resources of Arizona and Nevada to underwrite the repayment of the cost "of the main canal and appurtenant structures connecting Laguna Dam with the Imperial and Coachella Valleys in California," including operation and maintenance charges.

Mr. President, this morning some debate was had respecting flood control. The sentiment of Arizona, the constituency which my colleague and I represent, demands that we shall vote for any appropriation within reason looking toward flood control for Imperial Valley and Yuma Valley. I trust that I am not disclosing any secrets of the committee when I say that in the Committee on Irrigation and Reclamation during its sessions last February and March I offered an amendment proposing to appropriate $30,000,000, nonreimbursable, for flood control on the Colorado River.

Mr. FESS. Mr. President, will the Senator yield?

Mr. ASHURST. I yield to the Senator from Ohio.

Mr. FESS. Earlier in the debate the junior Senator from Colorado [Mr. WATERMAN] raised the point, or intimated at least, that there was not any danger of flood. I do not know that I ought to go to the extent of saying that he hinted to us that there was not any danger, but that was the inference I got. The question was whether there had been evidence at times that there was any danger of flood, except when it was artificial, and it left the impression in my mind that there is no danger. I would like to have the Senator explain about that.

Mr. ASHURST. I have respect for the two Senators from Colorado. They are men of judgment and ability. But naturally Senators reserve the right to differ among themselves. Although my respect for those two Senators is great, I have always been of opinion, and my opinion was formed after repeated visits to that section of the country, that in Imperial Valley and Yuma Valley that there exists a real necessity for flood control on the lower reaches of the Colorado River.

Mr. FESS. I will say to the Senator that if there is no danger from flood much of my interest in this project is gone.

Mr. ASHURST. I would say that I refer to that section of the Colorado River from Laguna Dam to the place where the river debouches into the Gulf of California.

Mr. PHIPPS and Mr. SHORTRIDGE addressed the Chair.

The PRESIDING OFFICER (Mr. BROOKHART in the chair). Does the Senator from Arizona yield; and if so, to whom?

Mr. ASHURST. The Senator from Colorado rose first; therefore, I yield to him.

Mr. PHIPPS. Of course, my colleague can speak for himself. Unfortunately I did not hear all of his statement this morning as I was called from the floor. I desire to say for myself that were it not for what seems to me a very evident necessity for flood control, I would have taken the attitude from the beginning that the United States Government should never consider the construction of a dam of its own accord, but it should be left to the people who might desire to develop the water for power purposes and incidentally for purposes of irrigation and domestic use.

Mr. FESS. The Senator from Colorado states my view of it.

Mr. PHIPPS. The danger may not be imminent to-day, but it has not been removed by any means. The evidence our committee has had would tend to show that the danger increases as time goes on because of the fact of the river depositing tons and tons and acres of silt annually, raising the level of the river bed itself, and it means that if the water should come at the same time out of the main stream and the Gila River that no revetment or levee could be constructed that would prevent the breaking down of the dikes that have been constructed or that could be constructed.

I believe the Government is fully justified in providing flood control, and in a project such as this I do not think the Government should hesitate to set aside a reasonable amount of money, such as I have indicated in the amendment offered by me, $25,000,000, which shall be repaid only after the other moneys advanced for the project have been repaid out of power receipts—receipts for the use of water and other uses. I think to-day the Colorado River in its lower reaches is an absolute menace to the 60,000 or more people who are residents of the Imperial Valley and who, after years of effort, have made a real paradise out of that wonderful section of our country.

It is a problem such as other nations have had—the Netherlands and Denmark, for instance—where in order to preserve their lands it was necessary to build and maintain enormous works. Here the problem may be met more easily and more readily than like problems with which some of the foreign nations have had to contend and which they have succeeded in surmounting.

Mr. FLETCHER. Mr. President——

Mr. ASHURST. I yield to the Senator from Florida.

Mr. FLETCHER. May I suggest, if the Senator from Arizona will allow me, that the Senator from Ohio [Mr. FESS] spoke about the "danger of flood control." There is a little confusion in my mind. I presume he means the danger of floods, whether there is danger of floods in this region, and not, as he said, "danger from flood control." In other words, the danger is in the possible occurrence of floods and the necessity arises for flood control. I presume that is what the Senator had in mind.

Mr. FESS. I am not certain whether the Senator is speaking with levity or not, but it is not flood control that I am afraid of, but the lack of flood control.

Mr. FLETCHER. That is what I really thought the Senator had intended to say, but he alluded to the "danger of flood control." The Senator from Arizona now, as I understand it, suggests that there is danger in the lower reaches of the Colorado. I would be glad if he would specify what he means by the lower reaches.

Mr. ASHURST. When I referred to "lower reaches," I meant that portion of the Colorado River from Laguna Dam, which is a dam in the Colorado River some 14 miles above Yuma, down to the point where the river debouches or trickles (as the case may be) into the Gulf of California. Is that clear now to the able Senator from Florida

Mr. FLETCHER. Yes; and I thank the Senator.

Mr. ASHURST. But, Mr. President, the vice of this bill—the devastating vice of this bill—is that its advocates have seized upon the need of flood control and have used that need of flood control to cover and screen their efforts to grasp large energies of hydroelectric power and to take enormous quantities of the waters of the Colorado River. They have shrewdly and inveterately spoken and written of the perils confronting Imperial Valley, and they go on to argue that those perils may not be obviated unless and until this project goes through in its entirety and Arizona despoiled of her rights in and to certain potentialities of the Colorado River. The blunder is that they have rejected the hand of friendship and amity extended by Arizona, which State was and is willing to support flood-control legislation.

Ninth. Because the amount of water apportioned to California is not warranted in equity, law, justice, or morals.

Tenth. Because the bill provides that when the canals, power plants, and structures in California are paid for they be turned over and delivered to the districts which use them in that State. But the bill does not provide that the dam and power plants be turned over to or inure to the benefit of the States of Arizona and Nevada when the Government is repaid.

Mr. PHIPPS. Mr. President, will the Senator from Arizona suffer an interruption?

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Colorado.

Mr. ASHURST. I do.

Mr. PHIPPS. My understanding of the bill now before the Senate as to reversion to California, pertains to the proposed canal and incidental power plants which might be built along the canal by the people who are responsible for the repayment of the money to the Government. They are the only properties that would revert to the California owners when the United States Government had been repaid in full for money advanced for those purposes. As against that, the situation regarding the dam proper and power plant built by the United States Government, is that after repayment in full with interest at 4 per cent, the Congress of the United States shall determine what shall be done with the dam and the power plant built in connection therewith.

Mr. ASHURST. Eleventh. Because the bill provides that the Imperial irrigation district and other California districts may be given rights in the Laguna Dam which they do not now possess and which are the property of the Yuma County Water Users' Association, for which the Secretary of the Interior is acting as trustee, and an arbitrary action by the Secretary as authorized under this bill would force the Yuma County Water Users' Association to engage in costly litigation to protect its interests.

Mr. President, I am willing to trust the present Secretary of the Interior, Mr. West; I have formed a favorable opinion of his talents and character, and I might be willing to trust the rights of the Yuma project in Arizona to him; but no man has a mortgage on the future; no man knows whom will be Secretary of the Interior a few years hence; and I would be recreant

to the people who have honored me so repeatedly and so highly if I failed to point out that this bill proposes to give to some future Secretary of the Interior the power arbitrarily to deprive the thriving community of Yuma, Ariz., and Yuma project of water if such Secretary should see fit to do so.

It may be answered that no Secretary of the Interior would do so wicked an act, but my reply is we can not conjure with the dice of destiny; no man knows what is in the future. I do not propose to have it said in the future when such thing might be attempted that the people of Arizona at that time had Senators who were so somnolent that they did not put forth an effort to point out what might come, and I shall later in this address discuss in some detail the rights of the Yuma project.

12. Because the bill proposes to authorize the Federal Government to become a party to a conspiracy to impose a boycott upon Arizona and to enforce against her the terms of the Colorado River compact, when approved by six States, as it affects the upper-basin States, and to impose upon Arizona the conditions of a subsidiary compact to be made by two States, affecting the lower basin, and to enforce these compacts against Arizona under terms of the bill.

13. Because the bill authorizes the expenditure of millions of dollars of Federal funds to irrigate lands owned largely by private-land speculators in California in units in excess of 160 acres. The records show that of the 785,400 acres of land in Imperial Valley, one corporation alone owns 47,000 acres of these lands and only 167,100 acres are Government lands. (S. Doc. 142, 67th Cong., 2d sess., p. 80.) This report was made in 1922, and the Government acreage has probably decreased since that time.

14. Because the bill authorizes California, which comprises only 2½ per cent of the Colorado River Basin and contributes no water, to appropriate over 38 per cent of the estimated constant water supply available in the main Colorado River for all seven States in the basin and for Mexico.

Mr. President, the very life of this Republic depends upon the preservation of the sovereign rights of the States. Local self-government is the basis of democratic institutions. If the rights of States are destructible the Union is destructible. If the Federal Government, under the thin guise of irrigating public land, may seize the property of Arizona over her protest, and by exploiting Arizona's property, embark upon a project to supply electrical energy and municipal water to California cities and irrigate privately owned lands in that State, then there is little left of the rights of the individual States.

The erection of a State and its entry into the American Union is the most symmetrical and the most beautiful creation of political authority known to mankind. Let us not, however, whilst contemplating the beauty of the entry of a State into the Federal Union, forget that States existed anterior to and created the Federal Union. Some of our States were flourishing in their authority, majesty, and strength before the Federal Union was created. Indeed, in order to have a Union the States voluntarily surrendered a portion, but not all, of their authority, jurisdiction, and power. Therefore, much as I am inclined to eulogize the Federal Union, whose great dome fills and glorifies the world, I never forget that the Union's strength, permanency, and endurance rest upon the States themselves.

Mr. SHORTRIDGE. Mr. President——

Mr. ASHURST. I yield to the able Senator from California.

Mr. SHORTRIDGE. I assume that the Senator claims that Arizona is a sovereign or a quasi-sovereign State, the equal in all its powers with any other State in the Union.

Mr. ASHURST. Yes.

Mr. SHORTRIDGE. I invite the Senator's thoughts, if he cares to disclose them, to paragraph 10 of Article XX of the Constitution of the State of Arizona and also to paragraph 7 of section 20 of the act admitting Arizona into the Union, which I believe was passed on June 20, 1910. I do not now express my own views, but I should be very glad, if it does not break the thread of his discussion, to have the Senator state whether he thinks those provisions impose any limitation upon the power of Arizona in respect to water rights.

Mr. ASHURST. The able Senator from California——

Mr. SHORTRIDGE. May I introduce the excerpts to which I have referred into the RECORD?

Mr. ASHURST. I have no objection.

Mr. SHORTRIDGE. Will the clerk kindly read paragraph 7 of section 20 of the act admitting Arizona into the Union, and then the tenth paragraph of Article XX of the constitution of that State?

The PRESIDING OFFICER. The clerk will read, as requested.

The legislative clerk read as follows:

[Copy of paragraph 7 of section 20 of act admitting Arizona (June 20, 1910)]

Seventh. That there be and are reserved to the United States, with full acquiescence of the State, all rights and powers for the carrying out of the provisions by the United States of the act of Congress entitled "An act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands," approved June 17, 1902, and acts amendatory thereof or supplementary thereto, to the same extent as if said State had remained a Territory.

[Constitution of the State of Arizona—Article XX]

Tenth paragraph. There are hereby reserved to the United States, with full acquiescence of this State, all rights and powers for the carrying out of the provisions by the United States of the act of Congress entitled "An act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands," approved June 17, 1902, and acts amendatory thereof or supplementary thereto, to the same extent as if this State had remained a Territory.

Mr. SHORTRIDGE. Mr. President, I beg pardon of the Senator if my interruption has served to disturb the course of his address. I wished to get the matter which has just been read into the RECORD for possible future comment. I do not call upon the Senator now to turn away from his argument to make answer.

Mr. ASHURST. I am willing to attempt to reply to the thoughtful interrogatory propounded by the able Senator from California.

I assert that the State of Arizona did not forfeit any rights, authority, or sovereignty by its acts, nor did the Government acquire any new right, power, or authority over the Colorado River, its bed, and banks, and waters that it did not already have and possess.

The Congress of the United States in disposing of the public lands has consistently acted upon the theory that those lands, whether in the interior or on the coast, above high-water mark, may be taken up by actual occupants in order to encourage the settlement of the country; but that navigable waters and the soils under them, whether within or above the ebb and flow of the tide, shall be and remain public highways and, being generally valuable for public purposes of commerce, navigation, and fishery, and for improvements necessary to secure and promote those purposes, shall not be granted away during the period of Territorial government; but, unless in case of some international duty or public expediency, shall be held by the United States in trust for future States and shall vest in the several States when organized and admitted into the Union, with all powers and prerogatives appertaining to the older States in regard to such waters and soils within their respective jurisdictions; in short, shall not be disposed of piecemeal to individuals as private property, but shall be held as a whole for the purpose of being ultimately administered and dealt with for the public benefit by the State after it shall become a completely organized community.

Grants by Congress of portions of the public lands within a territory to settlers therein, though bordering on or bounded by navigable waters, convey of their own force no title or right below high-water mark and do not impair the title and dominion of the future State when created, but leave the question of the use of the shores by the owners of uplands to the sovereign control of each State, subject only to the rights vested by the Constitution of the United States. (Withers *v.* Buckley, 61 U. S., 20 How. 84.)

It must logically follow that if a grant by Congress of portions of the public lands within a Territory to settlers convey of their own force no title or right on navigable streams below high-water mark, the reservations made by the Secretary of the Interior, by virtue of the act of Congress, of public lands on a navigable stream above high-water mark do not of their own force reserve rights to the Federal Government below high-water mark.

It will be noted that section 28 of the Arizona enabling act reserves to the United States lands solely, and that nothing but land was so reserved or excepted from the operation of the act. But admitting for the sake of argument—which I do not concede or admit to be a fact—that the Federal Government did reserve certain rights in the bed and banks of the Colorado River, and that the State of Arizona did grant certain authority and rights to the Federal Government in the bed and banks of the Colorado River, Ariz., nevertheless, asserts and contends, and the record discloses, that so far as it relates to those por-

tions of the Colorado River mentioned in the Swing-Johnson bill, in which it is proposed to build dams and hydroelectric power plants, that the Federal Government gained no right, as a result of the reservations in the Arizona enabling act, in those sections of the river, because it did not exercise such right and authority by designating lands at the Black Canyon Dam site prior to February 14, 1917.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator whether the record does not disclose that the Federal Government did exercise that right? My recollection is that I caused to be introduced into the record of the hearings the acts of the Government in respect to that very matter.

Mr. ASHURST. California and the Federal Government assert—I now use an expression that savors more of the nomenclature of the race track than of the Senate—that the Federal Government "got under the wire" a few days within the time. Arizona asserts that such is not the case. Of course, that question can be settled only by a judicial tribunal; and in a judicial tribunal my learned friend the Senator from California, like MacGregor, is eligible to sit at the head of the table.

Mr. SHORTRIDGE. Then the Federal Government undertook to do something to exercise its rights with respect to this matter?

Mr. ASHURST. I do not deny that it made an attempt.

Mr. SHORTRIDGE. My recollection was, if I may complete the statement, that the Government took the appropriate action some time before the expiration of the time limit. It may be well to insert in the RECORD at this point the official documents issued by the Government in respect of this matter. Those documents are as follows:

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, September 23, 1914.

REGISTER AND RECEIVER,
Phoenix, Ariz.

SIRS: By Executive order of September 5, 1914, the hereinafter-described lands in Arizona, involving, with other lands not in your district, approximately 40,000 acres, were withdrawn from settlement, location, sale, or entry and reserved for water-power sites as power-site reserve No. 446, subject to the limitations, provisions, exceptions, and conditions contained in the act of Congress entitled "An act to authorize the President of the United States to make withdrawals of public lands in certain cases," approved June 25, 1910 (36 Stat. 847 as amended by the act of August 24, 1912 (37 Stat. 497)).

GILA AND SALT RIVER MERIDIAN, ARIZONA

All lands within a quarter of a mile of Colorado River within the following unsurveyed townships:

T. 33 N., R. 5 W.	T. 32 N., R. 17 W.
T. 34 N., R. 5 W.	T. 30 N., R. 18 W.
T. 32 N., R. 16 W.	T. 31 N., R. 18 W.
T. 33 N., R. 16 W.	T. 31 N., R. 19 W.
T. 30 N., R. 17 W.	T. 32 N., R. 19 W.
T. 31 N., R. 17 W.	

All lands located on the north or west bank of Colorado River within a quarter of a mile thereof in the following unsurveyed townships and portions of townships:

T. 36 N., R. 5 E., N. ½ of T.	T. 42 N., R. 9 E.
T. 37 N., R. 5 E.	T. 33 N., R. 6 W.
T. 37 N., R. 6 E.	T. 32 N., R. 7 W.
T. 38 N., R. 6 E.	T. 33 N., R. 7 W.
T. 39 N., R. 6 E.	T. 32 N., R. 8 W., S. ½ of T.
T. 39 N., R. 7 E.	T. 31 N., R. 9 W.
T. 40 N., R. 7 E.	T. 32 N., R. 9 W.
T. 40 N., R. 8 E.	T. 31 N., R. 10 W.
T. 41 N., R. 8 E.	T. 31 N., R. 15 W.
T. 41 N., R. 9 E.	T. 32 N., R. 15 W.

All lands on the south or east bank of Colorado River within a quarter of a mile thereof and not within the Hualpai Indian Reservation, within the following unsurveyed townships:

T. 32 N., R. 6 W.	T. 31 N., R. 15 W.
T. 33 N., R. 6 W.	T. 32 N., R. 15 W.

Note the withdrawals upon your records and advise this office of such action.

Very respectfully,

C. M. BRUCE,
Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, August 17, 1914.

REGISTER AND RECEIVER,
Phoenix, Ariz.

SIRS: By departmental order of July 16, 1914, the lands in the hereinafter-described areas located along the Colorado River, involving approximately 38,000 acres, were withdrawn from location, sale, entry, allotment, or other appropriation, and reserved for water-power sites as power-site reserve No. 447, subject to the limitations, provisions, exceptions, and conditions contained in the act of Congress approved June 25, 1910 (36 Stat. 855), and it was directed that no trust patents issue.

ORDER OF WITHDRAWAL—POWER-SITE RESERVE NO. 447, COLORADO RIVER, ARIZ.

It is hereby ordered that the following-described lands, valuable for power sites, be, and the same are hereby, reserved from location, sale, entry, allotment, or other appropriation, in accordance with the provisions of sections 13 and 14 of the act approved June 25, 1910 (36 Stat. 855, 858), and that no trust or fee simple patent be issued as regards the lands until further orders.

GILA AND SALT RIVER MERIDIAN

All lands in the Hualpai and Navajo Indian Reservations within a quarter of a mile of Colorado River and within the following unsurveyed townships:

T. 36 N., R. 5 E.	T. 32 N., R. 9 W.
T. 37 N., R. 5 E.	T. 27 N., R. 10 W.
T. 37 N., R. 6 E.	T. 28 N., R. 10 W.
T. 38 N., R. 6 E.	T. 29 N., R. 10 W.
T. 38 N., R. 7 E.	T. 30 N., R. 10 W.
T. 39 N., R. 6 E.	T. 31 N., R. 10 W.
T. 39 N., R. 7 E.	T. 27 N., R. 11 W.

Make proper notations upon the records of your office and advise this office of such action.

Very respectfully,

C. M. BRUCE,
Acting Commissioner.

STATE LIEU SELECTIONS

The State land department advises that the State of Arizona has selected lands in lieu of the lands withdrawn by the Secretary of the Interior for power-site purposes along the Colorado River as follows:

Power-site reserve No. 446:
- T. 30 N., R. 17 W., sec. 32.
- T. 37 N., R. 6 E., secs. 2, 16, 32, 36.
- T. 38 N., R. 6 E., sec. 36.
- T. 39 N., R. 7 E., secs. 2, 16, 32, 36.
- T. 40 N., R. 7 E., sec. 36.
- T. 40 N., R. 8 E., secs. 2, 16, 32, 36.
- T. 41 N., R. 8 E., sec. 36.
- T. 41 N., R. 9 E., secs. 2, 32, 36.
- T. 33 N., R. 6 W., secs. 32, 36.
- T. 32 N., R. 7 W., secs. 2, 16, 32, 36.
- T. 33 N., R. 7 W., sec. 36.
- T. 31 N., R. 9 W., secs. 32, 36.
- T. 31 N., R. 15 W., sec. 16.
- T. 32 N., R. 6 W., secs. 2, 16, 32, 36.
- T. 33 N., R. 6 W., secs. 32, part 36.
- T. 31 N., R. 15 W., sec. 16.

Power-site reserve No. 447:
- T. 37 N., R. 6 E., sec. 36.
- T. 38 N., R. 6 E., sec. 36.
- T. 39 N., R. 7 E., secs. 2, 16, 32, 36.
- T. 40 N., R. 7 E., sec. 36.
- T. 40 N., R. 8 E., secs. 2, 16, 32, 36.
- T. 41 N., R. 8 E., sec. 36.
- T. 41 N., R. 9 E., secs. 2, 32, 36.
- T. 33 N., R. 6 W., sec. 32.
- T. 32 N., R. 7 W., secs. 32, 36.
- T. 33 N., R. 7 W., sec. 36.
- T. 32 N., R. 8 W., sec. 36.
- T. 27 N., R. 10 W., secs. 2, 16, 32, 36.
- T. 28 N., R. 10 W., secs. 2, 32 (208 acres).
- T. 27 N., R. 11 W., secs. 32, 36.
- T. 27 N., R. 12 W., secs. 16, 32, 36.
- T. 28 N., R. 13 W., sec. 16.

Mr. ASHURST. I do not deny that the Federal Government, through the General Land Office, attempted to take action within the time, and some evidence exists indicating such attempted action.

Whether the necessary steps were actually taken within the specified time or the record was made up nunc pro tunc is a question that can be settled only by the courts.

The Black and Boulder Dam sites in the Colorado River will utilize, as nearly as may be approximated, lands which when surveyed will be in townships 29, 30, 31, and 32 north, range 23 west, and in townships 29 and 32 north, range 22 west.

The only one of these sections designated and reserved, prior to February 14, 1917, by the Secretary of the Interior, was township 32 north, range 22 west. Therefore, even though the assumption be granted that the Federal Government acquired certain rights under the provisions of the Arizona enabling act and the designation of land by the Secretary of the Interior, in other sections along the river, it did not obtain any of these rights at the Black Canyon Dam site in which it is proposed to construct the proposed dam and power plants.

Any filings made by the Reclamation Service or any other agency of the Federal Government subsequent to February 14, 1917, are on the same basis and subject to the same conditions and reservations as filings of a similar nature in any of the other States.

The Federal Government has no special right to utilize the bed and banks and the water of the Colorado River at Black Canyon by virtue of any filings made on the said river under the provisions contained in paragraph 7, section 20, and paragraph 5, section 28, of the Arizona enabling act.

It is contended that by virtue of certain reservations in the enabling act which granted statehood to Arizona and which were accepted by Arizona that that State consented to certain conditions which will permit the Federal Government to ignore the lack of consent by Arizona, and over the protests of that State to construct a dam at Black Canyon under the provisions of the Swing-Johnson bill, which purports to be an amendment to the Federal reclamation act.

The provisions of the Arizona enabling act, which it is claimed gives this authority to the Federal Government, are as follows:

SEC. 20, par. 7. That there be and are reserved to the United States, with full acquiescence of the State, all rights and powers for the carrying out of the provisions by the United States of the act of Congress entitled "An act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands," approved June 17, 1902, and acts amendatory thereof or supplemental thereto, to the same extent as if said State has remained a Territory.

SEC. 28, par. 5. * * * The said State, at the request of the Secretary of the Interior, shall from time to time relinquish such of its lands to the United States as at any time are needed for irrigation works in connection with any such Government project.

The power to acquire territory, either by conquest or by treaty, is vested by the Constitution in the United States. The territory which constitutes the States of Arizona and Nevada was obtained from the Republic of Mexico.

The land grants from Mexico to the United States of the vast tract of territory which constitutes the State of Arizona vested in the United States every shred of proprietary and sovereign title that the most favored nation—under like circumstances—could acquire. It was, nevertheless, never a part of our scheme of government that such conditions should be perpetual.

When Arizona was formed out of the territory acquired from Mexico and statehood was granted to her, the State was admitted into the Union on an equality with all of the other States. The law so provides and the proclamation of the President so states.

When a part of the territory of the United States is included within a State the relation of the State to that territory becomes that of a sovereign antecedent and superior to proprietary right. The sovereign right of dominion, which temporarily resided in the United States, is assumed by the State, not transferred to it. This sovereign right of dominion over persons and property exists in every State without qualification, except as modified by the limitations of the Federal Constitution.

The authority of the United States to acquire and to hold land within a State is that granted by clause 17, section 8, Article I, and clause 2, section 3, Article IV, of the Constitution.

The power over the territory or other property of the United States is a granted power and the question, therefore, is not so much what does the Federal Government possess, but what did the people and the States intend to give. Did the people and the States surrender jurisdiction and control of those elements of material prosperity without which State development would be arrested and State ambitions defeated? Did Arizona, when she consented to the provisions in the enabling act which granted statehood to her, agree to divest herself of the control of these elements and resources within the State upon which the very life of the State depends? Arizona declares she did not so intend.

The United States Circuit Court of Appeals for the District of Idaho, in the case of the Twin Falls Canal Co. (Ltd.) *v.* Foote et al. (192 Fed. 583, quoting from p. 594), states:

In the construction of works for the irrigation of arid public lands under the reclamation act, June 17, 1902, chapter 1093, Thirty-second Statutes 388 (U. S. Comp. St. Supp. 1909, p. 596), the United States is not exercising a governmental function nor even a strictly public function, but is promoting its proprietary interests, and such advantage as arises therefrom to the public at large is material, and not governmental.

The reservations made by the Congress, in the Arizona enabling act, if valid, relate solely to the use, by the Federal Government, of lands within the State of Arizona, both public and State, for the sole purpose of enabling the Government to protect its proprietary interests in the public lands under the authority vested in Congress by clause 17, section 8, Article I, and clause 2, section 3, Article IV of the Constitution of the United States.

The United States Supreme Court, in discussing the control vested in the Federal Government over public lands in the case of Kansas *v.* Colorado (206 U. S. 46), stated:

The full scope of this paragraph has never been definitely settled. Primarily, at least, it was a grant of power to the United States of control over its property. * * * But clearly it does not grant to Congress any legislative control over the States, and must, so far as they are concerned, be limited to authority over property belonging to the United States within their limits. * * * The powers affecting the internal affairs of the States not granted to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, and all powers of a national character which are not delegated to the National Government by the Constitution are reserved to the people of the United States.

Arizona contends that the reservation in section 20, paragraph 7, of the Arizona enabling act, must be construed in accordance with the provisions of the reclamation act as it was on February 14, 1912; that it does not apply to the projects authorized in the Swing-Johnson bill; and that even if the projects, authorized by the Swing-Johnson bill, are determined to be reclamation projects, that the Federal Government must comply with the provisions of the reclamation act; that the provisions of section 28, paragraph 5, of the Arizona enabling act, relate solely to lands, and was not intended to and does not affect the control of the water and of the bed and banks of the Colorado River by the State of Arizona.

Arizona contends that she did not barter away any of her constitutional and sovereign rights when she accepted the provisions of the enabling act; that the reservations are limited by the provisions of the reclamation act as of February 14, 1912; and that any rights which the Government may have reserved in the Arizona enabling act must be predicated upon the provisions of the reclamation act as of that date.

One of the provisions in the Federal reclamation act reads:

SEC. 8. That nothing in this act shall be construed as affecting or intended to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any rights of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated and beneficial use shall be the basis, the measure, and the limit of the right.

If the reservations made by Congress in the Arizona enabling act are valid, they retain the right to the Federal Government to utilize the bed and banks and the waters of the Colorado River at Black or Boulder Canyon subject to and in accordance with the provisions of section 8 of the reclamation act.

We have 48 sovereign States, each one a giant column supporting the Union. Destroy one of the States, or weaken its power, and the same thing will happen to the Federal Union that happens to a temple when one of the columns distributing the temple's weight is removed or weakened. Remove, destroy, impair one of the columns and the whole structure is in danger of falling into disrepair and finally into ruin.

Therefore we should remember that it is the State of Arizona and not the Federal Government that is furnishing the potentiality of this mysterious thing we call electricity, and that fur-

nishes the fall of the river. Electricity, the great white horse of eternity, which is always on the road and which never grows weary; electricity, that invisible, mysterious, and powerful force, will be furnished by the State of Arizona and not by the Federal Government.

Mr. President, the Colorado River is an interstate stream and by a fiction of law is a navigable stream; its navigability has been destroyed. The water in the river originates wholly in the United States, but the mouth of the river is in a foreign country. The strict application of the doctrine laid down by the United States Supreme Court in the case of Wyoming *v.* Colorado (259 U. S. 419) would probably result in the appropriation of the water of the river by the States best able to put it to immediate use, and this would be extremely detrimental to the interests of the upper basin States. It would also probably inspire a race for competitive development of agricultural lands, which economic conditions do not warrant.

Mr. SHEPPARD. Mr. President, will the Senator yield?

Mr. ASHURST. I yield.

Mr. SHEPPARD. How much of the Colorado River is in Mexico?

Mr. ASHURST. I ask the Senator from Texas to step to the map which hangs on the wall, and in answer to his question I will say that this line [indicating] on the map is the boundary line between the State of California and Lower California, Lower California being in Mexico. This [indicating] is the line between Arizona and Mexico. It is approximately 100 miles from the international line to where the Colorado River debouches into the Gulf of California. In a meandered line, as the river flows, it is probably 150 miles.

Mr. SHEPPARD. About 150 miles of the river in a meandered line is in Mexico?

Mr. ASHURST. Approximately.

Mr. SHEPPARD. I thank the Senator.

Mr. ASHURST. I may be a little high in the mileage of the meandered line, but it is something approximating that.

STATES ARE ENTITLED TO EQUALITY OF RIGHT UNDER THE CONSTITUTION

The Constitution of the United States provides and the United States Supreme Court in a long line of decisions has consistently upheld the theory upon which our Union of States is founded—that each of the States is sovereign, is entitled to the use of its natural advantages, and stands on an equality with all of the other States.

The United States Supreme Court has declared in the case of Kansas *v.* Colorado (206 U. S. 97) that—

> One cardinal rule underlying all the relations of the States to each other is that of equality of right. Each State stands on the same level with all the rest. It can impose its own legislation on no one of the others and is bound to yield its own views to none.

In Hudson Water Co. *v.* McCarter (209 U. S. 357), the court stated:

> It (a State) finds itself in possession of what all admit to be a great public good, and what it has it may keep and give no one a reason for its will.

In Trenton *v.* New Jersey (262 U. S. 185) the court stated:

> The State undoubtedly has power and it is its duty to control and conserve the use of its water resources for the benefit of all its inhabitants.

In Coyle *v.* Oklahoma (221 U. S. 559, 573) the Supreme Court stated that—

> Equality of constitutional right and power is the condition of all States of the Union, old and new.

In Kansas *v.* Colorado (206 U. S. 92) the court stated:

> The powers of the National Government within the semiarid States are the same—no greater and no less—as those within the limits of the original thirteen.

In Hammer *v.* Dagenhart (247 U. S. 273) the court stated:

> There is no power vested in Congress to require the States to exercise their police powers.

The cases which have been cited leave no room for doubt that the State of Arizona is entitled to the same protection and to the application of the same principles of law which the other States in the Colorado River Basin are afforded by any legislation authorized by Congress.

If the present and existing laws which govern the appropriation and use of water in the Colorado River Basin—as they are interpreted and enforced by the decision of the courts, and particularly, if the laws as they relate to an interstate stream, as they are defined by the United States Supreme Court in the case of Colorado *v.* Wyoming (259 U. S. 419)—are to be repealed, Arizona's demand is merely for equality of right with the other States. Arizona insists that the other States of the Colorado River Basin have no right to determine their own needs, reserve an adequate supply of water to care for their needs, then impose their will upon Arizona and decline to be bound by the same rule they seek to apply to Arizona.

If Arizona unreservedly consented to and ratified article 4 (a) of the Colorado River compact, she would thereby renounce sovereign and valuable rights which she now possesses in the bed and banks of that river.

Arizona is asked to surrender rights which she now possesses and to enter into a compact with the other six States in the Colorado River Basin.

The Colorado River compact is primarily an instrument to apportion the beneficial consumptive use of the waters of the river among the several States.

Arizona agrees, in the main, with the principles upon which the proposed compact is based, and declares that when an equitable portion of the water is reserved for her use, she will then enter into the compact in so far as it relates to a division of the water.

The compact, however, contains a provision (art. 4 (a)) which is of transcendental importance to Arizona and to which the State can not agree without a reservation.

The article referred to makes a formal declaration in which the States agree—and Congress is asked to ratify the proposal—"that the Colorado River has ceased to be navigable for commerce." This might be construed to be tantamount to a renunciation by Arizona of sovereign and valuable rights which the State now possesses and a declaration that they shall become extinct.

I think it does no credit to the candor of gentlemen when they propose as one of the reasons for this bill the improvement of navigation.

Mr. SHEPPARD. Mr. President——

Mr. ASHURST. I yield.

Mr. SHEPPARD. As a matter of fact, the river is navigable for some distance from its mouth, is it not?

Mr. ASHURST. I will say in reply to the Senator that there are periods when the river from Yuma to the Gulf of California might be navigable for small craft; but for practical purposes navigation ceased 40 or more years ago, and sometimes the river below Hanlon Heading is not a stream at all, but a mere trickle, and persons and animals may walk dry-shod across the channel or bed of the river. The whole volume of the water below Hanlon Heading is at times necessarily absorbed in applying it to irrigate the thirsty soils. So, in answer to the Senator's question, I must say that at times the river would be navigable by small craft. Fifty years ago a vast amount of the supplies of the pioneers in Arizona were carried on a small steamer from California ports and brought around Cape of St. Lucas into the Gulf of California and thence up the Colorado River to Yuma, to Ehrenberg, and old Calville. But for practical purposes the river has not been navigable for years.

Mr. SHEPPARD. Is it not a fact that there are a number of fishing vessels on the lower river?

Mr. ASHURST. At times some fish from the Gulf of California do proceed some short distance up the river, but the real attractions that appeal to those who delight in piscatorial recreation are to be found in the gulf itself, and I might say, in passing, that the varieties of the fish in the Gulf of California probably rival those found in any other waters.

Mr. SHEPPARD. Is it not true that there are fishing fleets that go down into the gulf for purposes of fishing, rendezvousing within the United States in the river?

Mr. ASHURST. They rendezvous rather on the northeastern gulf coast, but not in the river.

Mr. SHEPPARD. What is the distance from the mouth of the river to the Laguna Dam?

Mr. ASHURST. The distance from the mouth of the river to the Laguna Dam, in a meandered line, would be about 164 miles, and in a direct line, over 100 miles. Of course, those distances are not absolutely accurate; they are approximate.

Mr. SHORTRIDGE. Mr. President, will the Senator yield?

Mr. ASHURST. I yield.

Mr. SHORTRIDGE. I think it would be fair to those who made this compact to have subdivision (a) of article 4 read into the RECORD.

Mr. ASHURST. I have no objection. The Senator may ask for that.

Mr. SHORTRIDGE. The Senator will observe that the provision proceeds to say that—

> The use of its waters for purposes of navigation shall be subservient to the uses of such water for domestic, agricultural, and power purposes.

Mr. ASHURST. Much as we may quarrel with the compact, I do not believe we quarrel with that expression. Navigation on the Colorado River is practically extinguished.

Mr. SHEPPARD. Mr. President, will the Senator yield for one more question?

Mr. ASHURST. Certainly. I always with pleasure yield to the able Senator from Texas.

Mr. SHEPPARD. I appreciate that very much. What is the average depth of the river from the mouth to the international boundary line?

Mr. ASHURST. At flood tide the river would have a depth of 20 feet or more, probably 30 feet, and be two or three hundred feet wide.

Mr. SHEPPARD. At ordinary low water stages, what would be the depth from the mouth of the river to the international boundary?

Mr. ASHURST. There would be periods when it would be 1 foot, some periods when it would be 2 feet, some when it would be 5, some 10. It all depends on the stream flow. The Colorado River is our most flashy, most uncertain, most temperamental river.

Arizona agrees, in principle, that a higher use can be made of the water of the Colorado River than to require its use for the purpose of navigation. The State, however, desires to retain sovereign and valuable rights which she possesses in this navigable stream, and insists that before Arizona will agree to ratify the provisions of article 4 (a) of the compact the agreement must provide that Arizona's right to retain and control—as a sovereign, for the use and benefit of her citizens—the bed and banks and the use of the waters of the stream, while they are within her borders, for the development of hydroelectric power. One of the sovereign rights which Arizona desires to exercise as a result of her ownership of the bed and banks of the Colorado River and her rights in the waters of the stream is to derive revenue for public purposes from the development of hydroelectric power.

It is contended that Arizona would have no right to tax a power project constructed by the Federal Government. Arizona agrees that if the United States Government, when it constructs the projects, were exercising a strictly governmental function or even a strictly public function and possibly even in promoting its own proprietary interests, it would not be subject to taxation upon its projects, but Arizona insists that the projects authorized in the Swing-Johnson bill do not meet this test.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator a question?

Mr. ASHURST. I yield to my friend from California.

Mr. SHORTRIDGE. There might be an argument made that the construction and operation of a power plant was not within a Federal governmental function. If that were so, as a matter of law, the State of Arizona could tax the power plant; could it not?

Mr. ASHURST. I think it worthy of further thought before replying.

Mr. SHORTRIDGE. Does the State of Arizona take the position that the building of the dam is not within governmental power or Federal power?

Mr. ASHURST. The Federal Government has plenary power and authority to do practically whatever the Government wishes to do with respect to a navigable stream and to regulate interstate commerce. The Federal Government has plenary power to impound flood waters in order to protect the lands of the Federal Government; yea, more, it is the duty of the Federal Government to build dams to impound waters to protect the lives and the property of citizens from waters of wrath which would overwhelm the property of citizens, take their lives, and sweep away their property; it is not only the right, but it is the duty of the Government to construct flood-control works or dams to control the floods where there is danger of destroying life and property.

When we get into a question of the right and authority of the Federal Government to enter "into business" we learn apparently that the Constitution was written on rubber and not on concrete. The Constitution has been stretched until it has protected every dollar in this land, and those who have stretched it to protect every dollar must not complain if some others stretch it to protect human life. Moreover, the Constitution is a document in keeping with the progressive thought of our country. Some propositions that would be declared constitutional now would not have been declared constitutional 40 or 30 years ago, because this is a living, moving, breathing world. I have no doubt if the question were taken to the Supreme Court of the United States as to the right and authority of the Federal Government to generate hydroelectric power at a dam built by the Government to protect the lives and property of its citizens, the court would declare that, as an incident and as a by-product of the project, under the general-welfare clause of the Constitution authority would be found to permit the governmental agencies to develop hydroelectric energy.

How far the Government should go into such "business" is a matter more for the political than the judicial forum, but it seems to me—and this is the fact upon which we predicate much of our opposition to the bill—that if the Government goes into the business of generating hydroelectric power and the business of furnishing potable water to cities, the Government ought to furnish and distribute its own waters and not the waters of Arizona. The Government in its attempts to generate hydroelectric power and sell the same, ought not to capture the potential rights and potential wealth which belong to a State.

The authorized representatives of Arizona have stated repeatedly that they are willing to accept and enter into a compact with the other States in the Colorado River Basin, provided the State of Arizona is given the protection under these new laws equal to that which is given to all the other States. Or, stated in another way, Arizona is asking that if the law of prior appropriation is to be set aside and water is to be apportioned by a compact among the States, that Arizona be given the same protection against Mexico and California that Colorado, Wyoming, Utah, and New Mexico are asking for themselves.

This is the infrangible point or pivot upon which the question revolves. If the law of prior appropriation, which has obtained in the Western States for 60 years is to be repealed, and this bill does repeal such law pro tanto, then Arizona asks that a compact be entered into by all the basin States distributing the water so that each State will know exactly how much each State will receive in the future, because I do not need to say to the Senators from those States of high temperature and low rainfall that water at times is as precious as molten silver. At times an acre-foot of water might mean as much as an acre-foot of molten silver would mean. So Arizona has contended that if the law of prior appropriation, under which the West has grown and prospered for 60 years, is to be repealed, we must know how much water we are to obtain for our State and the amount must come without default.

Mr. SHORTRIDGE. Mr. President, will the Senator pardon me again?

The PRESIDING OFFICER (Mr. SHEPPARD in the chair). Does the Senator from Arizona yield to the Senator from California?

Mr. ASHURST. I yield to the Senator.

Mr. SHORTRIDGE. I understand from the remarks of the Senator that many agree that the lower basin States have acquired or may acquire certain vested rights in and to water which might very materially affect the upper basin States; wherefore it has been suggested by many that the upper basin States should speedily join in the passage of this bill, for otherwise their rights might be impaired.

Mr. ASHURST. First let me say that in my opinion the normal stream flow of the Colorado River has been appropriated in the lower basin.

Mr. SHORTRIDGE. May I ask the Senator by whom?

Mr. ASHURST. By municipalities and citizens in the Senator's State and in Arizona.

Mr. SHORTRIDGE. And they can not be divested?

Mr. ASHURST. The upper States must send down to the lower States enough water to cover all the prior appropriations.

Mr. SHORTRIDGE. And from that flows the proposition that the upper States could be enjoined from interfering with us in the use of our water?

Mr. ASHURST. The normal flow of the stream, having been appropriated and turned to a beneficial use, we know there are floods which send down enormous quantities of water that rush wildly to the sea. Those floods it is now proposed to conserve, and of course the question arises as to the division and the distribution of the flood waters.

Questions were asked by the able Senator from Texas [Mr. SHEPPARD] about navigation.

Mr. NORRIS. Mr. President, may I interrupt the Senator before he leaves the subject he has been discussing, as he is apparently about to do?

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Nebraska?

Mr. ASHURST. Certainly.

Mr. NORRIS. If I understand the Senator correctly, then, we have already reached the time when the people in the so-called upper basin could be enjoined from taking any water out of the river.

Mr. ASHURST. They could be required to send down water to satisfy prior appropriators.

Mr. NORRIS. Oh, yes; and I intended to include that in my question. The Senator has said that the normal flow of the stream has already been appropriated.

Mr. ASHURST. That is in the so-called lower basin.

Mr. NORRIS. The upper basin must let enough water go down to keep up the normal flow?

Mr. ASHURST. Yes.

Mr. NORRIS. So they have really reached their limit so far as taking out water is concerned and, of course, it would not do them much good to take out only at flood time, because that would be the time when they would not need it. The time when they would need it most would be in the time of low water. So, for their practical purposes, they have reached the end of irrigation unless Congress provides or in some way there is a high dam built that will hold the flood waters.

Mr. ASHURST. I have much respect for the Senator's opinions and conclusions, and I am trying to bring home to Senators the importance of the idea that Arizona has valuable rights in these waters and that unless she has some agreement, understanding, or modus vivendi guaranteeing her a reasonable amount of water she would be handicapped because of the superior opulence of California, which would play an important part in any competitive development.

Mr. NORRIS. It seems to me, however we may disagree on the distribution of the surplus waters, practically everybody does agree that a dam to hold back the flood waters is necessary for those who live on the river in both the upper and the lower basins.

Mr. ASHURST. I never disputed that.

Mr. NORRIS. And particularly the upper-basin people have reached the time already when, even if they were ready to use more water for irrigation, they could not get it unless there should be such a dam built.

Mr. ASHURST. I will say that the upper-basin States, through their Senators and Representatives, are about as nervous over this question as over any problem in America to-day.

Mr. NORRIS. I should think it would be. They are not interested in the quarrel, if there is a quarrel, between California and Arizona and Nevada about the division of the surplus water——

Mr. ASHURST. Not at all.

Mr. NORRIS. That will come down after the dam shall be built; but it seems to me that probably, second to the people of the Imperial Valley, whose very lives depend on a dam of this kind, the people in the upper-basin States are next interested in this proposed dam, although it does not appear on the face of things that they are so directly interested, because their future development, as they claim—and I presume correctly—depends to a great extent upon the use of water that they can get from the Colorado River. The only way by which it would be possible for them to get it under the law would be to store the flood waters so as to give them an opportunity to use some of them.

Mr. ASHURST. The able Senator from Texas [Mr. SHEPPARD] asked a number of questions regarding navigation.

The history of exploration of the basin of the Colorado is replete with accounts of interest and romantic incidents, with discoveries, starvations, battles, massacres, and lonely, dangerous journeys. A brief outline of the more important events, arranged in chronologic order, is here presented:

1531. As early as 1531 vague rumors were current of a large river, the mouth of which was closed by a cable stretched across from side to side.

1539. Francisco de Ulloa sailed from Acapulco July 8, 1539, with a fleet of three vessels, and after many difficulties reached shallow water at the head of the Sea of Cortes (now known as the Gulf of California). This seems to have been the first visit of Europeans to the mouth of the Colorado. Ulloa did not see the river but surmised that one might be there.

1540. Hernando de Alarcon sailed in May, 1540, to explore the region north of New Spain, and at last reached the head of the Sea of Cortes. He says: "And it pleased God that after this sort we came to the very bottom of the bay, where we found a very mighty river, which ran with so great fury of a stream that we could hardly sail against it" (spelling modernized). Here began the acquaintance of Europeans with the river now known as the Colorado of the West. Alarcon proceeded up the Colorado in small boats to a point about 100 miles above the mouth of Gila River.

I might say that the Gila River flows across Arizona and enters into the Colorado River a little above the city of Yuma.

Mr. SHORTRIDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from California?

Mr. ASHURST. I yield to my friend from California.

Mr. SHORTRIDGE. I understood the position of the Senator's colleague [Mr. HAYDEN], as revealed in his proposed amendment, to be that, notwithstanding what the Senator has just now said, Arizona is not willing to contribute any of the waters of the Gila toward satisfying any demands of Mexico under any future treaty that may be entered into.

Mr. ASHURST. I think my colleague spoke clearly upon that point.

Mr. SHORTRIDGE. I wanted to know as to that.

Mr. ASHURST. When Mexico's demands, if she has any, would need satisfaction and the time when she would need water would be, of course, during the dry season, and there would be little or no waters of the Gila to come down to Mexico.

Mr. SHORTRIDGE. Then, the language of the proposed amendment, I take it, might be said to be an act of supererogation, surplusage, something which is not needed at all.

Mr. ASHURST. No; it is an act of good faith.

Referring further to navigation and explorations of the river:

Melchior Díaz in the fall of 1540 explored the Colorado and surrounding country in the vicinity of the Chocolate Mountains. At about the same time (1542) Don López de Cárdenas discovered the Grand Canyon. The canyons of the river, however, remained unexplored for 329 years thereafter—until 1869.

1605. Don Juan de Oñate, governor of New Mexico, made a trip from the village of San Juan on the Rio Grande to the Colorado in the vicinity of Williams River and went down the Colorado to the Gulf.

1618. Zalvidar with Padre Jimínez and 47 soldiers went out to Moki and thence to the Rio de Buena Esperanza (Colorado River), but they evidently encountered Marble Canyon and soon returned.

1680 to 1711. Padre Eusibio Francisco Kino (spelled also Kühn, Kühne, Quino, and in several other ways. Dellenbaugh (op. cit., p. 80) says that Kühn or Kühne is probably the correct form, but long usage gives preference to Kino), an Austrian by birth and a member of the Jesuit order, made many journeys over the whole of northern Sonora and the southern half of Arizona, then comprising the Pimeria Alta, the upper land of Pimas, and Papagueria, the land of Papagos. His base of exploration was the mission of Dolores, which he established in Sonora in 1687. For some 30 years Kino labored in this field with tireless energy.

1744. Padre Jacobo Sedelmair went down the Gila from Casa Grande to the great bend and thence across to the Colorado at about the mouth of William River, but his journey was no more fruitful than those of his predecessors in the last two centuries.

1768–1776. Francisco Garcés made five expeditions. The first was made in 1768 and the second in 1770, but in these journeys he did not reach the Colorado. In the third, in 1771, he went down the Gila to the Colorado and descended the Colorado along its banks, possibly to the mouth. In the fourth, in 1774, he went with Captain Anza to the Colorado and to the Mission of San Gabriel in California near Los Angeles. In his fifth and most important expedition, in 1775–76, he again accompanied Captain Anza, who was bound for the present site of San Francisco, there to establish a mission. At Yuma Garcés left the Anza party, went down to the mouth of the Colorado, and then up along the river to Mohave, and after another trip out to San Gabriel he started on the most important part of all his journeys, from Mohave to the Moki towns, the objective point of all expeditions eastward from the Colorado. Leaving Mohave June 4, 1776, Garcés struck eastward across Arizona and passed near the rim of the Grand Canyon, though he did not then see it. Garcés found his way down to the Little Colorado by means of a side canyon, and got up again on the other side in the same way. On July 2 he arrived at the Pueblo of Oraibi. The natives refused to allow him to remain at Oraibi, and he left on July 4. He reached the Colorado again July 25, his journey having proved absolutely fruitless so far as missionary work was concerned, and he arrived at his mission of Bac September 17, 1776.

1776. On July 29, 1776, another even greater expedition was begun at Santa Fe by the Fray Padre Francisco Silvestre Vélez Escalante in his search for a route to Monterey. Escalante believed a better road existed to Monterey by way of the north than by the middle route, and a further incentive to journey that way was probably the rumors of large towns in that direction.

The party went by way of Abiquiu and Chama River and reached the San Juan about where it first meets the north line of New Mexico; thence they crossed several tributaries to the head of Dolores River, which they descended for 11 days. The party made its way across Grand River, the Book Plateau, and White River to the Green (called the San Buenaventura), which was forded apparently near the foot of Split Mountain Canyon. Following the course of the river down some 10 leagues, they went up the Uinta (now called Duchesne) and finally crossed the Wasatch Range, coming down the western side, evidently by way of what is now known as Spanish Fork, to Utah Lake, then called by the natives Timpanogos. Here they heard of a greater lake to the north, but instead of seeking it they turned southwesterly in what they considered the direction of Monterey through Sevier River Valley, calling

the Sevier the Santa Isabel, and kept down along the western edge of the high plateaus. It was by this time the 7th of October, and Escalante concluded that it would be impossible to reach Monterey before winter set in; he therefore persuaded his companions that it would be best to strike for the Moki towns in Arizona.

Going on southward past what is now Parowan, they came to the headwaters of a branch of the Virgin, in Cedar Valley, and this they followed down to the main stream, which they left flowing southwesterly. The place where they turned from it was probably about at Toquerville. Trying to make their general course southeast, they passed over the country now known as Kanab, Ninemile Valley, Kaibab Plateau, Horse Rock Valley, and Vermilion Cliffs, and at length struck the Colorado at Marble Canyon. Twice they succeeded in descending to the river, but were unable to cross. On November 8, 1776, they reached the ford now known as the Crossing of the Fathers, about 35 miles north of Lee Ferry, a few miles north of the Utah-Arizona State line. From this crossing to the Moki towns Escalante had a plain trail, and on reaching Santa Fe he and his party had completed a circuit of more than 1,500 miles, mainly through unknown country. This is one of the most remarkable explorations ever carried out in the West.

1779–1781. The authorities, importuned by Captain Palma, the Yuma chief, whose devotions and piety had so delighted Garcés, had decided to establish on the Lower Colorado two nondescript settlements, a sort of cross between mission, pueblo, and presidio. Garcés therefore went to Yuma again in 1779 to prepare the way, and in 1780 two of the hybrid affairs were started. One, at what is now Fort Yuma, was called Puerto de la Purísima Concepción, after the little canyon near by which had been so named by Garcés, a canyon 50 feet deep and 1,000 feet long; the other, about 8 miles down, was called San Pedro y San Pablo de Bicuner. There were four padres, Garcés and Barraneche at the upper station and Diaz and Moreno at the lower. Each place had 8 or 10 soldiers, a few colonists, and a few laborers. The Spaniards were obliged to appropriate some of the best lands to till for the support of the missions, and this fact, together with the general poverty of the establishments when he had expected something fine, disgusted Palma and exasperated him and the other Yumas. In June, 1781, Captain Moncada, lieutenant governor of Lower California, arrived with soldiers and recruits en route for California settlements and encamped opposite Yuma. After some of these people had been sent forward or back, as the plans demanded, Moncada remained at the camp with a few of his soldiers. On the 17th of July, without a sign preliminary to the execution of their wrath, Captain Palma and all his band threw piety to the winds and annihilated with clubs Moncada's camp and most of the men in the two missions. Garcés, who had never been to Palma and his people anything but a kind and generous friend, and his assistant, Barraneche, were at first spared, but the rabble declared these two were the worst of all, and under this pressure Palma yielded. The military expeditions sent to avenge the massacre were unsuccessful and the missions on the Colorado were ended. Nearly half a century passed before the face of the white man was again seen at the mouth of the river.

1808. Two years after the return of the famous Lewis and Clark expedition Andrew Henry crossed over the South Pass into the valley of Green River in Wyoming.

1824. Gen. William Henry Ashley having previously organized a fur-trading company in St. Louis, then the center of all western commerce, had established himself in Green River Valley with a large band of expert trappers.

1825. In 1825 Ashley had established a camp at the mouth of Henrys Fork, near Flaming Gorge. During this year Ashley and his party constructed boats to go down the Green for the purpose of trapping beaver. The trip was successful through Flaming Gorge and Horseshoe Canyon, but in Red Canyon their boats were wrecked in a cataract now known as Ashley Falls. Ashley and his party left the river at Browns Park. This was, no doubt, the first attempt to navigate Green River.

1825 to 1839. During this period the Colorado Basin was visited by many trappers and explorers. Some of the most prominent were James O. Pattie and his father (1825); R. W. Hardy (1826); Jedediah Smith (1826); Kit Carson, one of the greatest scouts and trappers (1826); Ewing Young, trapper (1827); William Wolfskill (1830); Captain Bonneville (1832); and Thomas J. Farnham (1839).

By the time the third decade of the nineteenth century was fairly begun the trappers were crossing in considerable numbers from the headwaters of the Missouri and the Platte into the valleys of the Colorado and the Columbia.

1840. By the year 1840 the great western wilderness had been traversed throughout by Americans. Only the canyons of the Colorado remained, at least below the mouth of Grand River, almost as much of a problem as before the fur trade was born.

1842. In 1842 Frémont came up the North Platte and Sweetwater Branch, crossing from that stream by the South Pass over to the headwaters of the Colorado. Frémont's explorations of the Colorado and the West covered the period 1842 to 1846.

1847 to 1852. In 1847 the Mormons crossed the Colorado River Basin and settled in Salt Lake Valley. In 1849 the discovery of gold in California led many emigrants to cross the Colorado River Basin. In 1851 Fort Yuma was established. According to Lieutenant Hobbs, the first steamboat came up the Colorado to Yuma in 1850, frightening the Yumas so that they ran for their lives, exclaiming that the devil was coming, blowing fire and smoke out of his eyes and nose and kicking back with his feet in the water. This was the stern-wheel steamboat *Yuma*, which evidently antedated the *Uncle Sam*, usually credited with being the first steamboat on the Colorado. In 1851 George A. Johnson came to the mouth of the Colorado on the schooner *Sierra Nevada*.

1857. Lieutenant Ives with the steamboat *Explorer* and Captain Johnson with the steamboat *Colorado* navigated Colorado River to a point called "the head of navigation." The highest point reached by Lieutenant Ives was Vegas Wash; Captain Johnson took his boat to a point several miles above Vegas Wash.

1859. During the year 1859 Captain Macomb was sent to examine the junction of the Green and Grand. For a considerable distance he followed from Santa Fe almost the same trail that Escalante had traveled 83 years previously. Dr. J. S. Newberry, the eminent geologist, who had been with Lieutenant Ives, was one of this party. Macomb and Newberry succeeded in forcing their way within 6 miles of the junction, there to be completely baffled and turned back.

1866. In 1866 another attempt was made to navigate the Colorado above Mohave. Captain Rogers, who for four years had been on the lower Colorado, took the steamboat *Esmeralda*, 97 feet long and drawing 3½ feet of water, up as far as Callville, near the mouth of the Virgin, which was several miles above the highest point attained by Ives in his skiff, but little, if any, farther than Johnson had come with his steamboat.

1868. During the winter of 1868 and 1869 Maj. John Wesley Powell made several important journeys in connection with his purpose of exploring the great walled river; one was southward as far as Grand River; a second followed White River to its junction with the Green; and a third went northward around the base of Uinta Mountains, skirting the gorges afterwards named Lodore, Whirlpool, and Red Canyon. In these travels he formed his plans for an attempt to explore fully the remarkable string of chasms. Funds for the proposed expedition were furnished by the State institutions of Illinois and the Chicago Academy of Sciences—none by the Federal Government, so that this was in no way a Government expedition, except that Congress passed a joint resolution authorizing him to draw rations for 12 men from western Army posts.

1869. On May 24, 1869, Major Powell and his party left Green River, Wyo., on their voyage down the Green and the Colorado to the mouth of the Virgin. There were 12 men in the party; three of the four boats were of oak, 21 feet long, and one was of light pine, 16 feet long. During the last week in August, Powell reached his goal, the mouth of Virgin River. Here he left the party, but the others continued down the river to the Gulf, which they reached before the end of September, 1869. Although Powell had demonstrated the possibility of passing alive through the 1,000-mile stretch of canyons on the Green and the Colorado, the scientific results of his hazardous voyage were not what he desired. Owing to numerous disasters many instruments had been lost and he had been prevented by this and many other circumstances from fully accomplishing his intentions. For this reason he determined to make another descent if he could obtain pecuniary aid from the Government. Congress appropriated a sum for a second expedition.

1871. On May 22, 1871, Powell left Green River, Wyo., on his second voyage down the Green and the Colorado. This voyage of exploration of the canyons on the main stream and its tributaries was completed to Lee Ferry in the second week of October. Lee Ferry is at the mouth of Paria River, at the head of Marble Canyon, in Arizona. Here the boats were cached and the party spent the winter in the vicinity of Kanab.

1871. While the Powell party was making its second voyage down the Green and the Colorado another expedition was being made up the Colorado. Lieutenant Wheeler, topographical engineer of the War Department, started from Fort Mohave September 16, 1871, to explore the Colorado to the mouth of Diamond Creek, which he reached October 22. It required four weeks of extremely hard work to make the voyage up the Colorado from Fort Mohave to the mouth of Diamond Creek, whereas members of the party made the trip from the mouth of Diamond Creek to Fort Mohave in five days.

1872. On August 17, 1872, Major Powell returned to his boats at the mouth of the Paria and started on his second voyage through the Grand Canyon. On reaching the mouth of Kanab Creek, Powell decided to end the river work on account of the extreme high water, which made the rapids in the second graphite gorge impassable. The topographic, geologic, and geodetic work of the survey did not cease with his departure from the river but was continued in the territory adjacent to the Grand Canyon.

1877. The Southern Pacific Railroad was completed to the Colorado at Yuma, Ariz., in 1877.

1883. The Atlantic & Pacific Railroad crossed the Colorado at Needles in 1883. The Rio Grande Western crossed the Green in

Gunnison Valley, Utah, in 1883; the Union Pacific had been constructed to Green River, Wyo., in 1869.

1889. A new railroad was proposed from Grand Junction, Colo., down the Colorado through the canyons to the Gulf of California, a distance of 1,200 miles. At that time it was difficult to procure coal on the Pacific coast and it was thought that this "water-level" road, crossing no mountains, would be profitable in bringing the coal from Colorado to the Golden Gate.

A company was organized with Frank M. Brown as its president, and surveys were started as the preliminary to the construction of the Denver, Colorado Canyon & Pacific Railway. Brown and his party started from Green River, Utah, on May 25, 1889, to continue the railroad survey down the Colorado, the survey down the Grand having been completed to its mouth. The chief engineer of the proposed railroad was Robert Brewster Stanton. The difficulties encountered in conducting the surveys through Cataract Canyon were enormous. The line was carried to the mouth of the Paria. Boats were not suitable for the river work, and it was decided not to attempt to carry the railroad survey into Marble Canyon. A reconnaissance investigation of this canyon, however, was attempted, and just below the Soap Creek Rapids, in Marble Canyon, Brown, the president of the railroad company, was drowned. A few days later two other members of the party were lost in the river. This second disaster caused Stanton to resolve to leave the river. The remaining members of the party climbed from Marble Canyon at the point known as Veseys Paradise. On July 19, 1889, the party reached the surface of the country, 2,500 feet above the river. By November 25, 1889, Stanton had organized a new party to continue the railroad survey. The trip through the lower canyons on the Colorado was completed March 17, 1890.

1891–1894. Since the Stanton party several successful and unsuccessful descents have been made. The first was the "Best party," representing the Colorado, Grand Canyon & Improvement Co., with eight men and two boats similar to those used by Stanton on his second voyage. The expedition left Green River, Utah, July 10, 1891. The trip was successful to Lee Ferry. No men were lost. The expedition was abandoned at this point.

In 1891 the steam launch *Major Powell*, 35 feet long, equipped with two 6-horsepower engines driving twin screws, was brought out in the summer from Chicago by way of Rio Grande Western Railway to the crossing of Green River and was launched in September of that year. A screw was soon broken and the attempt to go down the river abandoned. In 1892 another effort was made, which was also given up after a few miles, but in 1893 the *Major Powell* was taken down to the junction of the Green and Grand and back, making a second trip in April. Several other steamboats were later put on the river, the *Undine* being the most pretentious. She was wrecked trying to run upstream on Grand River above Moab. In 1894 Lieut. C. L. Potter made a successful voyage from Diamond Creek to the mouth of the Virgin.

1895. September 20, 1895, N. Galloway and William Richmond started from Green River, Wyo., and made the trip to Lee Ferry in flat-bottomed boats. In September, 1896, they started again from Henry Fork, Wyo., and went to the Needles, reaching there February 10, 1897. Since that time Galloway has made several successful descents.

1896. In August, 1896, George F. Flavell and a companion left Green River, Wyo., and successfully descended the Colorado to Yuma, Ariz., in flat-bottomed boats, reaching there December, 1896.

1907. In 1907 three miners, Charles Russell, E. R. Monett, and Albert Loper, with three steel boats, each 16 feet long, left Green River, Utah, September 20, to make the descent. Loper and one damaged boat were left at Hite, near the mouth of Fremont River, while Russell and Monett proceeded. In the beginning of the Grand Canyon they lost a boat, but with the remaining one, after various disasters, finally made their exit from the Grand Canyon January 31, 1908. Their boats of steel were unsuited to the river work.

1909. Julius F. Stone and N. Galloway left Green River, Wyo., September 12, 1909, making a successful descent through the many canyons of the Green and the Colorado.

1911. September 8, 1911, Ellsworth and Emery Kolb left Green River, Wyo., on a photographic trip down the Green and the Colorado. The trip was a complete success. Interesting pictures were obtained, many of which showed the party shooting various rapids. The Kolbs landed at Needles January 18, 1912.

Although many successful descents have been made through the canyons of Green and Colorado Rivers the dangers of such a trip must not be overlooked. In making this trip at the present time it is necessary to take every precaution to make sure that the equipment is complete. No pains should be spared in providing the proper kind of boats. Life preservers should be provided, and care should be taken to provide sufficient food.

THE GOVERNMENT MAY BUILD A DAM ON THE COLORADO RIVER TO IMPROVE NAVIGATION

Considered merely from the point of view of rules of law, clearly established by the highest court of our land, there appears to be no doubt, if the Congress of the United States determines that it is expedient to take such measures as are necessary to promote the Government's interests in the Colorado River under the commerce clause of the Constitution, that there will be little question of the right of the Government to proceed to improve navigation.

Indeed it may be admitted, for the sake of this discussion, that the right of the Federal Government to improve the river for navigation is incontrovertible. The Supreme Court in United States *v.* Chandler-Dunbar Co. (229 U. S. 53), Mr. Justice Lurton speaking for the court (on page 62) says:

> It is subordinate to the public right of navigation, and however helpful in protecting the owner against third parties, is of no avail against the exercise of the great and absolute power of Congress over the improvement of navigable rivers. That power of use and control comes from the power to regulate commerce between the States and with foreign nations. It includes navigation and subjects every navigable river to the control of Congress. * * * If, in the judgment of Congress, the use of the bottom of the river is proper for the purpose of placing therein structures in aid of navigation, it is not thereby taking private property for a public use, for the owner's title was in its very nature subject to that use in the interest of public navigation.

In Scranton *v.* Wheeler (179 U. S. 144, at page 815) the court said:

> If the title had remained in the State, the conclusion would be the same. The State would hold subject to the public use and its property right in the submerged soil of the navigable stream would be subservient to the power of Congress to regulate navigation, and the use of such soil as a support for a structure in aid of navigation would not have been the taking of the private property of the State, within the meaning of the constitutional provisions inhibiting it without compensation.

It is contended, however, by the State of Arizona that by this bill it is not the intention of Congress to control the Colorado River for the primary purpose of making it available as an artery of commerce to facilitate the transportation of persons and goods; but that the whole purpose and intent of the bill is to authorize the division of the water of the Colorado River among the seven basin States; to authorize the States to consume the waters allocated to them and to divert a portion of the water entirely outside the drainage area of the Colorado River and to destroy navigation on the Colorado River.

It is further contended by Arizona, if the Government undertakes to build a dam at Boulder or Black Canyon under the authority of the commerce clause, that the dam must have some real and substantial relation with commerce. The improvement of navigation is not the primary purpose of the projects authorized by the Swing-Johnson bill. No Member of Congress would be so disingenuous as to assert that the primary purpose of this bill is to improve navigation.

BOULDER DAM IS PRIMARILY FOR POWER

The dam authorized by the Swing-Johnson bill is primarily for the purpose of obtaining a water power to lease to States, subdivisions of States or to private individuals, and thereby make available certain incidental benefits. In substantiation of this statement, attention is called to the substance of the following provisions of the bill S. 728:

1. No dam shall be constructed and no work be performed unless power revenues are adequate to pay for the interest and amortization and the operation and maintenance of the entire project. (Sec. 4 (b) p. 5.)

2. No charges are to be made for the storage, use, or delivery of water for domestic purposes. (Sec. 1, p. 2, lines 15 to 17.)

3. No charges are to be made for the storage, use, or delivery of water for agricultural purposes. (Sec. 1, p. 2, lines 15 to 17.)

4. Priorities to use of water from the reservoir shall be in the following order:

(a) Water for use of lands under "a canal connecting Laguna Dam with Imperial and Coachella Valleys." (Sec. 1, p. 2, lines 10 to 13.)

(b) Domestic use.

(c) Agricultural use.

(d) Power.

(e) Navigation.

Sections 4 (a), 5, 6, 8 (b), 12, and 14 of the act and Article IV of the Colorado River compact. (See especially sec. 12 (b) of the bill.)

5. If there be any surplus revenues, Nevada and Arizona are each to receive 18¾ per cent of such excess revenues. (Sec. 4, p. 5.)

6. Leases on power are not to be for longer than 50 years. (Sec. 5 (a), p. 7.)

7. Preference to the use of power is given to States, subdivisions of States, and private agencies in the order given. (Sec. 5 (c), p. 9.)

8. Any agency making a contract for 100,000 horsepower is required to reserve one-fourth of its transmission line for the use of other power contractees. (Sec. 5 (d), p. 10.)

LAWS PASSED BY CONGRESS MUST COME WITHIN THE AUTHORITY AND SCOPE OF THE POWERS DELEGATED TO THE UNITED STATES BY THE CONSTITUTION

The powers which the people and the several States have given to the General Government are named in the Constitution, and such powers as are not therein named, either expressly or by necessary implication, are reserved to the people and to the States. (Turner *v.* Williams, 194 U. S. 295, Justice Brewer's concurring opinion.) The Federal Government would have authority to erect a dam at Black Canyon or Boulder Canyon in the Colorado River for the purpose of the improvement of navigation and the regulation of commerce.

If the Federal Government undertakes under the authority of the commerce clause of the Constitution to build a dam in the Colorado River at Black or Boulder Canyon, the purpose for building the said dam must have some real or substantial relation to or in connection with the commerce regulation. The Supreme Court, in Adair *v.* United States (208 U. S. 178), said:

> Manifestly, any rule prescribed for the conduct of interstate commerce in order to be within the competency of Congress under its power to regulate commerce among the States must have some real or substantial relation to or in connection with the commerce regulation.

Storing water so that the same may be available for domestic purposes and leasing the use of water for developing hydroelectric power may be desirable purposes in themselves, and assuming for the purposes of argument only that they are within the scope of the powers possessed by the Federal Government, surely these activities have nothing to do with interstate or foreign commerce as such. If these purposes are not commerce, clearly the Government may not invoke the commerce clause of the Constitution as granting and sustaining the right to build a dam at Black or Boulder Canyon.

The National Government has the authority to store flood waters for the purpose of irrigating public lands, to develop hydroelectric power, to aid in the development of public lands, and, incidentally, to sell the surplus water for the irrigation of private lands or for other purposes, and to sell the surplus power; but this authority is derived from another provision of the Constitution, and in so far as the States of Arizona and Nevada are concerned the consent of these States must be obtained before these projects can be undertaken at Black or Boulder Canyons.

Other than the implied right conferred upon Congress to promote, preserve, and control navigation, all sovereign powers, property rights, and interests in navigable streams within the borders of the States are reserved to the States. (Pollard *v.* Hagen, 3 How. 229.)

The Supreme Court, in Adair *v.* United States (180 supra), stated:

> We need scarcely repeat what this court has more than once said, that the power to regulate interstate commerce, great and paramount as this power is, can not be exerted in violation of any fundamental right secured by other provisions of the Constitution.

The Supreme Court, in Hammer *v.* Dagenhart (247 U. S. 274), said:

> The grant of authority over a purely Federal matter was not intended to destroy the local power always existing and carefully reserved to the States in the tenth amendment to the Constitution.

Commerce embraces navigation, but commerce does not embrace the irrigation of lands, the development and sale of hydroelectricity, or the sale of water for domestic purposes.

The Supreme Court, in Hammer *v.* Dagenhart (272 supra; citing Delaware, Lackawanna & Western Railroad Co. *v.* Yurkonis (238 U. S. 439), and other cases), stated:

> The making of goods and the mining of coal are not commerce, nor does the fact that these things are to be afterwards shipped or used in interstate commerce, making their production a part thereof.

A statute must be judged by its natural and reasonable effect. (Collins *v.* New Hampshire, 171 U. S. 30, 33, 34.)

The control by Congress over interstate commerce can not authorize the exercise of authority not intrusted to it by the Constitution. (Pipe Line cases, 234 U. S. 548, 560.)

The maintenance of the authority of the States over matters purely local is as essential to the preservation of our institutions as is the conservation of the supremacy of the Federal power in all matters intrusted to the Nation by the Federal Constitution. (Hammer *v.* Dagenhart, 275.)

The purposes intended (by Congress) must be attained consistently with constitutional limitations and not by an invasion of the powers of the States. (Ibid. 276.)

It is argued that the right to control navigation as an incident to the regulation of commerce implies that when necessity demands the control of flood waters of a river in order to protect agricultural lands and the towns dependent upon them from inundation that the Federal Government has the authority to provide such flood control, even though the agencies employed by the Government to control such waters will invest in the Federal Government, the control of the use, of the water. Arizona contends that any dams or other works in the Colorado River must be constructed in conformity with the laws of the States particularly involved.

EXCEPTING ONLY A DAM FOR THE PURPOSE OF IMPROVING NAVIGATION—THE CONSENT OF THE STATES OF ARIZONA AND NEVADA IS REQUIRED TO ERECT A DAM AT BLACK OR BOULDER CANYON

The several States of the Colorado River Basin are primarily the proprietors of, and have sovereignty over, the beds and waters of the navigable streams and watercourses within their respective borders, subject only to the rights of the Federal Government under the commerce clause of the Constitution.

The Federal Government has no special rights in these States, because the common-law rule of riparian rights is not recognized, so that no riparian rights exist.

In the case of Martin *v.* Waddell (16 Pet. 367), where the question of tidelands and tidewaters was involved, the Supreme Court of the United States makes this clear and comprehensive declaration:

> For when the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters, and the soils under them, for their own common use, subject only to the rights since surrendered by the Constitution to the General Government.

The same doctrine was laid down by the court in the case of Pollard *v.* Hagan (3 How. 212), and it was held to apply to the newer States in as full a measure as to the original States of the Union. In this case the court concludes its opinion as follows:

> By the preceding course of reasoning we have arrived at these general conclusions: First, the shores of navigable waters and the soils under them were not granted by the Constitution to the United States, but were reserved to the States, respectively. Second, the new States have the same rights, sovereignty, and jurisdiction over this subject as the original States. Third, the right of the United States to the public land and the power of Congress to make all needful rules and regulations for the same and disposition thereof conferred no power to grant to the plaintiffs the land (tidewater land) in controversy.

In the case of Barney *v.* Keokuk (94 U. S. 324) Justice Bradley declares that the correct principles were laid down in the foregoing cases, and then adds:

> These cases related to tidewater, it is true; but they enunciate principles which are equally applicable to all navigable waters.

The rule laid down in the foregoing cases is reaffirmed and amplified with the citation of numerous authorities in the case of Shively *v.* Bowlby (152 U. S. 1).

Now the Senators proposing this bill rise and say that the stream is navigable, and they insert a provision to make it more truly navigable. If they wish to proceed upon the hypothesis that this river is navigable, then the bed of the stream and the banks of the stream belong to Arizona, and Arizona must be consulted.

Mr. SHORTRIDGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from California?

Mr. ASHURST. I do.

Mr. SHORTRIDGE. Would the Senator object to the Federal Government cleaning out the river below the dam?

Mr. ASHURST. You are cleaning us out.

Mr. SHORTRIDGE. Well, perhaps; but I am asking about cleaning out the river first. Then we will take on Arizona. Would the Senator object to cleaning it out so that you might send craft of two or three feet draft from Yuma up the river at certain periods of the year? It has been done in the past. It might be done in the future. Do I understand that Arizona would object to the Government appropriating the necessary funds for the purpose of improving the navigability of the river?

Mr. ASHURST. Frankly, I do not believe that there is any thought of improving or creating any navigation between Yuma and the proposed Boulder Dam. It may be that after the dam is built, and the reservoir is created, pleasure craft might float upon the bosom of the reservoir created by the dam; but the commerce would be relatively insignificant.

Mr. BARKLEY. Mr. President, does the Senator think that whatever we do about the Boulder Dam bill will have any material effect on the climate of Yuma?

Mr. ASHURST. Let me say that the able Senator from Kentucky did the city of Yuma the honor to pay it a visit and he delivered a speech there which for eloquence is still remembered. He is invited to return to that hospitable city and those who visit Yuma in the summer time always receive a warm reception.

The States of Arizona and Nevada have rejected in toto the common-law rule of riparian rights. As the ownership of the beds of fresh-water streams navigable in fact is one of the riparian rights, it follows that these rights were also rejected, and that the ownership of the bed of the Colorado River at the Boulder Canyon or the Black Canyon Dam site is in the States of Arizona and Nevada, under whose jurisdiction these waters flow. These States have prescribed or may prescribe how the use of the beds and banks and waters of the Colorado River may be obtained.

The acquisition of the lands and waters of the States of Arizona and Nevada at Black Canyon or Boulder Canyon by the Federal Government by any method or for any purpose—other than for the improvement of the navigation facilities of the Colorado River, incidental to the regulation of commerce thereon—or in accordance with the laws of those States, as is required by the reclamation act and the Federal water power act, is a transgression of the limitation of its power, and is, ultra vires, the Federal Government.

Consent or ratification by the States of Arizona and Nevada is necessary to the acquisition of exclusive jurisdiction over the dam site at Black Canyon or Boulder Canyon, if the dam site is to be used for any purpose other than the regulation of the waters of the Colorado River for navigable purposes, as an incident to the regulation of commerce on said river and such incidental purposes as might arise as a result of the construction of the dam for this primary purpose, and any attempt by Congress to accomplish such a purpose at the Black or Boulder Canyon Dam site by the authority of the Swing-Johnson bill is a pure nadum pactum.

It is to be noted, however, that the Colorado River is not now being used for the transportation of persons or property or for the purchase, sale, and exchange of commodities, nor is there any demand at this time from any source that the river be made navigable for this purpose, and there is nothing to indicate that if the river was made navigable that it would be used for commerce.

The primary purpose of the Swing-Johnson bill is to apportion among the States of the Colorado River Basin the waters of the Colorado River and completely to exhaust the same for beneficial purposes and, in fact, to regulate the use of the water so that its flow shall be increased at certain seasons of the year, when the demand for domestic and irrigation purposes is highest, and to decrease the flow of the river at other seasons of the year so that the water may be conserved for domestic and irrigation purposes, even though such regulation were to render navigation on the river wholly impracticable. In order to accomplish this purpose the Colorado River compact in article 4 (a) provides:

The Colorado River has ceased to be navigable for commerce.

Mr. President, it is now nearly 4 o'clock. I can finish on Monday but can not finish to-day.

Mr. CURTIS. I had intended at a quarter of 4 to move an executive session, if the Senator will yield now for that purpose.

Mr. ASHURST. Yes; I thank the Senator.

HOUSE CONCURRENT RESOLUTIONS REFERRED

The following concurrent resolutions, heretofore received from the House of Representatives, were referred to the Committee on Printing:

H. Con. Res. 37. Concurrent resolution to print 3,000 additional copies of the hearings during the Sixty-ninth Congress on the bill (H. R. 7895) relating to the stabilization of the price level of commodities; and

H. Con. Res. 40. Concurrent resolution to provide for the printing of additional copies of the hearings held before the Committee on Education of the House of Representatives on the bill to create a department of education.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After three minutes spent in executive session the doors were reopened and (at 3 o'clock and 42 minutes p. m.) the Senate adjourned until Monday, December 10, 1928, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate December 8 (legislative day of December 7), 1928

DIRECTOR OF THE MINT

Robert J. Grant, of Denver, Colo., to be Director of the Mint. (Reappointment.)

POSTMASTERS

ARIZONA

Frank A. Rhodes to be postmaster at Gila Bend, Ariz., in place of C. C. Rockwell, not commissioned.

CALIFORNIA

Nella Carl to be postmaster at Encanto, Calif. Office became presidential July 1, 1928.

Margaret A. Robison to be postmaster at Kelseyville, Calif., in place of W. E. Hunt. Incumbent's commission expired February 9, 1927.

COLORADO

Ira R. Wood to be postmaster at Ramah, Colo., in place of I. R. Wood. Incumbent's commission expires December 12, 1928.

CONNECTICUT

Robert DeF. Bristol to be postmaster at Guilford, Conn., in place of R. D. Bristol. Incumbent's commission expires December 10, 1928.

Gordon B. Smith to be postmaster at Saybrook, Conn., in place of J. A. Ayer, deceased.

ILLINOIS

Mary H. Hrdlicka to be postmaster at Cary, Ill., in place of M. H. Hrdlicka. Incumbent's commission expires December 10, 1928.

Fred Frazier to be postmaster at Viola, Ill., in place of Fred Frazier. Incumbent's commission expires December 10, 1928.

INDIANA

Harley Secor to be postmaster at Akron, Ind., in place of Harley Secor. Incumbent's commission expires December 12, 1928.

Alfred V. Reschar to be postmaster at Anderson, Ind., in place of A. V. Reschar. Incumbent's commission expires December 12, 1928.

Louis W. Otto to be postmaster at Crawfordsville, Ind., in place of L. W. Otto. Incumbent's commission expires December 12, 1928.

John C. Chaille to be postmaster at Otwell, Ind., in place of J. C. Chaille. Incumbent's commission expires December 12, 1928.

Manda Neet to be postmaster at Rosedale, Ind., in place of Manda Neet. Incumbent's commission expires December 12, 1928.

William M. Willmore to be postmaster at Vincennes, Ind., in place of W. M. Willmore. Incumbent's commission expires December 12, 1928.

IOWA

Bernard E. Fraley to be postmaster at Albion, Iowa, in place of B. E. Fraley. Incumbent's commission expires December 9, 1928.

Earl E. Silver to be postmaster at Center Point, Iowa., in place of E. E. Silver. Incumbent's commission expires December 9, 1928.

Charles A. Norris to be postmaster at Eldora, Iowa, in place of C. A. Norris. Incumbent's commission expires December 12, 1928.

George T. Stauffer to be postmaster at Garrison, Iowa, in place of G. T. Stauffer. Incumbent's commission expires December 9, 1928.

William C. Moon to be postmaster at Greene, Iowa, in place of W. C. Moon. Incumbent's commission expires December 12, 1928.

Gilbert Jones to be postmaster at Hawkeye, Iowa, in place of Gilbert Jones. Commission expires December 12, 1928.

Mollie Daley to be postmaster at Parnell, Iowa, in place of Mollie Daley. Incumbent's commission expires December 9, 1928.

Edward M. Bratton to be postmaster at Shellsburg, Iowa, in place of E. M. Bratton. Incumbent's commission expires December 12, 1928.

KANSAS

Clara G. Williams to be postmaster at Elgin, Kans., in place of F. E. Williams, deceased.

KENTUCKY

Levi Brooks to be postmaster at Blue Diamond, Ky., in place of G. S. Greear, resigned.

Hugh B. Gross to be postmaster at Dawson Springs, Ky., in place of C. A. Niles, deceased.

LOUISIANA

Albert A. Thoman to be postmaster at Monroe, La., in place of A. A. Thoman. Incumbent's commission expires December 11, 1928.

Lillie Vaughan to be postmaster at Sellers, La., in place of Lillie Vaughan. Incumbent's commission expires December 11, 1928.

Thomas C. Reagan, sr., to be postmaster at Winnsboro, La., in place of T. C. Reagan, sr. Incumbent's commission expires December 11, 1928.

MASSACHUSETTS

Fred A. Tower to be postmaster at Concord, Mass., in place of F. A. Tower. Incumbent's commission expires December 12, 1928.

Lester G. Lathrop to be postmaster at Orange, Mass., in place of L. G. Lathrop. Incumbent's commission expires December 12, 1928.

MICHIGAN

Jesse G. Wilbur to be postmaster at Belding, Mich., in place of J. G. Wilbur. Incumbent's commission expires December 12, 1928.

Thomas Watson to be postmaster at Birch Run, Mich., in place of Thomas Watson. Incumbent's commission expires December 12, 1928.

Ralph C. Hubbard to be postmaster at Hartford, Mich., in place of R. C. Hubbard. Incumbent's commission expires December 12, 1928.

Merrill F. Fitch to be postmaster at Mattawan, Mich., in place of M. F. Fitch. Incumbent's commission expires December 12, 1928.

George L. Runner to be postmaster at Shelby, Mich., in place of G. L. Runner. Incumbent's commission expires December 12, 1928.

Mary M. Smith to be postmaster at Thompsonville, Mich., in place of M. M. Smith. Incumbent's commission expires December 12, 1928.

Moses O. Champney to be postmaster at Traverse City, Mich., in place of M. O. Champney. Incumbent's commission expires December 12, 1928.

MINNESOTA

Sadie A. Lane to be postmaster at Sherburn, Minn., in place of S. A. Lane. Incumbent's commission expires December 12, 1928.

MISSOURI

Albert L. Brady to be postmaster at Oran, Mo., in place of A. L. Brady. Incumbent's commission expires December 11, 1928.

Lizzie A. Rademaker to be postmaster at Parma, Mo., in place of L. A. Rademaker. Incumbent's commission expires December 11, 1928.

NEBRASKA

Walter I. Farnham to be postmaster at Merna, Nebr., in place of W. I. Farnham. Incumbent's commission expires December 11, 1928.

Margaret Bolan to be postmaster at St. Columbans, Nebr., in place of Margaret Bolan. Incumbent's commission expires December 11, 1928.

NEW HAMPSHIRE

Hugh C. Young to be postmaster at Sunapee, N. H., in place of H. C. Young. Incumbent's commission expires December 10, 1928.

NEW YORK

Richard J. Higgins to be postmaster at East Rockaway, N. Y., in place of R. J. Higgins. Incumbent's commission expires December 11, 1928.

Edwin W. Cushman to be postmaster at Keuka Park, N. Y., in place of E. W. Cushman. Incumbent's commission expires December 11, 1928.

James Agnew to be postmaster at Lake Ronkonkoma, N. Y., in place of James Agnew. Incumbent's commission expires December 11, 1928.

Loie C. Husted to be postmaster at Woodhull, N. Y., in place of L. C. Husted. Incumbent's commission expires December 11, 1928.

NORTH CAROLINA

Alfred A. McDonald to be postmaster at Parkton, N. C., in place of A. A. McDonald. Incumbent's commission expires December 12, 1928.

NORTH DAKOTA

John E. Nelson to be postmaster at Litchville, N. Dak., in place of J. E. Nelson. Incumbent's commission expires December 12, 1928.

OHIO

Frances Dunham to be postmaster at Fayetteville, Ohio, in place of Frances Dunham. Incumbent's commission expires December 12, 1928.

Veeda F. Stevens to be postmaster at Holloway, Ohio, in place of H. E. Graham, resigned.

Blanche M. Lauer to be postmaster at Lower Salem, Ohio, in place of B. M. Lauer. Incumbent's commission expires December 10, 1928.

OKLAHOMA

John J. Gayman to be postmaster at Chandler, Okla., in place of J. J. Gayman. Incumbent's commission expires December 12, 1928.

Anna H. Figley to be postmaster at Hastings, Okla., in place of A. H. Figley. Incumbent's commission expires December 12, 1928.

Katherine Anderson to be postmaster at Ninnekan, Okla., in place of Katherine Anderson. Incumbent's commission expires December 10, 1928.

PENNSYLVANIA

Allie L. Keyes to be postmaster at Lake Ariel, Pa., in place of E. D. Keyes, resigned.

Wallis G. Detrick to be postmaster at Milford, Pa., in place of W. V. Dingman, removed.

Donald A. Whoolery to be postmaster at Smithfield, Pa., in place of F. A. Allmon, removed.

Bessie Havlichek to be postmaster at Smock, Pa., in place of M. H. Thomas, removed.

SOUTH CAROLINA

Thomas S. Armour to be postmaster at Eastover, S. C., in place of E. C. Rye, removed.

Andrew R. Barrett to be postmaster at Rock Hill, S. C., in place of A. R. Barrett. Incumbent's commission expires December 12, 1928.

Rebecca Wimberly to be postmaster at St. Matthews, S. C., in place of Rebecca Wimberly. Incumbent's commission expires December 12, 1928.

John C. Luke to be postmaster at Summerville, S. C., in place of J. C. Luke. Incumbent's commission expires December 12, 1928.

George H. Hart to be postmaster at York, S. C., in place of G. H. Hart. Incumbent's commission expires December 12, 1928.

SOUTH DAKOTA

Ezra J. F. Lamkee to be postmaster at Avon, S. Dak., in place of E. J. F. Lamkee. Incumbent's commission expires December 11, 1928.

Loretta M. Stromme to be postmaster at Garretson, S. Dak., in place of L. M. Stromme. Incumbent's commission expires December 11, 1928.

Adam F. Glaser to be postmaster at Herrick, S. Dak., in place of A. F. Glaser. Incumbent's commission expires December 11, 1928.

Oscar D. Hanson to be postmaster at Irene, S. Dak., in place of O. D. Hanson. Incumbent's commission expires December 11, 1928.

Leland K. Stoddard to be postmaster at Parker, S. Dak., in place of L. K. Stoddard. Incumbent's commission expires December 11, 1928.

Joseph W. Gibson to be postmaster at Salem, S. Dak., in place of J. W. Gibson. Incumbent's commission expires Decem- 11, 1928.

VERMONT

Hiram E. Rowe to be postmaster at Barnet, Vt., in place of H. E. Rowe. Incumbent's commission expires December 11, 1928.

William H. C. Whitcomb to be postmaster at Forest Dale, Vt., in place of W. H. C. Whitcomb. Incumbent's commission expires December 11, 1928.

Ethel E. Churchill to be postmaster at Quechee, Vt., in place of E. E. Churchill. Incumbent's commission expires December 11, 1928.

Otis B. Dauchy to be postmaster at Townshend, Vt., in place of O. B. Dauchy. Incumbent's commission expires December 11, 1928.

Kenneth A. Foster to be postmaster at Wolcott, Vt., in place of K. A. Foster. Incumbent's commission expires December 11, 1928.

WEST VIRGINIA

Pearl L. Hughes to be postmaster at Keystone, W. Va., in place of P. L. Hughes. Incumbent's commission expires December 12, 1928.

A. Ewell Riley to be postmaster at Thorpe, W. Va., in place of A. E. Riley. Incumbent's commission expires December 12, 1928.

Harry E. Ewing to be postmaster at War, W. Va., in place of H. E. Ewing. Incumbent's commission expires December 12, 1928.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 8 (legislative day of December 7), 1928

COMPTROLLER OF THE CURRENCY

John W. Pole to be Comptroller of the Currency.

POSTMASTERS

ARIZONA

Orrin H. Perry, Somerton.

COLORADO

Richard A. Gifford, Hesperus.
Ralph H. Weekly, Yuma.

CONNECTICUT

George W. Fairgrieve, Bantam.

Alma M. West, Medicine Bow.
Willis L. Eaton, Wolf.

SENATE

MONDAY, *December 10, 1928*

Rev. Jason Noble Pierce, D. D., pastor of the First Congregational Church of the city of Washington, offered the following prayer:

O Thou, in whom we live and move and have our being and all work is begun, continued, and finished, grant Thy presence not only in this place but in our minds and hearts, that we may accomplish Thy holy will to the glory of Thy name.

ARTHUR R. ROBINSON, a Senator from the State of Indiana, appeared in his seat to-day.

THE JOURNAL

The Chief Clerk proceeded to read the Journal of the proceedings of the legislative day of Friday last, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the enrolled bill (H. R. 13824) authorizing L. L. Montague, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Columbia River at or near Arlington, Oreg., and it was signed by the Vice President.

SENATOR FROM MINNESOTA

Mr. SCHALL. I present the credentials of my colleague, Mr. SHIPSTEAD, which I ask may be read.

The credentials were read and ordered to be placed on file, as follows:

STATE OF MINNESOTA,
EXECUTIVE DEPARTMENT,
St. Paul.

To the PRESIDENT OF THE SENATE OF THE UNITED STATES:

This is to certify that on the 6th day of November, 1928, HENRIK SHIPSTEAD was duly chosen by the qualified electors of the State of Minnesota a Senator from said State to represent said State in the Senate of the United States for the term of six years, beginning on the 4th day of March, 1929.

Witness: His excellency our governor, Theodore Christianson, and our seal hereto affixed at St. Paul, this 30th day of November, A. D. 1928.

THEODORE CHRISTIANSON,
Governor of Minnesota.

[SEAL.] MIKE HOLM,
Secretary of State.

PETITIONS

Mr. EDGE presented a letter in the nature of a petition from Mrs. Catharine B. Lippincott, of Moorestown, N. J., praying for the prompt ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

He also presented a petition of sundry members of the faculty and students of the Madison High School, of Madison, N. J., praying for the prompt ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

He also presented the petition of Miss Cora L. Hartshorn and 993 other citizens of Short Hills, Millburn, Wyoming, Newark, Maplewood, South Orange, East Orange, Basking Ridge, Summit, and Model Park, all in the State of New Jersey, praying for the prompt ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

Mr. ROBINSON of Arkansas presented a resolution of the Beta Delphian Chapter, of Jonesboro, Ark., favoring the prompt passage of the so-called Gillett resolution (S. Res. 139), suggesting a further exchange of views relative to the World Court, which was referred to the Committee on Foreign Relations.

He also presented a resolution of the Men's Bible Class of Vesta Methodist Sunday School, of Charleston, Ark., favoring the ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

PRIVATE EMPLOYMENT BY SPECIAL COUNSEL IN OIL CASES

Mr. WALSH of Montana. From the Committee on the Judiciary I report back favorably without amendment the joint resolution (S. J. Res. 167) limiting the operation of sections 198 and 203 of title 18 of the Code of Laws of the United States, and I submit a report (No. 1338) thereon. A few days ago I explained to the Senate the nature of the joint resolution; it is a matter requiring some expedition, and I ask unanimous consent for the immediate consideration of the measure.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution, which was read, as follows:

Resolved, etc., That nothing in sections 198 or 203 of title 18 of the Code of Laws of the United States (sections 109 and 113, Criminal Code) or any other act of Congress forbidding any person in the employ of the United States or acting in any official capacity under them from acting as agent or attorney for another before any department or branch of the Government, or from receiving pay for so acting, shall be deemed to apply to counsel serving under the provisions of S. J. Res. 54, Sixty-eighth Congress, first session, approved February 8, 1924.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ROBINSON of Arkansas:

A bill (S. 4797) granting a pension to Alvin L. Hagood; to the Committee on Pensions.

By Mr. TYSON:

A bill (S. 4798) granting a pension to Frank V. Griffith (with accompanying papers); to the Committee on Pensions.

By Mr. FESS:

A bill (S. 4799) granting an increase of pension to Lester L. Karns; to the Committee on Pensions.

By Mr. McNARY:

A bill (S. 4800) to amend section 8 of the act entitled "An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes," approved June 30, 1906, as amended; to the Committee on Agriculture and Forestry.

A bill (S. 4801) for the relief of C. E. Briggs; and

A bill (S. 4802) for the relief of Robert Wilson; to the Committee on Claims.

By Mr. NEELY:

A bill (S. 4803) granting an increase of pension to James K. Ferguson;

A bill (S. 4804) granting an increase of pension to Rebecca Neal; and

A bill (S. 4805) granting an increase of pension to Ulysses G. Snodgrass; to the Committee on Pensions.

By Mr. CAPPER (for Mr. HOWELL):

A bill (S. 4806) for the relief of Franz J. Jonitz, first lieutenant, Quartermaster Corps, United States Army (with accompanying papers);

A bill (S. 4807) to authorize an appropriation to cover damages to an automobile of William H. Baldwin (with accompanying papers);

A bill (S. 4808) for the relief of the Western Electric Co. (Inc.) (with accompanying papers);

A bill (S. 4809) for the relief of John B. Meisinger and Nannie Belle Meisinger;

A bill (S. 4810) for the relief of A. C. Elmore (with accompanying papers);

A bill (S. 4811) for the relief of C. J. Colville (with accompanying papers);

A bill (S. 4812) for the relief of John T. Lennon and George T. Flora (with accompanying papers);

A bill (S. 4813) for the relief of Johnson & Higgins (with accompanying papers);

A bill (S. 4814) for the relief of Madrigal & Co., Manila, P. I. (with accompanying papers);

A bill (S. 4815) for the relief of the members of the crew of the transport *Antilles* (with accompanying papers);

A bill (S. 4816) for the relief of F. M. Gray, Jr., Co. (with accompanying papers);

A bill (S. 4817) for the relief of the Federal Construction Co. (Inc.) (with accompanying papers);

A bill (S. 4818) for the relief of hay growers in Brazoria, Galveston, and Harris Counties, Tex. (with accompanying papers); and

A bill (S. 4819) for the relief of Roy M. Lisso, liquidating trustee of the Pelican Laundry (Ltd.) (with accompanying papers); to the Committee on Claims.

By Mr. BRATTON:

A bill (S. 4820) granting a pension to Carlota Padilla de Martinez; to the Committee on Pensions.

A bill (S. 4821) extending the benefits of the World War veterans' act, 1924, as amended, to Charles Mebane Fullwood; to the Committee on Finance.

By Mr. THOMAS of Idaho:

A bill (S. 4822) granting a pension to Sarah Farmer (with accompanying papers); to the Committee on Pensions.

By Mr. HALE:

A bill (S. 4823) to provide for the extension of the boundary limits of the Lafayette National Park in the State of Maine and for change of name of said park to the Acadia National Park; to the Committee on Public Lands and Surveys.

By Mr. WAGNER:

A bill (S. 4824) for the relief of Francis X. Callahan; to the Committee on Military Affairs.

By Mr. HAYDEN:

A bill (S. 4825) for the relief of August R. Lundstrum; to the Committee on Military Affairs.

A bill (S. 4826) granting a pension to Cedenia Willis; and

A bill (S. 4827) granting a pension to Thomas R. Myrick; to the Committee on Pensions.

AMENDMENTS TO BOULDER DAM BILL

Mr. KING submitted sundry amendments intended to be proposed by him to the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes, which were ordered to lie on the table and to be printed.

BRAZOS AND COLORADO RIVERS, TEX.

Mr. SHEPPARD submitted an amendment intended to be proposed by him to the bill (H. R. 13484) authorizing preliminary examinations of sundry streams with a view to the control of their floods, and for other purposes, which was referred to the Committee on Commerce and ordered to be printed.

AMENDMENT TO TREASURY AND POST OFFICE DEPARTMENTS APPROPRIATION BILL

Mr. SHEPPARD submitted an amendment intended to be proposed by him to House bill 14801, the Treasury and Post Office Departments appropriation bill, which was referred to

the Committee on Appropriations and ordered to be printed, as follows:

On page 35, line 11, strike out the figures "$23,040,000" and insert in lieu thereof the figures "$23,155,000."

On page 40, line 9, insert the word "courts" between the word "office" and the word "and."

On page 40, line 10, strike out the words "except for the courts."

On page 40, line 10, strike out the figures "$220,000" and insert in lieu thereof the figures "$335,000."

Strike out the proviso beginning in line 11 and continuing through all of lines 12 and 13.

SAMUEL J. D. MARSHALL

Mr. REED of Pennsylvania. Mr. President, I have two requests for changes of reference. The first is as to the bill (H. R. 11422) for the relief of Samuel J. D. Marshall, which is now before the Committee on Claims. This bill was considered in the House by the Committee on Military Affairs and I am advised by Senator HOWELL's secretary that he is satisfied it should be referred to the Military Affairs Committee of the Senate.

The PRESIDENT pro tempore. Without objection, the Committee on Claims is discharged from further consideration of the bill and it will be referred to the Committee on Military Affairs.

RAYMOND NELSON HICKMAN

Mr. REED of Pennsylvania. The second bill, Mr. President, is House bill 8464, for the relief of Raymond Nelson Hickman, which has been referred to the Committee on Military Affairs. It involves, however, a naval matter, and I ask that it may be referred to the Committee on Naval Affairs.

The PRESIDENT pro tempore. Without objection, the Committee on Military Affairs is discharged from the further consideration of the bill and it will be referred to the Committee on Naval Affairs.

CAPT. WILLIAM CASSIDY

Mr. SMITH. Mr. President, last Friday I introduced a bill (S. 4756) for the relief of Capt. William Cassidy, an officer in the military service. Inadvertently a wrong reference was made. I ask unanimous consent to have the bill, which involves legislation, withdrawn from the Committee on Claims, to which it was inadvertently referred, and referred to the Committee on Military Affairs.

The PRESIDING OFFICER (Mr. FESS in the chair). Without objection, that order will be made.

INAUGURATION OF PRESIDENT ELECT

Mr. WATSON. Mr. President, I submit a concurrent resolution and ask unanimous consent for its immediate consideration.

The VICE PRESIDENT. The resolution will be read.

The Chief Clerk read the concurrent resolution (S. Con. Res. 24), as follows:

Resolved by the Senate (the House of Representatives concurring), That a joint committee consisting of three Senators and three Representatives, to be appointed by the President of the Senate and the Speaker of the House of Representatives, respectively, is authorized to make the necessary arrangements for the inauguration of the President elect of the United States on the 4th of March next.

Mr. ROBINSON of Arkansas. Mr. President, I inquire of the Senator if this is the usual resolution?

Mr. WATSON. It is the usual resolution.

Mr. ROBINSON of Arkansas. I have no objection to its consideration and adoption.

The concurrent resolution was considered by unanimous consent and agreed to.

INVESTIGATION OF TOLL BRIDGES AND FERRIES

Mr. ODDIE submitted the following concurrent resolution (S. Con. Res. 25), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved by the Senate (the House of Representatives concurring), That a joint select committee is hereby created, to be known as the Select Joint Committee to Investigate Toll Bridges on the Public Highways and Ferries, which committee shall consist of three Senators who are members of the Committee on Post Offices and Post Roads, to be appointed by the Vice President, and three Members of the House of Representatives who are members of the Committee on Roads, to be appointed by the Speaker, said appointments to be made from among those who are Members of the Seventy-first Congress.

SEC. 2. Said committee shall investigate and report to the Seventy-first Congress during its first session upon the following subjects:

1. Whether existing congressional legislation authorizing private companies or persons to build toll bridges upon the public highways of the United States adequately provides for the safety and permanence of such structures erected or to be erected and for their adequate inspection during construction.

2. Whether, since all such bridges will ultimately become the property of the public, it is in the public interest that it have control over their initial construction and future maintenance.

3. Whether, in view of the fact that under existing Federal highway legislation Congress has required the States to agree that the roads shall be free from tolls, which requirement the States have accepted, it be just and reasonable to grant franchises permitting a revival of a system of toll gates in the form of toll bridges.

4. Whether, as currently reported, franchises granted by Congress for the building of private toll bridges have been sold, offered for sale, or made the subject of trafficking.

5. Whether there has been an excessive and extravagant capitalization of toll-bridge structures, which is reflected in the tolls paid by the public and in the value of the securities purchased by it.

6. Whether the public has demonstrated its willingness and ability to finance the construction of large bridges on as favorable or more favorable terms than private interests, and whether in such cases the use of such structures ultimately is made free to the public at an earlier period than when constructed by private capital, although a toll charge for their immediate use may have been temporarily necessary.

SEC. 3. Said committee shall also make investigation with respect to existing toll bridges on the public highways and ferries connecting therewith, such investigation to include the original investment therein, present value, outstanding securities, rate of tolls, dividends, salaries, traffic carried, and other related and pertinent matters; also the status of franchises granted, including the activities of agents in procuring such franchises, together with the disposition of such franchises by sale or otherwise.

SEC. 4. Said committee or any subcommittee thereof is authorized to sit during sessions, recesses, or adjournments of the Seventy-first Congress in the District of Columbia or elsewhere in the continental United States, to send for persons and papers, to administer oaths, to summon and compel the attendance of witnesses, to employ a stenographer at a cost not exceeding 25 cents per 100 words to report such hearings as may be had in connection with any subject which may be before said committee or any subcommittee thereof, and to employ such personal services and incur such expenses as may be necessary to carry out the purposes of this resolution. Such expenditures, which are hereby limited to the sum of $25,000, shall be paid from the contingent funds of the Senate and House of Representatives in equal proportions, upon vouchers approved by the chairman of said committee.

LILLIAN T. OYSTER

Mr. TYDINGS submitted the following resolution (S. Res. 278), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay from the contingent fund of the Senate to Lillian T. Oyster, widow of Guy H. Oyster, late an assistant clerk in the office of Hon. MILLARD E. TYDINGS, a Senator from the State of Maryland, a sum equal to six months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed a joint resolution (H. J. Res. 332) to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C., in which it requested the concurrence of the Senate.

ANNIVERSARY OF FIRST AIRPLANE FLIGHT

The joint resolution (H. J. Res. 332) to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C., was read twice by its title and referred to the Committee on Military Affairs.

Mr. BINGHAM subsequently said: From the Committee on Military Affairs I report back favorably House Joint Resolution 332, being a joint resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C.; and I ask unanimous consent for its immediate consideration.

The PRESIDENT pro tempore. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the joint resolution.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

APPROPRIATIONS FOR TREASURY AND POST OFFICE DEPARTMENTS

Mr. WARREN. From the Committee on Appropriations I report back with amendments the bill (H. R. 14801) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1930, and for other purposes, and I submit a report (No. 1339) thereon. I shall undertake to call the bill up immediately after the routine morning business on Wednesday.

The PRESIDING OFFICER (Mr. SHORTRIDGE in the chair). Meanwhile the bill will be placed on the calendar.

THE CALENDAR

The VICE PRESIDENT. Morning business is closed. The calendar, under Rule VIII, is in order.

The bill (S. 2787) providing for the appointment of governors of the non-Christian Provinces in the Philippine Islands by the Governor General without the consent of the Philippine Senate was announced as first in order.

Mr. BLAINE. Mr. President, I understand that my colleague [Mr. LA FOLLETTE] is interested in that bill.

Mr. ROBINSON of Arkansas. I think it had better go over for the present.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States prohibiting war was announced as next in order.

Mr. JONES. The Senator from South Dakota [Mr. MCMASTER] is not here, and inasmuch as he is interested in the joint resolution I suggest that it go over.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 1414) for the prevention and removal of obstructions and burdens upon interstate commerce in cottonseed oil by regulating transactions on future exchanges, and for other purposes, was announced as next in order.

The VICE PRESIDENT. A motion is pending by the senior Senator from New York [Mr. COPELAND] to recommit the bill to the Committee on Agriculture and Forestry.

Mr. CURTIS. Let the bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1728) placing postmasters in the classified service was announced as next in order.

Mr. ROBINSON of Arkansas. Mr. President, I think there should be a discussion of the bill. I have no objection to its consideration if Senators want to proceed with it, but I would not be willing to act upon the bill without an explanation of its provisions. I suggest that it go over. The Senator from Vermont [Mr. DALE] is not present, nor does it appear that the Senator who reported the bill is present.

The VICE PRESIDENT. The bill will be passed over.

COLUMBIA BASIN RECLAMATION ACT

The bill (S. 1462) providing for the necessary surveys, studies, investigations, and engineering of the Columbia Basin reclamation project, and for other purposes, was announced as next in order, and the Senate, as in Committee of the Whole, resumed its consideration.

Mr. JONES. Mr. President, there was considerable opposition to the bill at the last session of Congress, and those who are interested in the bill have decided to abandon the measure in so far as adopting a project is concerned and to provide instead for the surveys that were suggested in the last Congress. I take it there will be no objection to the bill in that form. I have talked with several Members who were opposed to the bill and they all said they have no opposition to a bill providing for the surveys. Therefore I propose an amendment striking out all after the enacting clause and providing for surveys, which amendment I send to the desk.

Mr. ROBINSON of Arkansas. I believe the Senator told me that the junior Senator from Washington [Mr. DILL] concurs in the suggestion.

Mr. JONES. Yes; I present the amendment in his behalf as well as my own.

The VICE PRESIDENT. The amendment will be stated.

The CHIEF CLERK. Strike out all after the enacting clause and insert in lieu thereof:

That the Secretary of the Interior is hereby authorized to make such studies, surveys, investigations, and do such engineering as may be necessary to determine the lands that should be embraced within the boundaries of a reclamation project, heretofore commonly known and hereafter to be known as the Columbia Basin reclamation project, and to determine definitely and recommend the best source of water supply for said lands, and which of the two proposed plans of placing water on said lands—the gravity system or the pumping plan—is the most practicable, feasible, and desirable, and the cost of the same; and the appropriation of such sums of money as may be necessary for the aforesaid purposes from time to time is hereby authorized. The Secretary shall report to Congress as soon as practicable, and not later than December 10, 1931, his findings, conclusions, and recommendations regarding such project.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill providing for the necessary surveys, studies, investigations, and engineering of the Columbia Basin reclamation project, and for other purposes."

DIVISION OF SAFETY IN DEPARTMENT OF LABOR

The bill (S. 1266) to create in the Bureau of Statistics of the Department of Labor a division of safety was announced as next in order.

Mr. BAYARD. Let the bill go over.

The VICE PRESIDENT. The bill will be passed over.

CIVILIAN ASSISTANTS FOR GOVERNOR GENERAL OF PHILIPPINE ISLANDS

The bill (S. 2292) providing for the employment of certain civilian assistants in the office of the Governor General of the Philippine Islands and fixing salaries of certain officials was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That section 29 of the act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands," approved August 29, 1916, is amended to read as follows:

"SEC. 29. That, except as in this act otherwise provided, the salaries of all the officials of the Philippines not appointed by the President, including deputies, assistants, and other employees, shall be such and be so paid out of the revenues of the Philippines as shall from time to time be determined by the Philippine Legislature; and if the legislature shall fail to make an appropriation for such salaries, the salaries so fixed shall be paid without the necessity of further appropriations therefor. The salaries of all officers and all expenses of the offices of the various officials of the Philippines appointed as herein provided by the President shall also be paid out of the revenues of the Philippines. The annual salaries of the following-named officials appointed by the President and so to be paid shall be: The Governor General, $25,000; in addition thereto he shall be entitled to the occupancy of the buildings heretofore used by the chief executive of the Philippines, with the furniture and effects therein, free of rental; vice governor, $15,000; chief justice of the supreme court, $10,500; associate justices of the supreme court; auditor, $10,000; one assistant auditor, $7,500; one assistant auditor, $6,000: *Provided, however*, That no officer whose salary is so paid under this section shall receive either from the treasury of the Philippine Islands or from any other source whatever any additional salary unless specifically provided by law."

SEC. 2. That a new section is hereby inserted between sections 29 and 30 of the act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands," approved August 29, 1916, as follows:

"SEC. 29½. That from and after the passage of this act all taxes levied, collected, and paid in accordance with law upon articles, goods, wares, or merchandise brought into the United States from the Philippine Islands shall, as heretofore, accrue intact to the general government of the Philippine Islands, and of the amounts so accruing the Governor General may, with the prior approval of the Secretary of War, expend not to exceed $125,000 per annum, without the necessity of further appropriation, for salary, travel, and other expenses of such civilian assistants and technical advisers, not exceeding seven in number, as he may see fit to employ on contracts calling for whole-time or part-time service."

The bill had been reported from the Committee on Territories and Insular Possessions with amendments.

Mr. BINGHAM. Mr. President, there is an amendment on the desk which I desire to have read at this time.

The VICE PRESIDENT. Does the amendment of the Senator from Connecticut affect the committee amendments? There are several committee amendments.

Mr. BINGHAM. Very well; let them be acted on first.

The first amendment of the Committee on Territories and Insular Possessions was, on page 2, line 18, after the word "court," to insert the numerals "$10,000," so as to make the clause read:

Associate justices of the supreme court, $10,000.

The amendment was agreed to.

The next amendment of the committee was, on page 2, line 18, after the word "auditor," to strike out the numerals "$10,000" and insert in lieu thereof the numerals "$15,000," so as to make the clause read:

Auditor, $15,000.

The amendment was agreed to.

The next amendment of the committee was, on page 3, line 15, after the word "advisers," to strike out the words "not exceeding seven in number" and insert in lieu thereof "or such emergency assistants."

Mr. BINGHAM. Mr. President, this last amendment will not be necessary providing the amendment which I have sent to the desk several days ago is agreed to. In view of the fact that the Philippine Legislature has met the situation by providing for what is provided for in section 2, it will not be necessary to adopt the amendment. The amendment which I propose is to strike out all of section 2.

Mr. ROBINSON of Arkansas. Mr. President, I ask that the bill may go over for the present.

The VICE PRESIDENT. The bill will be passed over.

BILL PASSED OVER

The bill (S. 759) to give the Supreme Court of the United States authority to make and publish rules in common-law actions was announced as next in order.

SEVERAL SENATORS. Let the bill go over.

The VICE PRESIDENT. The bill will be passed over.

FRANCIS J. YOUNG

The bill (S. 2859) for the relief of Francis J. Young was considered as in Committee of the Whole, and as heretofore amended was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Francis J. Young, father of Wallace J. Young, late consul at Bradford, England, $4,500, being one year's salary of his deceased son, who died of illness incurred in the Consular Service; and there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, a sufficient sum to carry out the purpose of this act.

The bill was reported to the Senate as amended and the amendment was concurred in. The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS AND JOINT RESOLUTION PASSED OVER

The bill (S. 2864) to establish the standard of weights and measures for the following wheat-mill, rye-mill, and corn-mill products—namely, flours, semolina, hominy, grits, and meals—and all commercial feeding stuffs, and for other purposes, was announced as next in order.

Mr. ROBINSON of Arkansas. Mr. President, I think we should have an explanation of the bill.

Mr. TYSON. I ask that the bill go over.

Mr. CURTIS. At the last session the Senator from Tennessee [Mr. TYSON] asked that it go over. I believe it is desired to discuss the amendments, so I think it had better go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1093) to prevent the sale of cotton and grain in future markets was announced as next in order.

Mr. DENEEN. Let the bill go over.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 57) requesting the President to immediately withdraw the armed forces of the United States from Nicaragua was announced as next in order.

Mr. HEFLIN. Mr. President, I think that there ought to be some action taken now. I understand the President of Nicaragua has been elected and there is no occasion for keeping our troops there any longer. I would like to have the Senator from Idaho [Mr. BORAH] give us some light on the subject.

Mr. BORAH. Will the Senator permit the joint resolution to go over to-day until I can get the facts as they are now? I will then submit a statement to the Senate.

Mr. HEFLIN. Very well.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 2532) to provide for the designation of clerks or employees of the Department of the Interior to serve as registers and receivers in the land offices in Alaska was announced as next in order.

The VICE PRESIDENT. A motion is pending, entered by the senior Senator from Wisconsin [Mr. LA FOLLETTE], to reconsider the vote by which the bill was passed.

Mr. BLAINE. Mr. President, my colleague [Mr. LA FOLLETTE] is interested in the measure, and I understand that he will be here in a day or two. I therefore ask that the bill may go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2679) to limit the period for which an officer appointed with the advice and consent of the Senate may hold over after his term shall have expired was announced as next in order.

Mr. BRUCE. Let the bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 5773) to provide for the construction of works for the protection of the development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes, was announced as next in order.

The VICE PRESIDENT. That being the unfinished business, it will be passed over temporarily.

The bill (S. 1263) to amend section 4 of the interstate commerce act was announced as next in order.

Mr. BLEASE. Over.

The VICE PRESIDENT. The bill will be passed over.

The resolution (S. Res. 173) expressing it as the sense of the Senate that Andrew W. Mellon should resign as Secretary of the Treasury was announced as next in order.

Mr. REED of Pennsylvania (and others). Over.

The VICE PRESIDENT. The resolution will be passed over.

The bill (S. 1748) relating to the qualifications of jurors in the Federal courts was announced as next in order.

Mr. KING. Over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3151) to limit the jurisdiction of district courts of the United States was announced as next in order.

Mr. BAYARD. Over.

The VICE PRESIDENT. The bill will be passed over.

HOWARD UNIVERSITY

The bill (H. R. 279) to amend section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867, was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867, be amended to read as follows:

"SEC. 8. Annual appropriations are hereby authorized to aid in the construction, development, improvement, and maintenance of the university, no part of which shall be used for religious instruction. The university shall at all times be open to inspection by the Bureau of Education and shall be inspected by the said bureau at least once each year. An annual report making a full exhibit of the affairs of the university shall be presented to Congress each year in the report of the Bureau of Education."

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (H. R. 8298) authorizing acquisition of a site for the farmers' produce market, and for other purposes, was announced as next in order.

Mr. BRUCE. Over. However, I will say to the Senator from Virginia [Mr. GLASS] that I am perfectly willing to do anything he desires with reference to the consideration of the measure.

Mr. GLASS. I am perfectly willing to discuss it if the Senate wants to discuss it now.

Mr. BRUCE. I ask that the bill may go over for the present.

The VICE PRESIDENT. The bill will be passed over.

The joint resolution (S. J. Res. 25) to declare the 11th day of November, celebrated and known as Armistice Day, a legal holiday, was announced as next in order.

Mr. ROBINSON of Arkansas. Let that joint resolution go over.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (S. 1729) extending the classified civil service to include postmasters of the third class, and for other purposes, was announced as next in order.

Mr. ROBINSON of Arkansas. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 742) to provide for the establishment, operation, and maintenance of foreign-trade zones in ports of entry of

the United States, to expedite and encourage foreign commerce, and for other purposes, was announced as next in order.

Mr. BINGHAM. Let that bill go over.

The VICE PRESIDENT. The bill being objected to, will be passed over.

The bill (S. 1995) placing certain employees of the Bureau of Prohibition in the classified civil service, and for other purposes, was announced as next in order.

Mr. BRUCE. Let that bill go over.

The VICE PRESIDENT. The bill will go over.

HELEN F. GRIFFIN

The bill (S. 1215) for the relief of Helen F. Griffin was announced as next in order. The bill had been reported adversely by the Committee on Claims.

Mr. KING. I move that the bill be indefinitely postponed.

Mr. McNARY. Mr. President, that is a bill of which I have some knowledge, and I will appreciate it if the Senator from Utah will not move its indefinite postponement to-day. I should like to look into the bill.

Mr. KING. I withdraw my motion indefinitely to postpone the bill and merely ask that it go over.

The VICE PRESIDENT. The bill will be passed over.

PROPOSED AMENDMENT OF PROHIBITION ACT

The bill (S. 2901) to amend the national prohibition act, as amended and supplemented, was announced as next in order.

Mr. BRUCE. I ask that that bill go over.

The VICE PRESIDENT. The bill will be passed over.

INVESTIGATION AND SURVEY FOR NICARAGUAN CANAL

The joint resolution (S. J. Res. 117) authorizing an investigation and survey for a Nicaraguan Canal was announced as next in order.

Mr. BLAINE. Let that joint resolution be passed over.

Mr. EDGE. Mr. President, if the Senator will withdraw his suggestion for a moment, I should like to offer two technical amendments to the joint resolution in order to perfect it so that it will be in the final form in which at some time I propose to press for its passage. Will the Senator permit me to perfect the joint resolution so as to have it in the form in which it should be?

Mr. BLAINE. Very well.

Mr. EDGE. If there is no objection, I should like to offer, and with the acquiescence, I may say, of the Senator from Tennessee [Mr. McKELLAR], who originally prepared them, two short technical amendments to the joint resolution.

On page 5, line 1, after the word "authorized," I move to strike out the comma and insert the word "and"; and in the same line, after the word "empowered," to strike out the comma and the words "and directed."

The VICE PRESIDENT. The amendment proposed by the Senator from New Jersey being an amendment to that proposed by the Senator from Tennessee [Mr. McKELLAR] and agreed to by the Senate on May 29 last, the vote agreeing to the latter amendment will, without objection, be reconsidered, in order that the amendment of the Senator from New Jersey may be in order.

Mr. EDGE. Again, in line 6, on page 5, after the word "having," I move to strike out the comma and insert the word "incorporated"; and in line 7, before the word "ratification," to insert the words "resolution advising and consenting to a"; and in line 7, after the word "aforesaid," to insert the words "a declaration."

Mr. ROBINSON of Arkansas. What draft of the joint resolution is the Senator from New Jersey using in suggesting his amendments? The draft that I have evidently does not correspond to the one which he is employing.

Mr. EDGE. The draft I am using is the final draft that was adopted the last day of the previous session of the Senate. If the Senator will permit me to finish offering the amendments the joint resolution will then be in proper and better form.

Mr. ROBINSON of Arkansas. Certainly, I am willing to do so. All I desire is to ascertain just what the Senator is proposing.

Mr. EDGE. In line 8 I move to strike out the words "inserted the words 'It is declared by the Senate.'"

Mr. WALSH of Montana. We are unable to follow the Senator from New Jersey, because the text of the joint resolution before us is not in the form apparently of the one from which the Senator is reading.

Mr. EDGE. I appreciate the objection of the Senator, but I can assure him that if he will permit these technical amendments to be printed, he will then have a reprint of the joint resolution in such form that Senators can give it very much better consideration.

Mr. WALSH of Montana. But the Senator is asking us to agree to amendments the purport of which we do not know.

Mr. ROBINSON of Arkansas. Does the Senator from New Jersey ask to have the amendments which he is proposing acted on now?

Mr. EDGE. I was going to ask to have the amendments adopted and then ask to have the joint resolution lie over.

Mr. NORRIS. I should like to suggest to the Senator from New Jersey that he offer his amendments and let the joint resolution be reprinted with the amendments as offered. That will give every Senator an opportunity to understand the amendments.

Mr. EDGE. I shall be very glad to accept the Senator's suggestion.

I will repeat the last amendment which I suggested. It is, on line 8, to strike out the words "inserted the words 'It is declared by the Senate.'"

There is one more amendment desired. I move also, in line 15, to strike out the word "directed," and to insert the word "empowered" in lieu thereof.

Now, following the suggestion of the Senator from Nebraska [Mr. NORRIS], I will ask that the joint resolution be reprinted with the amendments I have offered incorporated therein, and that the joint resolution lie over.

The VICE PRESIDENT. Without objection, it is so ordered.

BILL PASSED OVER

The bill (S. 2097) to provide for the protection of municipal watersheds within the national forests was announced as next in order.

Mr. KING. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

RESERVE DIVISION OF WAR DEPARTMENT

The bill (S. 3458) to create the reserve division of the War Department, and for other purposes, was announced as next in order.

The bill had been reported from the Committee on Military Affairs with amendment, on page 3, after the numerals "1922" and the period, to insert "No reserve officer shall be called to active duty for such purpose more than once or for a longer period than four years."

Mr. ROBINSON of Arkansas. Mr. President, will the Senator in charge of the bill explain its purpose and provisions?

Mr. REED of Pennsylvania. Yes, Mr. President. The sole purpose of the bill is to create in the War Department a division to which the reserve officers and the reserve authorities can resort as a center of information, exactly like the Militia Bureau which is there to-day. The Army consists now of the Regulars, the National Guard division, and the reserve division. At the present time the affairs of the reserve division and the officers in the reserve division are scattered about in a number of different offices. This bill will not add any appreciable amount of expense. It merely involves the detailing of officers of some other branches to this particular division.

Mr. ROBINSON of Arkansas. Is it intended to promote efficiency in administration?

Mr. REED of Pennsylvania. It is intended to promote efficiency in administration.

Mr. ROBINSON of Arkansas. I have no objection to the consideration of the bill.

Mr. BROOKHART. I ask that the bill may go over.

Mr. KING. Mr. President, I should like to ask a question. Does the bill provide for promotion which otherwise would not be obtainable?

Mr. REED of Pennsylvania. No; it does not.

Mr. KING. Does it advance officers from one grade to another?

Mr. REED of Pennsylvania. No; I do not think so.

Mr. KING. Is it intended to accomplish that end?

Mr. REED of Pennsylvania. It certainly is not. It is intended that there shall be a chief of the reserve division to whom recourse may be had in connection with affairs concerning the reserve, exactly as the Militia Bureau takes care to-day of the National Guard.

Mr. KING. The Senator knows that many measures innocent on their face have been offered by which promotions have been obtained from one grade to another and advancement from one rank to another.

Mr. REED of Pennsylvania. I quite understand that; but that is not the purpose of this bill. The acting chief of the bureau will have the same right as the Chief of the Militia Bureau while he is so acting; that is all.

I should like before anything is done in the way of putting the bill over to offer two further amendments.

Mr. BROOKHART. Mr. President——

Mr. REED of Pennsylvania. If the Senator from Iowa will permit me to do that and then make his request, I shall be obliged to him.

Mr. BROOKHART. Very well.

Mr. REED of Pennsylvania. I inquire if the amendment recommended by the committee has been acted upon.

The VICE PRESIDENT. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

Mr. REED of Pennsylvania. I move on page 2 to strike out all of line 11 after the word "reserves," the first word in the line and to insert a period; and to strike out also all of line 12 down to the word "camps."

The VICE PRESIDENT. Without objection, the amendment is agreed to.

Mr. REED of Pennsylvania. Again on page 2, line 18, I move to strike out the word "reserve," the last word in the line, and all of line 19.

The VICE PRESIDENT. Without objection, the amendment is agreed to.

Mr. REED of Pennsylvania. Again, on page 2, line 22, I move to strike out all of that line after the words "Organized Reserves," and on line 23 to strike out the words "citizens' military training camp."

The VICE PRESIDENT. Without objection, the amendment is agreed to.

Mr. REED of Pennsylvania. I might say that those amendments have been requested by the Reserve Officers' Association and have been agreed to by the National Guard Association, with whom they have been in consultation.

Mr. OVERMAN. Mr. President, as I understand this new division can be established without providing additional appropriations?

Mr. REED of Pennsylvania. That is the expectation, Mr. President.

Mr. BROOKHART. Mr. President, I have a fundamental objection to the policy of this bill, and I therefore request that it go over.

The VICE PRESIDENT. The bill will be passed over.

SALARIES OF DISTRICT COMMISSIONERS

The bill (S. 1625) to fix the salaries of the members of the Board of Commissioners of the District of Columbia was announced as next in order.

Mr. KING. Mr. President, I objected to the consideration of this bill at the last session of Congress, and I would object to it now and shall do so if it is necessary, but I am told that the Welch bill, notwithstanding the action of the Senate in refusing to pass this bill, has advanced the salaries of the officials in question and given them the compensation provided in this bill. So indirectly there has been accomplished what this bill sought directly to bring about. Nevertheless, I object to it.

The VICE PRESIDENT. The bill will be passed over.

FEDERAL AID FOR RURAL POST ROADS

The bill (S. 1945) to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes, approved July 11, 1916, and for other purposes," was announced as next in order.

Mr. KING. Let that bill go over for the time being; it will require some discussion.

The VICE PRESIDENT. The bill will be passed over.

DETAIL OF PUBLIC ROAD ENGINEERS

The bill (S. 1718) to authorize the President to detail engineers of the Bureau of Public Roads of the Department of Agriculture to assist the governments of the Latin-American Republics in highway matters was announced as next in order.

Mr. KING. Mr. President, the purpose of this bill undoubtedly is commendable, and anything that would bring about more cordial relations between the United States and Latin America meets my hearty approval. However, we are building roads here at the present time for which our engineering staff will be required. For the moment, until we have further opportunity to examine it, I suggest that the bill go over.

The VICE PRESIDENT. The bill will be passed over.

MARKETING OF PERISHABLE AGRICULTURAL COMMODITIES

The bill (S. 1294) to suppress unfair and fraudulent practices in the marketing of perishable agricultural commodities in interstate and foreign commerce was announced as next in order.

Mr. ROBINSON of Arkansas. Mr. President, this appears to be a very important bill. I have no objection to taking it up, but I think it ought to be discussed and given adequate consideration.

Mr. BORAH. Mr. President, I have just come into the Chamber. I realize the bill can not be disposed of this morning, so I ask that it go over.

The VICE PRESIDENT. The bill will be passed over.

BILLS PASSED OVER

The bill (S. 1762) granting consent to the city and county of San Francisco, State of California, its successors and assigns, to construct, maintain, and operate a bridge across the Bay of San Francisco from Rincon Hill to a point near the South Mole of San Antonio estuary, in the county of Alameda, in said State, was announced as next in order.

Mr. ODDIE. I ask that the bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 391) to regulate the use of the Capitol Building and Grounds was announced as next in order.

Mr. BLAINE. I ask that the bill go over.

Mr. DILL. Mr. President, I wish to say that I have objected to this bill heretofore and I shall continue to object to it unless there shall be incorporated in it an amendment giving the proposed authority to the official in charge of the Capitol only in the event Congress is not in session. I am opposed to allowing him to have the power when Congress is in session.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2475) to create a prosperity reserve and to stabilize industry and employment by the expansion of public works during periods of unemployment and industrial depression was announced as next in order.

Mr. SMOOT. I ask that the bill go over.

Mr. JONES. Mr. President, I had very much hoped that this bill might be passed. It has been reported unanimously by the Commerce Committee and is in accordance with the Democratic platform adopted in the last campaign.

Mr. KING. The Democrats did not win.

Mr. SMOOT. I shall have to ask that the bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 11074) to promote the agriculture of the United States by expanding in the foreign field the service now rendered by the United States Department of Agriculture in acquiring and diffusing useful information regarding agriculture, and for other purposes, was announced as next in order.

Mr. KING. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3089) to increase the efficiency of the Military Establishment, and for other purposes, was announced as next in order.

Mr. REED of Pennsylvania. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2274) for the relief of William H. Chambliss was announced as next in order.

Mr. KING. I ask that that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 4174) to establish a woman's bureau in the Metropolitan Police Department of the District of Columbia, and for other purposes, was announced as next in order.

Mr. KING. Let that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1749) providing for the development of hydroelectric energy at Great Falls for the benefit of the United States Government and the District of Columbia was announced as next in order.

Mr. MOSES. I ask that that bill go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3874) authorizing appropriations of funds for construction of a highway from Red Lodge, Mont., to the boundary of the Yellowstone National Park near Cooke City, Mont., was announced as next in order.

Mr. PHIPPS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3770) authorizing the Federal Power Commission to issue permits and licenses on Fort Apache and White Mountain Indian Reservations, Ariz., was announced as next in order.

Mr. PHIPPS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 2330) authorizing reconstruction and improvement of a public road in Wind River Indian Reservation, Wyo., was announced as next in order.

Mr. WHEELER. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 8988) for the relief of Milton Longsdorf was announced as next in order.

Mr. KING. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 11526) to authorize the construction of certain naval vessels, and for other purposes, was announced as next in order.

Mr. KING. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3902) to provide books and educational supplies free of charge to pupils of the public schools of the District of Columbia was announced as next in order.

Mr. PHIPPS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 1900) to provide for the construction of a post road and military highway from a point on or near the Atlantic coast to a point on or near the Pacific coast, and for other purposes, was announced as next in order.

Mr. BAYARD. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 3890) to amend section 5 of the act entitled "An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1921, and for other purposes," was announced as next in order.

SEVERAL SENATORS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

ENGINEER FIELD CLERKS WITH THE AMERICAN EXPEDITIONARY FORCES

The bill (S. 3210) providing for the men who served with the American Expeditionary Forces in Europe as engineer field clerks the status of Army field clerk and field clerk, Quartermaster Corps of the United States Army, when honorably discharged, was announced as next in order.

The VICE PRESIDENT. This bill was adversely reported.

Mr. KING. I move that it be indefinitely postponed.

The VICE PRESIDENT. The question is on the motion of the Senator from Utah.

The motion to postpone indefinitely was agreed to.

BILL PASSED OVER

The bill (S. 717) to provide for the deportation of certain alien seamen, and for other purposes, was announced as next in order.

Mr. JONES. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

FREDERICK D. SWANK

The bill (S. 584) for the relief of Frederick D. Swank was announced as next in order.

Mr. OVERMAN. Let that go over.

Mr. JONES. Mr. President, who asked that the bill go over?

Mr. OVERMAN. I did, Mr. President; but after the explanation which has been made to me by the Senator from Washington I withdraw my objection.

Mr. ROBINSON of Arkansas. Mr. President, some others of us would like an explanation.

Mr. JONES. Mr. President, I will state that the chairman of the committee who reported this bill went into the facts very carefully. In brief, it is a bill in regard to the removal of a wreck, the facts in regard to which developed very differently from what the War Department or the Navy Department alleged in the first instance. The committee went into the matter very carefully.

Mr. ROBINSON of Arkansas. I note that the original claim presented in the bill was for $91,000 plus.

Mr. JONES. Yes.

Mr. ROBINSON of Arkansas. And that the committee reduced the amount to $22,000 for extra services and materials and for furnishing lights on the wreck while the claimant was removing it.

Mr. JONES. That is for a definite amount about which the committee had no doubt. Then they have recommended referring the rest of the claim to the Court of Claims to study and investigate and ascertain the amount that may be due.

Mr. ROBINSON of Arkansas. Why was not the entire claim referred to the Court of Claims?

Mr. JONES. The Senator from Oregon [Mr. STEIWER] went into the matter very carefully.

Mr. STEIWER. Mr. President, I think possibly I can answer the Senator's question. The claim was made up of several items, the aggregate amount of which is covered in the original bill. Some of those items were in dispute, and some were not. The items that were conceded by the War Department and evidently were sustained by every consideration, the committee believed, should be accepted.

Mr. ROBINSON of Arkansas. May I ask the Senator why the War Department did not pay the part of the claim that it admitted to be due?

Mr. STEIWER. They desired to pay it, but felt that they were not authorized to do so under the law. They recommended that it should be paid.

Mr. ROBINSON of Arkansas. I have no objection to the consideration of the bill.

Mr. STEIWER. The Budget Director, too, has given his sanction to that part of the bill. The rest of the claim is in dispute. The committee, therefore, preferred that it be referred to the Court of Claims.

Mr. ROBINSON of Arkansas. The committee included in the authorization for appropriation no part of the claim that was objected to by the War Department?

Mr. STEIWER. No; none at all.

Mr. ROBINSON of Arkansas. Very well.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Claims with an amendment to strike out all after the enacting clause and to insert:

That the Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Frederick D. Swank, his heirs or assigns, the sum of $22,000 for extra services and materials furnished by him in removing oil residue from the wreck of the oil tanker *Alden Anderson*, and the sum of $250 for services and materials furnished in maintaining lights upon the wreck during the period of his contract with the United States for the removal of such wreck. The acceptance of such sums shall be in full satisfaction of all claims against the United States with respect to such removal of oil residue and maintenance of lights.

SEC. 2. Jurisdiction is hereby conferred upon the District Court of the United States for the Northern District of California, to hear, determine, and render judgment upon the claim of said Frederick D. Swank against the United States for the reasonable value of all services and materials (other than the services and materials specified in section 1 of this act) furnished by him in connection with the removal of the wreck of the oil tanker *Alden Anderson;* except that there shall be deducted from any such judgment all sums paid prior to the approval of this act to said Frederick D. Swank with respect to such removal. Such claim shall be instituted within six years after the right accrued for which the claim is made. Appeals from any judgment rendered upon such claim shall be had as in the case of claims over which such court has jurisdiction under paragraph 20 of section 24 of the Judicial Code, as amended.

Mr. JONES. Mr. President, in justice to the chairman of the committee, the Senator from Nebraska [Mr. HOWELL], I feel that I should say before the bill is passed that the Senator from Nebraska has insisted upon the whole amount being referred to the Court of Claims, but with the specific limitation, as I understood him, that the adjudication should be confined to the express terms of the contract. I am frank to say that if that should be done none of the equities and none of the real matters in controversy would have any consideration. The committee, aside from the chairman, was unanimously in favor of the measure as reported by the Senator from Oregon [Mr. STEIWER].

Mr. KING. Mr. President, will the Senator yield?

Mr. JONES. Yes.

Mr. KING. Does the Senator mean, then, that this matter will go to the Court of Claims, and the Court of Claims can make a new contract between the United States and this man?

Mr. JONES. Not exactly a contract; but much of this work really was done outside the terms of the contract. As a matter of fact, I understand that if the contract had been strictly adhered to the cost to the Government would have been possibly several hundred thousand dollars more than the contractor now claims. The situation, however, was such that the contractor felt that the interests of the Government really required that the work should proceed, even though not strictly under the terms of the contract; but he is perfectly willing that the matter shall be referred to the Court of Claims and that his contention shall be passed upon by that body. It seems to me that his attitude has been extremely fair to the Government and that the action of the committee is fair to the Government and reasonably fair to the contractor, so I hope the bill may pass.

Mr. KING. Mr. President, I move to strike out, in line 20, on page 2, of the amendment, the words "six years." Before doing so, may I inquire when it is claimed that the right of action accrued? Why would it not be better to provide that suit should be brought within a certain time after the passage of this act?

Mr. ROBINSON of Arkansas. Within one year.

Mr. KING. Within one year or six months.

Mr. JONES. I have no objection to an amendment of that kind.

Mr. KING. I move to strike out the words "such claim shall be instituted within six years after the right accrued for which the claim is made" and in lieu thereof to insert the words "action shall be instituted within one year after the passage of this act."

The VICE PRESIDENT. The question is on the amendment of the Senator from Utah to the amendment of the committee.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS, ETC., PASSED OVER

The joint resolution (S. J. Res. 9) to establish a joint commission on insular reorganization was announced as next in order.

Mr. COUZENS. Let that go over.

Mr. ROBINSON of Arkansas. Mr. President, I wonder if that joint resolution can not be taken up and disposed of now. Is the Senator who objected willing to withdraw the objection?

Mr. COUZENS. I think it ought to go over to the next Congress. That is my judgment as a result of reading the joint resolution.

The VICE PRESIDENT. The joint resolution will be passed over.

The bill (H. R. 6185) for the relief of Thomas Jefferson Shropshire was announced as next in order.

SEVERAL SENATORS. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (H. R. 12814) to increase the efficiency of the Air Corps was announced as next in order.

Mr. TYSON. Let that go over.

Mr. ROBINSON of Arkansas. Mr. President, I call the attention of the Senator from Pennsylvania [Mr. REED] to this bill. I do not believe it would be advisable to take up a bill of this importance under this order of business.

Mr. REED of Pennsylvania. I think not. I understood some Senator to ask that it go over.

Mr. ROBINSON of Arkansas. I did not know that.

The VICE PRESIDENT. The bill will be passed over.

STREETS AND ALLEYS WITHIN GROUNDS OF WALTER REED HOSPITAL

The bill (S. 3440) to vacate certain streets and alleys within the area known as the Walter Reed General Hospital, District of Columbia; and to authorize the extension and widening of Fourteenth Street from Montague Street to its southern terminus south of Dahlia Street, was announced as next in order.

Mr. REED of Pennsylvania. Let that go over.

Mr. BRUCE. Mr. President, I hope the Senator will not object to the consideration of the bill. It was reported favorably to the Senate during the Sixty-ninth Congress, and passed by the Senate, and went over to the House. That was after the very fullest deliberation was had in committee with reference to the bill, and after the bill had been agreed upon in conferences between the District Commissioners, members of the Senate and House District Committees, and the authorities in charge of the Walter Reed Hospital.

Mr. REED of Pennsylvania. Mr. President, I have tried to make a careful study of the measure. I have taken up the matter with the War Department and with the authorities of the Walter Reed Hospital, and if that street should be extended as the bill provides I am convinced that it will work a very serious injury to the Walter Reed Hospital and that that injury would be irreparable.

You can not put a busy street through the middle of the hospital reservation without serious injury to convalescent patients who are using the grounds, and who, on many days, would be unable to get from one part of the grounds to the other because of the traffic. I am sure it would be a mistake, and I am objecting now because I shall want to be heard at length upon the bill before it passes. I shall not try to prevent the Senator from getting up his bill for consideration by making it the unfinished business at some time when we can put a couple of hours on it.

Mr. BRUCE. Mr. President, may I interrupt the Senator for a moment? Apparently the Senator did not hear me make the statement that the Walter Reed Hospital had agreed to the passage of this bill and it is so stated in the report of the committee to the Senate. If that is true, I can not see why the Senator should entertain so much tenderness for the Walter Reed Hospital when the Walter Reed Hospital does not entertain any great tenderness for itself.

Mr. REED of Pennsylvania. I am glad to answer that question. I have in my desk a letter from the Acting Secretary of War, dated November 28 of this year, calling attention to the statement in the report of the committee which says that the bill has been agreed to by those in charge of Walter Reed Hospital. The letter goes on to say:

> The above-quoted statements were true as to S. 2477, Sixty-ninth Congress, * * * and are quoted from the report on that bill. * * * However, the War Department no longer favors such legislation, as further study of the conditions at Walter Reed indicate that it is undesirable for the following reasons:

Does the Senator wish me to give the reasons now?

Mr. BRUCE. No. I was not aware of the existence of any such communication. Of course, that gives the matter a different aspect, so I will not ask for the consideration of the bill at this time.

Mr. REED of Pennsylvania. I ask unanimous consent to put the letter in its entirety in the RECORD at this point.

The VICE PRESIDENT. Without objection, that order will be made.

The letter is as follows:

WAR DEPARTMENT,
Washington, D. C., November 28, 1928.

Hon. DAVID A. REED,
Chairman Committee on Military Affairs,
United States Senate.

DEAR SENATOR REED: It is noted that on May 12, 1928, the Committee on the District of Columbia, United States Senate, made a favorable report on S. 3440, "A bill to vacate certain streets and alleys within the area known as the Walter Reed General Hospital, District of Columbia, and to authorize the extension and widening of Fourteenth Street from Montague Street to its southern terminus south of Dahlia Street."

The report as made contains the following statements with respect to the attitude of the War Department:

"The bill hereby reported has been agreed upon in conferences between the District Commissioners, the members of the Senate and House District Committees, and those in charge of Walter Reed Hospital. It permits traffic through the hospital reservation on Fourteenth Street extended except as to street cars and solid-tire trucks, which are prohibited. The grade of the street through the hospital reservation shall be subject to the approval of the Secretary of War, and regulation and control of traffic within the limits of the reservation is to be under the supervision of the hospital authorities."

The above-quoted statements were true as to S. 2477, Sixty-ninth Congress, a similar bill which was passed by the Senate April 29, 1926, and are quoted from the report on that bill as being applicable to S. 3440. However, the War Department no longer favors such legislation, as further study of the conditions at Walter Reed indicates that it is undesirable for the following reasons:

If a hospital is to best serve its purposes it should be located in as quiet a zone as it is possible to secure.

Every precaution should be taken to remove all danger to the sick and disabled, and unrestricted traffic would be a menace to the patients going from ward to ward as is necessary in reaching the various clinics involved in their examination and treatment.

The present grounds are being developed into a park for the convalescents, and putting through a street will seriously interfere with such development and curtail the amount of ground available for that purpose.

Increased traffic through the grounds is undesirable as it constitutes a danger to the patients, increases the noise and dirt, and renders traffic control difficult.

In the opinion of the War Department the extension is not required in order to furnish transportation facilities for people living north of Walter Reed, as Sixteenth Street and Georgia Avenue will accommodate such traffic.

The chief interests behind this movement are believed to be the result of real-estate exploitation, and this reservation should not be sacrificed to such interests.

The building program already started will be seriously interfered with if Fourteenth Street is to be opened, as important and substantial buildings are scheduled for locations which would not then be available. One of these—"the nurses' quarters"—has already been authorized and money appropriated for its construction.

In view of the facts as presented above, it is requested that your committee take such action as may be possible to prevent the passage of S. 3440.

Sincerely yours,

C. B. ROBBINS,
Acting Secretary of War.

Mr. NORRIS. Mr. President, the Senator has read part of the letter. I wish he would read the rest of it.

Mr. BRUCE. I hope the Senator will allow me to call his attention to the fact that, of course, this bill prohibits the use

of solid-tire vehicles on the thoroughfare that is to pass through the hospital grounds, and also provides, of course, that the War Department shall have the power to fix the grades of the thoroughfare where it passes through those grounds.

Mr. REED of Pennsylvania. Mr. President, it will not take long to give the War Department's reasons, and I know that a number of Senators are interested in the matter. They state that the bill is opposed for the following reasons:

If a hospital is to best serve its purposes, it should be located in as quiet a zone as it is possible to secure.

Every precaution should be taken to remove all danger to the sick and disabled, and unrestricted traffic would be a menace to the patients going from ward to ward, as is necessary in reaching the various clinics involved in their examination and treatment.

The present grounds are being developed into a park for the convalescents, and putting through a street will seriously interfere with such development and curtail the amount of ground available for that purpose.

Increased traffic through the grounds is undesirable, as it constitutes a danger to the patients, increases the noise and dirt, and renders traffic control difficult.

In the opinion of the War Department, the extension is not required in order to furnish transportation facilities for people living north of Walter Reed, as Sixteenth Street and Georgia Avenue will accommodate such traffic.

The chief interests behind this movement are believed to be the result of real-estate exploitation and this reservation should not be sacrificed to such interests.

The building program already started will be seriously interfered with if Fourteenth Street is to be opened, as important and substantial buildings are scheduled for locations which would not then be available. One of these—"the nurses' quarters"—has already been authorized and money appropriated for its construction.

I might add that the foundation excavation for the nurses' quarters has been made. It lies right across the line on which it is proposed to extend this street, and I believe that some little work has been done on the foundation already.

The extension of that street would result in tremendous injury to the hospital. I feel that very deeply, and I would like to be heard at length before the bill passes.

Mr. BRUCE. Now, Mr. President, in view of the fact that the Senator has stated in detail his objections to the bill, I wish to say that under the provisions of the bill street cars and solid-tired trucks would not be permitted to pass through the hospital reservation. Moreover, what is contemplated is a subway under the reservation. The grade of the street would be subject to the approval of the Secretary of War, and the regulation and control of traffic within the limits of the reservation would be under the supervision of the hospital authorities. So it seems to me it is perfectly manifest that every possible safeguard, as far as the hospital is concerned, would be thrown around the street extension that could be thrown around it.

I move that the bill be taken up for consideration.

Mr. REED of Pennsylvania. A point of order, Mr. President. Is that motion in order before 1 o'clock?

The VICE PRESIDENT. The motion is in order at the present time.

Mr. JOHNSON. Mr. President, may I ask the effect of taking up this particular bill?

The VICE PRESIDENT. It would not affect the unfinished business.

Mr. REED of Pennsylvania. I ask for the yeas and nays on the motion of the Senator from Maryland.

The yeas and nays were ordered, and the Chief Clerk called the roll.

Mr. SHEPPARD. I desire to announce that my colleague the junior Senator from Texas [Mr. MAYFIELD] is unavoidably detained on account of illness. This announcement may stand for the day.

Mr. BRUCE. I desire to announce that the senior Senator from New York [Mr. COPELAND] is detained at his home by illness in his family.

Mr. ROBINSON of Arkansas. I wish to announce that the Senator from Louisiana [Mr. BROUSSARD], the senior Senator from North Carolina [Mr. SIMMONS], the junior Senator from North Carolina [Mr. OVERMAN], the Senator from South Carolina [Mr. SMITH], and the Senator from New York [Mr. WAGNER] are necessarily absent on official business.

The result was announced—yeas 19, nays 56, as follows:

YEAS—19

Ashurst	Dill	Hayden	Swanson
Bayard	Fletcher	Heflin	Tydings
Black	Glass	King	Tyson
Blease	Harrison	Locher	Walsh, Mass.
Bruce	Hawes	Ransdell	

NAYS—56

Barkley	Gillett	Metcalf	Shipstead
Bingham	Glenn	Moses	Smoot
Blaine	Goff	Neely	Steck
Borah	Gould	Norris	Steiwer
Bratton	Greene	Nye	Stephens
Brookhart	Hale	Oddie	Thomas, Idaho
Capper	Harris	Phipps	Thomas, Okla.
Caraway	Johnson	Pine	Trammell
Couzens	Jones	Reed, Pa.	Vandenberg
Curtis	Kendrick	Robinson, Ark.	Walsh, Mont.
Deneen	Keyes	Robinson, Ind.	Warren
Fess	McKellar	Sackett	Waterman
Frazier	McMaster	Schall	Watson
George	McNary	Sheppard	Wheeler

NOT VOTING—20

Broussard	Edwards	McLean	Reed, Mo.
Copeland	Gerry	Mayfield	Shortridge
Dale	Howell	Norbeck	Simmons
du Pont	La Follette	Overman	Smith
Edge	Larrazolo	Pittman	Wagner

So Mr. BRUCE's motion was rejected.

Mr. SACKETT. Mr. President, the bill in regard to which a vote has just been taken has been only before the Committee on the District of Columbia, which has taken up the question of the streets, and I think it should be committed to the Committee on Military Affairs, as it is a matter in which the War Department is vitally interested. I so move.

Mr. BRUCE. Mr. President, I did not hear all of the Senator's remarks. What is the motion?

The PRESIDENT pro tempore. The motion is to commit the bill to the Committee on Military Affairs.

Mr. BRUCE. I have no objection.

The motion was agreed to.

BILLS AND RESOLUTIONS PASSED OVER

The resolution (S. Res. 113) favoring the restriction of loans by Federal reserve banks for speculative purposes was announced as next in order.

The PRESIDENT pro tempore. The resolution will go over.

The resolution (S. Res. 159) to investigate the affairs and management of the Federal land and intermediate credit bank of Columbia, S. C., was announced as next in order.

Mr. BLEASE. I am ready to take up the resolution now, but I have no objection to its going over.

The PRESIDENT pro tempore. The resolution will be passed over.

The resolution (S. Res. 213) to investigate certain circumstances connected with the matter of additional tax assessments upon Hon. JAMES COUZENS was announced as next in order.

Mr. REED of Pennsylvania. Over.

The PRESIDENT pro tempore. The resolution will be passed over.

The bill (S. 3938) relating to the District Court of the Canal Zone was announced as next in order.

Mr. ROBINSON of Arkansas. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (H. R. 7729) to divest goods, wares, and merchandise manufactured, produced, or mined by convicts or prisoners of their interstate character in certain cases, was announced as next in order.

Mr. BLEASE. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (H. R. 9024) to authorize the appointment of stenographers in the courts of the United States and to fix their duties and compensation was announced as next in order.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 4304) to provide for the storage for diversion waters of the North Platte River and construction of Casper-Alcova reclamation project was announced as next in order.

Mr. WALSH of Montana. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 4305) to provide for the storage for diversion of the waters of the North Platte River and construction of the Saratoga reclamation project was announced as next in order.

Mr. WALSH of Montana. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 4438) authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Ohio River at or near Evansville, Ind., was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (H. R. 5527) to prevent deception or improper practice in connection with business before the United States Patent Office, and for other purposes, was announced as next in order.

Mr. KING. Over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 3866) authorizing the appointment of H. P. Milligan as a major of Infantry in the Regular Army was announced as next in order.

Mr. REED of Pennsylvania. Mr. President, the bill really ought to be discussed at some length before it is passed, and therefore I will have to ask that it go over.

The PRESIDENT pro tempore. The bill will be passed over.

THE PULLMAN SURCHARGE

The bill (S. 668) amending section 1 of the interstate commerce act was announced as next in order.

Mr. KING. May we have an explanation of the bill?

Mr. ROBINSON of Arkansas. Mr. President, this is a bill eliminating the Pullman surcharge. It provides that after the passage of the act it shall be unlawful to collect what is known as the Pullman surcharge. Senators will remember that an identical bill has three times passed the Senate, but has failed in the body at the other end of the Capitol.

Mr. SMOOT. Mr. President, I would like to have the bill go over for the present.

Mr. ROBINSON of Arkansas. The Senator states he desires that the bill shall go over for the present. I have no objection, although I am ready to take it up.

Mr. SMOOT. I will ask the Senator to let it go over for a day or two.

Mr. ROBINSON of Arkansas. Very well.

The PRESIDENT pro tempore. The bill will be passed over.

COTTON FUTURES CONTRACTS

The bill (S. 4411) to amend the United States cotton futures act, approved August 11, 1916, as amended, by providing for the delivery of cotton tendered on futures contracts at certain designated spot-cotton markets, by defining and prohibiting manipulation, by providing for the designation of cotton-futures exchanges, and for other purposes, was announced as next in order.

Mr. JONES. Mr. President, may I inquire if this is a unanimous report from the Committee on Agriculture and Forestry?

Mr. RANSDELL. I think it is.

Mr. ROBINSON of Arkansas. The Senator from South Carolina [Mr. SMITH], who reported the bill, appears to be absent this morning.

Mr. McNARY. I think, in view of the statement of the Senator from Arkansas, I shall ask that the bill go over.

Mr. ROBINSON of Arkansas. I believe it had better go over.

The PRESIDENT pro tempore. The bill will be passed over.

STATISTICS OF TOBACCO

The bill (H. R. 53) to provide for the collection and publication of statistics of tobacco by the Department of Agriculture was announced as next in order.

Mr. SWANSON. Over.

Mr. BARKLEY. Mr. President, I would like to ask the Senator from Virginia if he does not think the bill should be considered at this time? It passed the House unanimously and there is a unanimous report from the committee.

Mr. SWANSON. My information is that the tobacco associations in my State are opposed to it. I have been unable to learn of any demand from a single individual in my State for the passage of any such measure.

Mr. KING. Mr. President, I want to look into the bill myself, and therefore ask that it may go over.

Mr. BARKLEY. May I ask the Senator from Virginia——

The PRESIDENT pro tempore. Does the Senator from Virginia withhold his objection?

Mr. SWANSON. I do not.

The PRESIDENT pro tempore. The bill will be passed over.

NATIONAL INSTITUTE OF HEALTH

The bill (S. 4518) to establish and operate a national institute of health, to create a system of fellowships in said institute, and to authorize the Government to accept donations for use in ascertaining the cause, prevention, and cure of disease affecting human beings, and for other purposes, was announced as next in order.

Mr. SMOOT. Let the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

STANDARDIZATION OF COTTON BALES

The bill (S. 872) to standardize bales of cotton and requiring sale of cotton by the true net weight of bale was announced as next in order.

Mr. SMOOT. Mr. President, I desire to ask the Senator from Louisiana if the terms of the bill could be carried out successfully? Suppose cotton was baled in Louisiana and shipped to Boston, Mass.; would the cotton increase in weight by virtue of a change from a warm, dry climate to a cold, wet climate?

Mr. RANSDELL. Will the Senator make his point a little clearer to me? I am not sure that I understand it.

Mr. SMOOT. If I bought a bag of wool and the contents weighed 250 pounds and it was shipped from a real dry, warm climate to Boston, where there is a wet, cold climate, and if the wool should lie untouched for a couple of weeks, or even a week, the wool content would increase in weight and not decrease. Is that the case with cotton?

Mr. RANSDELL. No; I do not think it is; but I will state that that is not the idea or purpose of the bill. The purpose of the bill is to require cotton to be sold by the true net weight of the lint rather than by the gross weight, as it is now sold.

Mr. SMOOT. Yes; the bill states that. I would not want to enact a law which we know beforehand could not be enforced. The true net weight of a bale of cotton in Louisiana on the 1st day of July would be one thing, but in Boston it might be another thing. We do not want to enact a law requiring 500 pounds of actual net weight in a bale of cotton when it is shipped from a warm, dry climate, because by virtue of a change in climatic conditions there would probably be an increase in weight, if I am correctly informed. I called attention to the fact that wool will increase when shipped from a dry climate to a wet climate by reason of absorption from the atmosphere. What I asked the Senator was whether that is the case with cotton. I am not so familiar with cotton as I am with wool. If it is the case with cotton, I hardly see just how we could pass the bill without bringing trouble to those interested.

Mr. RANSDELL. I do not understand that is the case with cotton, but I will say to the Senator that even if it were the case it would not militate against the passage of the bill. The bill is to correct an archaic custom that has been in existence for many, many years, under which the cotton is sold by the gross weight of the bale, and there are usually about 25 to 26 pounds of bagging and steel ties which have no value at all. We simply want to do away with that practice. We want to sell the net cotton or fleece that can be marketed. As it is now it really puts a premium on and almost requires people to use this bagging. We want to do away with that practice and let a man cover his cotton with anything he desires. Answering directly the Senator's question, I do not think there is any such trouble as that.

Mr. SMOOT. I am in full sympathy with what the Senator states. There is no difference between us. The only question in my mind is whether cotton, when shipped from a moist section of the country to a drier atmosphere, would weigh less in the drier atmosphere than in the more moist atmosphere.

Mr. RANSDELL. I do not think so. Cotton is so tightly pressed that after it once goes into the bale it can not asborb any moisture.

Mr. ROBINSON of Arkansas. Mr. President, I would like some explanation in justification of the bill. It seems to me the bill would impose a hardship on the producer of cotton. At present the price per pound comprehends not only the net pounds of lint actually embraced within the bale but also the weight of the wrapping, including the bagging and the ties. The Senator proposes to make it a criminal practice to use any other than the standardized form for the purpose of eliminating the weight of the bagging and ties. I must object to the present consideration of the bill.

The PRESIDENT pro tempore. The bill will be passed over.

BILLS AND JOINT RESOLUTIONS PASSED OVER

The bill (S. 2309) to amend the interstate commerce act in respect of certificates of public convenience and necessity was announced as next in order.

Mr. KING. Mr. President, I should like to ask whether or not there is a report on this bill?

Mr. BRUCE. I ask that the bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

The joint resolution (S. J. Res. 144) relating to the manufacture of stamped envelopes was announced as next in order.

Mr. JONES. Let that bill be passed over, Mr. President.

The PRESIDENT pro tempore. The bill will be passed over.

The joint resolution (S. J. Res. 35) to amend section 3 of the joint resolution entitled "Joint resolution for the purpose of promoting efficiency, for the utilization of the resources and industries of the United States, etc.," approved February 8, 1928, was announced as next in order.

Mr. METCALF. Let that joint resolution go over.

The PRESIDENT pro tempore. The joint resolution will be passed over.

The bill (H. R. 9049) to amend section 227 of the Judicial Code was announced as next in order.

Mr. BRATTON. Mr. President, I should like to have some explanation of the manner in which this bill proposes to amend section 227 of the Judicial Code.

Mr. McNARY. I ask that the bill go over.

The PRESIDENT pro tempore. The bill will go over.

STANDARDIZATION OF COTTON BALES

Mr. RANSDELL. Mr. President, I understand that the Senator from Arkansas [Mr. ROBINSON] is willing to withdraw his objection to Senate bill 872, which was before the Senate a few moments ago.

Mr. ROBINSON of Arkansas. I have no objection to the consideration of the bill.

Mr. HEFLIN. Mr. President, I want an opportunity to look into the bill. I am not satisfied to proceed with its consideration to-day.

Mr. ROBINSON of Arkansas. Let me state to the Senator from Alabama that I am willing to withdraw my objection to the consideration of the bill. I am, however, in the same attitude of mind that he seems to be. I want to know something about the bill before it shall be passed.

Mr. HEFLIN. I ask that the bill go over until we can look into it.

The PRESIDENT pro tempore. The bill will be passed over.

ALTERATIONS AND REPAIRS TO NAVAL VESSELS

The bill (S. 4570) to authorize alterations and repairs to certain naval vessels was announced as next in order.

Mr. KING. Let that bill go over.

Mr. HALE. Mr. President, if the junior Senator from Utah will permit me, I desire to state that this is not the so-called cruiser bill, but is merely a bill to modernize two battleships. It is in line with what has been done in the naval program for the last three or four years. It is desirable to have this authorization out of the way so that appropriations may be made when the naval appropriation bill comes up later on in the session.

Mr. KING. Mr. President, I think it might be a good idea to consider the two bills together. That may be done, of course, by unanimous consent.

Mr. HALE. There is no connection of any kind between this measure and the bill for an addition to the Navy. This is simply a bill to authorize the altering and repairing of two of our older battleships, and is in line with what we have been doing for the last few years.

Mr. KING. I know; but we wish to discuss the naval policy of the United States, and a discussion of the naval policy and the enormous appropriations which are made for the Army and for the Navy for ordinary expenses, and for what might be denominated extraordinary expenses, may take place in the consideration of both bills.

Mr. HALE. I take it the Senator from Utah does not mean to give up the Navy altogether?

Mr. KING. There is no such suggestion, but, as the Senator from Maine knows, I have been very much opposed to the reactionary policy of some persons who are connected with the Navy when they insisted upon building 18 capital ships at a cost of more than a billion dollars, instead of building some airplanes, airplane carriers, and submarines. I think that some of the policies of the Navy Department are not consistent with an up-to-date, modern, scientific Navy.

Mr. HALE. Mr. President, we have 18 battleships in our Navy, and we have already modernized 8 of them, providing deck protection and blisters and a few other changes in connection with them. I hope the Senator from Utah will allow this bill to go through. I repeat it is merely carrying out the policy which we have already inaugurated.

Mr. KING. I shall be very glad to join with the Senator in taking this bill up when we can have a little discussion of it, as some criticism has been made in regard to this measure.

Mr. HALE. The Senator has a right to object.

The PRESIDENT pro tempore. The bill will go over.

BILLS PASSED OVER

The bill (S. 4572) to authorize the Secretary of the Navy to proceed with the construction of certain public works, and for other purposes, was announced as next in order.

Mr. HALE and Mr. KING asked that the bill be passed over.

The PRESIDENT pro tempore. The bill will be passed over.

The bill (S. 2328) to promote the development, protection, and utilization of grazing facilities within national forests, and for other purposes, was announced as next in order.

Mr. WALSH of Montana. Let that bill go over.

The PRESIDENT pro tempore. The bill will be passed over.

HOWARD P. MILLIGAN

The bill (H. R. 13440) for the relief of Howard P. Milligan was announced as next in order.

Mr. REED of Pennsylvania. I think that is the same as the bill (S. 3866) authorizing the appointment of H. P. Milligan as a major of infantry in the Regular Army, and I ask that the bill go over.

Mr. FLETCHER. Should the bill not be referred to the Committee on Military Affairs?

Mr. REED of Pennsylvania. I do not understand why the bill was placed on the calendar instead of being referred to that committee.

The PRESIDENT pro tempore. The bill came over to the Senate the last day of the last session and some Senator objected to it.

Mr. REED of Pennsylvania. Then I move that the bill be referred to the Committee on Military Affairs.

The motion was agreed to.

S. L. ROBERTS

The bill (S. 3741) for the relief of S. L. Roberts was considered as in Committee of the Whole. The bill had been reported from the Committee on Claims with an amendment, in line 5, after the words "sum of," to strike out "$2,469.99" and insert "$1,500," so as to make the bill read:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay to S. L. Roberts, out of any money in the Treasury not otherwise appropriated, the sum of $1,500, as full compensation for services rendered in 1919 to the Alien Property Custodian by the firm of Crandall & Roberts in auditing the books of the Columbia & Northern Fishing & Packing Co.

Mr. KING. Mr. President, I desire to ask the Senator from Oregon, who reported this bill, whether the appropriations which have been made for the Alien Property Custodian are not sufficient to meet this expenditure?

Mr. STEIWER. Mr. President, the difficulty respecting this little claim was that the Alien Property Custodian turned over the corpus of the trust; that is, the property held, and he has no funds from which to pay the item. It is not disputed, and the Alien Property Custodian himself recommends the payment. He would make the payment out of his funds if that were possible and it could be so made. I hope there will be no objection.

Mr. KING. May I ask the Senator whether or not the service rendered merited such a large appropriation?

Mr. STEIWER. Oh, yes; and there was an agreement made for the payment of $1,500. The services were rendered in accordance with that agreement, and in addition to that further services were rendered. The bill, therefore, was drawn for something more than $1,500; but some dispute grew out of the matter, and the Alien Property Custodian recommended merely that we pay in accordance with the original agreement. The bill, therefore, has been amended to that effect and is in the sum of $1,500 instead of the original amount.

Mr. KING. I have no objection.

The PRESIDENT pro tempore. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

SALARIES OF FIRST-CLASS POSTMASTERS

The bill (H. R. 5837) to increase the salaries of certain postmasters of the first class was announced as next in order.

Mr. KING. I ask that that bill go over.

The PRESIDENT pro tempore. May the Chair say to the Senator from Utah that this is a House bill which came over while a Senate bill of similar purport was then pending? By agreement the two bills were consolidated and the amendments agreed to; but at a later stage of the proceedings objection was made and the bill, therefore, went to the calendar. The Senate, however, had already agreed as to the subject matter of the bill.

Mr. KING. Well, objection is made now.

The PRESIDENT pro tempore. The objection is now insisted upon, and the bill goes over.

Mr. JONES. Mr. President, according to the statement on the calendar, this bill has never been before a Senate committee.

The PRESIDENT pro tempore. A similar Senate bill, the given number of which the Chair does not now recall, was introduced, as he remembers, by the Senator from New Jersey. That bill was heard and acted upon in the committee. Then the House bill came over when the Senate bill was on the

calendar. The record, in the opinion of the Chair, in the last column of the calendar should be substantially the same as for Calendar No. 1366, where a substitution was made upon motion of the Senator from California.

Mr. JONES. The calendar certainly should be corrected so as to show the state of affairs as disclosed by the chairman of the Committee on Post Offices and Post Roads.

The PRESIDENT pro tempore. The bill will be passed over.

BOULDER DAM

The bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes, was announced as next in order.

The PRESIDENT pro tempore. That is the unfinished business, and will be passed over.

TRAVEL PAY AND ALLOWANCES TO CERTAIN SOLDIERS

The bill (S. 1513) granting travel pay and other allowances to certain soldiers of the Spanish-American War and the Philippine insurrection who were discharged in the Philippines was announced as next in order.

Mr. KING. Mr. President, I understand there is some objection to that bill and that it will lead to some discussion. So I suggest that it go over.

The PRESIDENT pro tempore. The bill will be passed over.

DISPOSAL OF LIGHTHOUSE RESERVATIONS

The bill (H. R. 12533) to authorize the Secretary of Commerce to dispose of certain lighthouse reservations and to acquire certain lands for lighthouse purposes was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of Commerce is hereby authorized to transfer to the Colonial Dames of America in Virginia the following-described portion of the Dutch Gap Lighthouse Reservation, Va.: Beginning at a stone marked "A" on blue print No. 5624, on file in the office of the Superintendent of Lighthouses, Baltimore, Md., which is designated as the point of beginning in deed dated November 12, 1889, from the city of Richmond to the United States and recorded among the land records of Henrico County, Va., in deed book No. 128–A, page 301, etc., running thence south 40° west 122.98 feet to B, thence south 50° east 228 feet to C, thence north 40° east 160 feet to D, thence north 50° west 60 feet to E, thence north 40° east 162.98 feet to F, thence north 50° west 118 feet to G, thence south 80° west 78 feet to H, thence south 40° west 140 feet to A, the point of beginning, containing 1.43 acres, which includes all of the land conveyed from the city of Richmond to the United States by aforementioned deed, and all of first parcel described in deed of May 30, 1873, from city of Richmond, Va., to the United States recorded in deed book No. 92, page 72, etc., except plots D, E, F, J, which is retained by the Lighthouse Service. The property shall be used and maintained by the Colonial Dames of America in Virginia for historical purposes only. If at any time for a period of one year it should not be so used and maintained, it shall revert to the United States without notice, demand, or other suit or proceeding. The United States reserves the right to locate and maintain upon the property so transferred any aids to navigation and in any locations thereon the Secretary of Commerce may deem necessary and to enter and leave the property by the most convenient routes for this purpose.

SEC. 2. The Secretary of Commerce is hereby authorized to convey by quitclaim deed to the Ann Arbor Railroad Co., having its principal place of business at Toledo, Ohio, a tract of land lying south of the harbor entrance connecting Lake Michigan and Lake Aux Bocs Sucs, at Frankfort, Mich., deeded to the United States by warranty deed on August 1, 1908, from Charles T. Parker administrator de bonis non com testamento annexo of Henry Day, deceased, said deed being recorded February 23, 1909, in the register's office of Benzie County, Mich., in liber 39 of deeds, pages 57 and 58, described therein by metes and bounds, as follows:

"Begininng at a point on the fence situated on the west side of the buildings of the life-saving station 70 feet measured on said fence from the southerly boundary of the life-saving station reservation; running westerly 150 feet parallel with the south boundary of the reservation; thence true north 150 feet, more or less, to the face of the revetment; thence easterly along the face of the revetment to its intersection with the fence aforesaid; thence in a southerly direction along the line of said fence 150 feet, more or less, to the place of beginning, being an area of land approximately 150 feet square, which land is situated in the southeast quarter northeast quarter section 28, township 26 north, range 16 west, Benzie County, Mich.; excepting perpetual easements for life-saving purposes granted to the United States of America in certain conveyances bearing dates, respectively, November 4, 1883, and June 3, 1889."

The said tract of land to be given in exchange for and dependent upon the Ann Arbor Railroad Co. conveying to the United States the fee-simple title, as evidenced by a warranty deed and abstracts acceptable to the Attorney General of the United States, to the following tract of land lying northerly of the said harbor entrance and described by metes and bounds, as follows:

"Starting at the common corner between sections 21, 22, 27, and 28, township 26 north, range 16 west, State of Michigan, running due west along the section line a distance of 690 feet; thence running due south a distance of 1,160.38 feet, to a stake, thence north 86° 36′ west, a distance of 291 feet to the place of beginning.

"Thence running south 3° 24′ west, a distance of 80 feet to a stake; thence north 86° 36′ west, for a distance of 281 feet to a stake; thence north 3° 24′ east, for a distance of 80 feet to a stake; thence south 86° 36′ east, for a distance of 281 feet to the place of beginning of the land hereby conveyed, containing one-half acre, more or less."

SEC. 3. The Secretary of Commerce is hereby authorized to transfer to the control of the Secretary of the Navy the parcels of land hereinafter described and forming portions of the Parris Island Lighthouse Reservation, S. C.:

Parcel No. 1. The tract of land, together with all buildings and appurtenances, which was formerly the site of the Parris Island Range Front Light, described as follows in a deed of July 26, 1878, from James C. Snyder to the United States, recorded June 12, 1879, in book No. 11, page 511, of Beaufort County register's office:

"All that piece or parcel of land being a part of a tract of land formerly known as the 'Means Plantation' and numbered according to a map of a survey on file in the office of Commissioner of Internal Revenue, Washington, D. C., as lot 23, section 20, township 2 south of Beaufort base line and 1 west of the St. Helena meridian in the county of Beaufort and State of South Carolina, to wit:

"'Commencing at a point on the shore of a creek known as "Means Creek" north 28° 41′ west, 206 feet from the southeast corner of lot 23 of the aforesaid map and running thence north 77° 30′ west, 558 feet; thence north 72° 15′ east, 710 feet to Means Creek; thence southerly along the shores of Means Creek to the place of beginning, the whole containing 2¼ acres, more or less, and including the water privileges of the front on Means Creek, and * * * a right of way of sufficient width for the construction of an earthen causeway and for the procuring of the material to construct and keep in repair the same across the land lying between the aforesaid piece or parcel of land and an earthen causeway across the marsh to the southerly end of Parris Island.'"

Parcel No. 2. The tract of land, on which the Parris Island Range Rear Beacon is now located, described as follows in a deed of February 28, 1879, from Silas E. Taylor to the United States, recorded November 14, 1879, in book No. 11, page 576, of Beaufort County register's office:

"All that piece and parcel of land situated, lying, and being on Parris (or Parry) Island in the county of Beaufort and State of South Carolina, to wit:

"'All of the NE. ¼ NE. ¼ SE. ¼ section 18, township 2 south, range 1 west, of Beaufort principal meridian, according to a plat of the United States survey on file in the office of Commissioner of Internal Revenue, Washington, D. C., and numbered according to the said plat, lot 33, of the aforesaid section, containing 10 acres, more or less.'"

The Parris Island Range Rear Beacon shall be allowed to remain in its present position until removed or relocated by or with the permission of the Department of Commerce Lighthouse Service. The Department of Commerce Lighthouse Service shall also retain the right of ingress and egress by the most convenient route across the above-described parcel No. 2, for maintenance, relocation, or removal of the said rear beacon of this range.

SEC. 4. The Secretary of the Treasury is hereby authorized and directed to transfer to the Department of Commerce for lighthouse purposes an additional strip of land 6 feet in width, extending in a southerly direction from Jefferson Avenue a distance of 150 feet, parallel and contiguous to the easterly line of the portion of the old Marine Hospital Reservation, Detroit, Mich., which was transferred to the Department of Commerce by authority of the act of Congress approved May 18, 1926.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

CLAIMS OF WINNEBAGO INDIANS

The bill (H. R. 7346) conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment thereon in claims which the Winnebago Tribe of Indians may have against the United States, and for other purposes, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That jurisdiction be, and is hereby, conferred upon the Court of Claims, with the right of appeal to the Supreme Court of the United States by either party as in other cases, to hear, examine, and adjudicate and render judgment in any and all legal and equitable claims arising under or growing out of the treaty of February 27, 1855 (10 Stat. 1172), and the act of February 21, 1863 (12 Stat. 658), or arising under or growing out of any subsequent act of Congress, Executive order, or treaty which said Winnebago Tribe of Indians, or any band thereof, may have against the United States, which claims have not heretofore been determined and adjudicated on

their merits by the Court of Claims or the Supreme Court of the United States.

SEC. 2. Any and all claims against the United States within the purview of this act shall be forever barred unless suit be instituted or petition filed as herein provided in the Court of Claims within three years from the date of the approval of this act, and such suit shall make the Winnebago Indians, or any band thereof, party plaintiff and the United States party defendant. The petitions shall be verified by the attorney or attorneys employed to prosecute such claim or claims under contract with said Winnebago Indians approved in accordance with existing law; and said contract shall be executed in their behalf by a committee or committees to be selected by said Winnebago Indians as hereinafter provided. Official letters, papers, documents, and records, or certified copies thereof, may be used in evidence, and the departments of the Government shall give access to the attorney or attorneys of said Winnebago Indians to such treaties, papers, correspondence, and records as they may require in the prosecution of any suit instituted under this act.

SEC. 3. In said suit or suits, the court shall hear, examine, and adjudicate any claims which the United States may have against said Winnebago Indians, and any payment, including gratuities, which the United States may have made to said Indians prior to the date of adjudication, shall not operate as an estoppel but may be pleaded as an offset in such suit.

SEC. 4. If it be determined by the court that the United States in violation of the terms and provisions of any law, treaty, Executive order, or agreement as provided in section 1 hereof, has unlawfully appropriated or disposed of any money or other property belonging to the Indians, the damages therefor shall be confined to the value of the money or other property at the time of such appropriation or the disposal thereof; and with reference to all claims which may be the subject matter of the suit herein authorized, the decree of the courts shall be in full settlement of all damages, if any, committed by the Government of the United States and shall annul and cancel all claim, right, and title of said Winnebago Indians in and to such money or other property.

SEC. 5. The Court of Claims shall have full authority by proper orders and process to bring in and make parties to such suit any other tribe or band of Indians deemed by it necessary or proper to the final determination of the matters in controversy.

SEC. 6. A copy of the petition shall, in such case, be served upon the Attorney General of the United States, and he, or some attorney from the Department of Justice to be designated by him, is hereby directed to appear and defend in the interest of the United States in such case.

SEC. 7. Upon final determination of such suit the Court of Claims shall have jurisdiction to fix and determine a reasonable fee, not to exceed 10 per cent of the recovery, and in any event not more than $25,000, together with all necessary and proper expenses incurred in preparation and prosecution of the suit, to be paid to the attorneys employed by the said tribe or bands of Indians, and the same shall be included in the decree and shall be paid out of any sum or sums found to be due said tribe.

SEC. 8. The amount of any judgment shall be placed in the Treasury of the United States to the credit of the said Indians and shall draw interest at the rate of 4 per cent per annum and shall be thereafter subject to appropriation by Congress for educational, health, industrial, and other purposes for the benefit of said Indians, including the purchase of lands and building of homes, and no part of said judgment shall be paid out in per capita payments to said Indians. The costs incurred in any suit hereunder shall be fixed against the losing party; if against the United States such costs shall be included in the amount of the judgment or decree, and if against said Indians shall be paid by the Secretary of the Treasury out of the funds standing to their credit in the Treasury of the United States: *Provided*, That actual cost necessary to be incurred by the Winnebago Indians as required by the rules of court in the prosecution of this suit shall be paid out of the funds of the Winnebago Tribe in the Treasury of the United States.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EASEMENTS ON NEZ PERCE INDIAN RESERVATION, IDAHO

The bill (H. R. 11983) to provide for issuance of perpetual easement to the department of fish and game, State of Idaho, to certain lands situated within the original boundaries of the Nez Perce Indian Reservation, State of Idaho, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to issue perpetual easement to the department of fish and game, State of Idaho, to the following-described lands, all situated within the original boundaries of the Nez Perce Indian Reservation, State of Idaho:

Commencing at a point on the east and west center line of section 14, township 35 north, range 4 west, Boise meridian, 885 feet west of the east quarter corner of said section 14, which point of beginning is also on the easterly right-of-way line of the Camas Prairie Railroad; thence north 3° 10′ west along said right-of-way line a distance of 1,646 feet; thence east a distance of 1,158.5 feet to a point on the westerly right-of-way line of the county road; thence south 3° 27′ west along said county road right-of-way line a distance of 1,648 feet to a point on the east and west center line of section 13, township 35 north, range 4 west, Boise meridian, which point is 83.6 feet east of the west quarter corner of said section 13; thence north 89° 58′ west along the east and west center lines of said sections 13 and 14, a distance of 968.6 feet to the point of beginning. Lying partly in the northwest quarter section 13 and partly in the northeast quarter section 14. All in township 35 north, range 4 west, Boise meridian, containing 40.22 acres, more or less.

Said lands to be used by the department of fish and game, State of Idaho, for the propagation of fish and game: *Provided*, That should the land herein granted cease to be used by the department of fish and game, State of Idaho, for the propagation of fish and game, the easement shall cease, the grantees be permitted to remove structures and equipment that they may have added, and the land described revert to the grantors herein.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RUSSELL WHITE BEAR

The bill (H. R. 13606) for the relief of Russell White Bear was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to issue a patent in fee to Russell White Bear, Crow allottee No. 822, for land allotted to him under the provisions of the act of June 4, 1920 (41 Stat. L., p. 751), and designated as homestead.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

JAMES HUNTS ALONG

The bill (H. R. 12312) for the relief of James Hunts Along was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to place to the credit of James Hunts Along the sum of $2,000, out of any money in the Treasury not otherwise appropriated, to be expended for his use and benefit under the supervision of the Secretary of the Interior to cover in full reimbursement and compensation for injuries incurred and resulting from his being attacked and severely beaten by Indians while engaged in the performance of his official duties as Indian policeman on the Fort Berthold Indian Reservation.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

THE PULLMAN SURCHARGE

Mr. ROBINSON of Arkansas. Mr. President, some time ago when Calendar No. 1287 amending section 1 of the interstate commerce act, being a bill to prevent the collection of the Pullman surcharge, was called the Senator from Utah [Mr. SMOOT], whom I do not now see in the Chamber, stated that he desired that the measure go over for the present. I did not understand whether his request was that the bill should go over for the day or merely for a few moments.

Mr. KING. Mr. President, I understood that the bill was to go over for the day. I know that some representations have been made from the West, and I would feel constrained to object if my colleague did not, in view of the information which I have received. So I ask that the bill go over.

Mr. ROBINSON of Arkansas. The senior Senator from Utah is not present, and I shall not insist on taking it up.

The PRESIDENT pro tempore. The bill will be passed over.

NOMINATION OF JOHN W. POLE

Mr. GLASS. Mr. President, I note from the RECORD of Saturday that the nomination of John W. Pole to be Comptroller of the Currency was confirmed. I wish to call attention to the fact that the reference of this nomination was totally wrong. It should have been referred to the Banking and Currency Committee, and I give notice, as in open executive session, of my intention to move a reconsideration of the vote whereby the nomination was confirmed so that a proper reference of the nomination may be made. I do that in the absence of the chairman of the Committee on Banking and Currency, who felt very much irritated at a similar occurrence during the last session of Congress, and I am sure if he were here he would want this nomination to take the course required by the rules of the Senate.

The PRESIDENT pro tempore. The Chair understands the Senator from Virginia to ask unanimous consent that the Senate

resolve itself into open executive session for the purpose of presenting the notice which he has given?

Mr. GLASS. Yes; if that is the proper proceeding.

The PRESIDENT pro tempore. Without objection, that course will be followed.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

The PRESIDENT pro tempore. The question is on the amendment proposed by the junior Senator from Arizona [Mr. HAYDEN] to the substitute amendment of the Senator from California [Mr. JOHNSON].

Mr. KING. Mr. President, I offer a number of amendments to the pending bill, which I ask to have printed and lie upon the table.

The PRESIDING OFFICER (Mr. BRATTON in the chair). Without objection, it is so ordered.

Mr. HAYDEN. Mr. President, in the absence of my colleague [Mr. ASHURST], who gave notice that he would desire to conclude his remarks to-day, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	Frazier	McNary	Simmons
Barkley	George	Metcalf	Smith
Bayard	Glass	Moses	Smoot
Bingham	Glenn	Neely	Steiwer
Black	Goff	Norris	Stephens
Blaine	Gould	Nye	Swanson
Blease	Greene	Oddie	Thomas, Idaho
Borah	Hale	Overman	Thomas, Okla.
Bratton	Harris	Phipps	Trammell
Brookhart	Harrison	Pine	Tydings
Broussard	Hayden	Pittman	Tyson
Bruce	Heflin	Ransdell	Vandenberg
Capper	Johnson	Reed, Pa.	Wagner
Caraway	Jones	Robinson, Ark.	Walsh, Mass.
Couzens	Kendrick	Robinson, Ind.	Walsh, Mont.
Curtis	Keyes	Sackett	Warren
Deneen	King	Schall	Waterman
Dill	Locher	Sheppard	Watson
Fess	McKellar	Shipstead	
Fletcher	McMaster	Shortridge	

Mr. WAGNER. I desire to announce the necessary absence of my colleague [Mr. COPELAND] on account of illness in his family.

The PRESIDENT pro tempore. Seventy-eight Senators having answered to their names, a quorum is present. The question is on agreeing to the amendment proposed by the junior Senator from Arizona [Mr. HAYDEN] to the substitute amendment of the Senator from California [Mr. JOHNSON].

TITLE OF THE STATES IN THE BEDS AND WATERS OF NAVIGABLE STREAMS

Mr. ASHURST. Mr. President, discussing the title of the States in and to the beds, banks, and waters of navigable streams, the several States of the Union are each primarily the proprietors of, and have the sovereignty over, the beds and waters of the navigable streams and watercourses within their respective borders, subject only to the rights of the Federal Government under the interstate commerce clause of the Constitution (Art. I, sec. 8, par. 3) and to the rights of the Federal Government as owner of the riparian lands (Art. IV, sec. 3, par. 2), which rights will hereafer be discussed.

In the case of Martin *v.* Waddell (16 Pet. 367), where the question of tidelands and tidewaters was involved, the Supreme Court of the United States makes this clear and comprehensive declaration:

> For when the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters, and the soils under them, for their own common use, subject only to the rights since surrendered by the Constitution to the General Government.

The same doctrine was laid down by the court in the case of Pollard *v.* Hagan (3 How. 212), and it was held to apply to the newer States in as full a measure as to the original States of the Union. In this case the court concludes its opinion as follows:

> By the preceding course of reasoning we have arrived at these general conclusions: First, the shores of navigable waters and the soils under them were not granted by the Constitution to the United States, but were reserved to the States respectively; second, the new States have the same rights, sovereignty, and jurisdiction over this subject as the original States; third, the right of the United States to the public land and the power of Congress to make all needful rules and regulations for the sale and disposition thereof conferred no power to grant to the plaintiffs the land (tidewater land) in controversy.

In the case of Barney *v.* Keokuk (94 U. S. 324), Justice Bradley declares that the correct principles were laid down in the foregoing cases, and then adds:

> These cases related to tidewater, it is true; but they enunciate principles which are equally applicable to all navigable waters.

The rule laid down in the foregoing cases is reaffirmed and amplified with the citation of numerous authorities in the case of Shively *v.* Bowlby (152 U. S. 1).

In United States *v.* Holt State Bank (70 Law Ed. 213) the Supreme Court stated:

> The United States early adopted and constantly has adhered to the policy of regarding lands under navigable waters in acquired territory, while under its sole dominion, as held for the ultimate benefit of future States, and so has refrained from making any disposal thereof, save in exceptional instances when impelled to particular disposals by some international duty or public exigency. It follows from this that disposals by the United States during the Territorial period are not lightly to be inferred and should not be regarded as intended, unless the intention was definitely declared or otherwise made very plain.

There is nothing in the enabling act, which granted statehood to Arizona, or in any legislation which was passed during the time that Arizona was a Territory which disposed of any of the rights of the State of Arizona in the bed and banks and the use of the waters of the Colorado River at Boulder or Black Canyons.

CONGRESS GAVE ITS CONSENT TO THE STATES IN THE COLORADO RIVER BASIN TO DEPLETE THE FLOW OF THE RIVER AND RENDER IT NONNAVIGABLE IN THE UNITED STATES

The Congress of the United States first recognized the necessity for local customs to govern the use and appropriation of water in the semiarid Western States when it adopted section 9 of the act of July 26, 1866 (14 Stat. 266; sec. 2339, Rev. Stats.). This section reads:

> That whenever, by priority of possession, right to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and the decisions of the courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals, for the purposes aforesaid, is hereby acknowledged and confirmed.

Congress later adopted another provision (16 Stat. 217; sec. 234, Rev. Stats.), which reads as follows:

> All patents granted or preemptions or homesteads allowed shall be subject to any vested and accrued water rights or rights to ditches and reservoirs used in connection with such water rights, as may have been acquired under or recognized by the preceding section.

Under the terms of the United States reclamation law, the United States is required to obtain the consent of the States to use the lands and waters of the States before it may proceed with the erection of any dam for the purposes of utilizing the water for domestic, irrigation, or power purposes.

Section 8 of the United States reclamation act, Thirty-second Statutes, page 388 (1902), reads:

> That nothing in this act shall be construed as affecting or intending to affect or to in any way interfere with the laws of any State or Territory relating to the control, appropriation, use, or distribution of water used in irrigation, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing herein shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate streams of the waters thereof: *Provided*, That the right to the use of water acquired under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right.

The Federal water power act approved June 10, 1920, contains the following provisions:

> 9. (b) Satisfactory evidence that the applicant has complied with the requirements of the laws of the State or States within which the proposed project is to be located, with respect to beds and banks, and to appropriate diversion and use of water for power purposes, and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to affect the purposes of a license under this act.
>
> SEC. 27. That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the

respective States relating to control, appropriation, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein.

It is contended, however, that Congress, when it passed these laws, did not surrender the authority to regulate commerce and navigation, and it is argued that in the case of the United States *v.* Rio Grande Irrigation Co. (174 U. S. 690), the Supreme Court, in passing upon the certain statutes relating to the use of water for mining and irrigation purposes, makes the declaration:

To hold that Congress, by these acts, meant to confer upon any State the right to appropriate all the waters of the tributary streams which unite into a navigable water course, and so destroy the navigability of that water course in derogation of the interests of all the people of the United States, is a construction which can not be tolerated. It ignores the spirit of the legislation and carries the statute to the verge of the letter and far beyond what under the circumstances of the case must be held to have been the intent of Congress (pp. 706–707).

Arizona contends that the decision is not applicable to the Colorado River because the use of the water for irrigation and navigation is incompatible on that river. The State contends that the destruction of navigation is exactly what was authorized and what has occurred in the Colorado River, and is what is proposed to be ratified by the Swing-Johnson bill.

The States have authorized the use of and are now using the entire normal low flow of the river for irrigation, mining, and domestic uses. It has been established that, four times during recent years, the entire low flow of the Colorado River has for several consecutive weeks been diverted for irrigation and domestic use and that the bed of the river has been dry.

The Government of the United States has constructed dams on the main river and the tributaries for the diversion of water for irrigation purposes, which have contributed to the destruction of navigation on the Colorado River.

The States of Utah and Colorado have authorized, and the Government has consented to, the present annual diversion of 234,000 acre-feet of water in those States, from the Colorado River drainage basin, into other drainage basins. (See p. 173, S. Doc. No. 142; 67th Cong., 2d sess.)

The Government has constructed on the Colorado River and its tributaries the Strawberry and Gunnison tunnels, the Green River, and the Laguna Dams, and it is also diverting water from the river and its tributaries for the irrigation of Indian lands, and for other uses.

Numerous State and private irrigation projects have been constructed upon, and diversions have also been made for domestic, mining, and other uses from the Colorado River and its tributaries.

During the year 1902 the Secretary of State of the United States, in response to a communication from the Department of Justice, requested the International Water Boundary Commission, representing the United States, to investigate the subject to the alleged diversion of the waters of the Colorado River for irrigation purposes. The basic reason for the investigation was that protests had been filed which involved questions of treaties between the United States of America and the United States of Mexico respecting the navigation of the Colorado River.

The investigation made at that time established the fact that the river had been navigated but that if the proposed diversion of water was made for the use of irrigation in the Imperial Valley the river would be rendered nonnavigable below the point of diversion, which was located within the United States, between the States of Arizona and California.

Following the investigation the irrigators in California were permitted to construct a system to divert water from the Colorado River and to send the same into Mexico and into the Imperial Valley in California.

On October 23, 1918, the Secretary of the Interior of the United States entered into a contract with the Imperial Valley irrigation district to permit that district to use the Laguna Dam, which was constructed by the United States Bureau of Reclamation in connection with and for the benefit of the Yuma project, Arizona-California, to divert the waters of the Colorado River for use in the Imperial and Coachella Valleys in California. These valleys are outside of the drainage area of the Colorado River Basin, and such diversion would cause the Colorado River below Laguna Dam to be practically dry.

The Swing-Johnson bill ratifies all of these diversions of water and ratifies the Colorado River compact, which declares that—

Inasmuch as the Colorado River has ceased to be navigable for commerce, and the reservation of its waters for navigation would seriously limit the development of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes. If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

The Colorado River compact authorizes the States of Colorado, Wyoming, Utah, and New Mexico to appropriate and to have the annual consumptive use of 7,500,000 acre-feet of water from the Colorado River system in perpetuity.

Article III (d) of the compact provides that the annual flow of the stream in the upper basin may be depleted entirely, provided that from the return flow:

3 (d) The States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of 10 consecutive years reckoned in continuing progressive series beginning with the 1st day of October next succeeding the ratification of this compact.

The Colorado River compact authorizes the lower basin States, viz: Arizona, California, and Nevada, to appropriate and consume 8,500,000 acre-feet of water. The Swing-Johnson bill will enable California to take and consume at least 4,600,000 acre-feet of the waters apportioned by the compact to the lower basin and one-half of any water available for use which is not apportioned by the Colorado River compact.

It is therefore established that if navigation has not already been destroyed, the Colorado River compact, if applied, would destroy it, and the works authorized by the Swing-Johnson bill, if operated in conformity with all of the provisions of the bill, would render the stream nonnavigable.

NO RIPARIAN RIGHTS

A contention has been made that the Federal Government, in its capacity as the owner of public lands bordering on the Colorado River, has as the riparian owner the right to build a dam at Boulder or Black Canyon, use the water to develop power, and to control the appropriation of the waters of the river for the benefit of the public lands over the protest of Arizona.

The Supreme Court of the United States has stated:

The technical ownership of the beds of navigable rivers in the United States is either in the States in which the rivers are situated, or in the riparian owners, depending upon the local law. (Chandler-Dunbar *v.* United States, 229 U. S. 53.)

The Supreme Court of the United States in the case of Harden *v.* Jordan (140 U. S. 371) has determined that—

the limits and extent of the riparian ownership is governed by the law of the State in which the land is situated.

Justice Bradley, who delivered an opinion in this case (supra, 384) after discussing the question and citing numerous authorities, concludes as follows:

We do not think it necessary to discuss this point further. In our judgment the grants of the Government for lands bounded on streams and other waters, without any reservation or restriction of terms, are to be construed as to their effect according to the law of the State in which the lands lie.

The case of Shively *v.* Bowlby (152 U. S. 1) approves of and adheres to this rule, and the following cases indorse and adhere to the rule: Barney *v.* Keokuk (94 U. S. 324); St. Louis *v.* Myers (113 U. S. 566); Packer *v.* Bird (137 U. S. 661); St. Louis *v.* Rutz (138 U. S. 226); Mitchell *v.* Smale (140 U. S. 406); Grand Rapids *v.* Butler (159 U. S. 87); Water Power Co. *v.* Water Commissioners (168 U. S. 349); Kean *v.* Calumet Canal Co. (190 U. S. 452); United States *v.* Chandler-Dunbar Co. (209 U. S. 447).

A declaration contained in the bill of rights adopted by the Territory of Arizona in 1864 recognized that local customs and laws, in addition to the decisions of the courts in the semiarid States of the West, should govern the appropriation and use of water. The section of the Territorial act follows:

All streams, lakes, and ponds of water capable of being used for the purpose of navigation or irrigation are hereby declared to be public property and no individual or corporation shall have the right to appropriate them exclusively to their own private use, except under such equitable regulations and restrictions as the legislature shall provide for that purpose.

The State of Arizona has never recognized the common-law rule of riparian rights. The constitution of the State of Arizona contains the following provision:

Arizona: The common-law doctrine of riparian water rights shall not obtain or be of any force or effect in the State. (Art. 17, sec. 1.) All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 2.)

The United States Supreme Court and the Supreme Court of Arizona, respectively, have sustained this principle in Boquillas Cattle Co. *v.* Curtis (213 U. S. 339) and in Clough *v.* Wing (2 Ariz. 371).

In Boquillas Land & Cattle Co. *v.* Curtis (213 U. S. 339) wherein the controversy was a question as to whether the owner of a tract of land in Arizona acquired by a Mexican land grant which had been confirmed by treaty was entitled to the use of water as a riparian right. Mr. Justice Holmes, for the court, decided against the riparian rights and said:

It is not denied that what is called the common-law doctrine of riparian rights, does not obtain in Arizona at the present date. (Rev. Stat., Ariz., 1887, sec. 3198.) But the plaintiff contends that it had acquired such rights before that statutory declaration, and that it can not be deprived of them now. * * * They (the provisions relating to priority) simply follow what has been understood to be the law for many years (Clough *v.* Wing, 2 Ariz. 371). The right to use water is not confined to riparian proprietors * * *. Such a limitation would substitute accident for the rule based upon economic considerations, and an effort, adequate or not, to get the greatest use from all available land.

No State in the Colorado River Basin, with the exception of California, either in its capacity as a Territory or as a State, has ever recognized the common-law rule of riparian rights. California has never recognized the riparian doctrine as it relates to that portion of the State bordering upon the Colorado River. The provisions of the constitutions of the several States relating to the appropriation and use of water, together with court decisions sustaining them are as follows:

Arizona: The common-law doctrine of riparian water rights shall not obtain or be of any force or effect in the State. (Art. XVII, sec. 1.) All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed. (Art. XVII, sec. 2.) (Boquillas Cattle Co. *v.* Curtis, 213 U. S. 339; Clough *v.* Wing, 2 Ariz. 371.)

New Mexico: The unappropriated water of every natural stream, perennial or torrential, within the State of New Mexico, is hereby declared to belong to the public and subject to appropriation for beneficial use. In accordance with the laws of the State, priority of appropriation shall give the better right. (Sec. 2, Art. XVI.) (Trombley *v.* Luterman, 6 N. Mex. 15.)

Wyoming: Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channel, its control must be in the State which, in providing for its use, shall equally guard all the various interests involved. (Art. I, sec. 31.)

The waters of all natural streams, springs, lakes, and other collections of still waters within the boundaries of the State are hereby declared to be the property of the State. (Art. VIII, sec. 1.) (S. 728 and S. 1274, p. 482.) (Farm Investment Co. *v.* Carpenter, 9 Wyo. 110.)

Colorado: The waters of every natural stream not heretofore appropriated within the State of Colorado is hereby declared to be the property of the public and the same is dedicated to the use of the people of the State, subject to appropriation as hereinafter provided. (Art. 14, sec. 5.) (S. 728, S. 1274, p. 484.) (Yernker *v.* Nichols, 1 Colo. 551; Coffin *v.* Hand Ditch Co., 6 Colo. 443.)

California: The use of all water now appropriated or that may hereafter be appropriated for sale, rental, or distribution is hereby declared to be a public use and subject to the regulations and control of the State in the manner to be prescribed by law. (Art. 14, sec. 1.) (S. 728 and S. 1274, p. 476.)

Utah: All existing rights to the use of any of the waters of this State for any useful or beneficial purposes are hereby recognized and confirmed. (Art. 17, sec. 1.) (S. 728 and S. 1274, p. 481.) (State *v.* Xalio (4575), Nov. 25, 1927; Stowell *v.* Johnson, 7 Utah, 215; 26 Pac. 290.)

The constitution of the State of Nevada is silent upon the use of public water, but the State Water Code of Nevada contains the following provision:

Nevada: All natural watercourses and natural lakes and the waters thereof which are not held in private ownership belong to the State and are subject to appropriation for beneficial uses. (Reno Smelting, Milling & Reduction Works *v.* Stevenson, 20 Nev. 269; 21 Pac. 317, 4 L. R. A. 60, 19 Com. St. Rep. 364.) (Walsh *v.* Massey, 26 Nev. 327.)

In the case of Walsh *v.* Massey (26 Nev. 327) Chief Justice Massey said:

And it has been held by this court that the doctrine of riparian rights is so unsuited to the conditions existing in this State of Nevada and is so repugnant in its operation to the doctrine of appropriation that it is not a part of the law and does not prevail here.

As the ownership of the beds of fresh-water streams, navigable in fact, is one of the riparian rights, it follows that this right was rejected and the ownership of the bed of the Colorado River at Boulder Canyon and Black Canyon is vested in the States of Arizona and Nevada. It must necessarily follow that the United States has no right to the use of the bed and banks of the Colorado River at Boulder or Black Canyon as a riparian owner of public lands.

The State of Arizona has never conveyed the title to the bed and banks of the Colorado River at Boulder or Black Canyon and has never granted a permit for the use of the water at either site to anyone.

If the Federal Government did own riparian rights, the Supreme Court, in Barney *v.* Keokuk (944 U. S. 324) has held that—

with respect to such rights, we have held that the law of the State so declared by the Supreme Court, has control, as a rule, of property.

In Kansas *v.* Colorado (206 U. S. 92) the Supreme Court intimated that the National Government would not be able to interfere with the flowing waters on a navigable stream for purposes of irrigation because of the ownership of lands within the limits of the State, and the court said:

We do not mean that its (the National Government's) legislation can override State laws in respect to the general subject of reclamation.

PAYMENTS TO STATES IN LIEU OF TAXES

Congress has provided for payments to the States in lieu of taxes in other instances, as, for example, in the agricultural appropriation act of May 23, 1908 (35 Stat. 260), which directs the Secretary of Agriculture to turn over one-quarter of the total receipts from the national forests to the States in which the same are located.

That hereafter 25 per cent of all money received from each forest reserve during any fiscal year, including the year ending June 30, 1908, shall be paid at the end thereof by the Secretary of the Treasury to the State or Territory in which said reserve is situated, to be expended as the State or Territorial legislature may prescribe for the benefit of the public schools and public roads of the county or counties in which the forest reserve is situated: *Provided,* That when any forest reserve is in more than one State or Territory or county the distributive share to each from the proceeds of said reserve shall be proportional to its area therein.

In addition the act of March 4, 1913 (37 Stat. 843), directs that a tenth of these same receipts shall be devoted to the construction of roads and trails within the forest reserves of the States where collected, so that the States actually benefit to the extent of 35 per cent of the gross Federal income from the national forests.

That hereafter an additional 10 per cent of all moneys received from the national forests during each fiscal year shall be available at the end thereof, to be expended by the Secretary of Agriculture for the construction and maintenance of roads and trails within the national forests in the States from which such proceeds are derived; but the Secretary of Agriculture may, whenever practicable, in the construction and maintenance of such roads, secure the cooperation or aid of the proper State or Territorial authorities in the furtherance of any system of highways of which such roads may be made a part.

The act to promote the mining for coal, phosphate, oil, oil shale, gas, and sodium on the public domain (41 Stat. 450) specifically directs that 37½ per cent of all royalties collected shall be paid to the State within which the leased lands are located. Section 35 of that act reads:

SEC. 35. That 10 per cent of all moneys received from sales, bonuses, royalties, and rentals under the provisions of this act, excepting those from Alaska, shall be paid into the Treasury of the United States and credited to miscellaneous receipts; for past production 70 per cent and for future production 52½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902, and for past production 20 per cent and for future production 37½ per cent of the amounts derived from such bonuses, royalties, and rentals shall be paid by the Secretary of the Treasury after the expiration of each fiscal year to the State within the boundaries of which the leased lands or deposits are or were located, said moneys to be used by such State or subdivisions thereof for the construction and maintenance of public roads or for the support of public schools or other public educational institutions as the legislature of the State may direct: *Provided,* That all moneys which may accrue to the United States under the provisions of this act from lands within the naval petroleum reserves shall be deposited in the Treasury as "Miscellaneous receipts."

The same principle is recognized in the Federal water power act of June 10, 1920 (41 Stat. 1072), from which this provision is quoted:

SEC. 17. That all proceeds from any Indian reservation shall be placed to the credit of the Indians of such reservation. All other

charges arising from licenses hereunder shall be paid into the Treasury of the United States, subject to the following distribution: Twelve and one-half per cent thereof is hereby appropriated to be paid into the Treasury of the United States and credited to "Miscellaneous receipts"; 50 per cent of the charges arising from licenses hereunder for the occupancy and use of public lands, national monuments, national forests, and national parks shall be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress known as the reclamation act, approved June 17, 1902; and 37½ per cent of the charges arising from licenses hereunder for the occupancy and use of national forests, national parks, public lands, and national monuments, from development within the boundaries of any State shall be paid by the Secretary of the Treasury to such State; and 50 per cent of the charges arising from all other licenses hereunder is hereby reserved and appropriated as a special fund in the Treasury to be expended under the direction of the Secretary of War in the maintenance and operation of dams and other navigation structures owned by the United States or in the construction, maintenance, or operation of headwater or other improvements of navigable waters of the United States.

To sustain the right of the Federal Government to dispose of water and surplus power incidentally created in the course of improving the navigability of a stream, reliance is placed upon three decisions of the Supreme Court; i. e., in the cases of Kaukana Water Power Co. *v.* Green Bay & Mississippi Canal Co. (142 U. S. 254); Green Bay, etc., Co. *v.* Patten Co. (172 U. S. 58); and Chandler *v.* Dunbar (229 U. S. 53).

The case first cited is not in point. The right of the Federal Government to sell or dispose of incidentally created surplus electrical energy or water power was not involved.

Briefly, the facts in this case were: Congress granted public lands to the future State of Wisconsin for the improvement of the navigation of the Fox and Wisconsin Rivers. The State accepted the grant and undertook the work of improving the Fox River, reserving to itself all water powers created and appurtenant to such improvement, "subject to future action of the legislature." Unable to complete the work, the State incorporated and transferred to an improvement company the incomplete work, vesting in the company complete title to all the improvements, water powers to be created, rights, powers, and franchises. The improvement company mortgaged the property, was unable to meet its indebtedness, the mortgage was foreclosed, and complete title passed under foreclosure sale to the Green Bay & Mississippi Canal Co., the appellee.

This company in turn became seized in fee of all the improvements and all the appurtenant rights, powers, and franchises. Finding the operation of the dam and canal unprofitable, this company in turn sold the improvements to the United States Government, reserving, however, to itself the water power created by the dam and the use of surplus waters not required for purposes of navigation. Another company, claiming the right as a riparian owner, thereafter attempted to draw water from the pond formed by the dam, and thus deprive the Green Bay Co. of its use, control, and dominion over it. The Supreme Court of Wisconsin directed an injunction against the intruding company, and the case went to the Supreme Court of the United States on the ground that it involved the validity of a State statute, because repugnant to the Constitution of the United States. Mr. Justice Brown, for the court, among other things, said (p. 272):

> With respect to such rights (riparian rights) we have held that the law of the State, as declared by its supreme court, is controlling as a rule of property. (Barney *v.* Keokuk, 94 U. S. 324, etc.)

Upon the question as to the validity of the State statute he said (p. 273):

> But if, in the erection of a public dam for a recognized public purpose, there is necessarily produced a surplus of water, which may properly be used for manufacturing purposes, there is no sound reason why the State may not retain to itself the power of controlling or disposing of such water as an incident of its right to make such an improvement.

There is indeed no sound reason for denying such a right to the State. Such a right is entirely consistent with the doctrine of the State's dominion and sovereignty over the flowing waters of the navigable streams within its borders. But there is no word in the entire opinion in regard to the power of the Federal Government to assert and reserve such a right, and certainly there can be no parity in application of the construction of a rule dealing with the reserved rights of the State to the limited constitutional grants to the Federal Government. What there is sound reason for conceding to the State, there is, under the circumstances, equally as sound reason for denying to the Federal Government. The first proposition from the report quoted supra gains no support from the case cited.

The other case, that of Green Bay, etc., Canal Co. *v.* Patten Paper Co. (172 U. S. 58), is another suit against the same company as above. In this suit the right of the United States to control and dispose of the surplus waters created by the improvement to navigation heretofore described was brought directly into question. As said by Mr. Justice Shiras for the court (pp. 68–69):

> Whether the water power, incidentally created by the erection and maintenance of the dam and canal for the purposes of navigation in Fox River, is subject to control and appropriation by the United States, owning and operating those public works, or by the State of Wisconsin, within whose limits Fox River lies, is the decisive question in this case.
>
> Upon the undisputed facts contained in the record we think it clear that the canal company is possessed of whatever rights to the use of this incidental water power that could be validly granted by the United States.

The court then reviews the history of the whole enterprise, namely, the granting of land by act of Congress to the future State of Wisconsin for the express purpose of the improvement of the navigation of the river; the acceptance of the grant by the legislature of the State and the accompanying express reservation of title in the State to the water power incidentally created "subject to the future action of the legislature"; the act authorizing the relinquishment of such water powers to the persons undertaking the work of improvement; the act creating a corporation authorized to undertake the work and take all the powers, rights, and franchises possessed by the State; the failure of the company so created, foreclosure of the mortgage, and acquirement of all its property, rights, and powers at the sale by purchasers, who were incorporated under another act of the legislature, specifically investing them with such rights, powers, franchises, and so forth; the sale by this last company (appellant in this case) of all the property to the United States Government, under an act of the Legislature of Wisconsin authorizing the sale and an act of Congress providing for the purchase, and the reservation by the company in its conveyance of title to the personal property, water powers, and appurtenances. With reference to this reservation by the company the court said (p. 80):

> The substantial meaning of the transaction was that the United States granted to the canal company the right to continue in the possession and enjoyment of the water powers and the lots appurtenant thereto, subject to the rights and control of the United States as owning and operating the public works, and that the United States were credited with the appraised value of the water powers and appurtenances and the articles of personal property. The method by which this arrangement was perfected, namely, by a reservation in the deed, was an apt one, and quite as efficacious as if the entire property had been conveyed to the United States by one deed and the reserved properties had been reconveyed to the canal company by another.
>
> So far, therefore, as the water powers and appurtenant lots are regarded as property, it is plain that the title of the canal company thereto can not be controverted; and we think it is equally plain that the mode and extent of the use and enjoyment of such property by the canal company fall within the sole control of the United States. At what points in the dam and canal the water for power may be withdrawn, and the quantity which can be treated as surplus with due regard to navigation, must be determined by the authority which owns and controls that navigation. In such matters there can be no divided empire.

Evidently questioning the inherent right of the National Government under the Constitution to dispose of this surplus water power by virtue of its ownership of the dam, the court adopted the fiction of transfer and retransfer, so that the chain of title might be complete and a foundation laid for the Government's claim of authority to dispose of the surplus water. An abstract of the title would begin then with the acknowledged ownership by the State of the entire property, including the right to control and dispose of the surplus water power, and continuing, through the transfer by the State of its title and all appurtenant rights and powers to the first company; the foreclosure sale under mortgage and purchase by the second company, vesting it in turn with the complete title and all appurtenant rights and powers; the transfer by the second company to the national company of its title and all appurtenant rights and powers, all these transfers being duly authorized by acts of the Wisconsin Legislature; and finally the retransfer of the right to the use and enjoyment of such water powers by the Government to the second company, but a retention of all other property conveyed, including whatever power of control may have vested in the company by the State. As Mr. Justice Shiras says (p. 76):

> We have here the case of a water power incidental to the construction and maintenance of a public work and, from the nature of the

case, subject to the control of the public authorities, in this instance the United States.

And, at page 79:

The legal effect and import of the sale and conveyance by the canal company were to vest absolute ownership in the improvement and appurtenances in the United States, which proprietary rights thereby became added to the jurisdiction and control that the United States possessed over the Fox River as a navigable river.

In other words, the United States bought the right to dispose of this surplus water power. It never possessed it under the commerce clause of the Constitution giving it control of the navigation of the river. It was a proprietary right, coming down by regular conveyance from the State of Wisconsin. The National Government always had the right under the Constitution to prevent the State of Wisconsin, or its successors in title to this dam and appurtenances, from destroying or impairing the navigability of the river by an improvident diversion of the flowing water, but it never had the right, until it acquired it by purchase, of disposing of the surplus water power so created, and the court does not say it did. The State had such a right, and the court in the first case, supra, specifically recognized not only its right but its power to dispose of it.

So far as the authority of the National Government in the premises is concerned, what this case really does decide, and that is not now an open question, and was not so then, is, that the National Government has plenary power to maintain the navigability of streams uninterrupted, and further, that in the exercise of that power, it can determine at what points in its dams erected in aid of navigation water may be withdrawn, the quantity that may be withdrawn so far as it affects the question of navigability, and all other matters affecting that question solely. As is said by the court (p. 80): "In such matters there can be no divided empire." The power to sell surplus water incidentally created by improvements in aid of navigation is not given the National Government, in terms at least, by the Constitution.

The sole and exclusive right of the States to control the disposition of the flowing waters within their boundaries, limited only by nonimpairment of the riparian rights (under the State system) of the Government as an actual owner of the lands, and noninterference with the maintenance and improvement of the navigation of streams, has been too repeatedly and too strongly confirmed by the Supreme Court to be now questioned, and this reserved and valuable right would be seriously impaired—sometimes, perhaps, entirely destroyed—if the National Government, under the guise of aiding navigation, could exercise a precisely similar but paramount right at will. Here, too, there should be "no divided empire." The National Government has the undoubted power to see to it that the navigability of streams is maintained when they are in fact navigable, and that right is granted to it by the Constitution of the United States. The State has the undoubted right to control the disposition of the waters within its limits, subject only to the limitations stated, and that right has been repeatedly confirmed by the Supreme Court. Neither should seek to invade the province of the other. In Kansas *v.* Colorado (206 U. S. 88) Mr. Justice Brewer said:

Yet while so construed—that is, broadly—it still is true that no independent and unmentioned power passes to the National Government or can rightfully be exercised by the Congress.

The power to seize upon and dispose of the flowing waters of a State would be both independent and unmentioned. Assertion of the existence of such power under the second paragraph of section 3 of Article IV of the Constitution, providing "The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States," and so forth, was made by counsel for the United States Government intervening, apparently, upon the theory that the National Government, being a large owner of arid lands in the Western States, might enter into a general scheme of reclamation, and, consequently, had an interest in the controversy between the States as to the disposal of the waters of the Arkansas River, the boundary between them. The contention of the Government met with no favor, the court stating emphatically that no such power had been granted and none could be exercised. Conceding, however, that so far as its own lands were concerned, the National Government had power to make all needful rules and regulations, the court materially qualified this decision by adding:

We do not mean that its legislation can override State laws in respect to the general subject of reclamation. (Ib. p. 92.)

THE CHANDLER-DUNBAR CASE

In the United States *v.* Chandler-Dunbar Co. (229 U. S. 53), the act of Congress, March 3, 1909, declared that a public necessity existed for the absolute control of the waters of the St. Marys River for purposes of navigation.

The ownership in fee simple absolute, was acquired by the United States of all lands and property of every kind and description throughout the entire length of the St. Marys River, within the State of Michigan, a riparian State, necessary for the purposes of the navigation of the waters of the river and the United States Government compensated the owners for this property.

The State of Michigan, when it was admitted into the Union, acquired title to the bed of the St. Marys River. Under the law of that State conveyance of a tract of land upon a navigable river carried the title to the middle thread. The technical title became vested in the Chandler-Dunbar Co. and included the bed of the river opposite its upland on the bank to the middle thread of the stream, which was the boundary line at that point between the United States and the Dominion of Canada. The Federal Government when it acquired, by purchase, the property of the Chandler-Dunbar Co., became the proprietor of and acquired all of the rights of that company in the property in question.

The court in the Chandler-Dunbar case stated:

The main purpose of the act of 1909 was to clear the way for generally widening and enlarging facilities for the ever-growing commerce of the Great Lakes. The act, therefore, looks to the construction of one or more canals and locks paralleling those in use and directs a survey "to ascertain and determine the proper plan * * * for constructing in the rapids * * * a filling basin or forebay from which the ship locks may be filled" (p. 67).

That Congress did not act arbitrarily in determining that "for the purposes of navigation of said waters and the waters connected therewith," the whole flow of the river should be devoted exclusively to that end, is most evident when we consider the character of this stream and its relation to the whole problem of lake navigation (p. 66).

The court then analyzed the character of the stream, the fall of the river, the turbulent nature of the water, the influence of the outflow upon Lake Superior, the necessity of maintaining water levels, and directed attention to the fact—

that millions of public money have already been expended in the construction of canals and locks by this Government upon the American side and by the Canadian Government upon its own side of the rapids, as a means by which water craft may pass around the falls and the rapids in the river. The commerce, using these facilities, has increased by leaps and bounds. The first canal had hardly been finished before it became inadequate. (Ibid. p. 67.)

In the Chandler-Dunbar case the court was careful to determine the findings of fact and law regarding the development of the river which was undertaken by the Federal Government. The court, with great pains, set out in detail the importance of the improvement of the navigation facilities of the river as an aid to the growing and important commerce thereon.

The court also at great length traced the title and ownership of the bed of the river and of the adjacent lands, and it determined that when the United States became the riparian owner, in a riparian-law State, of the shore and appurtenant submerged land, by right of purchase, the United States owned in fee the property right in the river as a rule of law of the State of Michigan.

The United States constructed works in connection with navigation on the St. Marys River which made available surplus water which could be used for the development of hydroelectric power, which the Government leased to private consumers.

Mr. Justice Lurton, speaking for the court (Ibid, p. 73) on the question of the rights of the Government to deal with property of the character here under consideration, said:

If the primary purpose is legitimate, we can see no sound objection to leasing any excess of power over the needs of the Government. The practice is not unusual in respect to similar public works constructed by State governments. In Kaukauna Co. *v.* Green Bay, etc., Canal (142 U. S. 254, 273), respecting a Wisconsin act to which this objection was made, the court said:

"But if, in the erection of a public dam for a recognized public purpose, there is necessarily produced a surplus of water, which may properly be used for manufacturing purposes, there is no sound reason why the State may not retain to itself the power of controlling or disposing of such water as an incident of its right to make such improvement. Indeed, it might become very necessary to retain the disposition of it in its own hands in order to preserve at all times a sufficient supply for the purposes of navigation. If the riparian owners were allowed to tap the pond at different places and draw off the water for their own use, serious consequences might arise, not only in connection with the public demand for the purposes of navigation but between the riparian owners themselves as to the proper proportion each was

entitled to draw—controversies which could only be avoided by the State reserving to itself the immediate supervision of the entire supply. As there is no need of the surplus running to waste, there was nothing objectionable in permitting the State to let out the use of it to private parties and thus reimburse itself for the expenses of the improvement."

The court did not find that the Government had authority to engage in the production and sale of hydroelectric energy for commercial purposes. It acquired the right to dispose of this surplus power as the proprietor of the riparian lands. It will be observed that the court specifically stated that the rights of the Government must rest upon the fact that "the primary purpose was legitimate," namely, navigation.

The legal effect of the sale and conveyance by the riparian owners was to vest absolute ownership in the improvement and appurtenances in the United States, which proprietary rights thereby became added to the jurisdiction and control that the United States possessed over the St. Marys River as a navigable river.

In other words, in addition to the unquestioned right of the Federal Government to improve the river to aid the rapidly increasing commerce thereon, the United States bought the right to dispose of the surplus water power. It never possessed it under the commerce clause of the Constitution, giving it control of the navigation of the river. It was a proprietary right, coming down by regular conveyance from the State of Michigan. The court did not recognize any right in the Federal Government to engage in the development and sale of hydroelectric power for commercial purposes, even in its capacity as a proprietor. It simply recognized the right of the Federal Government as a proprietor to dispose of certain surplus power which is developed as incidental to the primary development—the improvement of the river for navigation as an incident to facilitating commerce thereon.

RIGHTS OF YUMA PROJECT

Any analysis of this legislation would be incomplete that failed to recognize the avidity with which its authors have availed themselves of every opportunity for advantage. No point has been overlooked where advantage might be reaped, at whatsoever cost to others, for the interests it is designed to enrich.

A striking illustration of this may be found in section 10, supplemented, extended, and enlarged by the provisions of section 7.

Section 10 empowers the Secretary of the Interior, with the consent of Imperial irrigation district, to modify the existing contract, dated October 23, 1918, authorizing the use of Laguna Dam for the diversion of water for the irrigation of Imperial Valley. That may appear reasonable enough to the casual observer, since the Secretary of the Interior and Imperial irrigation district are the parties of record to the contract in question. It should be understood, however, that the contract, in all of its details, relates to property rights and interests vital to the welfare and existence of Yuma project.

The Secretary of the Interior is a party to the contract merely in his capacity as an officer of the United States, in which the title to the Yuma project temporarily vests. The contract was the result of long negotiations, in which the negotiating parties were representatives of Imperial irrigation district on one hand and Yuma project on the other.

The projection to Yuma project, as embodied in the completed agreement, was the result of hard labor and determined effort over the attempts on the part of the California representatives seeking, as they now seek, every advantage for themselves. To disturb the status quo of this contract and agreement without the consent of the organization conducting the affairs of the landowners and water users of Yuma project, which originally confirmed its provisions, would constitute a violent outrage of the rights of those water users.

YUMA PROJECT INTERESTS NOT RECOGNIZED

It may be asserted that the Secretary of the Interior will naturally consult the interested project members, or their representatives, before modifying the contract, as did a previous Secretary of the Interior when the instrument was originally formulated. That does not necessarily follow. Secretaries come and Secretaries go. Secretaries have been known to be partisan. They are human, and humanity is beset with frailty. The water users of Yuma project might indeed be consulted but their protests might go unheeded. In any event, it is proposed to empower the Secretary, with the consent only of one party, viz, The Imperial irrigation district, to modify this contract in which Yuma project's very existence is bound up, and the peril that lurks in the provision is clearly shown by the alacrity with which a proposal made in committee for an amendment that would have required the consent of the Yuma County Water Users' Association was rejected by champions of this bill. The suggestion that Yuma project has any interest in the contract was treated with contempt.

If there were any doubt as to the seriousness of the purpose intended in the authority extended by section 10, it would be removed by turning back to section 7. Taking time and authorization by the forelock, this section, in vital particulars, itself modifies the contract in question.

By the agreement entered into on October 23, 1918 (appendix to House hearings on All-American Canal in Imperial County, Calif., 1922, p. 245), it is declared that Laguna Dam was constructed "in connection with the Yuma project, Arizona-California"; that Imperial irrigation district desires to secure "the right to divert water at said dam"; that the said district is authorized to contract with the United States "for a supply of water"; that the district shall proceed to secure cost data "for the diversion of water" at Laguna Dam and thence "through the existing main canal of the Yuma project" and for a main canal to "connect with said main canal of the United States at a point described as Siphon Drop"; that "for the right to use the Laguna Dam, the main canal, and appurtenant structures, and divert water," the district agrees to pay the sum of $1,600,000; that "the United States shall have and retain perpetually the title to and the complete control, operation, and management of said Laguna Dam, auxiliary works, and enlarged main canal from the dam to and including the Siphon Drop * * *, including the diversion works at Siphon Drop for the diversion and delivery of water to the Yuma project and the district"; that "the United States reserves the right to develop power * * * down to and including Siphon Drop; that all other power possibilities * * * down to * * * Pilot Knob shall be developed by the United States * * * for the joint benefit of the Yuma project and the Imperial irrigation district," and the cost of joint canal and headworks alterations and of power plants and accessories is definitely apportioned to the United States "for the Yuma project" and to the Imperial irrigation district; that "the preference right to purchase power developed" (between Siphon Drop and Pilot Knob) "shall be given over other users of power to the requirements of the Yuma project for power to be used in pumping irrigation water."

Other provisions highly important to Yuma project, relating both to power and to water, are embodied in the contract, which the Secretary of the Interior, with the consent of Imperial irrigation district, is to be given authority to modify. Imperial irrigation district, by the permission heretofore given to it to use the Laguna Dam, thereby gained no proprietary interest in the dam, "auxiliary works and enlarged main canal from the dam to and including the Siphon Drop." The Yuma project, it should be borne in mind, is not solely an Arizona project, but an Arizona-California project. Down to and including Siphon Drop, at which point the proposed main canal of the Imperial irrigation district is to take off from the Yuma project canal, the district, for the considerations named, obtained simply the right to use, but the title to the dam, appurtenant works, and canal to the point described is not affected by any capital investment therein necessary to be made by Imperial irrigation district in order that it may use Laguna Dam and divert water therefrom for the irrigation of Imperial Valley.

MUSCLE SHOALS

The construction of the Wilson Dam at Muscle Shoals was authorized by the President of the United States on February 23, 1918, pursuant to the act of Congress of June 3, 1916, chapter 134, section 124, Thirty-ninth Statutes, pages 166 and 215 (see U. S. C., title "War," sec. 79), known as the national defense act. Under the terms of this act the President was empowered to make investigation for the purpose of determining the—

best, cheapest, and most available means for the production of nitrates and other products for munitions of war * * * to designate for the exclusive use of the United States * * * such site or sites, upon any navigable or nonnavigable river or rivers or upon the public lands, as in his opinion will be necessary for carrying out the purposes of this act; and * * * to construct, maintain, and operate, at or on any site or sites so designated, dams, locks, improvements to navigation, power houses, and other plants and equipment * * * necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers and other useful products.

Section 124 of the national defense act of June 3, 1916, supra, relates not only to national defense and the production of materials needed in time of war, but provides for the improvement of navigation. Either is, of course, a national purpose. Legislation of this character would be expected to be broad and comprehensive. The act is so.

It gives the President large discretionary powers in the designation of suitable places for the erection of such plants as in his judgment are necessary in the effectuation of the purposes of the act. It gives authority to construct, maintain, and operate dams, locks, improvements to navigation, power houses, and other plants and equipment for the generation of electric or other power, and for the production of nitrates and other products needed for munitions of war. Paragraph 3 of section 124 reads:

The products of such plants shall be used by the President for military and naval purposes to the extent that he may deem necessary, and any surplus which he shall deem is not required shall be sold and disposed of by him under such regulations as he may prescribe.

The Muscle Shoals legislation is not a case where the Government has entered upon the business of generating power for commercial uses. It is a case where the Government, under its constitutional powers, has entered upon the prosecution of a work of national concern, in a time of war, relating to national defense and the improvement of navigation, in which a surplus product is created in time of peace which can be disposed of to aid agriculture.

Whether the State of Alabama reserved any rights in the surplus water power at Muscle Shoals has not as yet been determined by the Supreme Court. That State, however, contends that it has a right to derive a revenue from power developed at Muscle Shoals which is sold for commercial purposes.

THE TAXATION BY THE STATES OF HYDROELECTRIC POWER PRODUCED AT THE BOULDER DAM

The Federal Government has no authority under the Constitution to generate electric current primarily for commercial uses. It is assumed for the basis of this discussion that, because of the many and complex questions which are involved in Senate bill 728, that the States of Arizona and Nevada would waive the question of the right of the Government to generate and sell power for commercial purposes at Black Canyon or Boulder Dams on the Colorado River, if the interests of those States are recognized and protected in the pending bill.

The States of Arizona and Nevada have a twofold interest at Black and Boulder Canyons. First, they own the bed and banks of the river. Second, they have the sole authority to grant an easement or usufruct, for water-power purposes, to and in the water, which will be stored at that site, for the development of power. These States would have authority to impose a tax upon the usufruct to and in the water.

The United States Supreme Court, in Van Brecklin *v.* Tennessee (117 U. S. 150, 155), stated:

All subjects over which the sovereign power of a State extends are objects of taxation, but those over which it does not extend are upon the soundest principles, exempt from taxation. The sovereignty of a State extends to everything which exists by its authority or is introduced by its own authority or which is introduced by its permission, but it does not extend to those means which are employed by Congress to carry into execution power conferred upon that body by the people of the United States.

The sovereign power of the States extends to the appropriation, the use, and control of the public waters and lands underlying navigable waters and the banks thereof, except as to the paramount right of the Federal Government to control the stream for navigation as an incident to facilitating commerce on the stream, and there is no evidence that anyone has attempted to justify the development of the stream for navigation.

The taxing power of a State is one of its attributes of sovereignty, and where there has been no compact with the Federal Government or cession of jurisdiction for the purpose specified in the Constitution this power reaches all the property and business within the State which are not properly denominated the means of the General Government. (Van Brocklin *v.* Tennessee, 117 U. S. 176, quoting Nathan *v.* Louisiana, 8 How. 73, 82; see also Society for Savings *v.* Coite, 6 Wall. 504, 605; State Tonnage Tax cases, 12 Wall. 204, 224; Ward *v.* Maryland, 12 Wall. 418, 427; Transportation Company *v.* Wheeling, 99 U. S. 273, 279; see also South Car. *v.* United States, 199 U. S. 437, in particular, the minority opinion; Husler *v.* Thomas Collory Co., 260 U. S. 245; Oline Iron Works *v.* Lord, 262 U. S. 172; Lake Superior Mine Co. *v.* U. S., 211 U. S. 577.)

The Supreme Court in United States *v.* Bridge Co. (6 McLean 515, pp. 531, 532) stated:

In the admission of any States into the Union compacts were entered into with the Federal Government that they would not tax the lands of the United States. This implies that the States had power to tax such land if unrestrained by compact.

In United States *v.* Bridge Co. (ibid. 532) the court stated:

Within the limits of a State, Congress can, in regard to the disposition of public lands and their protection, make all needful rules and regulation, but beyond this it can exercise no other acts of sovereignty which it may not exercise in common over the lands of individuals. A mode is provided for the cession of jurisdiction when the Federal Government purchased a site for a military post, a customhouse, and other public buildings; and if this mode be not pursued, the jurisdiction of the State over the ground purchased remains the same as before the purchase. This, I admit, is not a decided point, but I think the conclusion is maintainable by the deductions of constitutional law.

The States have authority to establish such rules of property for themselves as they deem expedient, relative to the ownership of the beds and banks of navigable streams subject to the authority of Congress to control navigation in the interest of commerce. (27 R. C. L. 1369, 1072, and cases cited.)

That for the purpose of its policy, the State has legislative control, exclusive of Congress, within its territory, of all persons, things, and transactions of strictly internal concern. (Bowman *v.* Chicago & N. R. Co., 25 U. S. 465, 493.)

Assuming that a State may divest itself of its control and dominion over the bed and banks and the use of the waters of the stream, and that the United States may acquire a property right in the bed and banks of a stream and the use of the waters by such action on the part of the State; the States of Arizona and Nevada, which are nonriparian States, have not so divested themselves of the property at Black Canyon Dam site in the Colorado River. (See Kaukana Water Power Co. *v.* Green Bay & Mississippi Canal Co., 142 U. S. 254; Green Bay & Mississippi Canal Co. *v.* Patten Paper Co., 172 U. S. 58; 9 Corpus Juris, 185 in re opening West Farm Road, 213 N. Y. 325; Fulton Light Co. *v.* State, 116 N. Y. S. 1000, sec. 10570, et seq., Code of Alabama, 1923.)

The State of Arizona and the State of Nevada are not riparian States and, in any event, they have not conveyed to any person or to the Federal Government title to the banks and beds and the use of the water of the Colorado River at Black or Boulder Canyon. This is one distinction between this issue and issues decided in the Green Bay cases, the Economy Light & Power Co. cases; or at Muscle Shoals. At each of these dam sites the State had voluntarily divested itself of the title to the bed and banks of the streams and the United States had acquired the same.

The right to use the bed of navigable streams, for purposes other than the improvement of navigation, can only be acquired by legislative grant.

A franchise or license to build dams, locks, or other structures in a navigable stream does not create any interest in the land.

The legislation which is proposed in Senate bill 728 would result in the National Government acquiring, by subterfuge, the absolute control of over 90 per cent of the water of the Colorado River and would enable the Federal Government to lease, sell, or give it away. The bill would create a Federal monopoly in 90 per cent of the flowing waters of the Colorado River and in exercising the authority vested in the Federal Government by this act it may dispose of the water under rules, regulations, and upon terms different from, and in actual conflict with, the rules, regulations, and terms established by the State of Arizona for the appropriation and use of waters within its borders. This legislation is in direct conflict with the opinion of the Supreme Court in Kansas *v.* Colorado (206 U. S. 92) in which case the court stated:

We do not mean that its (National Government) legislation can override State laws in respect to the general subject of reclamation.

That power to tax is the power to destroy is the principle exempting the property of the Federal Government from taxation by the States and likewise exempting the property of the States from taxation by the Federal Government. No one will deny that as a legal proposition any property held by the Federal Government necessary or useful in performing the functions vested in the Federal Government by the Constitution is exempt from State taxation. A wholly different question arises when the Federal Government goes into a private business such as the production and distribution of hydroelectric power either directly or through leases. It was held in South Carolina *v.* United States (199 U. S. 437) that where a State assumed to conduct a private business, the performance of which did not fall within the ordinary and usual functions of a State, the business was not exempt from taxation by the Federal Government merely because it was conducted by the State. It was said by the Supreme Court in Hammer *v.* Dagenhart (247 U. S. 275) that the maintenance of the authority of the States over matters purely local is as essential to the preservation of our institutions as the conservation of the supremacy of the Federal power in all matters intrusted to the Federal Government by the Federal Constitution.

This being the case it would seem to follow since the Federal Government may tax private business conducted by the States the States may also tax private business conducted by the Federal Government, and that such will be the rule is asserted in the dissenting opinion in the case of South Carolina *v.* United States (199 U. S. 437).

We are at present concerned, however, not with what is the strict right of the United States in this respect but rather with what is the equitable thing that Congress should do in the matter. The exemption of Federal property from taxation by the States may be waived by Congress. Both the legality and good policy of such waiver are firmly established. Thus, Congress permits the taxation of national banks by the State at the same rate as other State property is taxed and with the consent of Congress such taxation is legal. (Owensboro National Bank *v.* Owensboro, 173 U. S. 664; Bank of California *v.* Richardson, 348 U. S. 476, 483.)

So also with certain lands granted to railroad companies. (Central Pacific Railroad Co. *v.* Nevada, 162 U. S. 512, 521; Northern Pacific Railroad Co. *v.* Myers, 172 U. S. 589, 597.)

Such taxation is also permitted under certain conditions by acts of Congress of lands in irrigation districts, and of lands held in trust for certain Indian tribes in Oklahoma.

As a matter of fair dealing between States, Congress should permit the taxation by Arizona and Nevada of the power produced at Boulder Canyon Dam. The dam will be situated wholly in Arizona and Nevada. So will also be the reservoir. It is expected that but little land in Nevada will be irrigated from the reservoir. Only an insignificant strip of California lies in the Colorado River Basin. It is proposed to build a canal for Imperial Valley lands at a cost of $31,000,000; another canal to irrigate the lands in Coachella Valley, also in California, is also authorized by the bill which is estimated to cost $12,000,000; and to pay the interest for a long term of years and perhaps also the principal of the cost of such canal from the proceeds of the sale of the power produced at the dam. It is proposed to pump a vast quantity of water over the mountains to supply the California coastal plains cities with water by means of the power that will be produced at the dam. Most of the remaining power will be conducted by transmission lines to Los Angeles. This water and this power will create billions of dollars of taxable wealth in California out of the construction of a dam and reservoir on the soil of Arizona and Nevada and from the use of water that nature has placed in Arizona and Nevada.

It is thus a case of where Arizona and Nevada resources are to be used to transfer other Arizona and Nevada resources to the State of California. California realizes that without the aid of the Federal Government she can not accomplish her purpose. As a State on an equality with any other State she can not enter into Arizona to build dams or create power. Without such dams or power she can get no more water of the Colorado River than she has now appropriated. Furthermore, if Arizona did permit her to enter and build a dam and other works she would certainly be subject to taxation by Arizona. California therefore comes to Congress and says: Use for our benefit the powers vested in you for the benefit of the Nation and build for us a dam on Arizona and Nevada soil. Produce hydroelectric power by the use of Arizona and Nevada resources to make a profit that will help build our all-American canal and that will pump the water that by nature belongs to Arizona over the mountains to our coastal plain and employ your power of exemption from taxation to our benefit, so that we may have cheap power for our industries and domestic water for our coastal cities.

We have heard it stated that in no event should Congress consent to the distribution of any revenues created by a Government-constructed dam until the construction cost is paid. That principle is correct where the dam is constructed for the benefit of the State and with the consent of the State where the dam is situated, because in such case the State collects taxes from the taxable wealth created by the Government investment. But where the dam is built in one State against its wishes and for the benefit of another State that principle does not apply. In the latter case for the Federal Government to insist on its exemption from taxation is simply robbing one State for the benefit of another. It is said that we are one Nation and State lines should be disregarded in the development of resources. But since State lines are regarded in imposing a large part of the burdens of Government they can not be disregarded in the development and distribution of resources without stripping the poorer States for the benefit of the more opulent States. But it is said that the project will not stand the extra cost of taxation. If it is worth so little to California that taxes can not be paid thereon, it should not be presently undertaken but should be left to Arizona to utilize in her future development.

NAVIGATION ON THE COLORADO RIVER AND THE EFFECT OF IRRIGATION THEREON

The Boulder Canyon project act is the consummation of the plan for the development of the Colorado River as outlined in the Fall-Davis report (S. Doc. 142, 67th Cong., 2d sess.). This bill in the main conforms to the recommendations in that report, which are found on page 21 of the report. These recommendations are as follows:

1. It is recommended that through suitable legislation the United States undertake the construction with Government funds of a high-line canal from Laguna Dam to the Imperial Valley, to be reimbursed by the lands benefited.

2. It is recommended that the public lands that can be reclaimed by such works be reserved for settlement by ex-service men under conditions securing actual settlement and cultivation.

3. It is recommended that through suitable legislation the United States undertake the construction with Government funds of a reservoir at or near Boulder Canyon, on the lower Colorado River, to be reimbursed by the revenues from leasing the power privileges incident thereto.

4. It is recommended that any State interested in this development shall have the right at its election to contribute an equitable part of the cost of the construction of the reservoir and receive for its contribution a proportionate share of power at cost, to be determined by the Secretary of the Interior.

5. It is recommended that the Secretary of the Interior be empowered, after full hearing of all concerned, to allot the various applicants their due proportion of the power privileges and to allocate the cost and benefits of a high-line canal.

6. It is recommended that every development hereafter authorized to be undertaken on the Colorado River by the Federal Government or otherwise be required in both construction and operation to give priority of right and use—

First. To river regulation and flood control.
Second. To use of storage water for irrigation.
Third. To development of power.

It will be noted that the "improvement of navigation" is not mentioned in the report and that the project is an irrigation and power project.

The Chief of Engineers of the Army prepared a memorandum on navigable waters, as defined by the Supreme Court of the United States. The memorandum is found on page 298 of the hearings of the House of Representatives on H. R. 2903, Sixty-eighth Congress, first session, February 27, 1924, and is as follows:

The Daniel Ball (10 Wall. 557): A river is navigable in law when it is navigable in fact, and it is navigable in fact when it is used or is susceptible of being used in its ordinary condition as a highway for commerce over which trade and travel may be conducted in the customary modes of trade and travel on water.

A river or other waterway that lies wholly within the limits of a State and has no navigable connection with any waters outside the boundaries of the States is a navigable water of the State, subject to regulation and control by State laws, and does not come within the jurisdiction of Congress nor of the laws enacted by Congress for the preservation and protection of navigable waters of the United States.

A river or other waterway constitutes a navigable water of the United States, within the meaning of the aforesaid acts of Congress, when it forms by itself or by uniting with other waters a continuous highway over which trade and travel is or may be conducted between the States themselves or between the States and foreign countries.

The Montell (20 Wall. 430): The true test of the navigability of a stream does not depend upon the manner or mode by which commerce is or may be conducted nor upon the difficulties attending navigation. If this were so, the public would be deprived of the use of many of the large rivers of the country over which rafts of lumber of great value are constantly taken to market. It would be a narrow rule to hold that in this country unless a river was capable of being navigated by steam or sail vessels it could not be treated as a public highway.

The capability of use by the public for purposes of transportation and commerce affords the true criterion of the navigability of a river rather than the extent and manner of that use.

If it be capable in its natural state of being used for purposes of commerce, no matter in what mode the commerce may be conducted, whether in vessels propelled by steam, wind, cars, or poles, the stream is navigable in fact, and becomes in law a public highway.

21 Pickering, 344: It is not to be understood, however, that every ditch or inlet in which the tide ebbs and flows, nor every small creek in which a fishing skiff or gunning canoe can be made to float at high

water, is a navigable highway; but to give it the character of a navigable stream it must be generally and commonly useful to some purpose of trade or agriculture.

DECISION BY UNITED STATES CIRCUIT COURT OF APPEALS

Harrison *v.* Fite (148 Fed. 781): To meet the test of navigability as understood in American law a watercourse should be susceptible of use for purposes of commerce or possess a capacity for valuable floatage in the transportation to market of the products of the country through which it runs. It should be of practical usefulness to the public as a public highway, in its natural state and without the aid of artificial means. A theoretical or potential navigability, or one that is temporary, precarious, or unprofitable is not sufficient. While the navigable quality of a watercourse need not be continuous, yet it should continue long enough to be useful and valuable in transportation; and the fluctuations should come regularly with the seasons, so that the period of navigability may be depended upon. Mere depth of water, without profitable utility, will not render a watercourse navigable in the legal sense, so as to subject it to public servitude nor will the fact that it is sufficient for pleasure boating or to enable hunters or fishermen to float their skiffs or canoes. To be navigable a watercourse must have a useful capacity as a public highway of transportation.

Gen. Lansing H. Beach, Chief of Engineers of the United States, War Department, testified before the Colorado River Commission (first meeting). He said:

While the lower Colorado River did have some navigation on it in the seventies, there is nothing on it to-day to justify navigation being regarded as of foremost importance.

Col. William Kelly, former chief engineer of the Federal Trade Commission, on April 15, 1924, testified (H. R. 2903, 68th Cong., 1st sess., p. 1228) as follows:

The physical conditions on the Colorado River Basin make it fairly simple to outline what form the complete development should take. In the upper region, above the junction of the Green with the Colorado, there are possibilities for both irrigation and power development. Below the junction of the Green and Grand, through the canyon section, irrigated development is practically impossible, except for a few very small intercanyon areas.

Power in this section can be developed to an amount of probably 4,000,000 horsepower, and that development can be made without interference with irrigation.

In the lower basin irrigation is by far the most important development. Such power as will be developed there will be relatively small, and will be incidental to irrigation developments. In some of the irrigation developments there will undoubtedly be opportunities to develop a small amount of power; and such developments will take care of themselves, because they help to carry the financial burden.

There are two things which I think stand out on the Colorado River:

One is that there is sufficient land to use all the water in the river, and perhaps more than enough land available for irrigation. Consequently, there should be no waste of water by unnecessary evaporation or by diversion which does not give full efficiency.

The second point is that the Colorado River constitutes the only big remaining source of power in the southwestern section of this country; and every kilowatt-hour that can be developed from the Colorado River will be needed. Consequently, no development should be permitted on the river which will reduce the ultimate supply of water or the ultimate amount of power that can be taken out of the river.

Those are the two basic principles on which the outline of a general scheme of development must rest.

(Page 1240)

According to the Reclamation Service figures, which check with those of the Geological Survey and those that have been made in my office, 3,200,000 acre-feet of storage, if placed at Laguna Dam, would control the floods in the worst flood season of record, so that the maximum flow would not exceed 75,000 second-feet. If that dam be moved upstream, certain additional storage must be provided in order to compensate for the storage that exists in the valley now during those high floods.

(Page 1244)

On the ultimate development as proposed by the Reclamation Service, in order to get the maximum power output from this Boulder Canyon Dam, a dam is to be built at Bullshead which would have a storage capacity of 1,600,000 acre-feet.

(Page 1258)

In the upper basin, and that the consumption of water for irrigating these lands will lie somewhere between 1 and 1½ acre-feet per acre per year. If we take it at slightly over 1 foot, the consumption for upstream lands becomes ultimately 4,500,000 acre-feet. If we take it at 1½ feet, it becomes 6,500,000 acre-feet.

(Page 1259)

The available water supply is still somewhat in doubt. The Reclamation Service, based on the records at Yuma over the past thirty-odd years, figure that the average annual run-off amounts to about 16,000,000 acre-feet. The Geological Survey, going back and figuring since 1878 to what the probable run-off has been, placed the usable annual run-off at somewhere around 12,000,000 acre-feet. Now, the figure lies somewhere between there. It is impossible to get at it with precision.

(Page 1262)

In addition to the above acreage, the reclamation report states that there are 800,000 acres in Arizona that might be feasible under the Parker-Gila project which were not included. If we include them, the water required on the same basis for the lower basin becomes 13,360,000 acre-feet per year. The total water required, therefore, from the Colorado River on the minimum basis stated is 14,460,000 acre-feet per year.

On the maximum basis, which includes the 800,000 acres of the Parker-Gila project and a slightly larger consumption in the upper region, it amounts to 20,400,000.

Now, the average run-off of the river, as I stated, taken from the reclamation records at Yuma gauge, is about 16,000,000 acre-feet per year. The average as deduced by the Geological Survey may run as low as 12,000,000 acre-feet per year. With the records available it is impossible to tell with precision just where the average will come, but it will lie somewhere between those figures.

(Page 1271)

Mr. RAKER. The States of the upper basin will not cause the flow of the water to be depleted below an aggregate of 75,000,000 acre-feet for any period of 10 years, reckoned in continuing progressive series, beginning with the 1st of October next succeeding the ratification of this compact. Now, what does that mean?

Colonel KELLY. Well, that means any consecutive 10-year period that you might take. That is, if you went over the record you would pick out the worst 10 years with respect to flow, and the average flow during that time would have to amount over the 10-year period to 75,000,000 acre-feet, although it might at some time have been less than * * * 75,000,000 acre-feet.

(Page 1272)

Mr. RAKER. All right. I will put it this way, Colonel: From the mouth of the river, the Gulf of California, up, say, to Lees Ferry, have you made any investigation to see how many obstructions there are in the river that would have to be removed to clear it for navigation if you put in locks, if you kept the flow of the stream in shape, and there was not to be permitted to be taken out the water that has been taken and is contemplated?

Colonel KELLY. Well, the river is obstructed in its natural condition for navigation in many places. Of course, through several months of the year below Yuma there is practically no water in the river. The Laguna Dam is an absolute obstruction to the passage of boats up and down the river, but boats have passed up as far as Old Coleville.

(Page 1273)

Mr. RAKER. The Laguna Dam has assisted in obstructing the navigability of the river?

Colonel KELLY. It is a complete obstruction.

Mr. RAKER. And also the diversion of the Imperial Valley has been another means of obstruction?

Colonel KELLY. Yes, sir.

Mr. RAKER. So what has been done has been done to obstruct the navigation rather than to expedite navigation?

Colonel KELLY. What has been done practically puts navigation out of possibility except on certain stretches of the river.

Mr. Arthur P. Davis, former Director of the Reclamation Service, testified before the Colorado River Commission, first meeting, page 43 and page 44, Department of Commerce, Washington, January 26, 1922, as follows:

It [Laguna Dam] was authorized by the act of Congress due to the fact that the river was navigable and it actually stopped navigation. It is not possible to navigate past the dam. At that time there were, I believe, three boats plying on the lower Colorado River and it had been for a long time a navigable stream and the commerce had been considerable at one time. It is gradually declining on account of the railroads tapping many points and being much more accessible for the transportation necessary, and now Laguna Dam is a stop to navigation. Navigation is possible above and below, but not through the dam. * * * As a practical fact Laguna Dam is the diversion for the Yuma project and the Imperial Valley project, and it has destroyed practical navigation below. Every use of the water for irrigation depleted the supply. The navigation of the river was one of the problems that we had to meet, and following the act of Congress all trouble was overcome by the purchase of the steamboats on the river by the Government. The operation of these boats had become unprofitable, for there had been no profit in navigation for a good many years; the boats were old and no new ones were put into commission. They are used for construction purposes and finally were put out of service—Colorado River Commission, first meeting, etc.

Many years ago the navigation of the Colorado River was possible and was actually carried on from the mouth of the river to points in what is now the State of Nevada. As late as 1904 there were still some boats engaged in transportation upon the lower reaches of the river. In 1901 the first large diversion from the lower stream system, that to the Imperial Valley, began; and this, with other development in the basin, necessarily depleted the supply for navigation below that point.

In 1904 Congress passed an act (33 Stat. 224, sec. 25) authorizing the Secretary of the Interior to divert the waters of the Colorado River for the irrigation of lands now constituting the Yuma irrigation project. Under this authority there was constructed shortly thereafter what is known as the Laguna Dam, a large dam across the channel of the river a short distance above Yuma. This dam now effectually prevents any navigation of the river between points above and below. Prior to the construction of this dam the operation of boats on the river had become unprofitable, there having been no navigation for several years. The boats then in service were old. They were purchased by the Government, used in connection with the construction of the dam, and then put out of service. While there is an occasional period of high water when navigation may be physically possible, this would continue for only a few months in ordinary years. There is no commercial navigation upon the river at present.

Mr. L. Ward Bannister, a Denver attorney, who has appeared before the committees of Congress numerous times in support of amendments to the Boulder Dam bill, in a letter to Congressman E. O. LEATHERWOOD, who was a member of the Committee on Irrigation and Reclamation, April 7, 1924, which is found beginning on page 900 in the hearings of H. R. 2903 (68th Cong., 1st sess., 902), in discussing the question of navigation, stated:

In the case of the Colorado River the Federal Government is not intending to protect navigation, if, indeed, the river can be said to be navigable, but joins the States in the intention that the waters shall be withdrawn for purposes utterly inconsistent with navigation, such, for instance, as irrigation. When, therefore, the course of development is to be one which has no bearing upon navigation except to destroy it, the course of development and the water rights gained must be under the power of the State and not under that of the Federal Government. In States where riparian rights exist as to nonnavigable streams riparian rights also exist as to navigable streams, except in the latter case they are subject to the paramount public right of navigation. Except for the extent required for the public right of navigation, riparian rights exist with respect to navigable streams in States where they exist as to nonnavigable streams. In the seven States of the West, however, riparian rights exist neither as to nonnavigable nor as to navigable streams.

The construction of a dam at Boulder Canyon by the Federal Government is not an act for the purpose of promoting or protecting navigation. The very purpose is to gather water in order later to withdraw it from the stream for use on land and also in order to generate electric power. These acts by the Government are not connected with navigation, and therefore can not be justified by the interstate commerce clause of the Constitution, which is the clause under which the Congress has the implied right to protect navigation on an interstate stream.

It (the Federal Government) has no rights of ownership. Under the commerce clause its power is to protect navigation, if the river is navigable, and not to enter into schemes for withdrawing water from the river, for that would be destructive of navigation.

We know that the development of the Colorado River, whether undertaken by the States or by the Federal Government, is going to proceed without any regard for the protection of navigation; in fact, the whole scheme from the Gulf to Wyoming contemplates the withdrawal of the water. Even if Congress has the power to prohibit withdrawal by reason of the stream being navigable, the Congress is not going to exercise it, and therefore it may well say that the stream has ceased to be navigable and that navigation uses are subservient to other uses. The meaning of article 4 of the compact as to navigability is not as clear as it might be with respect to whether or not there is a declaration to the effect that the stream is not navigable, but this is not of practicable importance.

Mr. President, if the advocates of the Swing-Johnson bill had exercised energy and good judgment, Imperial Valley would to-day have been protected from floods of the Colorado River and the all-American canal would have been nearing completion; but, unfortunately for Imperial Valley, the advocates of the Swing-Johnson bill have preferred to spend their time and energy in planning how most effectively to exploit Arizona's resources rather than to spend their time and energy in securing the relief which Congress would quickly and amply grant.

California seeks not only flood control but hydroelectric power. Flood control may be the excuse, but power is the substance of the demand for this bill. Arizona has never stood in the way and does not now stand in the way of ample appropriations for flood control on the Colorado River. * * *

Politically, financially, industrially, socially, and economically California is one of the most powerful States of the Union, and if her congressional delegation had labored for Imperial Valley along flood-control lines, success would have long ago abundantly crowned such efforts.

If the sword of Damocles is suspended over Imperial Valley and if the waters of wrath are held in check only by a tricky guard of sand, let the California delegation but ask for appropriations and the relief prayed for will be promptly granted by Congress.

The great point at issue is whether the States are sovereign over their waters subject only to the right of Congress to legislate for the improvement of navigation.

Arizona can not, under any circumstances, yield her right to an equitable share of the waters of the Colorado River available for use in the lower-basin States. This water is absolutely essential to Arizona's development. It represents the only possibility of the reclamation of a large tract of her arid but exceedingly fertile and otherwise highly favored land. It means, at some time in the not remote future, population, homes, taxable wealth, prosperity, and the subsisting of peoples. Aside from the question of the rights of States and of geographical boundaries, the deprivation of this land of an opportunity for development would mean a tremendous economic waste, both in the production of crops and in the duty of water.

Arizona has 1,500,000 acres of land, easily susceptible of irrigation from the main stream of the Colorado River. It is land highly favored both by soil and climatic conditions and lies adjacent to the Colorado and Gila Rivers in the southwestern portion of Arizona. It requires only water to make it tremendously productive of crops of a highly valuable character, and which can be produced only to a limited extent in the United States. This land drains back into the Colorado and Gila Rivers and its irrigation will therefore result in a return flow, and in an important saving of water over the irrigation of land having no drainage, where the water actually used on the land as well as the surplus flowing in the canal is forever lost. Through engineering feats of the greatest proportions all of the water of the Colorado River might be placed by gravity upon Arizona land, but no questionable engineering feat is involved in the utilization of Arizona's fair division of the water available for use in the States of the lower division. This is Arizona's claim, which she presents for the consideration of all who are fairly disposed toward the principle of equity and justice. It may be true that with only one-half of the water in the lower basin at her disposal, some of California's desert land could not be watered. If so, no hardship would be suffered by that State, which would not likewise be visited upon Arizona. If some acreage must be forever arid, there is no sound reason why Arizona should be singled out to bear the burden and the loss.

I now read to you from the Saturday Evening Post an article written by a gentleman who is not friendly to Arizona's attitude, judging from the whole article; but this is what, in part, he says:

Wealth and population are small in Arizona as compared with California. But the percentage of growth has been very remarkable, indeed. The State has been settled by white men and free from Indian disturbances a short time, comparatively speaking. All things considered, it is doubtful if any other State has such just cause for pride. Great mining industries, large farming areas, unequaled scenic attractions, good roads, excellent schools, a large State university, flourishing cities, famous health resorts—all these have been established or rendered accessible in an amazingly short period of time.

This is not from some orator who speaks as a friend of Arizona, but it is from a man writing in the Saturday Evening Post from the viewpoint of an antagonist of Arizona's position. Arizona has done these things within 20 years. This bill would destroy our opportunity for and stifle our hope of future growth.

I should say at this juncture that those who are foremost in promoting this legislation do not understand this bill; I say this not in criticism of their ability, but to do justice to their morality, for if they understood the consequences of this bill they would not be found supporting the same.

This bill is a reckless and relentless assault upon Arizona. It may indeed appeal to some as a project of superb magnitude, but the bill is ruthless and cynical. It swarms with cryptic phrases. It is not the voice of compromise or an extension of the hand of amity and friendship.

I denounce it in the name of the Federal Constitution, which it violates; I denounce it in the name of Arizona, whose sovereignty it violates; I denounce it in the name of that fair play, which most bullies and all pugilists respect.

Mr. BRATTON obtained the floor.

Mr. JOHNSON. Mr. President, will the Senator from New Mexico yield to me to suggest the absence of a quorum.

Mr. BRATTON. I beg the Senator not to do that.

Mr. JOHNSON. I should infinitely prefer to do it, because I assume that the Senator from New Mexico, as one of the representatives of the upper States, is about to present, from his State's viewpoint, this bill. I should be very glad, therefore, if he would permit me to suggest the absence of a quorum.

Mr. BRATTON. Very well.

Mr. JOHNSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. FESS in the chair). The Secretary will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	George	McNary	Shipstead
Barkley	Glass	Metcalf	Shortridge
Bayard	Glenn	Moses	Smith
Bingham	Goff	Neely	Smoot
Black	Greene	Norris	Steiwer
Blaine	Hale	Nye	Swanson
Blease	Harris	Oddie	Thomas, Idaho
Bratton	Harrison	Overman	Trammell
Brookhart	Hayden	Phipps	Tyson
Broussard	Heflin	Pittman	Vandenberg
Bruce	Johnson	Ransdell	Wagner

Mr. WAGNER. I desire to announce that my colleague [Mr. COPELAND] is necessarily absent because of illness in his family.

Mr. NORRIS. I desire to announce that my colleague [Mr. HOWELL] is detained from the Senate on account of illness.

The PRESIDING OFFICER. Sixty-nine Senators having answered to their names, a quorum is present.

Mr. PHIPPS. Mr. President, will the Senator from New Mexico yield to me for a moment for the purpose of presenting an amendment?

Mr. BRATTON. I yield to the Senator.

Mr. PHIPPS. I understand that the pending amendment is the one offered by the junior Senator from Arizona [Mr. HAYDEN]. I desire to offer an amendment to that amendment, which I believe is permissible under the rule in force.

The PRESIDING OFFICER. The Chair will ask the Senator from New Mexico whether he has submitted his amendment? Is it pending?

Mr. BRATTON. It has been printed and is lying on the table, but has not been formally proposed.

The PRESIDING OFFICER. Then the amendment of the Senator from Colorado to the amendment will be in order.

Mr. PHIPPS. I ask to have my amendment to the amendment printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

On page 5, strike out all of lines 1 to 18, inclusive, and insert in lieu thereof the following:

"SEC. 4 (a). This act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 12 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within one year from the date of the passage of this act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions save that of such 6-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,600,000 acre-feet of the waters apportioned to the lower-basin States by the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact."

On page 6, strike out line 25, and on page 7, lines 1 to 8, inclusive, and insert in lieu thereof the following: "permanent service and shall conform to paragraph (a) of section 4 of this act. No person shall".

On page 12, after line 14, add the following paragraph to section 6:

"The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this act shall become effective, as provided in section 4 herein."

Mr. PHIPPS. I thank the Senator from New Mexico.

Mr. BRATTON. Mr. President, the Colorado River system, with which we are dealing in the pending measure, is one of the largest to be found anywhere in the Nation. Indeed, its length is about 1,700 miles, with a drainage area of approximately 242,000 square miles. Its fall aggregates almost 7,500 feet, or an average of 4½ feet per mile. Seven States are directly affected, because a part of the territory of each of them is within the drainage area of the river.

It is an interstate navigable stream, thus making it a national problem, concerning all of the country generally. The stream crosses the international boundary, enters the Republic of Mexico at a point below Yuma, Ariz., and finally discharges into the Gulf of California, thus injecting an international feature into the equation.

Title to water, with the right consumptively to use the same in a beneficial way, is a matter that has concerned the Western or so-called arid States most vitally. Because of the importance of this river system, its extreme magnitude and its potential possibilities, both for irrigation and power purposes, the seven basin States, joined by the Federal Government, set about in 1921 to effectuate an agreement adjudicating the title and allocating the use of the water. An act of Congress was passed authorizing the designation of a representative of the Government to participate in a conference to be held for that purpose. Hon. Herbert Hoover was duly designated. Each of the seven States passed a statute providing for the appointment of an agent or commissioner to act for and on behalf of the State. The several representatives so named convened at Santa Fe, N. Mex., negotiated at length, considered every phase of the situation, and then mutually agreed upon the terms of a compact. It was finally signed by all of them at Santa Fe, November 24, 1922. It has been and is commonly called the Colorado River compact. I ask leave, Mr. President, to have it printed in the RECORD at this juncture.

The PRESIDING OFFICER (Mr. PHIPPS in the chair). Is there objection?

There being no objection, the compact was ordered to be printed in the RECORD, as follows:

COLORADO RIVER COMPACT, SIGNED AT SANTA FE, N. MEX., NOVEMBER 24, 1922

The States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming, having resolved to enter into a compact under the act of the Congress of the United States of America approved August 19, 1921 (42 Stat. L., p. 171), and the acts of the legislatures of the said States, have through their governors appointed as their commissioners: W. S. Norviel for the State of Arizona, W. F. McClure for the State of California, Delph E. Carpenter for the State of Colorado, J. G. Scrugham for the State of Nevada, Stephen B. Davis, jr., for the State of New Mexico, R. E. Caldwell for the State of Utah, Frank C. Emerson for the State of Wyoming, who, after negotiations participated in by Herbert Hoover, appointed by the President as the representative of the United States of America, have agreed upon the following articles:

ARTICLE I

The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River system; to establish the relative importance of different beneficial uses of water; to promote interstate comity; to remove causes of present and future controversies, and to secure the expeditious agricultural and industrial development of the Colorado River Basin, the storage of its waters, and the protection of life and property from floods. To these ends, the Colorado River Basin is divided into two basins, and an apportionment of the use of part of the water of the Colorado River system is made to each of them with the provision that further equitable apportionments may be made.

ARTICLE II

As used in this compact:

(a) The term "Colorado River system" means that portion of the Colorado River and its tributaries within the United States of America.

(b) The term "Colorado River Basin" means all of the drainage area of the Colorado River system and all other territory within the

United States of America to which the waters of the Colorado River system shall be beneficially applied.

(c) The term "States of the upper division" means the States of Colorado, New Mexico, Utah, and Wyoming.

(d) The term "States of the lower division" means the States of Arizona, California, and Nevada.

(e) The term "Lee Ferry" means a point in the main stream of the Colorado River 1 mile below the mouth of the Paria River.

(f) The term "upper basin" means those parts of the States of Arizona, Colorado, New Mexico, Utah, and Wyoming within and from which waters naturally drain into the Colorado River system above Lee Ferry and also all parts of said States located without the drainage area of the Colorado River system which are now or shall hereafter be beneficially served by waters diverted from the system above Lee Ferry.

(g) The term "lower basin" means those parts of the States of Arizona, California, Nevada, New Mexico, and Utah within and from which waters naturally drain into the Colorado River system below Lee Ferry, and also all parts of said States located without the drainage area of the Colorado River system which are now or shall hereafter be beneficially served by waters diverted from the system below Lee Ferry.

(h) The term "domestic use" shall include the use of water for household, stock, municipal, mining, milling, industrial, and other like purposes, but shall exclude the generation of electrical power.

ARTICLE III

(a) There is hereby apportioned from the Colorado River system in perpetuity to the upper basin and to the lower basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a), the lower basin is hereby given the right to increase its beneficial consumptive use of such waters by 1,000,000 acre-feet per annum.

(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River system, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then the burden of such deficiency shall be equally borne by the upper basin and the lower basin, and whenever necessary the States of the upper division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

(d) The States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,000,000 acre-feet for any period of 10 consecutive years reckoned in continuing progressive series beginning with the 1st day of October next succeeding the ratification of this compact.

(e) The States of the upper division shall not withhold water, and the States of the lower division shall not require the delivery of water which can not reasonably be applied to domestic and agricultural uses.

(f) Further equitable apportionment of the beneficial uses of the waters of the Colorado River system unapportioned by paragraphs (a), (b), and (c) may be made in the manner provided in paragraph (g) at any time after October 1, 1963, if and when either basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b).

(g) In the event of a desire for a further apportionment as provided in paragraph (f) any two signatory States, acting through their governors, may give joint notice of such desire to the governors of the other signatory States and to the President of the United States of America, and it shall be the duty of the governors of the signatory States and of the President of the United States of America forthwith to appoint representatives, whose duty it shall be to divide and apportion equitably between the upper basin and lower basin the beneficial use of the unapportioned water of the Colorado River system as mentioned in paragraph (f), subject to the legislative ratification of the signatory States and the Congress of the United States of America.

ARTICLE IV

Priority: (a) Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation would seriously limit the development of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural, and power purposes. If the Congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

(b) Subject to the provisions of this compact, water of the Colorado River system may be impounded and used for the generation of electrical power, but such impounding and use shall be subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

(c) The provisions of this article shall not apply to or interfere with the regulation and control by any State within its boundaries of the appropriation, use, and distribution of water.

ARTICLE V

The chief official of each signatory State charged with the administration of water rights, together with the Director of the United States Reclamation Service and the Director of the United States Geological Survey, shall cooperate, ex officio—

(a) To promote the systematic determination and coordination of the facts as to flow, appropriation, consumption, and use of water in the Colorado River Basin, and the interchange of available information in such matters.

(b) To secure the ascertainment and publication of the annual flow of the Colorado River at Lees Ferry.

(c) To perform such other duties as may be assigned by mutual consent of the signatories from time to time.

ARTICLE VI

Should any claim or controversy arise between any two or more of the signatory States: (a) With respect to the waters of the Colorado River system not covered by the terms of this compact; (b) over the meaning or performance of any of the terms of this compact; (c) as to the allocation of the burdens incident to the performance of any article of this compact or the delivery of waters as herein provided; (d) as to the construction or operation of works within the Colorado River Basin to be situated in two or more States or to be constructed in one State for the benefit of another State; or (e) as to the diversion of water in one State for the benefit of another State, the governors of the States affected, upon the request of one of them, shall forthwith appoint commissioners with power to consider and adjust such claim or controversy, subject to ratification by the legislatures of the States so affected.

Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method or by direct future legislative action of the interested States.

ARTICLE VII

Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes.

ARTICLE VIII

Perfected rights.—Present perfected rights to the beneficial use of waters of the Colorado River system are unimpaired by this contract. Whenever storage capacity of 5,000,000 acre-feet shall have been provided on the main Colorado River within or for the benefit of the lower basin, then claims of such rights, if any, by appropriators or users of water in the lower basin against appropriators or users of water in the upper basin shall attach to and be satisfied from water that may be stored not in conflict with Article III.

All other rights to beneficial use of waters of the Colorado River system shall be satisfied solely from the water apportioned to that basin in which they are situate.

ARTICLE IX

Nothing in this compact shall be construed to limit or prevent any State from instituting or maintaining any action or proceeding, legal or equitable, for the protection of any right under this compact or the enforcement of any of its provisions.

ARTICLE X

This compact may be terminated at any time by the unanimous agreement of the signatory States. In the event of such termination, all rights established under it shall continue unimpaired.

ARTICLE XI

This compact shall become binding and obligatory when it shall have been approved by the legislatures of each of the signatory States and by the Congress of the United States. Notice of approval by the legislatures shall be given by the governor of each signatory State to the governors of the other signatory States and to the President of the United States, and the President of the United States is requested to give notice to the governors of the signatory States of approval by the Congress of the United States.

In witness whereof the commissioners have signed this compact in a single original, which shall be deposited in the archives of the Department of State of the United States of America and of which a duly certified copy shall be forwarded to the governor of each of the signatory States.

Done at the city of Santa Fe, N. Mex., this 24th day of November, A. D. 1922.

Approved.

HERBERT HOOVER.

Mr. BRATTON. Under the terms of the compact, the system was divided into two entities, designated as the upper basin, composed of that part of the States of Colorado, New

Mexico, Utah, and Wyoming lying within the basin from which waters naturally drain into the Colorado River system above Lee Ferry, as well as all parts of said States located without the drainage area of the river system which were then or should thereafter be beneficially served by water diverted from the said system at any point above Lee Ferry; the other being denominated as the lower basin, composed of those parts of the States of Arizona, California, Nevada, New Mexico, and Utah from which waters naturally drain into the river system below Lee Ferry, as well as all parts of said States situated without the drainage area of the system which were then or thereafter should be beneficially served by water diverted at points below Lee Ferry. Colorado, New Mexico, Utah, and Wyoming are generally referred to as upper-basin States, and Arizona, California, and Nevada as lower-basin States. For convenience they will be so denominated in this discussion.

Under the terms of the compact 15,000,000 acre-feet of water per annum was apportioned, 7,500,000 acre-feet thereof to the upper basin, and 7,500,000 acre-feet to the lower basin, with the additional provision that the lower basin was given the right to increase its beneficial consumptive use of water from said stream system to the extent of 1,000,000 acre-feet per annum. The agreement contains a further provision that if, under the doctrine of international comity, the Government shall be required to furnish any water to Mexico, it shall be supplied from the surplus water of the river system above the allocations thus made and, if such surplus is insufficient for that purpose, then the burden shall be borne equally by the upper and lower basins, each contributing one-half of the water thus exacted.

The compact was submitted to the several States for ratification. Without entering into a discussion of the details, it is sufficient to say that all of them, except Arizona, ratified it. Following Arizona's refusal or failure to act favorably, and as an alternative, efforts were put forward to make the agreement effective upon its ratification by six of the States and the Government. This plan has not been effectuated, thereby allowing the title to the water of this immense river system to remain undetermined and the subject matter of much disputation.

The seven States in particular, and the Government in general, have a common interest in the international feature of the situation. As previously stated, on leaving the United States, the river enters Mexico. We have no treaty with Mexico in respect to the river. People residing in Mexico and owners of property situated there have for many years diverted water from the river for irrigation of their lands situated within the Republic. According to my best information, there are about 400,000 acres of land susceptible of irrigation situated adjacent to the river. I am told that of this, more than 200,000 acres are now actually in cultivation, and that the area is being steadily and rapidly enlarged, thus correspondingly increasing the amount of the diversion from the river.

Discussion of how or where the matter might be determined aside, it is my firm belief that so long as we remain idle and permit those in Mexico to increase their prior application of this water to beneficial use, a serious question will be presented regarding our duty to respect their rights as being superior to our own. In making this assertion, I am not unmindful of the views entertained by some that, within the purview of international law, there is no obligation on the part of one nation to deliver any water to another nation through the channel of a stream which traverses their separating boundary line. This conclusion rests upon the concept that every nation is an unlimited sovereign, and that to exact such an obligation would constitute a restriction upon sovereignty. The duty of a nation in the lower reaches of an international stream to accept such water as may flow into its territorial confines, burdened with the possibility that it may be either diminished or discontinued by use in the upper nation, is frequently called servitude. While not taking issue with the advocates of such doctrine in respect to its technical existence, I maintain that if we remain inactive and allow more and more water to be placed to beneficial use in Mexico, we shall be confronted with a question fraught with difficulties and dangerous possibilities.

It may be profitable here to quote from an editorial which appeared in the Washington Post yesterday:

> Although the board of engineers reporting upon the Boulder Dam project recommended that an agreement be reached with Mexico before appropriating the water of the Colorado River, the bill now pending in Congress makes no provision whatever for Mexico's rights. If the bill should become law and the dam should be built, Mexico would be deprived of most, if not all, of the water in the Colorado River. The 240,000 acres of irrigated land in Mexico now depending upon the Colorado River would be subject to destruction.
>
> Apparently international law gives no nation the ownership of water flowing into it from another country. The United States, therefore, can take every drop of water out of the Colorado River. But can it do so with honor and with decent regard to the natural rights of Mexico?
>
> The board of engineers may not be expert in international law, but it has given a hint to the United States Government that should not be disregarded. The construction of a project monopolizing all the water of the Colorado, to the great damage of Mexico, would inevitably be followed by a protest from that country. Failing to reach an agreement through diplomatic negotiations, Mexico would ask for arbitration of the question. How could the United States honorably refuse to arbitrate? Yet the arbitral award might be such as to destroy the value of the Boulder Dam project as a source of supply for Los Angeles.
>
> Before the United States commits itself too deeply to the Colorado River project it should, in all fairness, reach an agreement with Mexico.

While I am unable to bring my views into accord with those expressed in the editorial with respect to the manner of solving the problem, I do agree that the situation presents a problem upon which we should look with deep anxiety. So that, if we fail to take appropriate steps to discontinue the enlargement of these rights in Mexico, no one but ourselves will be responsible for the possibly permanent loss of our own birthright. The plan contemplated in the bill is designed to obviate this danger by way of the construction of the so-called all-American canal, through which the water to be used in the Imperial and Coachella Valleys in Southern California will be diverted at a point within the United States and carried exclusively through California to said valleys, thus discontinuing the flow of the water into Mexico, and consequently making it no longer available for consumptive use there. Moreover, we then shall have sufficient water stored for the discharge of any obligation to furnish water in Mexico during dry years, thereby making the entire natural flow of the river during those years available for consumptive use, particularly in the upper basin.

The importance of this can not be overstated. Without storage facilities, substantially as contemplated in the bill, the duty to furnish water to Mexico, either under present rights or those hereafter created prior in point of time to our own, must be met and discharged, if done at all, with water from the natural flow of the river. This flow, in the very nature of things, will be inadequate to supply all of the demands during dry years in the future, so that users of water in the river basin will be constantly overshadowed with the danger of an inadequate supply during such years. On the contrary, if the bill is enacted and the dam constructed with storage capacity of 26,000,000 acre-feet, sufficient flood water will be stored with which to meet our obligation to Mexico during dry seasons, thereby insuring to us the full use of the natural flow in the basin States. The same principle applies as between the upper and lower basins. For the present, however, I am discussing it with respect to the international aspect of the problem. It seems to me that this feature of the situation is sufficiently grave and urgent to move the Senate to act.

That the Government possesses the constitutional power to construct the dam, store the water, and equate and stabilize the flow of the river, seems clear. The stream affords a constant danger to the people residing and the property situated within the Imperial Valley of California. This danger is a shadow which continuously overhangs them in respect to their lives and property. The seriousness of danger occasioned during flood periods seems to be generally admitted, although some question was raised in the course of our debate within the past few days. As is well known, the Committee of the Senate on Irrigation and Reclamation made an exhaustive study of the subject matter. The members traveled extensively in the area of the river system, viewed the physical situation, and received a vast amount of testimony and data. Thereafter a report was made upon the measure, in which the following was said respecting the danger to life and property:

> Storage above and the regulation of the flow are now recognized as the only means of protection from floods, not only for the Imperial Valley but for a part of Arizona, a part which by reason of its development has become a productive, valuable, and beautiful territory. The flood danger so far as the Imperial Valley is concerned, is unlike that which exists in any other part of the United States. In other localities destructive floods may occur with untold losses, and yet the waters subside and the territory affected ultimately recover. In the Imperial Valley, floods mean water entering the basin of the saucer-shaped land with no possible outlet. Millions of dollars have already been expended, not only by the localities affected but by the Federal Government, in the attempt to protect the lower basin of the Colorado River from floods. Levees at times have no sooner been built than they have been washed away.

Mr. F. E. Weymouth, formerly chief engineer of the Reclamation Service, in his 1924 report recommending the project, stated in the plain and conservative language of the engineer the physical conditions causing the acute flood menace which exists:

"Within a few years at the most the silt deposits will raise the elevation of this latter area to a point where the main current of the floods will again be thrown to the west and north, at which time the assaults of the river on the Volcano Lake Levee will be renewed, with assurance that sooner or later another break into the valley will occur.

"The menace in case of such a break is not limited as at Yuma and above to the loss of crops and improvements and the cutting away of a few or many acres of valuable land, serious as that menace is. Besides all this the greater danger here is that the levee once breached and the river at flood turned into Salton Sea, the steep gradient of its course will induce the cutting through the soft alluvial soil of a gorge in which the flow may not be checked until a large part of the valley has become submerged beneath the waters of an inland sea." (Hearings on H. R. 2903, 68th Cong., 1st sess., pp. 711, 712.)

The Colorado River is subject to periods of great floods and great droughts. It has been known to reach a maximum discharge of more than 200,000 cubic feet of water per second and a low flow at the head works of the Imperial system of 1,250 cubic feet of water per second.

This causes extremely serious flood situations all along the lower river. Floods above Imperial Valley, were they not overshadowed by the exceptional flood danger to Imperial Valley, would attract attention and call for remedial measures. In 1916 the water stood 2 feet deep in the streets of the town of Yuma and threatened its destruction. In 1922 the river inundated a large part of Palo Verde Valley and the water stood several feet deep in the town of Ripley in that valley, destroying much property and otherwise causing a large amount of damage. Other floods have submerged the Parker Valley and also done serious damage to the city of Needles.

The greatest flood danger, however, is to the Imperial Valley, lying far below the river's channel and with no outlet for flood waters once they enter the valley.

In 1914 the Volcano Lake Levee was breached and 10,000 cubic feet of water per second flowed through the levee into the Imperial Valley for many days before the levee could be repaired. More serious results were avoided by means of hundreds of men placing bags of earth on top of the levee.

In 1918 the Ockerson Levee, which had been rebuilt by Imperial irrigation district, was breached in two places. The flood water was successfully turned westward to Volcano Lake by other levees, but not until after several thousand acres of land had been inundated and the workmen and a Southern Pacific train marooned. In a course of two days the men were removed but the train was held until the flood subsided, some three months later.

In 1919, before the river was turned into Pescadaro Cut, the levees were again breached and 4,000 acres of land inundated before the opening could be closed. The river was so high and the water-soaked earth so soft that maintenance work could not be carried on by the usual means of dumping rock from trains operated for that purpose. This was found to be the case after a locomotive and cars had been lost in the attempt. Numerous smaller breaks have occurred. In 1925, with only 50,000 second-feet of water, the river turned against the levees and in two different places undermined and destroyed them for distances of several hundred feet. This again occurred in 1926. These smaller breaks are of annual occurrence and serious results have been prevented only by constant vigilance. Telephone communication is maintained throughout the entire length of the levees and numerous watchmen are constantly on patrol. Strings of dump cars are kept loaded with rock and during high water locomotives kept under steam for immediate use.

Desilting the water is another element of safety to the Imperial Valley. It must be borne in mind that the annual discharge of silt at Yuma—not the volume carried by the river, but the discharge—is 100,000 acre-feet annually. In this respect the committee said in its report:

The river has an annual discharge at Yuma of more than 100,000 acre-feet of silt. This silt greatly aggravates the flood menace. No temporary works can be built to hold it. It was the silt deposit that built the deltaic ridge on which the river now flows. It was the silt deposit that filled the Bee River and Volcano Lake, so that the river could no longer be held at that point, and the same silt deposit will quickly fill the depression where the river now flows.

The gradient to the north into Imperial Valley is much greater than that to the south into the Gulf, and when the depression is filled there is no means known which, at any cost within reason, can prevent the river from again flowing into the Imperial Valley.

The dam proposed in this bill will catch and hold the silt. Most of the silt finding its way onto the delta is from and above the canyon section. If no other dams were provided on the river, the one proposed in this bill would retain all of the silt finding its way into the reservoir for a period of 300 years, and for more than 100 years before its storage capacity and usefulness would be seriously interfered with. As other dams are constructed on the river they will catch and retain the silt, thereby further extending the usefulness of the Boulder Canyon Reservoir.

In aid of flood control and navigation, it is the plain duty of the Government to act. It should take appropriate steps to control the flow of the river, and in that manner discharge its solemn obligation and protect the people residing in lower California. This seems to be so clear that argument upon it would be a waste of time. Every Member of the Senate readily concedes the duty of the Government to protect its citizenry against danger from floods upon interstate streams of this character. In the instant case, this seemingly can only be done by the construction of a dam for storage purposes, so that the flow of the river may be equated, stabilized, and controlled. The desired ends can not be accomplished otherwise.

The consensus of opinion is that the most desirable site for the dam is at Black or Boulder Canyon, the two locations being near together, each situated at a point where the river traverses a narrow, deep canyon, with adequate rock foundation and other natural conditions for the construction of the dam with safety. The commission recently appointed, under an act of Congress for the purpose of making a scientific study of the situation, has recommended the Black Canyon site as being more desirable because of better natural conditions. This commission reported emphatically that a dam can be constructed there, approximately 550 feet in height, with storage capacity of 26,000,000 acre-feet, with perfect safety. It is assumed, therefore, that this site will be adopted. When the dam is constructed, the reservoir, with this immense capacity, will equalize and stabilize the flow of the river, protect the people and property in the Imperial Valley in that way, and discharge the duty of the Government in that respect. It will be of vast benefit to all of the States within the basin.

About 84 per cent of the water of the Colorado River rises in the upper basin States. The law of prior appropriation, in its strictest sense, as distinguished from the doctrine of riparian rights in respect to the use of water, obtains in six of the States affected. California has a system partaking in some aspects of each system. It is my opinion that it is so closely akin to the theory of prior appropriation that, as to the Colorado River system, it may safely be called a prior appropriation State. Consequently we may say that all of the States affected hold to the doctrine of prior appropriation in regard to claims to water of intrastate streams. Under this system the one who is prior in point of time in applying water to beneficial consumptive use is superior in point of right. This is true, regardless of their relative positions on the stream. One living down the stream may acquire a superior right to one living above if he is prior in point of time in putting water to beneficial consumptive use. Such a right is effectuated from the time the purpose to make it is definitely formed and actual work to carry it into effect is begun, provided the necessary things to complete it are done with reasonable diligence or dispatch. This was the holding in the case of Wyoming *v.* Colorado (259 U. S. 419). The same thing being held in numerous decisions by State courts. The question naturally arises as to the applicable rule where the stream traverses State lines and is interstate in character.

This question has been before the Supreme Court of the United States, notably in the cases of Kansas *v.* Colorado (206 U. S. 46), just referred to, and Wyoming *v.* Colorado (259 U. S. 419). It already has been stated that the doctrine of prior appropriation obtains in Colorado and Wyoming. The rule of riparian rights was enforced in Kansas at the time the case first mentioned herein was decided. Therefore, in the contest between Colorado and Kansas, the court considered the respective rights of the States where the same system does not apply, one being riparian and the other prior appropriation. It may be said that in that case the court decided that, under such circumstances, it would disregard State lines and determine the question upon principles of equity. In the latter case, it was definitely decided that in a case involving two or more States where each holds to the doctrine of prior appropriation, that rule would be applied regardless of State lines. Consequently, as to the Colorado River system, the rule of prior appropriation is in force regardless of State lines. From this it is perfectly obvious that a State situated in the lower basin, by reason of its more rapid growth and development, may put an undue proportion of the water to beneficial, consumptive use prior in time to any or all of the upper basin States, and thus acquire a superior right to such water. Indeed, if the more rapid growth were extended upon a sufficiently large scale, the entire volume of water in the river not now applied to beneficial use could be acquired by one or more of the lower basin

States, thus depriving all of the States in the upper basin of any part thereof, regardless of the fact that about 84 per cent of the entire volume of the system arises in the upper basin. It is no secret that California is growing vastly more rapidly than any other State in the entire basin. For this she is to be commended rather than criticized. In the very nature of things, she will increase her consumptive use of water from the stream system for domestic purposes in disproportion to any of the other States, and thereby will acquire a steadily increasing prior right to the water. At the same time, power sites of immense potential possibilities are located in Arizona and Nevada. By putting the water to beneficial use for the development of power, prior rights of stupendous proportions may be acquired by these States. Mr. President, on last Saturday I secured from the Federal Power Commission complete data in respect to the number of pending applications for permits for proposed water-power projects on the Colorado River and its tributaries, with the enormous quantities of water sought to be used for such purposes. These applications are suspended by reason of the joint resolution passed during the recent session of the Congress. I ask that these data with the letter of transmittal accompanying them may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matters referred to are as follows:

FEDERAL POWER COMMISSION,
Washington, December 8, 1928.

Mr. F. O. ROTH,
Secretary to Senator Bratton,
Room 444, Senate Office Building.

DEAR SIR: In accordance with your telephonic request to Mr. Merrill this morning, I am sending you herewith a list of water-power projects on the Colorado River and its tributaries for which applications for preliminary permits and/or licenses have been made.

Very truly yours,

GLEN E. EDGERTON,
Chief Engineer in the absence of the Executive Secretary.

SUSPENDED APPLICATIONS FOR POWER DEVELOPMENT IN COLORADO RIVER WATERSHED, INCLUDING DATA REGARDING WATER RIGHTS

I. PROJECTS ON THE COLORADO RIVER

Project No. 30: Beckman & Linden Engineering Corporation. Parker site on Colorado River. Preliminary permit applied for. Estimated installed capacity, 200,000 horsepower. Water to be diverted on Arizona side of river. Application made to State of Arizona for 50,000 second-feet.

Project No. 59: Edward L. Beyard. Nine dam sites on Colorado River from Echo Peaks just below mouth of Paris River to point 20 miles below mouth of Virgin River. Preliminary permit applied for. Estimated installed capacity, 1,800,000 horsepower. No rights applied for and quantity of water to be used not mentioned.

Project No. 111: Southern California Edison Co. Glen Canyon storage site and Marble Canyon, Bright Angel, and Diamond Creek plants. Preliminary permit applied for. Estimated installed capacity, 3,300,000 horsepower. Applications for water rights to be filed later in Arizona and Utah; amounts not stated.

Project No. 121: James B. Girand. Diamond Creek site. Preliminary permit issued. License applied for. Estimated installed capacity, 200,000 horsepower. On December 22, 1920, filed application for 10,000 second-feet under new law without waiving rights claimed in earlier filings; appropriation made in August, 1913, under then existing law.

Project No. 230: James B. Girand. Colorado River at Andrus Canyon. Preliminary permit applied for. Estimated installed capacity, 130,000 horsepower. Application filed with State water commissioner of Arizona December 22, 1920, without prejudice to rights previously acquired.

Project No. 231: James B. Girand. Colorado River at Pierces Ferry. Preliminary permit applied for. Estimated installed capacity, 130,000 horsepower. Water right application same as No. 230.

Project No. 238: City of Los Angeles. Colorado River at Boulder Canyon. Preliminary permit applied for. Estimated installed capacity, 800,000 horsepower. Application filed with State water commissioner of Arizona July 18, 1921. Amount not given, but plans indicate 15,000 second-feet.

Project No. 258: Southern California Edison Co. Colorado River at Boulder and Pyramid Canyon sites. Preliminary permit applied for. Estimated installed capacity, 1,200,000 horsepower. Water-right applications to be filed in Arizona and Nevada. Amounts not stated.

Project No. 265: Guy P. Mohler. Colorado River at Pyramid and Black Canyon sites. Preliminary permit applied for. Estimated installed capacity, 400,000 horsepower. No statement regarding water applications or amounts to be appropriated.

Project No. 301: Clare N. Stannard. Kremmling site on Colorado River. Preliminary permit applied for. Estimated installed capacity, 57,000 horsepower. Preparing to file application for water right when power application was made; 1,080,000 acre-feet of storage proposed.

Project No. 391: G. Henry Stetson. Colorado River at Bull's Head site. Preliminary permit applied for. Estimated installed capacity, 168,000 horsepower. Entire flow of river to be controlled to maximum of 42,000 second-feet. "The water rights along this section are controlled by the Federal Government, and it is not the intent of the applicant to change their status in any way, but to utilize the waters as they may be released under regulations to be issued by the Reclamation Service."

Project No. 392: G. Henry Stetson. Colorado River at Boulder Canyon site. Preliminary permit applied for. Estimated installed capacity, 1,600,000 horsepower. Same statement regarding water rights as under No. 391.

Project No. 647: City of Los Angeles. Colorado River at Parker site. Preliminary permit applied for. Estimated installed capacity, 200,000 horsepower. Water-right application filed in Arizona September 2, 1925; also filed in California, but date not given. Amount of flow to be used not given, but plans indicate 15,000 second-feet.

Project No. 660: Fred T. Colter, for and in behalf of the State of Arizona. Colorado River at Glen Canyon and Bridge Canyon sites. Preliminary permit applied for. Estimated installed capacity, 750,000 horsepower. Application made to State of Arizona for 20,000 second-feet, diversion at a point 4 miles below mouth of Spencer Canyon; 22,500,000 acre-feet storage at Spencer Canyon; 52,000,000 acre-feet storage at Glen Canyon; 10,000,000 acre-feet storage at Bridge Canyon.

Project No. 661: Board of directors of State institutions, State of Arizona. Colorado River at Bridge Canyon site. Preliminary permit applied for. Estimated installed capacity, 1,000,000 horsepower. "Water rights to be determined by priority and State sovereignty." Amount to be appropriated not given.

Project No. 668: Southern California Edison Co. Colorado River at Topock or Mojave Canyon site. Preliminary permit applied for. Estimated installed capacity, 180,000 horsepower. Application to Arizona and California for water rights not made, but "alleges that the license, if and when issued by the Federal Power Commission, will carry with it the riparian rights of the United States incident to the public lands occupied and used under such license, and that such rights will entitle applicant to the use of the water necessary for the operation of said project." Will acquire by purchase or condemnation all private water rights that may be necessary. Proposed appropriation not stated.

Project No. 770: Board of directors of State institutions, State of Arizona. Colorado River at Glen Canyon. Preliminary permit applied for. Estimated installed capacity, 750,000 horsepower. Water-rights statement same as for 661.

Project No. 808: Board of directors of State institutions, State of Arizona. Colorado River at Parker site. Preliminary permit applied for. Estimated installed capacity, 200,000 horsepower. Water-rights statement same as 661; 1,900,000 acre-feet storage to be provided, diversion on Arizona side.

Project No. 875: Board of directors of State institutions, State of Arizona. Colorado River above Grand Wash. Preliminary permit applied for. Estimated installed capacity, 340,000 horsepower. Water rights "will be determined by priority and sovereignty of State of Arizona."

II. PROJECTS ON THE TRIBUTARIES OF THE COLORADO RIVER

Project No. 158: Utah Power & Light Co. Rattlesnake site on Green River, 27 miles above Green River, Utah. Preliminary permit applied for. Estimated installed capacity, 100,000 horsepower. Water-right application made October 20, 1917, in name of J. Kimball Smith for 5,000 second-feet flow and 150,000 acre-feet storage.

Project No. 165: Utah Power & Light Co. Flaming Gorge site on Green River. Preliminary permit issued. License applied for. Estimated installed capacity, 125,000 horsepower. Water-right application filed July 31, 1922, with Utah authorities. Amounts not stated, but plans call for 1,542,500 acre-feet storage and use of entire flow through this regulation.

Project No. 190: Uintah Power & Light Co. Uintah River and Pole Creek, Utah. Preliminary permit issued and expired. License applied for. Estimated installed capacity, 2,425 horsepower. Application filed July 12, 1918, for 150 second-feet on Uintah River. Application filed January 25, 1919, for 20 second-feet on Pole Creek.

Project No. 279: Utah Power & Light Co. Swallow Canyon, Echo Park, Island Park, Split Mountain, Minnie Maud, and Rock Creek sites on Green River; and Juniper Mountain, Maybell, Lily Park, and Blue Mountain on Yampa River. Preliminary permit applied for. Estimated installed capacity, 800,000 horsepower. Plans call for use of 11,000 second-feet on Yampa River and from 2,700 to 7,000 second-feet on Green River. Filings to be made in Utah and Colorado as required.

Project No. 306: Joseph Wittman. Hassayampa River at old Walnut Grove site and at Box Canyon. Preliminary permit applied for. Estimated installed capacity, 5,500 horsepower. Permit from State water commissioner of Arizona, March 6, 1924. Covers right to use all flow at these points except prior appropriations, aggregating approximately 5 second-feet.

Project No. 400: The Western Colorado Power Co. Animas and San Miguel Rivers. License applied for. Estimated installed capacity, 15,770 horsepower. Constructed works and old water rights of 20 to 40 years' standing. Appropriations include 70,500 acre-feet storage in Cascade Reservoir, in San Miguel drainage, and 480 second-feet flow therefrom; also approximately 560 second-feet flow from South Fork of San Miguel and its tributaries.

Project No. 425: John L. Fish. Salt River, Ariz., at Walnut Canyon. Preliminary permit issued and expired. License applied for. Estimated installed capacity, 24,000 horsepower. Original application for water rights made in 1923. Renewed application (without prejudice to previous rights) filed February 17, 1928, to appropriate water for power purposes only. Rights for irrigation use expressly waived. Amounts not stated.

Project No. 524: A. E. Humphreys and J. H. and Mary E. Ratliff. Green River at Split Mountain Canyon site. Preliminary permit applied for. Estimated installed capacity, 60,000 horsepower. Water-right application filed August 28, 1923, for 5,500 second-feet. No storage.

Project No. 630: Mrs. Ida M. Butts. Eagle Creek, Colo. Small mining development. License applied for. Estimated installed capacity not stated. Application returned for revision in compliance with rules. Data as to water rights not available.

Project No. 730: Arizona Sodium Production Co. Aravaipa and Turkey Creeks, Ariz., in Gila watershed. Preliminary permit applied for. Estimated installed capacity not stated. Water rights not yet applied for and amount not mentioned.

Project No. 733: The Western Colorado Power Co. Uncompahgre River at Ouray, Colo. License applied for. Plant built in 1902–1904. Installed capacity, 650 horsepower. No water rights described in application. Hydraulic capacity of plant, 18.5 second-feet.

Project No. 741: Joseph Wittmann. Sabino, Bear, and Sycamore Canyons, near Tucson, Ariz. Preliminary permit applied for. Estimated installed capacity, 1,200 horsepower. Water-right application filed with State water commissioner in 1926. Amounts not given.

Project 767: Joseph Wittmann. Kirkland Creek, Santa Maria River, and Bill Williams River between Kirkland Valley and Colorado River. Preliminary permit applied for. Estimated installed capacity, 8,000 horsepower. Water-right application filed with State water commissioner March 10, 1926. Has priority except on William River. Amounts not given.

Project No. 784: R. H. Woods. Five sites on Gila River in Hidalgo and Grant Counties, N. Mex. Preliminary permit applied for. Estimated installed capacity, 50,000 horsepower. Water-right application to be made for flood waters. Amount of appropriation not stated, but plans propose 5 reservoirs with total storage of 362,000 acre-feet and 500 second-feet regulated flow.

Project No. 788: A. Frederickson. Salt River, Ariz. Preliminary permit applied for. Estimated installed capacity, 12,000 horsepower. Purchase of existing water rights arranged for. Amount not given, but plans propose use of 300 second-feet.

Project No. 837: Arizona Edison Co., Gila River near Clifton, Ariz. Preliminary permit applied for. Estimated installed capacity, 19,000 horsepower. No application made for State water rights, it being erroneously assumed by applicant that the Federal permit would cover power rights in public land.

Project No. 842: R. D. Webb, Lake Fork of Gunnison River, Colo. Preliminary permit applied for. Estimated installed capacity, 3,300 horsepower. Application for 30,000 acre-feet of storage made and filing approved by State engineer September 9, 1927. Filing to cover natural flow to be made later.

Project No. 854: A. E. Humphreys and J. H. and Mary E. Ratliff. Big and Little Brush Creeks, near Vernal, Utah. Preliminary permit applied for. Estimated installed capacity, 11,500 horsepower. Application to appropriate water for power approved by State engineer June 2, 1927.

Project No. 857: R. D. Webb. Henson Creek and Lake Fork of Gunnison River. Preliminary permit applied for. Estimated installed capacity, 3,300 horsepower. Application for 300 cubic foot-seconds approved by the State engineer October 27, 1928.

Project No. 924: Board of directors of State institutions, State of Arizona. Little Colorado River, Tolchico site. Preliminary permit applied for. Estimated installed capacity not stated. Will "use the heretofore unappropriated and unused water of the Little Colorado River above Tolchico dam site."

Mr. KING. Mr. President, I would like to ask the Senator whether all of the applications have been made for the appropriation of all the water within the State of Arizona, or have applications been made for appropriation in other States? If the Senator has that information, I shall be glad to be advised.

Mr. BRATTON. I speak from memory. My recollection is that most of the water applied for is in Arizona—some in Utah, but the vast majority in Arizona.

Mr. KING. Mr. President, will the Senator suffer a further interruption?

Mr. BRATTON. I yield.

Mr. KING. I am interested in trying to ascertain the annual irrigation of lands in the Imperial Valley. My recollection is that some of the testimony showed, and, indeed, one of the committees reported, that whereas it is claimed there have been irrigated in the Imperial Valley between 400,000 and 500,000 acres, and probably that number of acres have been irrigated, yet that annually not to exceed more than 300,000 acres are irrigated. Some of the land is summer fallowed. Some owners, appreciating that they can not get the full water supply because it is not in the river, irrigate only a portion of their lands each year, and yet in totaling the aggregate lands irrigated they give the entire area which has been irrigated in all the years rather than the annual irrigation.

It is quite important in the consideration of the bill to know whether 500,000 acres of land are irrigated annually or 300,000 acres of land are irrigated annually. Assume, for the purpose of illustrating the point which I am trying to make, that each acre requires 5 second-feet of water for irrigation during the season. If there are actually irrigated only 300,000 acres each year, that would be a net appropriation, which would be subject to the claim of vested rights, of 1,500,000 acre-feet. If, upon the other hand, the 500,000 acres of land are irrigated annually, taking the consumptive use of 5 second-feet per acre, that would mean 2,500,000 acre-feet. My information is that the number of acres irrigated annually one year with another in the Imperial Valley does not exceed 300,000 acres, and yet the claim is made here for 500,000 acres annually.

I wonder if the Senator has any information to show just what the facts are in this matter.

Mr. BRATTON. Mr. President, I do not have the information desired by the Senator from Utah. One day last week the senior Senator from California [Mr. JOHNSON] inserted some tables in the RECORD respecting the amount of land in irrigation in California. I wonder if the Senator from California is in position to give the Senator from Utah the desired information?

Mr. JOHNSON. Mr. President, I am compelled to apologize to the Senator from New Mexico and the Senator from Utah. My attention was engrossed upon another matter at the moment, and I do not know exactly what it was the Senator from Utah desired.

Mr. KING. Will the Senator yield?

Mr. BRATTON. I yield.

Mr. KING. In reading the hearings—and I have read thousands of pages—I find that the testimony is somewhat uncertain as to the quantity of water used in the Imperial Valley. There are statements that between four and six hundred thousand acres of land have been cultivated, but as I read the testimony the annual acreage cultivated and irrigated is much less. My recollection is that there is testimony tending to show that the lands upon which crops are grown and which are annually irrigated do not exceed 300,000 acres. It is important for us to know what the annual consumption of water is in the Imperial Valley; to know how many acres are actually cultivated and irrigated each year; it is not sufficient to be told that five or six hundred thousand acres have been irrigated and cultivated. We know that agriculturists allow some of their farm lands to lie fallow. They cultivate a part of their farms one year and another portion the following year, using the same water right for the second year which they used the first year. This is particularly true in those districts where there is irrigation, and the owners of land do not have sufficient water for the irrigation of all their lands each year. Indeed, their experience demonstrates that they can not profitably cultivate all of their lands each year. In most irrigated sections the aggregate area of land which is subject to irrigation and at various times has had water applied thereto is approximately double the area which is annually cultivated and irrigated. If, in the Imperial Valley, only 4 acre-feet of water are necessary for each acre cultivated and irrigated, and only 300,000 acres are annually irrigated, then the appropriation and the so-called "vested right" would be twelve hundred thousand acre-feet, although within the valley there were more than 300,000 acres of land which had been cultivated.

Mr. JOHNSON. Mr. President, I am very frank to say to the Senator from Utah that it is an utter impossibility for me to tell him what lands are summer fallowed and what are not, and whether or not the irrigation is applied to the entire acreage in any one year.

I have before me, for instance, the tables that were presented in the report of Governor Scrugham in relation to the irrigated area in the State of California, but, of course, that does not segregate as between that which is actually under reclamation and irrigation and that which may for a very brief period be permitted to lie fallow for a particular reason. Therefore it is impossible for me to answer the Senator's question, except

to say that in this report it is stated that by gravity in the Imperial Valley in California there are now irrigated 462,000 acres of land; at Yuma—that is, on the California side, not upon the Arizona side—13,000 acres of land; in Palo Verde, 36,000 acres; and then by pumping, miscellaneous, 1,000 acres. The total land irrigated by gravity is 512,000 acres. If it be possible to obtain for the Senator a segregation such as he suggests, I will obtain it. I am unable, however, at the moment, myself, to make that segregation.

Mr. KING. Mr. President, I regard this matter as one of importance, because if the quantity of water used in the Imperial Valley has been only sufficient to irrigate 300,000 acres of land in any one year, then no rights have been acquired to the waters of the Colorado River for a larger area during any one year. The measure of the rights of the Imperial Valley are not the claims of the people of the valley but the amount of water actually applied to beneficial purposes. The question is: How many acre-feet or second-feet of water have been diverted from the river and conveyed to the Imperial Valley and there applied for irrigation and other beneficial purposes? This question is not determined by the aggregate area of land which might have been irrigated, because, as stated, a small quantity of water may be applied upon a parcel of land for one or two years and then used to irrigate a different parcel of land the third or fourth year. Perhaps the fifth year the same quantity of water obtained under the same right may be devoted to irrigating a parcel of land which has laid idle and uncultivated for several years. I repeat the water right is determined not by the area of land cultivated but by the quantity of water actually put to a beneficial use.

Mr. JOHNSON. I think I have given that to the Senator, but as to what might not be utilized of this acreage in a particular period I am unable to say. I will get those figures, if it is possible to get them, for the Senator.

Mr. KING. Mr. President, I am only seeking to ascertain the quantity which has been annually used in the Imperial Valley.

Mr. JOHNSON. It is not difficult to state the amount of water used, but I was stating it in acres. I thought it was acreage for which the Senator from Utah asked.

Mr. KING. I asked for both, because if we know the number of acres of land irrigated and the duty of water—and I have no doubt that the duty of water is well established—it would be easy to determine the annual consumption.

Mr. JOHNSON. Speaking in round numbers, the annual consumption of water that is constantly, continually utilized is 2,100,000 acre-feet, I think, in the Imperial Valley; but I will segregate the figures as best I can if the Senator desires them.

Mr. KING. Mr. President, the hearings disclose that the volume in the Colorado River often is less than 1,200 second-feet, and, as I read the record, I am inclined to believe that the quantity of water used in the Imperial Valley is less than that indicated by the Senator from California. The Senator knows that even if I had the power I would not deprive the people of Imperial Valley of a single drop of water to which they are entitled. The quantity of water which they have used from year to year they are entitled to have in the future. If they have actually applied to beneficial use 2,000,000 acre-feet, then they should in the future have the same amount.

As I have indicated, in view of the claims of the Senator from California that his State should have 4,600,000 acre-feet, and in addition 500,000 acre-feet of a claimed unappropriated 1,000,000 acre-feet, and in view of the fact that the necessity for the 4,600,000 acre-feet partly rests upon the assumption that the Imperial Valley has used 2,000,000 acre-feet, then it is important to determine just what amount the Imperial Valley has used.

If but 300,000 acres have been cultivated annually and twelve or fifteen hundred thousand acre-feet are all that have been actually applied and all that are actually necessary to cultivate the lands which annually have been irrigated, then it would seem that there is sufficient reason for the contention of Arizona that California should not receive the 4,600,000 acre-feet as claimed.

Mr. JOHNSON. I do not know whether the Senator is speaking from the legal standpoint now or from an equitable standpoint that ultimately he would like to see adopted. From the legal standpoint they are entitled under their filings to water for the purpose of irrigation that they put to beneficial use in the territory covered by the particular filing. There is no question on that score.

Mr. KING. I am not certain that I understand the Senator, but if I interpret his position correctly there would be some question. To illustrate my meaning, if the people of Imperial Valley have made filings for 5,000,000 acre-feet of water and have used only 1,000,000 acre-feet annually, that would be the measure of their vested right for which Congress should legally and equitably provide.

Mr. JOHNSON. No; as I understand, the filings are made for the use of water for a particular designated territory, and then the water is appropriated for beneficial use for that particular designated territory.

Mr. KING. Mr. President, if pursuant to the filing for a particular designated territory, water is used upon that territory, and a right acquired, then there would be no disagreement between my friend and myself. If, however, there is a filing by the Imperial Valley corporations or by individuals or corporations in Arizona or California which is not followed by actual physical appropriation upon the lands in question, that would not be the basis of a vested right so far as we desire to provide for vested rights in the bill which is under consideration.

Mr. JOHNSON. No, Mr. President—and I hope the Senator from New Mexico will pardon me, for this will be my last interruption upon that subject, and only in response to my friend from Utah do I trespass upon the time of the Senator from New Mexico—when an appropriation is made for a particular territory, if the water is put to beneficial use and then reasonable diligence is exercised in utilizing additional water in that territory for additional land, the right is a perfected right under the water law of the West.

Mr. BRATTON. Mr. President, as bearing upon the interests of the upper-basin States, it may well be said that, according to figures furnished by the Bureau of Reclamation in 1922, the following amounts of land were actually in irrigation in the respective upper-basin States in 1920:

	Acres
Colorado	740,000
New Mexico	34,000
Utah	359,000
Wyoming	367,000
Total	1,500,000

And that the following amounts were susceptible of irrigation in those States, respectively:

	Acres
Colorado	1,018,000
New Mexico	483,000
Utah	456,000
Wyoming	543,000
Total	2,500,000

Mr. KING. Mr. President, I dislike to interrupt the Senator.

The PRESIDING OFFICER (Mr. FESS in the chair). Does the Senator from New Mexico yield to the Senator from Utah?

Mr. BRATTON. I do.

Mr. KING. The Senator has stated that the number of acres susceptible of reclamation or irrigation in Utah, pursuant to the figures which he has given, was 456,000. I do not want to sit quietly by and agree that that is the maximum area which is susceptible of reclamation in the State of Utah from the waters of the Colorado River. As a matter of fact, the number of acres which can be irrigated, land which is valuable and which when water is supplied thereon will produce valuable agricultural crops, is between 750,000 and 1,000,000 acres.

Mr. BRATTON. I am conscious, Mr. President, that it is contended by those residing in each of the States referred to that the respective amounts of new acreage which may be irrigated are vastly larger. According to these data, however, about 2,500,000 acres of land located in the upper basin will be ready at some time in the future for irrigation. The area in New Mexico thus referred to lies in the San Juan Basin. According to a recent investigation made by the State engineer of that State, approximately 600,000 acres of land there, instead of 517,000 acres, is susceptible of reclamation. This would bring that vast area into intensive production, with possibilities beyond the comprehension of any of us. I do not desire to be selfish in the matter, but I am anxious in my efforts to protect these important interests in the State which I have the honor to represent in part here, so that when by reason of changed economic conditions development through agriculture and perhaps generation of power is ready to go forward we shall not be confronted with the asserted claim by those in the lower basin that our share of the water of the stream system has been lost through prior seizure and beneficial use in that region.

If the compact is ratified, title to the water for purposes of irrigation and the development of power will become safe. Without it uncertainty will prevail, investments delayed, and growth retarded. There are only two ways known to me through which title to water of an interstate stream, either for purposes of irrigation or development of power, may be adjudicated. One is by a compact or agreement—the method sought to be followed in this case—and the other is by a

decree rendered in a suit instituted originally in the Supreme Court of the United States. In this case such a suit would involve the seven States affected. Obviously, the former course is infinitely better than the latter. Litigation of this character would be vexatious, interminable, and without limit as to expense. It doubtless would require many years' time for hearings, investigation, and submission of evidence before the first decree could be entered. If the full supply of water were not then needed for beneficial consumptive use, new or additional rights would thereafter arise from time to time respecting the unadjudicated surplus, in connection with which controversies inevitably would be presented, thus necessitating supplemental hearings, more trials, and further decrees. It must be perfectly obvious that this course of procedure would disadvantage everybody connected with this enormous stream system and its limitless possibilities for useful service to the people of all the States in both basins. Each State in the interest of orderly procedure and well-regulated government should urgently and earnestly seek to avoid it.

I have no doubt that there is sufficient water in the river system to satisfy the allocations made under the terms of the compact. In making this declaration, I have not overlooked the statements contained in the report recently made by the commission. That the commission did not have sufficient time to make an exhaustive study of the situation is apparently reflected from the report. I quote the following from it:

The flow of the Colorado River is one of the fundamental factors on which the success of this project depends. On the stream flow depends the amount of land that can be irrigated and the amount of power that can be generated. The information on which this flow has been estimated is inadequate to furnish an accurate or sound estimate on which to base an important project without using factors of safety sufficiently great to make such estimates conservative and safe. Since the water supply is such a vital element in the problem, the board has inquired into the subject as thoroughly as the limited time would permit.

The estimates of flow on which this project has been predicated are the measurements of the flow of the river made at Yuma continuously since 1902. The methods used in gauging at Yuma were those common at the time the measurements were begun, and while improved methods of gauging were adopted at other gauging stations, these old methods were continued in use at Yuma until 1918, and with little improvement until 1926.

To determine the flow in the Colorado River above Laguna Dam, there was subtracted from the Yuma gaugings the estimated flow of the Gila River which joins the Colorado between Yuma and the dam. The flows of the Gila are based on information of very doubtful value and can be considered as little better than fair guesses—whether too large or too small can not be determined. To the reduced flow as arrived at above, the flow through the Yuma Canal was next added, to get the gross flow above Laguna Dam. The measurements of flow of the Yuma Canal are approximately correct.

However, predicated upon the estimates thus made—obviously, not entirely accurate and dependable—the commission reached the following conclusions respecting the flow of the river at Black Canyon, the point at which it is proposed to construct the dam:

The records of past performance of the Colorado River and of such other streams in this vicinity as seem pertinent, furnish no basis for an exact estimate of long-past flows in the Colorado River. There is naturally considerable leeway in the interpretation of these data, and estimates based thereon may differ materially. The board, however, realizes that in determining the economic feasibility of this project its estimates should be on the safe side and it has consequently adopted the following figures for the flows at Black Canyon without further depletion:

	Acre-feet
Average low flow for a period of 15–20 years	10,000,000
Average high flow for a similar period	14,500,000
Average of high and low periods	12,250,000

It is estimated that the present flow is depleted by water taken for irrigation in the upper basin by approximately 2,750,000 acre-feet, which amount if added to the above-estimated average flow would increase it to about 15,000,000 acre-feet. This is the amount apportioned by the 7-State compact for division at Lees Ferry.

In the interest of emphasis, I direct the attention of the Senate to the fact that this commission estimates that the average annual flow of the Colorado River at Lees Ferry during the past 15 or 20 years is 15,000,000 acre-feet per annum, the exact amount apportioned and allocated under the terms of the Colorado River compact.

I desire to emphasize the fact that the measurements upon which the above conclusions were predicated were taken at Yuma, a point far below the Black Canyon site, with nothing more than estimates regarding the loss by seepage, evaporation, and otherwise in the reaches of the river below Black Canyon and above Yuma. This uncertain factor was clearly suggested in the report made by Water Supply Paper 556 of the Geological Survey, of which report E. C. La Rue, a recognized authority of note upon such subjects, is the author. In it he said:

Estimates of the water supply available in this section of the river must be based on stream-flow records obtained in the upper basin or the record of discharge obtained by the Bureau of Reclamation at Yuma, Ariz. The short-time records obtained at Lees Ferry and Bright Angel have proved very useful in connection with the work of estimating the inflow to the river in the canyon section.

The Yuma record is continuous from the year 1902, the date of the beginning of construction on the Yuma project of the Bureau of Reclamation. The chief difficulty in applying this record to the canyon section lies in the fact that there is a large and variable loss of water by evaporation from the stream channel, especially from the overflowed lands in the valleys between Yuma and Pierces Ferry. These lands are submerged and saturated by the annual summer floods. The area thus flooded varies from year to year, and the considerable amount of water passing into the dry, heated desert air by evaporation and transpiration from the rank growth of vegetation also varies. It is impossible to estimate accurately the amount of water thus lost. A more accurate estimate of the water supply for the canyon section can be obtained from the records of the flow of the main stream and its tributaries in the upper basin.

The lowest gauging station on the Colorado above the Green at which a continuous record has been obtained is that at Fruita, Colo. This station, however, is above the mouth of Dolores River. Stations have been maintained for periods of a few years near Cisco and Moab, all the run-off from the basin of the Colorado above the mouth of Green River. The records at Cisco and Moab, extended by comparison with the continuous record at Fruita, have therefore been used to represent the discharge of Colorado River above Green River from 1911 to 1923. This record is presented in column 3, Table 2.

Green River has been measured continuously at Little Valley, near Green River, Utah, from 1910 to 1923. San Rafael River, which is the only considerable tributary of the Green below Little Valley, has been measured near its mouth from 1909 to 1918, and stations were being maintained in its upper basin in 1923. By comparing the record of discharge of the San Rafael at its mouth with the sum of the records of its three largest tributaries—Huntington, Cottonwood, and Ferron Creeks—the figures for the San Rafael have been extended through the years 1919 to 1923.

Mr. President, I call attention to the fact that the estimates made by the commission are based upon the measurements taken at Yuma, far below the canyon region, and I emphasize what was said by Mr. La Rue, that the chief difficulty in applying that record to the canyon section lies in the fact that there is a large and variable loss of water by evaporation from the stream channel, especially from the overflowed lands in the valleys between Yuma and Pierces Ferry. These lands are submerged and saturated by the annual summer floods. The area thus flooded varies from year to year, and the considerable amount of water passing into the dry, heated desert air by evaporation and transpiration from the rank growth of vegetation also varies. It is impossible to estimate accurately the amount of water thus lost; but, even allowing for that factor of uncertainty, the commission agreed that the mean annual flow of the river at the Black Canyon site is 15,000,000 acre-feet, less 2,750,000 acre-feet that is now used for irrigation in the upper basin States. Without the deduction, the mean flow is 15,000,000 acre-feet, the exact amount that is allocated under the Colorado River compact, allotting 7,500,000 acre-feet to the upper basin States, and requiring the upper basin States to let 75,000,000 acre-feet pass at Lees Ferry during a period of 10 years, or an average of 7,500,000 acre-feet per annum.

Mr. KING. Mr. President, will the Senator yield?

Mr. BRATTON. I yield to the Senator from Utah.

Mr. KING. My understanding of the report of the commission is that an allowance was made of 1,200,000 acre-feet for evaporation, seepage, and otherwise, between Black Canyon and Laguna Dam, and that would probably measure the loss to which the Senator has referred by reason of the sandy condition at the point he referred to; and the commission have taken into account this 1,200,000 acre-feet, and have deducted that from the aggregate, and then have found the amount of water in the river at considerably less than that stated by the Senator.

Mr. BRATTON. But the point I make, Mr. President, is that the conclusions reached by the commission are based upon estimates rather than exact measurements actually made above Lee Ferry, whereas the figures furnished by Mr. La Rue, to which I shall address myself presently, account for substantially more water than the commission estimated; and I propose to show that his figures are more dependable. That is the point I now have in mind. If the Senator will bear with me, I shall give the La Rue

figures, and undertake to show that they are more dependable than are the figures of the commission.

Mr. KING. I hope the Senator will comment upon the findings of the commission based upon computations between the years 1887 and 1904, when, according to certain figures which they submit, the estimated average flow was 10,420,000 acre-feet, which, reduced by reason of the inaccurate measurements at Yuma, would bring the total to 9,360,000 acre-feet.

Mr. BRATTON. The Senator from Utah will keep in mind that the commission based its conclusions upon the measurements taken at Yuma, far below Lees Ferry, and that conditions obtain in the intervening section that make it impossible to determine accurately except by actual measurements taken above that point the amount of water that passes Lees Ferry.

Mr. McKELLAR. Mr. President, may I ask the Senator why the commission did not make its examination at Lees Ferry, but made it away down the river at Yuma? Was any explanation ever offered as to why it did so?

Mr. BRATTON. No. I will read from the report. I read it a while ago. Perhaps the Senator was out of the Chamber.

Mr. McKELLAR. I was not in the Chamber. I was in the Committee on Appropriations.

Mr. BRATTON. The commission said this:

The flow of the Colorado River is one of the fundamental factors on which the success of this project depends. On the stream flow depends the amount of land that can be irrigated and the amount of power than can be generated. The information on which this flow has been estimated is inadequate to furnish an accurate or sound estimate on which to base an important project without using factors of safety sufficiently great to make such estimates conservative and safe. Since the water supply is such a vital element in the problem, the board has inquired into the subject as thoroughly as the limited time would permit.

The estimates of flow on which this project has been predicated are the measurements of the flow of the river made at Yuma continuously since 1902. The methods used in gauging at Yuma were those common at the time the measurements were begun, and while improved methods of gauging were adopted at other gauging stations, these old methods were continued in use at Yuma until 1918, and with little improvement until 1926.

To determine the flow in the Colorado River above Laguna Dam, there was subtracted from the Yuma gaugings the estimated flow of the Gila River, which joins the Colorado between Yuma and the dam. The flows of the Gila are based on information of very doubtful value and can be considered as little better than fair guesses—whether too large or too small can not be determined. To the reduced flow as arrived at above, the flow through the Yuma Canal was next added to get the gross flow above Laguna Dam. The measurements of flow of the Yuma Canal are approximately correct.

In that connection I desire to reread, for the information of the Senator from Tennessee, what was said by Mr. La Rue, a recognized authority on such matters, in what is called Water Supply Paper 556, of the Geological Survey. He said this:

Estimates of the water supply available in this section of the river—

Referring to the canyon section—

must be based on stream-flow records obtained in the upper basin or the record of discharge obtained by the Bureau of Reclamation at Yuma, Ariz.

The latter being the record relied on by the commission. He continued:

The short-time records obtained at Lees Ferry and Bright Angel have proved very useful in connection with the work of estimating the inflow to the river in the canyon section.

The Yuma record is continuous from the year 1902, the date of the beginning of construction on the Yuma project of the Bureau of Reclamation. The chief difficulty in applying this record to the canyon section lies in the fact that there is a large and variable loss of water by evaporation from the stream channel, especially from the overflowed lands in the valleys between Yuma and Pierces Ferry. These lands are submerged and saturated by the annual summer floods. The area thus flooded varies from year to year, and the considerable amount of water passing into the dry, heated desert air by evaporation and transpiration from the rank growth of vegetation also varies. It is impossible to estimate accurately the amount of water thus lost. A more accurate estimate of the water supply for the canyon section can be obtained from the records of the flow of the main stream and its tributaries in the upper basin.

I shall now give the Senator the figures obtained by Mr. La Rue, taken from gaugings made in the upper reaches of the river—that is, above Lees Ferry.

Mr. KING. Before the Senator proceeds to that, if he will pardon me, it seems to me that neither Mr. La Rue nor the commission has taken into account the accretions to the stream between Lees Ferry and Yuma. The Senator knows that the Virgin River, flowing through Utah and Nevada, furnishes a considerable amount of water, which is a tributary to the Colorado, and which enters the Colorado just above the proposed site of the Boulder Dam.

Mr. BRATTON. The Senator will keep in mind that the point at which the upper basin States must furnish water to the lower basin States is Lees Ferry. Therefore it is important to determine the volume of water that passes Lees Ferry during an average year, or the mean flow. What occurs in the lower reaches of the river, or at any point below Lees Ferry, is a loss which the lower basin States must bear by reason of natural conditions. So it is important to determine what the mean flow of the river is at Lees Ferry.

Mr. KING. Mr. President, I appreciate that fact; but the point I was making was that the commission, in determining the flow at Yuma, apparently have failed to take into account the additions to the stream from the Virgin River and other sources.

Mr. BRATTON. Probably so.

Mr. KING. They have allowed a variation of 1,200,000 because of evaporation, seepage, and what not, and have failed to take into account the additions from the sources to which I have referred.

Mr. BRATTON. That may be true.

Mr. KING. So that the flow at Yuma would be greater by reason of these additions than if there were no additions from these sources.

Mr. BRATTON. Turning, now, to the figures furnished at the gauging stations in the upper basin—that is, those above Black Canyon, as shown by the so-called La Rue report—it is reflected that the mean flow of the river at Lees Ferry from 1895 to 1922, both inclusive, was 15,200,000 acre-feet per annum.

Mr. McKELLAR. How does that compare with the flow at Yuma?

Mr. BRATTON. Does the Senator inquire about the flow at Yuma or the flow at Lees Ferry, according to the report of the commission?

Mr. McKELLAR. I want to know how they compare, both at Yuma and Lees Ferry, according to the report of the commission.

Mr. BRATTON. I do not have the data as to the flow at Yuma. I can give the Senator the commission's figures as to Lees Ferry.

Mr. McKELLAR. How do they compare?

Mr. BRATTON. The average low flow for a period of 15 to 20 years was 10,000,000 acre-feet. The average high flow for a similar period was 14,500,000 acre-feet. The average high and low for the period was 12,200,000 acre-feet. The commission then estimated that the present flow is depleted by water taken for irrigation in the upper basin by approximately 2,750,000 acre-feet, which amount, if added to the estimated average mean flow, would increase it to about 15,000,000 acre-feet. This is the amount apportioned by the compact for division at Lees Ferry.

Mr. McKELLAR. There is a very great difference between the figures.

Mr. BRATTON. Yes. Now, turning again to the figures furnished at the gaging stations in the upper basin; that is to say, Black Canyon, as shown by the so-called La Rue report, it is reflected that the mean flow of the river at Lees Ferry from 1895 to 1922, both inclusive, was 15,200,000 acre-feet per annum; also, that the mean flow at said point from 1911 and 1923, both inclusive, was 16,000,230 acre-feet per annum.

These figures seem to be reasonably accurate. They are based upon actual measurements taken above Lees Ferry. The losses from evaporation and seepage in that area are negligible. They are not comparable with those occurring below Bulls Head dam site and above Yuma. But, even considering solely the estimates made by the commission, there seems to be enough water to satisfy the allocations made by the compact.

It is estimated that the average high and low flow periods covering 15 to 20 years past is 12,250,000 acre-feet per annum. To this should be added approximately 2,750,000 acre-feet, being the quantity now in use for irrigation in the upper basin. We have 15,000,000 acre-feet, the exact amount divided and allocated by the compact.

It must be apparent that a vast quantity of water is furnished by the river system; that it constitutes a grave menace to life and property; that it contains wonderful potentialities for consumptive use for irrigation, development of power, and potable purposes; that the title to it should be set at rest in the quickest and most satisfactory manner, and that this is through ratification of the compact; and that the Government should act with diligence and dispatch in controlling and stabil-

izing the flow of the river in the protection of life and property. All of this will be promoted through the passage of the pending bill.

Before departing from the subject of ratification, the bill as reported from the committee provides for construction of the dam as and when six of the States have ratified. The pending amendment advanced by the Senator from Arizona provides that nothing shall be done until all seven of the States have ratified. It is my belief that a middle-ground position is preferable to either provision. I think the bill should provide that nothing shall be done under its terms until all seven of the States have ratified, provided that is done within a prescribed period. I suggest one year as a reasonable time, and that thereafter the dam should be constructed and the other provisions effectuated as and when six States have ratified. I think, however, that if we proceed upon a 6-State ratification basis, California should be required to provide in her act of ratification that she irrevocably disclaims any and all interest in and to the water of the river in excess of a prescribed amount, to be fixed at some figure between 4,200,000 and 4,600,000 acre-feet per annum; also that she renounce any claim to more than one-half of the surplus waters belonging to the lower basin. This will give to California the just and fair share of the water to which she is rightly entitled, and also will protect the other States against any encroachment or diminution of their heritage.

These observations are made by one who entertains the most cordial feeling toward both Arizona and California. These two States have been unable to compose their differences in the past. It is much to be desired that they do so without further delay. If they can not do so, it seems to me to be the plain duty of the Senate, as one branch of the Congress charged with the duty of legislating in the premises, to formulate and pass a measure which we think is equitable and fair to both States and which will best discharge the duty resting upon the Government.

Mr. President, I presented and had printed last Saturday an amendment carrying out the observations just expressed, and providing that we shall proceed only upon the basis of a 7-State ratification if that can be obtained within one year after the passage of this bill, and upon a 6-State basis thereafter, with the provision that in her act of ratification the State of California should limit herself to 4,400,000 acre-feet annually of the allocated water and one-half of the surplus waters of the lower basin. In that connection the senior Senator from Colorado [Mr. PHIPPS] previously had introduced and had printed a similar amendment, fixing the maximum at 4,600,000 acre-feet. Otherwise the two amendments are quite similar.

As I understand, California holds to the belief that 4,600,000 acre-feet is an irreducible minimum. Arizona contends that a maximum of 4,200,000 acre-feet is the largest that she will consider. Personally, I am not wedded to either figure. The thing that is uppermost in my mind is to do equity and justice as nearly as can be done toward both States, and, at the same time, pass a bill that will be effectuated, and will secure the results which we all desire.

I think we should adopt that course. The two States have exchanged views, they have negotiated, they have endeavored to reach an agreement, and until now have been unable to do so. This controversy does not affect those two States alone. It affects other States in the Union and the Government as well.

Without undertaking to express my views either way upon the subject, I do think that if the two States are unable to agree upon a figure then that we, as a disinterested and friendly agency, should pass a bill which, according to our combined judgment, will justly and equitably settle the controversy. I suggested 4,400,000 acre-feet with that in view. I still hold to the belief that somewhere between the two figures we must fix the amount, and that this difference of 400,000 acre-feet should not be allowed to bar and preclude the passage of this important measure dealing with the enormous quantity of 15,000,000 acre-feet of water and involving seven States as well as the Government.

Mr. KING. Mr. President, will the Senator yield?

Mr. BRATTON. I yield.

Mr. KING. I will ask the Senator if it is not a fact that at the time when the governors' conference considered the matter and recommended a settlement upon a basis of 4,200,000 acre-feet to California there had not been fully discussed and fully appreciated the fact that there was probably a million acre-feet subject to capture which, under the compact, was allocated to Arizona and to California, so that if 4,200,000 acre-feet were awarded out of the 7,500,000 there would be an additional 500,000 acre-feet out of this 1,000,000 acre-feet which, under the compact, was to be allocated to the two States, so California in the aggregate would get 4,700,000 acre-feet?

Mr. BRATTON. That is true if the estimated surplus actually exists. At the same time, Arizona would get her 3,000,000 acre-feet agreed to by the governors as her just share of the allocated water, plus 500,000 acre-feet, being one-half of the unallocated surplus, so that while California would get 4,700,000 acre-feet Arizona would get 3,500,000 acre-feet. The surplus to which the Senator from Utah refers would be equally divided between Arizona and California. Neither State would get an advantage by reason of the division of the surplus.

So much, Mr. President, in regard to the technique of the compact, the urge for its ratification, and the beneficial results which will emanate from ratification. I turn now to the economic features of the bill. This phase of the situation has been discoursed upon so frequently and completely that any discussion at length by me would be utterly superfluous. Treating the matter briefly, it is well known that the Department of the Interior estimated that the entire development, including the construction of the dam, power plant, and all-American canal, will cost $125,000,000. This sum is composed of the following items:

Reservoir (26,000,000 acre-feet capacity)	$41,500,000
Power plant (1,000,000-horsepower capacity)	31,500,000
All-American canal	31,000,000
Interest during construction, 5 years, 4 per cent	21,000,000
Total	125,000,000

It was the further estimate of the department that the gross annual returns from the completed project will be $12,300,000, composed of the following items:

Sale of 3,600,000 kilowatt-hours, at three-tenths cent	$10,800,000
Storage and sale of water for irrigation and domestic use	1,500,000
Total	12,300,000

and that the annual charges for operation will be $6,200,000 annually, as follows:

Operation and maintenance of storage and power	$700,000
Operation and maintenance of all-American canal	500,000
Interest on $125,000,000, at 4 per cent	5,000,000
Total	6,200,000

So that after deducting the operating expense from the gross income, the net annual returns on the project, according to the estimate of the department, would be $6,100,000. This would be sufficient to amortize the development on the basis of 25 years.

The commission determined that, in the interest of safety, the dam, spillway, and diversion facilities should be larger, and that the all-American canal should be lined with concrete. With these changes, the commission estimated that the cost of the entire project will be $165,000,000 without the canal to the Coachella Valley included. The total sum thus fixed was arrived at as follows:

Dam and reservoir (26,000,000 acre-feet capacity)	$70,600,000
Power plant (1,000,000-horsepower capacity)	38,200,000
All-American canal	38,500,000
Interest during construction, estimated at 7 years	17,700,000
Total	165,000,000

In considering these figures, it must be kept in mind that the commission based their estimates upon the House bill which included the cost of the all-American canal as one part of the project on the same basis as the other parts thereof, both as to cost and repayment of the investment.

In considering the rapidity with which the money so invested will be repaid and the burden to be borne by the revenue from the power, the cost of the canal, with the interest charge thereon, must be eliminated because under the Senate bill that charge is to be made and repaid in accordance with the reclamation law, which means that it must be repaid by the lands benefited. So the actual cost of the canal with interest thereon at 4 per cent for seven years, that being the estimated period of construction, should be deducted. The original cost is fixed at $38,500,000. The interest is $10,780,000. These two sums aggregate $49,280,000. After making this deduction from the estimated cost of the project—$165,000,000—the balance remaining is $126,720,000. This is the amount to be repaid out of the revenues derived from the sale of power. The commission does not question the correctness of the estimates made by the Department of the Interior with respect to the income to be derived from the sale of the power. This has been fixed at $10,800,000 and no dispute about it has been raised by anyone so far as I know. Neither has anyone questioned the estimate of the department with regard to the cost of operating the power plant, which has been fixed at $700,000 annually. The annual interest at 4 per cent on the cost of the dam and power plant is $4,352,000. This interest and cost of operation

aggregate $5,052,000. This deducted from the annual gross income from power—$10,800,000—leaves a net balance of $5,748,000. This sum will amortize the investment within about 25 years.

Mr. KING. Mr. President, will the Senator yield?

Mr. BRATTON. I yield.

Mr. KING. I think the Senator did not mean that the commission attributed the income solely to power. My recollection is that the commission reported that there would be $1,500,000 at least as the result of the income derived from it. Certainly it is not intended that Los Angeles or the coastal cities, or anybody else for that matter, shall have the benefit of the storage water without paying for it.

Mr. BRATTON. That perhaps is true, but it would merely lower the burden of the revenue to be derived from power and would shorten the period of amortization rather than otherwise.

Mr. KING. Obviously; but the Senator does not intend to convey the idea, does he, that the only revenue shall be from power?

Mr. BRATTON. No. Confining the discussion to power alone, I am undertaking to show that the plan is feasible because the power sold at the rate of three-tenths of 1 cent per kilowatt-hour will amortize the investment within 25 years. When we consider the income which may reasonably be expected from storage and sale of water, the revenue will be increased and the period of amortization decreased, thus making the plan more feasible from the standpoint of the Government.

Mr. KING. I hope the Senator, before he concludes, will call attention to this statement by the commission:

> It is obvious that the power which can be generated from Boulder Dam is a valuable resource. If the income from storage can be reasonably increased and the capital investment reduced by the cost of the all-American canal, together with a reduction for all or a part of the cost properly chargeable to flood protection, it would be possible to amortize the remaining cost with the income from power.

Mr. BRATTON. If the canal to the Coachella Valley is constructed, the total cost of the entire project must be increased $11,000,000, that is to say from $165,000,000 to $176,000,000, but this will not be a burden upon the power because that money will be repaid in the same manner as the cost of the all-American canal and therefore will not affect the amortization of the cost of the dam and power plant. When the sale price of the electric energy, namely, 3 mills per kilowatt-hour, is kept in mind and that the plan will thus amortize itself in about 25 years, it seems to me that the feasibility of the project should give little anxiety to any of us.

Mr. President, my attention was called to-day to an article appearing in the Washington Herald. It was written by Mr. Joseph Timmons and contained some comments made by Mr. E. E. Weymouth, a distinguished engineer, who directed the investigation of the Bureau of Reclamation into the Boulder Dam project. This appeared in this morning's issue of the paper referred to. On account of Mr. Weymouth's reputation and the direct applicability of his comments to the report made by the commission, I ask that the article be inserted in the RECORD at this juncture.

The PRESIDING OFFICER (Mr. SHORTRIDGE in the chair). Without objection, it is so ordered.

The article is as follows:

[From the Washington Herald, December 10, 1928]

SIBERT REPORT FIGURES HIGH, EXPERT AVERS—BOARD FAILS TO SUPPLY FACTS ON WHICH IT BASES PROBABLE COST, ENGINEER SAYS

By Joseph Timmons

F. E. Weymouth, distinguished engineer who directed while in the Government service, the planning of Boulder Dam, gave out yesterday a critical analysis of the report on that project made a week ago by the Board of Engineers headed by Maj. Gen. William L. Sibert.

Pointing out with satisfaction that the Sibert board selects the Black Canyon site as the best, as he himself did four years ago, and declaring a 550-foot dam can be built there safely, with no earthquake menace existing, Weymouth took sharp issue, however, with the board's recommendations of charges and increases of cost estimates.

LEANING BACKWARD

"This board has leaned over backward in its ultraconservatism in reference to a pressure in the proposed dam," declared Weymouth.

Continuing, Mr. Weymouth pointed out that in showing this same ultraconservatism in cost estimates, the board protected itself by not supplying any of the facts and figures on which it based its cost increase except in those instances in which the board recommended changes in plans.

For instance, the board added $6,700,000 to the cost estimate for the great power plant, without the slightest indication why. It admits that job is simple, without any difficulties.

In the same way, about $15,000,000 is added to probable cost of the dam for which no explanation is given. The board has access to all of Weymouth's data; no one has access to the data which supports the board's opinions as to large costs.

"The board has approved the site and has asserted that a high dam can be built in Black Canyon that will be safe," commented Weymouth. "The only effect of the report otherwise has been to raise the estimate of cost.

NOT TO AFFECT COST

"Fortunately the board's estimate will not in any way affect the actual cost when the dam is built.

"Some of the ablest, best equipped, most experienced, and responsible dam contractors have stated that they are willing to build the dam within the estimate contained in the Weymouth report, and in less than the estimated time."

This reference points especially to Lynn Atkinson, builder of the new Coolidge Dam in Arizona, who has wired to Senator JOHNSON that he will furnish bond to do so. His message does not cover changes that would add about $15,000,000 to the cost, but it does apply to Weymouth's plans and estimates, to which the board has added about that much more without any explanation.

"Why does the Sibert board think the power plant will cost $38,200,000 instead of $31,500,000? Why does it with a stroke of the pen add $15,000,000 to the cost of the dam? No one knows; probably no one ever will know.

"Fortunately that opinion will not affect the actual cost when the dam is built," was Weymouth's caustic comment.

As to the board's adding $7,500,000 to the cost of the all-American canal, to carry out its recommendation for lining with concrete the section of the canal through the sand dunes, Weymouth said he sticks to his official declaration that to line that section with concrete will not increase its cost. A much smaller canal, with much sharper fall, is made possible by that plan, saving as much in excavation cost as the concreting will add.

NOW IN WASHINGTON

Mr. Weymouth was chief engineer of the Bureau of Reclamation when plans for Boulder Dam were embodied in the famous "Weymouth report." He is now engineer in Mexico for the White Engineering Co., planning and building irrigation dams. He is at present in Washington.

Mr. BRATTON. Mr. President, I shall not enter upon a more prolix discussion of this feature of the subject. I have endeavored to analyze as concisely and clearly as possible.

Mr. President, it is my personal belief that a system should be devised and written into legislation providing that the Government shall construct and operate the power plant and give to States and subdivisions thereof preference right to purchase the power directly from the Government at the switchboard without toll or tribute to any intervening agency. This would not be putting the Government in business in the ordinary and accepted sense of the term. The primary purpose of the development is flood control. That can be accomplished only through storing the water. The generation and sale of electric energy is merely an incident to the primary object sought to be accomplished.

But I construe the message of the President delivered last week to mean that such a measure would not meet with his approval. Also, according to the declarations of the President elect, he, too, would look with disfavor upon such a plan. This simply means that no law can be enacted during the next several years which fails to embrace an alternative plan; that is, one for Government operation and the other by private interests under lease or contract, leaving the exercise of the alternative to the Secretary of the Interior. The present proposed act contains such a plan and leaves it with the Secretary of the Interior to determine which shall be adopted. All of this means that we shall have an act of this kind or none during several years in the immediate future. I hope it is definitely understood that no legislation would be decidedly inimical to the welfare and best interests of all the States affected, and so I shall yield my desires in the interest of the passage of the very best measure that is possibly obtainable under the circumstances.

Mr. President, in conclusion, I address myself to another contention that has been advanced. It has been strenuously urged by some that, under the terms of the proposed legislation, the rights of Arizona and Nevada, particularly Arizona, are being disregarded. It will be remembered that the dam is to be located at a point where the river forms a boundary line between said States. The advocates of this theory urge that the power site is the common property of the two States and that they should have the right to tax or otherwise receive tribute from the pro-

posed development for power purposes. Personally, I am unable to share this view. The Government has the indisputable power to control the river in aid of navigation. It may take all needful steps in that behalf. That power is expressly granted in the Constitution. It was granted by the several States. Hence, if the proposed development contemplated merely a dam for the purpose of storing water and thereby stabilizing the flow of the river, there doubtless would be no argument with respect to the Government acting within its scope of authority. At the expense of repetition, allow me to say that it appears from the face of the bill that this is the primary object of the legislation. The generation of power is an incident thereto. I think it is the uniform holding of the courts that so long as a governmental agency acts within the scope of its power as to the primary objects of an undertaking or function, all things incident thereto in carrying the function to its full fruition may legally be done. Accordingly, the generation of power being an incident to the exercise of a legitimate function, namely, flood control in aid of navigation, it seems to me that the Government is not transgressing upon the rights of the State. On the contrary, if the States were permitted to interfere, such action would constitute a limitation upon the exercise of a constitutional prerogative of the Federal Government. I shall not undertake to discuss this phase of the matter further at this time. I may address myself to it later in the course of the debate.

Mr. PHIPPS. Mr. President, in checking up prints of the Hayden amendment and the amendment offered by myself to-day as an amendment to, or as a substitute for the Hayden amendment, I find on account of the fact that reprints have been made of the bill, that, in the case of both amendments, the language stricken out has been improperly stated. In other words, both amendments should read, on page 4, to strike out all of lines 22 to 25, inclusive, and on page 5 to strike out lines 1 to 14, inclusive, instead of the form in which the amendments are printed as they now read, namely, on page 5, strike out all of lines 1 to 18, inclusive. So far as the amendment offered by myself is concerned, I ask that the record be changed so as to give the proper point at which the proposed new language should be inserted.

The PRESIDING OFFICER (Mr. FESS in the chair). Has the Senator from Colorado the amendment in corrected form?

Mr. PHIPPS. I have.

The PRESIDING OFFICER. The Senator will please send the amendment to the desk and the correction will be made.

The question is on the amendment now offered by the Senator from Colorado [Mr. PHIPPS] to the amendment of the Senator from Arizona [Mr. HAYDEN].

Mr. PHIPPS. Mr. President, so far as I have been able to ascertain, none of the Senators who have been interested in this discussion care to make any general remarks regarding the bill at this time. It seems to me we have had this topic up for such a length of time that we should begin voting on the amendments. Therefore I should be pleased to have a vote on the pending amendment to the amendment.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Colorado to the amendment of the Senator from Arizona.

Mr. KING. Mr. President, let the amendment to the amendment be stated.

The PRESIDING OFFICER. The clerk will state the amendment as modified.

The LEGISLATIVE CLERK. On page 4 it is proposed to strike out all of lines 22 to 25, inclusive, and on page 5 to strike out lines 1 to 14, inclusive, and to insert in lieu thereof the following:

SEC. 4 (a). This act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 12 hereof, and the President, by public proclamation, shall have so declared, or (2) if said States fail to ratify the said compact within one year from the date of the passage of this act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions save that of such 6-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree with the United States and for the benefit of the State of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,600,000 acre-feet of the waters apportioned to the lower basin States by the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

On page 6, strike out line 25, and on page 7, lines 1 to 8, inclusive, and insert in lieu thereof the following: "permanent service and shall conform to paragraph (a) of section 4 of this act. No person shall."

On page 12, after line 14, add the following paragraph to section 6:

"The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this act shall become effective, as provided in section 4 herein."

Mr. HAYDEN. Mr. President, what the Senator from Colorado has stated is correct respecting the improper references in my amendment to the pages and lines of the substitute for the House bill now pending before the Senate. It will, therefore, be necessary for me likewise to make a correction in the amendment which I have offered. I shall do that at an early opportunity.

As I understand the situation, the Senator from Colorado offers his amendment as a substitute for the amendment which I have offered.

Mr. PHIPPS. As an amendment or a substitute, which is practically the same thing under the ruling at the time of the agreement which was made.

Mr. HAYDEN. There will be a vote on his proposal before there will be a vote upon my own?

The PRESIDING OFFICER. The Senator is correct.

Mr. HAYDEN. Under the circumstances I should like to inquire of the Senator from Colorado how he arrives at the figure 4,600,000 acre-feet of water instead of 4,200,000 acre-feet as proposed in my amendment?

Mr. PHIPPS. It was just about as difficult for me to arrive at 4,600,000 acre-feet as it would have been to arrive at 4,200,000 acre-feet. The arguments pro and con have been debated in the committee for quite a period of time. The contentions made by the Senators from Arizona have not been conclusive to my mind. For instance, I will refer to the fact that Arizona desires to eliminate entirely all waters arising in the watershed and flowing out of the Gila River.

Mr. HAYDEN. There is nothing of that kind in the Senator's amendment.

Mr. PHIPPS. There is nothing of that kind in the Senator's amendment, but that has been one of the arguments advanced by California as being an offset to the amount to which Arizona would try to limit California.

Mr. HAYDEN. If the Senator thought there was force in that argument, I should think that he would have included in his amendment a provision eliminating the waters of the Gila River and its tributaries, as my amendment does.

Mr. PHIPPS. I do not consider it necessary because the bill itself, not only the present substitute measure but every other bill on the subject, ties this question up with the Colorado River compact.

Mr. HAYDEN. My amendment does that.

Mr. PHIPPS. Yes; that is true, but under estimates of engineers—one I happen to recall being made, I think, by Mr. La Rue—notwithstanding all of the purposes to which water of the Gila may be put by the State of Arizona, at least 1,000,000 acre-feet will return to the main stream. Yet Arizona contends that that water is not available to California; whereas to-day and for years past at least some of the waters from the Gila River have come into the canal which is now supplying the Imperial Valley.

It is not a definite fixed fact that with the enactment of this proposed legislation the all-American canal is going to be built within the period of seven years; as a matter of fact, it may not be built at all; we do not know as to that. But I do not think that the water from the Gila River, one of the main tributaries of the Colorado, should be eliminated from consideration. I think that California is entitled to have that counted in as being a part of the basic supply of water.

Mr. HAYDEN. I will state to the Senator that the primary reason why the Colorado River compact was not approved by the State of Arizona was that the Gila River and its tributaries were included in the Colorado River Basin. The people of Arizona felt—and justly so—that they had appropriated and put to beneficial use all of the waters of that stream, and that by

remaining out of the compact under no circumstances could the waters of that stream be burdened with furnishing any water to Old Mexico, while by entering the compact they would assume a liability that does not at the present moment exist. Such being the case, since the Gila River is the very lifeblood of our State and the great majority of the people of Arizona live within its drainage, they felt that they were asked to do more than they should be required to do in approving that interstate agreement.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Nevada?

Mr. HAYDEN. I do.

Mr. PITTMAN. I think it is true, as stated by the Senator from Colorado, that Mr. La Rue has estimated that even after all of the water of the Gila that may be put to beneficial use by every means, even including pumping, is taken out, the return flow will still supply 1,000,000 acre-feet at the mouth of that river where it flows into the Colorado.

Mr. HAYDEN. No; the Senator from Nevada is mistaken. If the Senator will examine Mr. La Rue's report, he will find this to be the fact: That if three or more million acre-feet of water were diverted out of the main stream of the Colorado River and conveyed into the lower Gila Valley, and there used for irrigation, after a water table was established in irrigating some 800,000 acres of land, the return flow from that land would provide a very substantial amount of water for Mexico, because it could be used at no other place. Originally, however, that water must be diverted from the main Colorado River, diverted out of the Colorado River for irrigation of lands in the Gila Valley, and would not represent but little, if any, water from the watershed of the Gila River in Arizona.

Mr. PITTMAN. Does the Senator know what he figured the present return flow is to the Colorado from the Gila?

Mr. HAYDEN. The figures that Mr. La Rue used must have been derived from the record of stream measurements made by the United States Geological Survey. Over a long period of years the Geological Survey records will show an average run-off into the Colorado River of somewhere in the vicinity of a million acre-feet. That record goes back over a long period of years. The record will show a continual diminution of the run-off, first, because of the construction of the Roosevelt Dam; second, other uses for irrigation in the drainage area of the Gila; and, more recently, the construction of the Coolidge Dam. So that as reservoirs are constructed on the Gila and its tributaries, the quantity of water that will run out of that stream into the Colorado River will be reduced. The only way in which the water discharged from the mouth of the Gila River can be increased is by diverting water from the Colorado as proposed in the plan of irrigation which the State of Arizona has recommended, using that water to irrigate lands in the lower Gila Valley.

Mr. PITTMAN. I think I understand the Senator.

Mr. HAYDEN. Let the Senator thoroughly understand that so far as the State of Arizona is concerned, it lays no claim to and seeks no exemption from any and all return waters that pass out of the mouth of the Gila into the Colorado. That is exactly what I am sure is going to happen in the delta of the Colorado River just as it did happen on the Rio Grande. The Senator will remember the controversy between the United States of America and the United States of Mexico with respect to water for certain lands in the vicinity of El Paso, Tex. I can state the nature of that controversy very briefly.

In President Cleveland's administration the Government of Mexico submitted a claim for many millions of dollars damages because the flow of the Rio Grande had been so diminished by use within the United States that certain lands in Mexico had been deprived of their water supply. Judson Harmon was then the Attorney General of the United States. Mr. Harmon rendered an opinion to the effect that the United States was under no obligation to furnish any water to Mexico, and therefore that there was no basis for the claim. Then Congress passed the reclamation act of 1902, and under that act the Federal Government built the Elephant Butte Dam. When the time came to construct that dam a treaty was negotiated with Mexico, stating that whereas certain lands in Mexico needed a supply of water, the United States would impound in the Elephant Butte Reservoir a sufficient quantity of water to irrigate those lands upon condition that Mexico, in the treaty, would recognize that the American Government did it as an act of grace and comity, that our Government was under no obligation to furnish any water, and that the treaty would not be a precedent for any other treaty.

The treaty was ratified. The water was impounded. Water from that dam was further used to irrigate lands in the United States in the Rio Grande Valley; and what happened? The lands were irrigated and became waterlogged. To-day, from the drainage and return waters from the El Paso-Elephant Butte project in New Mexico and Texas, there is more water going into Old Mexico than the United States is required to deliver under the treaty, so that no water need be furnished to Mexico directly from the Elephant Butte Dam. They are not only irrigating all the land that was once irrigated in Mexico, but they are irrigating new and additional areas in that country. On top of that, from the return waters they are irrigating additional lands below El Paso on the American side of the river in Texas.

What happened on the Rio Grande will happen on the Colorado River. Every acre of land that is irrigated in the United States above the mouth of the Gila will serve as an underground reservoir for water, and the return flow from all such lands will be available to Mexico. Nobody objects to that after the United States has first made use of the water.

Mr. ASHURST. And we could not prevent Mexico from getting it if we wanted to.

Mr. HAYDEN. Nothing could prevent the return and drainage water from passing into Mexico.

But there is another side of the story. What I have stated is true of every acre irrigated in Colorado, Wyoming, New Mexico, Utah, Nevada, or Arizona, because in each case when the water is applied to the land some part of it can return to the stream, and ultimately go down to Mexico. In the Imperial Valley, however, there is no chance there for any return flow. There you are at the bottom of the bowl, with the result that from a broad national point of view it is uneconomic to irrigate lands in the Imperial Valley.

An acre-foot of water used in Colorado will probably return 50 per cent to the stream. An acre-foot of water used in Arizona will return at least 25 per cent to the stream for additional use; but an acre-foot of water diverted for use in the Imperial Valley is gone forever. There is no place where any part of it can be used again. Therefore, when the Californians appear before the Congress of the United States they set up not the highest use of water, not the most economic advantage that could be taken of a national asset. That is not the basis of their claim. The basis of their demand is that of necessity, that they must have so much water. The senior Senator from California [Mr. JOHNSON] himself in his remarks the other day, stated that the Imperial irrigation district claimed the right to waste 900,000 acre-feet of water into the Salton sink. If that water were used in the upper basin, if it were used in Arizona, it would irrigate more than 200,000 acres of land. Its use in the Imperial Valley, where there is no land below that the water can be again applied to beneficial use, means a loss to the Nation of farms and homes for thousands of American citizens.

Let me make it perfectly clear to the Senator from Nevada that if that is all the objection any one has to the amendment I have offered—that it lays a claim to return waters of the Gila River passing out of the mouth of that stream into old Mexico—we can very readily change the amendment to cure that fault without difficulty.

But I return to the question that I addressed to the Senator from Colorado [Mr. PHIPPS]. He states that the State of California shall be allowed 4,600,000 acre-feet of water. The only basis there is for fixing that figure is that the State of California has demanded that much water. The State of California has said that her necessities are such that she must have that much water to irrigate lands within the State and to furnish water for domestic use in the State of California.

Mr. SHORTRIDGE. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from California?

Mr. HAYDEN. I yield.

Mr. SHORTRIDGE. Suppose it is agreed that California shall have that quantity of water. In view of the physical facts, will not Arizona have ample for all her purposes and uses? Will there not be plenty left for her?

Mr. HAYDEN. I am sorry that there will not. That the total quantity of water is so limited is the basis of the controversy between Arizona and California.

Mr. SHORTRIDGE. Including, of course, all your tributary waters, which you claim to own, I take it, in fee simple, absolutely?

Mr. HAYDEN. The State of Arizona claims the waters of her tributaries to no more or no less extent than any other State would claim the tributaries of the Colorado River within its boundaries. If the water has been placed to beneficial use, then a right has been acquired to use it. If it has not been placed to beneficial use, of course the water will pass into the

main stream of the Colorado River and become part of the body of water which is divisible.

Mr. SHORTRIDGE. Arizona does not claim title to the water after it has passed into the stream on its way to the gulf?

Mr. HAYDEN. Not at all.

Mr. SHORTRIDGE. I did not know but that her claims went even to that extent.

Mr. HAYDEN. The claims of the State of Arizona have been very grossly misrepresented in that respect as in other respects in connection with this legislation. The claims of the State of Arizina are reasonable. They are based upon the long-acknowledged and well-established water law of the West.

Mr. PITTMAN. Mr. President——

Mr. HAYDEN. I yield to the Senator from Nevada.

Mr. PITTMAN. I started to say once or twice that I thought I understood the position of Arizona with regard to the Gila River. My understanding of the matter has been partially explained by the Senator from Arizona. I will now explain it in my own way.

The chief development for irrigation in Arizona is on the Gila. The large population of the State is on that river. The people of Arizona should be excused by reason of a fear that some of its development may in the future be interfered with by reason of a demand for water in Mexico. I do not believe that it is the intention of any Senator here to allow a bill to be passed that will interfere with the actual consumptive use of the waters of the Gila by Arizona on account of any demands from Mexico.

What the Senator has said with regard to return flow is undoubtedly correct. There is not any doubt whatever that the irrigation along the Colorado River, from the top to the very bottom, has the effect of equating the flow of that river. At the present time that river has enormous floods in the spring, while in the fall and in the winter it is sufficiently dry in many places to walk across it. There is very little water to irrigate with during the low season, of course; and during the high season they have a desperate time, not using it, to prevent it from destroying everything.

I think there has been too much fear manifested with regard to the demands of Mexico. That fear has not been limited to Arizona with regard to the Gila River. All of the States have been actuated by that fear, and they are to-day, in the division of this water. It is the bugaboo which more than anything else has prevented an agreement with regard to the distribution of this enormous quantity of water. Every time we approach the necessities of the State and the use of the water the ghost of Mexico instantly rises up.

The testimony that was given before the committee is printed. It stands practically undisputed. Mexico is irrigating only about 200,000 acres of land. The senior Senator from Arizona says that it is 240,000 acres. I will admit that 240,000 acres are irrigable.

The testimony also shows that practically the only means they have of irrigating is the present canal which supplies Imperial Valley and Mexico with water. The water goes through that canal. That canal has not been able, in dry years, to supply the Imperial Valley with sufficient water to irrigate the land they now have under irrigation. There has not been any very large increase in the irrigated land of Mexico, for the simple reason that they had to get their water from that canal, and that canal has been almost dry during certain dry seasons. There is no place where Mexico could place a dam to conserve water at all. When the Colorado River gets down into Mexico, it is so flat that there is hardly a flow at all. They have pumped some water recently. They are irrigating a little land by pumping the subsurface flow of that river. But when we are dealing with diversion works and irrigation we are not dealing with subsurface flow in a flat country like Mexico, because it can not be handled. It can be pumped, that is all.

The natural flow of that river to-day will not irrigate any more than 240,000 acres of land in Mexico. That is all it will irrigate. I think it is the recognized policy of Congress—certainly it is recognized in the very opening paragraph of this bill—that the comity between nations does not call upon the United States to furnish to Mexico any water that has accumulated in the United States through expenditures made in the United States. If this dam is never built, if there is no water impounded on that river, Mexico a thousand years from now will be where Mexico is to-day with regard to irrigation in Mexico.

Mr. HAYDEN. Mr. President, will the Senator yield at that point?

Mr. PITTMAN. Just a moment; I am not quite through with this. Undoubtedly this Government, if it can prevent it, will not permit Mexico to be wronged by any action we take in the United States with regard to that river. It will not reduce the amount of water they can obtain from the natural flow, and have obtained before we have. But to say that Mexico is unable to increase her supply from impounding because there is no place to impound it, and then to say that if the United States for the benefit of its own citizens increases the flow, Mexico shall take any benefit of it, is contrary to any principles of justice or equity as between nations.

You would think that there was some possible way by which Mexico in the next few years could put under cultivation several million acres of land. You would think that they could use the whole 15,000,000 acre-feet of that river. If they could have done that, if it had been physically possible, they would have done it, of course, but they have not done it. They can not do it. That river during the irrigation season is practically dry with the exception of the small amount that goes through the present canal, and that will not irrigate in Mexico over 300,000 acres of land. So, limit it to 300,000 acres of land, give them the water benefit if you want to, of even 4 acre-feet to the acre, which, in a country like that down there, is totally unnecessary, and what would you have? You would have only 1,200,000 acre-feet of water as a maximum.

Mr. HAYDEN. That is, to supply the irrigation of lands at present under irrigation in Mexico.

Mr. PITTMAN. Yes; or up to whatever they could irrigate from the natural flow. All on earth a treaty could ever deal with would be their rights under the natural flow. We can not deal with over 1,200,000 acre-feet. La Rue says to-day there is 1,000,000 acre-feet running out of the Gila River, the return flow above the line going into Mexico. That water to-day alone, within 200 feet, would supply their total demand.

It is totally impossible to capture all of the water that may go down into Mexico and the Imperial Valley for irrigation. It is not humanly possible to capture it. You have not the bedrock on which to capture it. You have silt thousands of feet deep that saturates with water down to base rock. There would not be any possible way of preventing from 10 to 15 per cent of the flow that is let down going into Mexico as a subsurface flow.

As a matter of fact, the very argument the Senator has made, the very argument which the Senator from Wyoming [Mr. KENDRICK] made with regard to the flow, all goes to prove that there would be no physically possible way in which you could keep out of Mexico over 2,000,000 feet of return flow.

It is more than she can use. It is more than is necessary for their present irrigation. The only way they can possibly use it would be through pumping, because the only other way is through the present canal, where the water is turned in the United States and carried into Mexico. They can not build a dam in the United States. They can not divert water in the United States. They have reached the limit of irrigation in Mexico from the Colorado River, except by pumping, and if they want to pump, as I have said, the subsurface flow will be over 2,000,000 acre-feet, no matter what on earth we try to do.

We have scared ourselves to death every time we started in to negotiate a settlement with regard to Mexico, by reason of not thinking both of the physical conditions and of the law that governs nations with regard to water rights. If we can ever get away from that foolish fear in this matter, we will find that we have plenty of water for everybody.

Mr. KING. Mr. President, will the Senator from Arizona yield?

Mr. HAYDEN. I yield.

Mr. KING. I suggest to the Senator from Nevada the fact that there is fear. Whether there are ample grounds for fear or not may be the subject of controversy. That fear found expression in a memorial adopted by the Governors of Arizona, California, Nevada, New Mexico, Utah, and Wyoming. In the memorial this language is used:

> Now, therefore, and to the end that no unfortunate misunderstanding may arise between the United States of America and the United States of Mexico, and that no false encouragement may be given to present or future developments along the Colorado River in the United States of Mexico, we, the governors of all seven of the Colorado River States, with our interstate river commissioners and advisers in conference assembled in the city of Denver on this 26th day of August, 1927, do hereby in great earnestness and concern make common petition that a note be dispatched to the Government of the United States of Mexico calling attention of that Government to the fact that neither it nor its citizens or alien investors have any legal right as against the United States of America or its citizens to a continuance of the flow of the Colorado River for beneficial purposes and that the United States of Mexico can expect no such continuance except to the extent that as a

matter of comity the two Governments may declare hereafter by treaty and that especially under no circumstances can the United States of Mexico hope to use water made available through storage works constructed or to be constructed within the United States of America, or hope to found any right upon any use thereof. We believe, too, so great are the water necessities of our States that any adjustment made with the United States of Mexico concerning the Colorado River should be based upon that river alone. We further earnestly suggest that a special commission be created by act of Congress for the Colorado River alone, a majority of the commission to be appointed from citizens of the Colorado River States, or that by act of Congress the present commission already referred to be enlarged to contain two additional members to come from the Colorado River States.

It is only by such precautionary measures, promptly taken, that our seven States with their millions of people can be given a basis of economic certainty, adequate protection, and a feeling of security pending the negotiation of an early treaty between the two Governments.

And your memorialists will forever pray.

Mr. PITTMAN. What is the date of that prayer?

Mr. KING. The 26th of August, 1927.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Nevada?

Mr. HAYDEN. I yield.

Mr. PITTMAN. I wish to call attention to the fact that since that memorial the Johnson bill was reported out by the Senate Committee on Reclamation, and that bill is now the one under consideration, as it has been offered as an amendment to H. R. 5773. Here is the statement at the very start of the bill:

That for purpose of controlling the floods, improving navigation, and regulating the flow of the lower Colorado River, providing for storage and delivery of the waters thereof for reclamation of public lands and other beneficial uses within the United States.

The committee added those words "within the United States" for the very purpose of declaring the policy of Congress and of this Government if and when this legislation becomes a law. There is no question as to what Congress will mean by that if they pass the bill. They will mean exactly the same thing those governors desire.

A treaty may never be necessary with regard to this. Whenever a treaty is necessary with regard to this matter, the burden of applying for that treaty will be on Mexico, not on the United States.

When we use this water which we store, it will be used before it can possibly get to Mexico, except such of the return as may go there. If Mexico maintains that she is being deprived of water from the Colorado River to which she is entitled, she has only one known legal remedy, and that is, through the State Department of Mexico, to protest to the State Department at Washington, to see if a harmonious adjustment can not be brought about.

We might seek to enter into a treaty with regard to what water could be used in Mexico. In the first place, you would have a question as to whether, if it was already being used, any treaty could take away any vested right. We know no statute can, and I hold that a treaty is only a statute.

We will assume, however, as a violent conclusion, that the Secretary of State of the United States would enter into a treaty with Mexico, giving them many times the amount of water to which they were entitled, from the natural flow of this river, and, to do so, should attempt to injure some vested rights in this country, to take away from people the use of water they had been legally using for irrigation.

That treaty would have to come to this body for ratification before it would ever be a treaty. It would take two-thirds of this body to ratify it. It is totally inconceivable, if we pass this bill, which states that all of the impounded water above the natural flow shall be used exclusively in the United States, that they would ratify any such treaty. They would have just as much right to say to Mexico then, as they would have if we would pass just such a resolution as the Senator from Utah has read: "You never had any right under the comity of nations to the stored waters of our country. Your rights were solely limited to the natural flow and the use to which you put the natural flow. Then, in addition to that, the Congress of the United States passed a public act in which they stated to you and the rest of the world that all of this impounded water was to be used exclusively in the United States. You and your citizens had notice of it. You can not complain that you are now injured because you took no notice of it."

There is not a chance in the world of Mexico ever getting anything except that which she is morally entitled to under the comity of nations, and we know just what that is.

Mr. KING. Will the Senator from Arizona yield?

Mr. HAYDEN. I yield.

Mr. KING. The Senator from Nevada may be right, viewing the proposition from a strictly legal standpoint. But there are other factors to be considered. There is a situation which can not be ignored. The record before Congress reveals the fact that not only the upper States but the lower-basin States are not free from apprehension because of the Mexican situation. One of the strongest reasons urged for prompt action by Congress in dealing with the Colorado River was based upon the claim that lands in Mexico were being brought under cultivation and that rights to the waters of the Colorado River were being acquired. There is much testimony tending to show that below the international boundary there are thousands of acres of arable land, some of which can be irrigated from the waters of the Colorado River. Rights, it is asserted, may be acquired which will be injurious to the residents of the Colorado River Basin. It is stated in reports made during the hearings that every acre of land irrigated in Mexico deprives an acre of land in the United States of water needed for its reclamation. And the record tends to show that if a dam is constructed in the Colorado River and the flow of the stream is equated, several million acre-feet of water will annually flow into Mexico.

If 500,000 primary horsepower are developed, a large part of the flow of the river will be required for the generation of power, and this will increase the quantity of water which will pass out of the United States into Mexico. The upper States, as the Senator knows, are not in a position to immediately appropriate the 7,500,000 acre-feet allocated to them in the Santa Fe compact. It may be a number of years before the economic and agricultural situation will permit the bringing under cultivation of lands in the upper basin, which can only be reclaimed by the use of waters from the Colorado River. Until the upper States are ready to appropriate that to which they are entitled, it will flow down the river and a portion of it may pass into Mexico.

In the meantime, if this bill shall become a law and proceedings under it shall be carried forward, the dam and the power plant will be built. Perhaps 10,000,000 acre-feet will flow over the dam, a portion of which will be required for power purposes. As stated, the upper-basin States are not prepared to use the 7,500,000 acre-feet to which they are entitled, and a part of it will find its way into Mexico. Mexico may bring additional lands under cultivation. Suppose that for 15 or 20 years Mexico shall use the water which flows from the upper States and large areas are made productive and valuable under cultivation, and properties are developed. What will be the result when the upper States are ready to take from the river the 7,500,000 acre-feet and apply the same to beneficial purposes? Will Mexico seek relief in some international tribunal, claiming that the United States has slept on its right for years and has thus permitted Mexico to develop valuable properties which would be rendered valueless if deprived of water?

There may be some ground for fear if unused waters of the river flow for years to Mexico and are there put to beneficial use.

Mr. PITTMAN. Would a resolution stating that they could not have it in the future cover it?

Mr. KING. I do not say that it could cover it. I am merely stating the situation. Perhaps there should be a legislative declaration that the United States claims all of the waters of the Colorado River. It is thought by some that the word "exclusively," found in the bill, will answer the purpose. It may be deemed sufficient. I have, however, prepared an amendment, consideration of which I shall ask later, declaring, in effect, that Mexico shall have no right to any of the stored water, that the United States and the States on the Colorado River have appropriated and are taking steps to use all of the water of the river, and notice is given to Mexico that she shall take cognizance of the claims of the United States and the States of Wyoming, Utah, Colorado, New Mexico, Nevada, Arizona, and California.

Mr. PITTMAN. Suppose it is possible, though I say it is not physically possible, for them to use this water and they do use it for about 20 years and build up those towns and a large population and they came in under all those grounds the Senator said they would——

Mr. KING. I said they might.

Mr. PITTMAN. Suppose they might do it, would not they have the same grounds to say there was no treaty between us limiting it and that they did not have notice of all this?

Mr. KING. I am suggesting no remedy. I was merely answering the proposition of my friend from Nevada and calling atten-

tion to the fact that though he asserts there is no ground for fear, the fear nevertheless exists, as is evidenced by the declaration of the governors in the memorial to which I just referred.

That fear does exist and the people of the upper States look with some concern upon the results which will follow the building of a dam and equating the flow. As stated, one of the results will be that for some years a large amount of water belonging to the upper basin will flow into the lower basin and thence into Mexico, and Arizona will not be able for several years to use all the flow to which she is entitled. What rights Mexico will acquire, if any, I am not discussing. I am merely saying that a situation may arise which will cause concern.

As a legal proposition I think the Senator is right, and we could say to Mexico, "You have no right to water stored in the United States. You knew when you used water flowing from the dam that there was a compact between the States, ratified by them and concurred in by the United States, under the terms of which 7,500,000 acre-feet were allocated to the States above, and that they have claimed and still assert title to the same.

It may be they were not prompt in applying the water to which they were entitled, but it is theirs and no claim of laches or delay or prescription may be asserted to deprive them of their rights.

I hope there is no ground for the fear. Of course, if this bill shall pass and a dam shall be built and the water equated and Mexico shall, for a considerable length of time, use water which the upper States or Arizona are entitled to, when we are ready to use the water we will take it regardless of any claim upon the part of Mexico.

Mr. BRATTON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BRATTON. Is the amendment offered by the senior Senator from Colorado [Mr. PHIPPS] subject to amendment?

The PRESIDING OFFICER. It is not at this stage.

Mr. BRATTON. That is the inquiry I wanted to propound. In view of that, if the Senator from Arizona will permit me——

Mr. HAYDEN. Certainly.

Mr. BRATTON. I suggest to the Senator that on page 2, line 18, following the word "agree," there should be inserted the words "irrevocably and unconditionally."

Mr. PHIPPS. Will the Senator give me a reference to the substitute bill, the Johnson bill, now before the Senate?

Mr. BRATTON. I refer to the amendment offered by the Senator himself as a substitute.

Mr. JOHNSON. Will the Senator state again the line and page?

Mr. BRATTON. It is the amendment of the senior Senator from Colorado, page 2, line 18. Following the word "agree," insert the words "irrevocably and unconditionally."

Mr. PHIPPS. Mr. President, it had not occurred to me that should be necessary. An agreement on the part of a State by its legislature may be looked upon as binding upon the State as a moral obligation. However, I do not see that any harm would be done by making the modification the Senator suggests; therefore I will ask permission——

The PRESIDING OFFICER. Does the Senator from Colorado withdraw his amendment?

Mr. PHIPPS. No. I was about to ask permission to perfect my amendment by adding the words which have been suggested by the Senator from New Mexico.

The PRESIDING OFFICER. The Senator from Colorado modifies his amendment by adding the words suggested by the Senator from New Mexico.

Mr. PHIPPS. I desire to perfect my amendment by adding, after the word "agree," in line 18, on page 2 of my amendment, the words "irrevocably and unconditionally." Then the amendment would stand in that form.

Mr. President, at this point I want to make the request that I be further permitted to make another change in the pending amendment and that is to make the term for agreement under the 7-State compact, the time during which the 7-State compact may be entered into before a 6-State compact shall become effective, six months instead of one year. It seems to me that one year is perhaps longer than necessary in which all of the seven States might, if they are going to at any time, agree to a 7-State compact.

The PRESIDING OFFICER. The Chair will state that the Senator has a right at any time before his amendment is acted upon to modify it as he desires.

Mr. PHIPPS. I was aware of that, but I desired that those who are deeply interested in this amendment should know my reasons and the modus, and then I desire to perfect my amendment by changing "one year" to "six months."

Mr. ASHURST. Mr. President, will the Senator from New Mexico yield to me for a moment on the question of procedure?

The PRESIDING OFFICER. Does the Senator from New Mexico yield to the Senator from Arizona?

Mr. BRATTON. I yield.

Mr. ASHURST. Of course, no one would deny the right and power of the Senator from Colorado or any other Senator to perfect his own amendment in such form as he pleased, but I am quite disturbed about a ruling just made by the Chair. I am not at this moment questioning the ruling; in fact, I am seeking light and information. When the Senate began the consideration of the bill on December 5, if Senators will advert to the RECORD, on page 67, the right-hand column, it will be discovered that my worthy colleague, with much thoughtful prevision, horoscoped just what might happen here. He asked the question as to whether or not amendments in this degree would be in order. It is quite important that that question should be settled. Let me see if I understand the situation.

The PRESIDING OFFICER. The Chair will state to the Senator that inquiry was made as to whether the amendment of the Senator from New Mexico could be offered and the decision was that it could not be.

Mr. ASHURST. I understand. Now, let us explore the situation. I want to be correct and I want to find out just what the RECORD discloses. The bill is pending before the Senate; my colleague offered an amendment; that amendment was in order; the Senator from Colorado [Mr. PHIPPS] proposed an amendment to the amendment of my colleague [Mr. HAYDEN]. That is true, is it not?

The PRESIDING OFFICER. That is correct.

Mr. ASHURST. Then it seems to me that it was understood, if I read the RECORD correctly and my memory serves me right at this time, that the amendment proposed by the Senator from New Mexico to the amendment offered by the Senator from Colorado would be in order.

The PRESIDING OFFICER. No; it would not be.

Mr. ASHURST. I yield with great deference to the present occupant of the chair, the Senator from Ohio [Mr. FESS]. I think that Senator is one of the few who has given very close study to the Senate rules. I wish more Senators would do so, and I should apply myself also in that direction. However, I still insist that a reading of the RECORD will indicate or seem to show that we attempted to reach an agreement whereby and whereunder amendments of this nature might be offered. I will ask the clerk to read from page 65 of the RECORD of December 5, if the Senator from New Mexico will pardon me.

Mr. BRATTON. Certainly.

The PRESIDING OFFICER. The clerk will read, as requested.

The Chief Clerk read as follows:

The VICE PRESIDENT. Is there objection to the request of the Senator from California?

Mr. HAYDEN. Mr. President, reserving the right to object, the Senator from California appreciates that the Senators from Arizona have offered a number of amendments to the Senate bill which they, at least, consider to be worthy of consideration by the Senate. The substitution of the House bill for the Senate bill will automatically require, I believe, under the rules of the Senate, that those amendments shall be reoffered, and that is a matter which we desire to have considered. Could the Senator suggest any way?

Mr. JOHNSON. Yes; I think I can suggest a way which will protect the amendments referred to by the Senator. For instance, let us assume that the House bill is substituted here. Let us assume that, after the substitution of the House bill, all succeeding the enacting clause is stricken out of the bill and the Senate bill inserted. Let us assume that that is done upon the agreement that the amendments heretofore presented by the Senators from Arizona shall be considered as having been presented and may be taken up in due course and in regular parliamentary fashion. Does not that answer the requirement?

Mr. HAYDEN. It would seem to me in addition that we should have assurance that the amendments which have been read should preserve the same status that they now possess.

The VICE PRESIDENT. The amendments would have to be reoffered to the House bill.

Mr. HAYDEN. That was the labor I was seeking to avoid.

The VICE PRESIDENT. They have never been offered to the Senate bill formally, because the Senate is now acting on committee amendments to the Senate bill.

Mr. ASHURST. Passing further on to page 68, with the permission of the Senator from New Mexico, I will ask the clerk to read a part of the discussion of the question by the Senator from Utah [Mr. KING], beginning with the words:

Mr. BRATTON. Do I understand that the Senator now offers the Senate bill in the form in which the committee recommended it?

I ask the clerk to read from there down to the end of the column, on page 68.

The PRESIDING OFFICER. Without objection, the clerk will read as requested.

The Chief Clerk read as follows:

Mr. BRATTON. Do I understand that the Senator now offers the Senate bill in the form in which the committee recommended it?

Mr. JOHNSON. Yes, sir.

Mr. ROBINSON of Arkansas. Mr. President, I think it ought to be understood, in view of what has taken place, that when the substitution is made the bill shall be subject to amendment and that the amendments which have been submitted to the Senate bill shall be considered as pending to the House bill. That was the understanding.

Mr. FESS. Not as pending.

Mr. ROBINSON of Arkansas. As having relation to the House bill. Of course they could not be pending until they are actually offered.

Mr. JOHNSON. Very well. I accept the statement of the Senator from Arkansas.

The VICE PRESIDENT. Is there objection? Without objection, it is so agreed and the Senator from California has offered the following amendment, which will be stated:

The CHIEF CLERK. The Senator from California proposes to amend House bill 5773 by striking out all after the enacting clause and inserting in lieu thereof the language of the Senate bill (S. 728).

Mr. KING. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state the parliamentary inquiry.

Mr. KING. If amendments shall be offered now, if the motion of the Senator from California——

The VICE PRESIDENT. Amendments should be offered now before the agreement is had. The bill should be amended now before the unanimous-consent request is agreed to.

Mr. KING. The inquiry I was about to propound was this: If we have before us the Senate bill——

Mr. JOHNSON. That is before us now, as I understand it.

Mr. KING. That is the inquiry I was about to make. If we have the Senate bill before us, then of course amendments to amendments may be offered and should not be subject to challenge that the latter amendment was subject to a point of order, being in the third degree or the second degree.

Mr. JOHNSON. I think not.

The PRESIDING OFFICER. The Chair will explain the situation to the Senator from Arizona.

Mr. BRATTON. Let me inquire of the Chair, if I may, in connection with the observation made——

The PRESIDING OFFICER. May the Chair make a statement as to the status of the situation at this time?

Mr. BRATTON. Certainly.

The PRESIDING OFFICER. We are regarding the Senate substitute to strike out all after the enacting clause of the House bill and insert the Senate bill as the original bill, just as if it had been originally reported in that form. Then, it is subject to amendment and an amendment so offered is subject to another amendment. That is the situation we now have. The Senate bill is an amendment, but we are considering it as the original text. The junior Senator from Arizona [Mr. HAYDEN] offered an amendment, which is in the first degree; the Senator from Colorado [Mr. PHIPPS] offered an amendment to that amendment, which is in the second degree. Any other amendment to the amendment of the Senator from Colorado, of course, would be out of order as being in the third degree.

Mr. BRATTON. That is the point I had in mind as to whether the Chair in making the ruling regards the substitute bill as occupying the same status that the original Senate bill occupied.

Mr. KING. I will say that it was my intention merely to put the Senate bill in the position of the original bill so that it would not be subject to challenge when an amendment was offered as being in the second degree. While I should be very glad to have it extended further, I must be honest with the Chair and say that that was my intention, and I think that the ruling of the Chair is correct.

Mr. ASHURST. I am not caviling or quarreling with the Chair, but I think it important that we know that the Senate bill substituted for the House bill on motion of the Senator from California shall not be considered as an amendment to the original text. Now, let me see if I perceive correctly the situation. My colleague has offered an amendment to the original bill which is in the first degree.

The PRESIDING OFFICER. That is correct.

Mr. ASHURST. And the Senator from Colorado has offered an amendment to my colleague's amendment, being, therefore, in the second degree.

The PRESIDING OFFICER. That is correct.

Mr. ASHURST. I will have to confess that the amendment of the Senator from New Mexico might be in the third degree.

MESSAGE FROM THE HOUSE—ENROLLED BILL AND JOINT RESOLUTIONS SIGNED

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bill and joint resolutions, and they were signed by the Vice President:

S. 3171. An act providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States;

H. J. Res. 76. Joint resolution for the relief of Leah Frank, Creek Indian, new born, roll No. 294;

H. J. Res. 260. Joint resolution for the relief of Eloise Childers, Creek Indian, minor, roll No. 354;

H. J. Res. 261. Joint resolution for the relief of Effa Cowe, Creek Indian, new born, roll No. 78; and

H. J. Res. 332. Joint resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C.

EXECUTIVE SESSION

Mr. JONES. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

RECESS

Mr. JONES. I move that the Senate take a recess until to-morrow at 12 o'clock noon.

The motion was agreed to; and (at 5 o'clock and 30 minutes p. m.) the Senate took a recess until to-morrow, Tuesday, December 11, 1928, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate December 10, 1928

COMMISSIONER OF IMMIGRATION

Thomas B. R. Mudd, of Maryland, to be Commissioner of Immigration at the port of Baltimore, Md.

UNITED STATES DISTRICT JUDGES

Samuel H. West, of Ohio, to be United States district judge, northern district of Ohio, to succeed D. C. Westenhaver, deceased.

Justin W. Harding, of Alaska, to be district judge, division No. 1, district of Alaska, to succeed Thomas M. Reed, deceased.

POSTMASTERS

CALIFORNIA

Jay K. Battin to be postmaster at Angwin, Calif., in the place of J. K. Battin. Incumbent's commission expires December 17, 1928.

Jeremiah R. Brown to be postmaster at Arcata, Calif., in place of J. R. Brown. Incumbent's commission expired January 31, 1928.

Joseph C. Beard to be postmaster at Burlingame, Calif., in place of J. C. Beard. Incumbent's commission expires December 17, 1928.

Wallace B. Sawyer to be postmaster at Galt, Calif., in place of W. B. Sawyer. Incumbent's commission expires December 17, 1928.

Felix B. LaCrosse to be postmaster at Half Moon Bay, Calif., in place of F. B. LaCrosse. Incumbent's commission expired June 5, 1928.

Josephine C. McCabe to be postmaster at Imola, Calif., in place of J. C. McCabe. Incumbent's commission expires December 17, 1928.

John E. Nolan to be postmaster at Jamestown, Calif., in place of J. E. Nolan. Incumbent's commission expires December 17, 1928.

Frank B. Clark to be postmaster at Mount Lowe, Calif., in place of F. B. Clark. Incumbent's commission expires December 17, 1928.

Ora Lester Dunn to be postmaster at Quincy, Calif., in place of I. G. Moody, resigned.

Charles J. Funk to be postmaster at Redondo Beach, Calif., in place of C. J. Funk. Incumbent's commission expires December 17, 1928.

William J. Martin to be postmaster at Salinas, Calif., in place of W. J. Martin. Incumbent's commission expires December 17, 1928.

Grace E. Patterson to be postmaster at Samoa, Calif., in place of G. E. Patterson. Incumbent's commission expired April 21, 1928.

COLORADO

Thomas N. Wayne to be postmaster at Edgewater, Colo., in place of T. N. Wayne. Incumbent's commission expires December 13, 1928.

Nellie M. Mickey to be postmaster at Evergreen, Colo., in place of N. M. Mickey. Incumbent's commission expires December 13, 1928.

Lewis W. Kennedy to be postmaster at Hot Sulphur Springs, Colo., in place of L. W. Kennedy. Incumbent's commission expires December 13, 1928.

Fannie E. Arnett to be postmaster at Peetz, Colo., in place of F. E. Arnett. Incumbent's commission expires December 13, 1928.

Charles J. Funk to be postmaster at Sterling, Colo., in place of C. J. Funk. Incumbent's commission expires December 13, 1928.

CONNECTICUT

Mary A. Tracy to be postmaster at Central Village, Conn., in place of M. A. Tracy. Incumbent's commission expires December 13, 1928.

John J. O'Neill to be postmaster at Killingly, Conn., in place of J. J. O'Neill. Incumbent's commission expires December 13, 1928.

George E. Dickinson to be postmaster at Rockville, Conn., in place of G. E. Dickinson. Incumbent's commission expires December 13, 1928.

William Krause to be postmaster at Westport, Conn., in place of William Krause. Incumbent's commission expires December 17, 1928.

Hal R. Kellogg to be postmaster at Woodmont, Conn., in place of H. R. Kellogg. Incumbent's commission expires December 17, 1928.

GEORGIA

Edith A. Herrington to be postmaster at Millen, Ga., in place of E. A. Herrington. Incumbent's commission expires December 17, 1928.

IDAHO

Robert R. Coon to be postmaster at Emmett, Idaho, in place of R. R. Coon. Incumbent's commission expires December 17, 1928.

Joseph B. Newbury to be postmaster at Mullan, Idaho, in place of J. B. Newbury. Incumbent's commission expires December 17, 1928.

ILLINOIS

David A. Howard to be postmaster at Glasford, Ill., in place of D. A. Howard. Incumbent's commission expires December 13, 1928.

Charles Jackson to be postmaster at Joy, Ill., in place of Charles Jackson. Incumbent's commission expires December 10, 1928.

Rex C. Bliss to be postmaster at La Fayette, Ill., in place of R. C. Bliss. Incumbent's commission expires December 10, 1928.

George E. Carlson to be postmaster at Moline, Ill., in place of G. E. Carlson. Incumbent's commission expired December 9, 1928.

Harry C. Smith to be postmaster at New Windsor, Ill., in place of H. C. Smith. Incumbent's commission expires December 10, 1928.

Alice Murray to be postmaster at Oneida, Ill., in place of Alice Murray. Incumbent's commission expires December 10, 1928.

Oscar B. Harrauff to be postmaster at Princeton, Ill., in place of O. B. Harrauff. Incumbent's commission expires December 10, 1928.

John Hudson to be postmaster at Valier, Ill., in place of John Hudson. Incumbent's commission expires December 13, 1928.

Oscar B. Park to be postmaster at Wapella, Ill., in place of W. A. Graham, resigned.

INDIANA

George P. Crabtree to be postmaster at Clay City, Ind., in place of G. P. Crabtree. Incumbent's commission expires December 12, 1928.

Lewis Debolt to be postmaster at Claypool, Ind., in place of Lewis Debolt. Incumbent's commission expires December 12, 1928.

Charles E. Barracks to be postmaster at Frankton, Ind., in place of C. E. Barracks. Incumbent's commission expires December 12, 1928.

IOWA

Elizabeth Summers to be postmaster at Fort Atkinson, Iowa, in place of Elizabeth Summers. Incumbent's commission expires December 12, 1928.

Estella Griffin to be postmaster at McIntire, Iowa, in place of Estella Griffin. Incumbent's commission expired December 9, 1928.

KENTUCKY

Howard C. Lewis to be postmaster at Morehead, Ky., in place of W. E. Proctor, removed.

Raymond H. Heskamp to be postmaster at St. Matthews, Ky., in place of E. F. Fravert, resigned.

Elbert W. Beers to be postmaster at Van Lear, Ky., in place of A. M. Gibson, removed.

John Lafferty to be postmaster at Wheelwright, Ky., in place of F. F. Gearhart, removed.

LOUISIANA

Rena F. Eckart to be postmaster at Natalbany, La., in place of R. F. Eckart. Incumbent's commission expires December 13, 1928.

MASSACHUSETTS

Robert A. Clark to be postmaster at Sharon, Mass., in place of J. L. McGrath, deceased.

James P. Smith to be postmaster at Springfield, Mass., in place of W. K. Kaynor, resigned.

Ethel V. Cook to be postmaster at Wenham, Mass., in place of W. P. Porter, resigned.

MICHIGAN

Clifford L. Kenney to be postmaster at Milford, Mich., in place of F. W. Holmes, deceased.

MINNESOTA

John V. Barstow to be postmaster at Brownsdale, Minn., in place of J. V. Barstow. Incumbent's commission expires December 13, 1928.

John L. Christianson to be postmaster at Harmony, Minn., in place of J. L. Christianson. Incumbent's commission expires December 13, 1928.

Laura Z. Cairns to be postmaster at Rice, Minn., in place of A. J. Rajkowski, resigned.

MISSOURI

Ida A. Sack to be postmaster at Bosworth, Mo., in place of I. A. Sack. Incumbent's commission expires December 17, 1928.

Delph C. Simons to be postmaster at Grant City, Mo., in place of D. C. Simons. Incumbent's commission expires December 17, 1928.

Delphia Johnson to be postmaster at Jerico Springs, Mo., in place of Delphia Johnson. Incumbent's commission expires December 17, 1928.

Mattie A. Campbell to be postmaster at King City, Mo., in place of M. A. Campbell. Incumbent's commission expires December 17, 1928.

J. Frank Wilson to be postmaster at Palmyra, Mo., in place of J. F. Wilson. Incumbent's commission expires December 17, 1928.

Clyde S. Jones to be postmaster at Polo, Mo., in place of C. S. Jones. Incumbent's commission expires December 17, 1928.

George R. Hendricks to be postmaster at Rutledge, Mo., in place of G. R. Hendricks. Incumbent's commission expires December 17, 1928.

Joseph A. Davis to be postmaster at Waynesville, Mo., in place of J. A. Davis. Incumbent's commission expires December 17, 1928.

MONTANA

George P. Huddleston to be postmaster at Whitetail, Mont., in place of G. B. Cameron, resigned.

NEBRASKA

Maude Pontius to be postmaster at Harrison, Nebr., in place of L. P. Rice. Incumbent's commission expired May 14, 1928.

NEW HAMPSHIRE

John E. Horne to be postmaster at Milton Mills, N. H., in place of J. E. Horne. Incumbent's commission expires December 10, 1928.

Maude B. Duston to be postmaster at Plaistow, N. H. Office became presidential July 1, 1928.

NEW JERSEY

Robert E. Torrance to be postmaster at Arlington, N. J., in place of R. E. Torrance. Incumbent's commission expires December 13, 1928.

Ralph E. Liddle to be postmaster at Fords, N. J., in place of R. E. Liddle. Incumbent's commission expires December 13, 1928.

James L. O'Donnell to be postmaster at Hammonton, N. J., in place of J. L. O'Donnell. Incumbent's commission expires December 13, 1928.

Walter G. Barber to be postmaster at Millville, N. J., in place of W. G. Barber. Incumbent's commission expires December 13, 1928.

Walter E. Walling to be postmaster at Port Monmouth, N. J., in place of W. E. Walling. Incumbent's commission expires December 13, 1928.

Harry W. Mutchler to be postmaster at Rockaway, N. J., in place of H. W. Mutchler. Incumbent's commission expires December 13, 1928.

Hiram H. Shepherd to be postmaster at South Boundbrook, N. J., in place of H. H. Shepherd. Incumbent's commission expires December 13, 1928.

NEW MEXICO

John H. York to be postmaster at Las Vegas, N. Mex., in place of J. H. York. Incumbent's commission expires December 13, 1928.

NEW YORK

Leslie E. Daniels to be postmaster at Chaumont, N. Y., in place of L. E. Daniels. Incumbent's commission expires December 16, 1928.

William L. Fuller to be postmaster at Ellenville, N. Y., in place of W. L. Fuller. Incumbent's commission expired February 8, 1928.

Harmon A. Ranous to be postmaster at Minetto, N. Y., in place of H. A. Ranous. Incumbent's commission expires December 16, 1928.

Perry Deyo to be postmaster at New Paltz, N. Y., in place of Perry Deyo. Incumbent's commission expired May 19, 1928.

Edith L. Kent to be postmaster at Tuxedo Park, N. Y., in place of E. L. Kent. Incumbent's commission expires December 11, 1928.

Daniel Van Alst to be postmaster at Wallkill, N. Y., in place of H. B. McHugh, deceased.

NORTH DAKOTA

Redmond A. Bolton to be postmaster at Jamestown, N. Dak., in place of R. A. Bolton. Incumbent's commission expired April 19, 1928.

OHIO

Elizabeth F. Kelley to be postmaster at North Olmsted, Ohio, in place of E. F. Kelley. Incumbent's commission expires December 17, 1928.

Will B. Maynard to be postmaster at Olmsted Falls, Ohio, in place of W. B. Maynard. Incumbent's commission expires December 17, 1928.

OKLAHOMA

Henry A. Ravia to be postmaster at Bessie, Okla., in place of H. A. Ravia. Incumbent's commission expired December 10, 1928.

Burton A. Tyrrell to be postmaster at Fargo, Okla., in place of E. T. Hull, removed.

Earl C. Moore to be postmaster at Forgan, Okla., in place of T. L. Ogilvie, resigned.

Benjamin F. Rarick to be postmaster at Guymon, Okla., in place of W. T. Bratton, resigned.

Helen Whitlock to be postmaster at Maramec, Okla., in place of Helen Whitlock. Incumbent's commission expires December 13, 1928.

OREGON

Howard C. Getz to be postmaster at Coquille, Oreg., in place of H. C. Getz. Incumbent's commission expires December 13, 1928.

Elbert Smith to be postmaster at Cottage Grove, Oreg., in place of Elbert Smith. Incumbent's commission expires December 13, 1928.

Frederick D. Gardner to be postmaster at Forest Grove, Oreg., in place of F. D. Gardner. Incumbent's commission expires December 13, 1928.

J. Clyde Martin to be postmaster at Grants Pass, Oreg., in place of J. C. Martin. Incumbent's commission expires December 13, 1928.

Gaylord G. Godfrey to be postmaster at Independence, Oreg., in place of G. G. Godfrey. Incumbent's commission expires December 13, 1928.

Willis E. Everson to be postmaster at Waldport, Oreg., in place of W. E. Everson. Incumbent's commission expires December 13, 1928.

PENNSYLVANIA

Clarence G. Young to be postmaster at Bristol, Pa., in place of C. G. Young. Incumbent's commission expires December 13, 1928.

Harold C. Fry to be postmaster at Camp Hill, Pa., in place of H. C. Fry. Incumbent's commission expires December 16, 1928.

Margaret E. Warnock to be postmaster at Darlington, Pa., in place of M. E. Warnock. Incumbent's commission expires December 17, 1928.

H. George Marburger, to be postmaster at Denver, Pa., in place of H. G. Marburger. Incumbent's commission expires December 13, 1928.

Carey W. Huff to be postmaster at Durant City, Pa., in place of C. W. Huff. Incumbent's commission expires December 17, 1928.

Laura E. Rich to be postmaster at Enola, Pa., in place of L. E. Rich. Incumbent's commission expires December 17, 1928.

Samuel Y. Wissler to be postmaster at Ephrata, Pa., in place of S. Y. Wissler. Incumbent's commission expires December 13, 1928.

William Irey to be postmaster at Glenmoore, Pa., in place of William Irey. Incumbent's commission expired January 8, 1928.

Edwin H. Cliff to be postmaster at Glen Olden, Pa., in place of E. H. Cliff. Incumbent's commission expires December 17, 1928.

John M. Kurtz to be postmaster at Honey Brook, Pa., in place of J. M. Kurtz. Incumbent's commission expires December 13, 1928.

Grant Umberger to be postmaster at Langhorne, Pa., in place of Grant Umberger. Incumbent's commission expires December 13, 1928.

Florence G. Hibberd to be postmaster at Lenni Mills, Pa. Office made presidential July 1, 1928.

Joseph G. Cassidy to be postmaster at Markham, Pa. Office made presidential July 1, 1928.

Elmer R. West to be postmaster at Malvern, Pa., in place of Warren Ruth. Incumbent's commission expired January 8, 1928.

Claude S. Yeager to be postmaster at Orwigsburg, Pa., in place of C. S. Yeager. Incumbent's commission expires December 16, 1928.

William K. Pearce to be postmaster at Rutledge, Pa., in place of W. K. Pearce. Incumbent's commission expires December 16, 1928.

Eli H. Shockey to be postmaster at Stoyestown, Pa., in place of E. H. Shockey. Incumbent's commission expires December 17, 1928.

David L. Bly to be postmaster at Watsontown, Pa., in place of D. L. Bly. Incumbent's commission expires December 16, 1928.

Annie Smith to be postmaster at Waverly, Pa., in place of Annie Smith. Incumbent's commission expires December 16, 1928.

Norman H. Koch to be postmaster at Weatherly, Pa., in place of N. H. Koch. Incumbent's commission expires December 16, 1928.

Boies M. Boyer to be postmaster at Weissport, Pa., in place of B. M. Boyer. Incumbent's commission expires December 16, 1928.

RHODE ISLAND

William F. Caswell to be postmaster at Jamestown, R. I., in place of W. F. Caswell. Incumbent's commission expires December 16, 1928.

SOUTH CAROLINA

Lawrence D. Hagan to be postmaster at Due West, S. C., in place of L. D. Hagan. Incumbent's commission expires December 17, 1928.

Carolyn M. Venters to be postmaster at Johnsonville, S. C., in place of W. H. Meng, removed.

Paul G. Barnett to be postmaster at Westminster, S. C., in place of P. G. Barnett. Incumbent's commission expires December 17, 1928.

George R. Hudson to be postmaster at Williston, S. C., in place of G. R. Hudson. Incumbent's commission expires December 13, 1928.

SOUTH DAKOTA

Harry K. Sanborn to be postmaster at Hurley, S. Dak., in place of H. K. Sanborn. Incumbent's commission expires December 11, 1928.

TENNESSEE

Sandy A. Greenwell to be postmaster at Butler, Tenn., in place of R. C. Laws, resigned.

VIRGINIA

Mary E. Gregory to be postmaster at Drakes Branch, Va., in place of G. C. Collins, resigned.

Thomas J. Crickenberger to be postmaster at Emporia, Va., in place of T. J. Crickenberger. Incumbent's commission expired February 8, 1928.

Florence E. Priest to be postmaster at Scottsburg, Va., in place of E. P. Lacy, resigned.

WEST VIRGINIA

Mary B. Carman to be postmaster at Bethany, W. Va., in place of M. B. Carman. Incumbent's commission expires December 16, 1928.

WYOMING

Frank A. Beard to be postmaster at Chugwater, Wyo., in place of F. A. Beard. Incumbent's commission expires December 13, 1928.

John H. Mantle to be postmaster at Kemmerer, Wyo., in place of J. H. Mantle. Incumbent's commission expires December 13, 1928.

Louis E. Eaton to be postmaster at Torrington, Wyo., in place of L. E. Eaton. Incumbent's commission expires December 13, 1928.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 10, 1928

EXAMINER IN CHIEF UNITED STATES PATENT OFFICE

Walter Leffingwell Redrow, to be examiner in chief, United States Patent Office.

POSTMASTERS

COLORADO

George H. Felton, Cragmor.
Dwight K. Foster, Paonia.

DELAWARE

John W. Dimes, Bridgeville.
Alexander R. Abrahams, Wilmington.

IDAHO

William R. Ogle, Glenns Ferry.
Clara H. Dunn, Hazleton.
Albert T. Moulton, Victor.
Marie E. Roos, Weippe.
Arthur N. MacQuivey, Wendell.

KENTUCKY

Walter C. Engle, Berea.
Tillie York, Bond.
Cicero S. Gentry, Dixon.
Floyd Arnett, Dunham.
Lawrence E. Ratliff, Lookout.
Lou M. Thompson, Lyndon.
G. Russell Ireland, Upton.
Fannie Winstead, Wheatcroft.

MARYLAND

William H. Medford, Cambridge.
John R. Watson, Cardiff.
Emma J. Wilson, Colora.
Mary J. Johnston, Fort Washington.
Florence C. Lambie, Mount Savage.
George E. Snyder, Randallstown.
George C. Logan, Rowlandsville.

MISSOURI

George J. C. Wohlschlaeger, Affton.
George H. Bathe, jr., Argyle.
George C. Blackwell, Breckenridge.
A. B. Williams, Campbell.
Joseph C. Muellersman, Festus.
Emma J. Lehman, Fortuna.
William A. Jenkins, Hardin.
Rhoda K. Ward, Patterson.
George D. Harris, Slater.

NORTH DAKOTA

Irene Tiller, Burlington.
Lena L. Hintz, Dunn Center.
Henry G. Stenson, Fort Totten.
George A. Swen, Gilby.
Alfred S. Duntley, Grandin.
Gilbert I. Ryan, Landa.
Harry H. Roberts, Tower City.

WASHINGTON

John A. Doyle, Berne.
William Scales, Centralia.
Frank G. Moran, Moran School.
Birdie L. Crook, Nespelem.
Lloyd Purdy, Prescott.
Edward V. Pressentin, Rockport.
Ida Jacklin, Woodinville.

WEST VIRGINIA

Lawrence M. Huddleston, Burnwell.
Robert Y. Henley, Caretta.
George H. Meredith, Dehue.
Otta K. Wigner, Ellenboro.
Oscar Sipple, Fort Gay.
Merrick D. Robertson, Glen Morrison.
Melvin W. Combs, Northfork.
James W. Bee, Parkersburg.
Harry M. Watson, Pine Grove.
Benjamin C. Wetzel, Sun.

HOUSE OF REPRESENTATIVES

MONDAY, *December 10, 1928*

The House met at 12 o'clock, noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Eternal God, all our days, with their opening light and their evening shade, demand our successive praise. We would begin the week with a devout thanksgiving to the infinite Creator of us all. Whatever our fortune or birth, let us rejoice in the possession of life. Not how long, not years, but how well, secures the treasure of time and forever. God help us to be just to ourselves. Oh, shine on our pathways, light them up with the reflection of the upper world. Make of them spiritual highways and thoroughfares for our climbing souls. Always and ever persuade us to keep far, far away from the moral subways, and may we never lose our sky line. Hold us to a beautiful and glorious vision from which we shall hear the voice and the call of our Father in Heaven. Amen.

The Journal of the proceedings of Friday last was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed without amendment joint resolutions of the House of the following titles:

H. J. Res. 76. Joint resolution for the relief of Leah Frank, Creek Indian, new born, roll No. 294;

H. J. Res. 260. Joint resolution for the relief of Eloise Childers, Creek Indian, minor, roll No. 354;

H. J. Res. 261. Joint resolution for the relief of Effa Cowe, Creek Indian, new born, roll No. 78.

The message also announced that the Senate agrees to the amendments of the House of Representatives to the bill (S. 3171) entitled "An act providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States."

MESSAGE FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were presented to the House by Mr. Latta, one of his secretaries, who also informed the House that on the following dates the President did approve and sign bills and joint resolutions of the House of the following titles:

On December 5, 1928:

H. R. 13406. An act to authorize the city of Fort Thomas, Ky., to widen, improve, reconstruct, and resurface Fort Thomas Avenue and to assess the cost thereof against the United States according to front feet of military reservation abutting thereon, and authorizing an appropriation therefor.

On December 6, 1928:

H. J. Res. 168. Joint resolution for the appointment of W. S. Albright, of Kansas, as a member of the Board of Managers of the National Home for Disabled Volunteer Soldiers;

H. J. Res. 193. Joint resolution for the appointment of Roy L. Marston, of Maine, as a member of the Board of Managers of the National Home for Disabled Volunteer Soldiers; and

H. R. 9710. An act for the relief of the State of South Carolina.

On December 7, 1928:

H. R. 1533. An act for the relief of Theodore Herbert;

H. R. 3170. An act for the relief of Franklin B. Morse;

H. R. 3723. An act for the relief of John M. Andrews;

H. R. 6432. An act for the relief of James E. Moyer; and

H. R. 3844. An act for the relief of Myra Madry.

On December 8, 1928:

H. R. 8728. An act to authorize the Postmaster General to give motor-vehicle service employees credit for actual time

served on a basis of one year for each 306 days of eight hours served as substitute;

H. R. 13778. An act authorizing Alex Gonzales, his heirs, legal representatives, and assigns to construct, maintain, and operate a bridge across the Rio Grande near the town of Ysleta, Tex.;

H. R. 7236. An act for the relief of James M. Long;

H. R. 9319. An act for the relief of the Glens Falls Insurance Co., of Glens Falls, N. Y.;

H. R. 9320. An act for the relief of the Home Insurance Co., of New York, N. Y.;

H. R. 12354. An act to grant to the city of Leominster, Mass., an easement over certain Government property; and

H. R. 12951. An act providing for the purchase of 640 acres of land, more or less, immediately adjoining Camp Clark, at Nevada, Mo., and authorizing an appropriation therefor.

AIRPORT FOR THE CITY OF WASHINGTON

Mr. WOODRUFF. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of an airport or air field for the city of Washington.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. WOODRUFF. Mr. Speaker, for several years Congress and the Government officials, as well as the commissioners and civic and commercial bodies of the District of Columbia have been perplexed by the problem of securing for the Capital of this great Nation an airport large enough to meet the requirements of the fastly developing science of aerial navigation.

The subject has been the topic of many special meetings of Government officials, aeronautic authorities, civic and industrial bodies, and of numerous editorials in Washington papers. It has been referred to in a presidential message, and during the past month was the cause of a mass meeting at which about 2,000 people, including Senators and Representatives, were present. The unanimous consensus of opinion was that Washington needs a large airport, and that we were facing a critical situation on account of lack of a large enough area to afford adequate runways for the large air liners that are certain to come in the near future, and the space required to accommodate the hundreds of planes that would come to the Capital, but can not do so because of lack of airport facilities. On such occasions as Lindbergh's reception at the Capital the planes were actually forbidden from the District because they could not be accommodated.

To solve this problem, the authorities state that an airport of a thousand acres is required. Cleveland, with an airport of that size, finds it necessary to provide additional airports, and all the other cities that have smaller airports, including Chicago, which spent $3,000,000 on airport facilities, are complaining that their airport area is inadequate. The only city that is not worrying over the future needs is Richmond, the capital of Virginia. Up to two years ago Richmond was facing the same problem that is worrying the District of Columbia, that of lack of suitable land for a large airport within the city limits. For that reason they could not have the air mail and were humiliated through being passed by aerial developments.

Then, in October, 1926, Mr. Henry Woodhouse, president of the Aerial League of America, and Col. A. A. Anderson, the New York capitalist, came to Richmond, acquired 1,268 acres of land at Seven Pines, about 8 miles from the city, and in 60 days they had a landing place. The city officials felt that the city should have control of its own municipal airport and bought 300 acres, which Messrs. Woodhouse and Anderson promptly agreed to sell at the same price they had paid, refusing the profit which was offered to them.

The result is that Richmond has a suitable airport, with ample land in reserve to take care of future needs. The directors of the Richmond Air Junction Association, the organization that solved that problem were A. A. Anderson, Henry Adam Ashforth, Stanley W. Eakin, C. Tiffany Richardson, and Henry Woodhouse.

Having in mind how quickly and thoroughly Richmond's problem was solved, I know that it will be gratifying to this body and to the Government and District officials to know that plans have been completed by these gentlemen and the Aerial League of America to give the Capital a great air and scientific center, the greatest in the world, with an area of over 2,000 acres.

In a letter transmitted to-day to the Board of District Commissioners of the District of Columbia, officials of the Aerial League of America and associated organizations announced the acquisition of over 2,000 acres of George Washington land and other historic estates for establishing the world's greatest air junction and scientific center at the Capital's gates, to be known as the Washington air junction, which is ideally located and ready for immediate use.

The letter to the Board of District Commissioners is signed by Henry Woodhouse, who succeeded Admiral Peary as president of the Aerial League of America, and who, with Col. A. A. Anderson, the New York capitalist, solved Richmond's problem of getting adequate airport facilities by establishing the 1,268-acre Richmond air junction two years ago.

Mr. Woodhouse offers the use of the air junction to the Government and District free of charge and emphasizes that no support whatsoever is sought or expected from the Government or the District.

The public-spirited group undertaking this huge project are represented by Mr. Edward Stafford, the Washington attorney, son of Mr. Justice Wendell P. Stafford, of the Supreme Court of the District of Columbia, who was selected because he was associated with Admiral Peary in the latter's pioneer aeronautic activities. He married the daughter of the discoverer of the North Pole, Miss Marie A. Peary, who was born in the Arctic, who has been a director of the Aerial League of America for a number of years.

Mr. Woodhouse's letter to the commissioners follows:

BOARD OF DISTRICT COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
Washington, D. C.

GENTLEMEN: 1. Having noted from the statements of President Coolidge and of officials of the Post Office, War Department, Department of Commerce, and District of Columbia, and of officers of the Chamber of Commerce, Board of Trade, and Merchants and Manufacturers' Association of the District that an airport is needed, and that Washington may lose its place as a relay point on the New York-Philadelphia-Richmond-Atlanta air mail line, because it will require from three to five years to fill the Potomac area at Gravelly Point and converting it into an airport; and appreciating the importance of giving to the Capital of the United States airport facilities equal to the world's best. The Aerial League of America and associated organizations have arranged for the acquisition of the only large tracts of level lands suitable for a large airport near the Capital, consisting of historic estates of Gen. George Washington and George Mason, on the Washington-Richmond Highway, aggregating over 2,000 acres and many buildings.

Steps are being taken to convert this huge tract into a great center of aeronautic and scientific activities, to be known as the Washington air junction, but planes have been landing on these grounds for two years, therefore planes can be accommodated immediately, while the improvements that will be made in the coming month will make it possible to accommodate the hundreds of planes that may come on Washington's Birthday, February 22, and Inauguration Day, March 4.

2. It was felt that it would be most appropriate that the world's greatest airport and scientific center should be established on the ancestral homelands of George Washington, at the gates of the Capital of the land which Washington first molded into a nation, and that such a great air and scientific center should be named the Washington air junction because George Washington was the first father of American aeronautics and the first American patron of applied sciences.

When the aeronaut Blanchard made the first balloon ascension ever made on the Western Hemisphere, which was made at Philadelphia on January 9, 1793, President Washington went to the place used as balloon park at 9 in the morning to witness the inflation, and personally issued to the intrepid air pioneer a passport in which he urged "all to whom these present shall come" to aid Blanchard, "with that humanity and good will which may render honor to their country, and justice to an individual so distinguished by his efforts to establish and advance an art, in order to make it useful to mankind in general."

3. An exhaustive search has confirmed the fact that President Washington was the first head of a nation in the world's history to express the belief that the art of aeronautics could become useful to mankind.

4. History's records show, likewise, that Washington was foremost in his age in supporting scientific institutions. He was the first head of a nation to urge such support in an official public message, which he did in his farewell address to the American people, in which he said:

"Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge."

5. Washington's extensive estates, located between the city of Washington and Mount Vernon, which he had defined in his will and delineated on maps, had been divided and were owned by close to 30 owners, and in the process of locating them we found that the War Department, during the World War, had made an extensive survey of the tracts of land in the District of Columbia and surrounding country with a view of establishing a military aviation field, and had determined that the only ideal site, affording runways of from 1 to 2 miles in length, was the huge plateau bounded by the Richmond Highway and Gravel Road and Telegraph Road. This site was surveyed by the War Department and plans were made for the buildings to be erected and other improvements to be made, but the ending of the war stopped this plan.

6. This and other tracts of land, aggregating over 2,000 acres, have been acquired for the Washington air junction, including the extensive tracts of land mentioned in Washington's diaries as having been cultivated by him, on which he planted oak, walnut, maple, hickory, and other stately trees, and cherry, pear, plum, and other fruit trees recorded in his diaries as having been planted by him, and on which he and his kinsmen and friends and guests went hunting.

The whole forms the large quadrangular tract located about 3 miles southwest of Alexandria, bounded for over 2 miles by the Washington-Richmond Highway, and on the northwest sides by the Telegraph Road and Gravel Road, also for over 2 miles, and has been pronounced ideal by the highest Government and civilian aeronautic authorities who have been consulted about the plan to convert this land into the Washington air junction.

7. This will make the Washington air junction nearer to the city of Washington, and better in many ways, than the famous Croydon Airport is to London, the LeBourget Airport is to Paris, the Roosevelt Field and the Curtiss Field are to New York; and the acreage of the Washington air junction alone is greatly more than the total acreage of these four noted airports and the Templehofer Field, Berlin's airport, combined. It is also twice the size of the Richmond, Va., air junction, which had been the world's largest since we established it in October, 1926, in honor of Commander Richard E. Byrd, the first man to fly to the North Pole.

8. Having a frontage of over 2 miles on the Washington-Richmond Highway, and 2 miles on the Telegraph Road and Gravel Road, and being close to the Richmond, Fredericksburg & Potomac and Southern Railroads and within sight of the Potomac River, the Washington air junction is ideal from the standpoint of accessibility and transportation.

9. In addition, it has electric power, electric light, several large springs of healthful water, famous since Washington's days, and other facilities not to be found at any of the world's airports. To these will soon be added the improvements necessary to make it a great air junction and scientific center.

10. The advisability of having 2,000 acres for the Washington air junction, to provide for the future demand for space for air traffic, was determined upon after a study of the world's 5,000 airports made by the airways council of the Aerial League of America, which included the following authorities on aeronautics, traffic, and public safety: Col. Jefferson de Mont Thompson, chairman of the Aviation Commission of the State of New York; Col. A. A. Anderson, president of the Richmond Air Junction Association and former Commissioner of Traffic and Public Safety of the City of New York; Alan R. Hawley, member of the Aviation Commission of the State of New York and holder of the American long-distance balloon record; Murray Hulbert, president of the Amateur Athletic Union, former Member of Congress, and president of the Board of Aldermen of the City of New York; Rear Admiral Colby M. Chester, noted scientist; Henry Woodhouse, president of the Aerial League of America, chairman of the International Science Forum, and member of the Federal city committee of the American Civic Association; Capt. Robert A. Bartlett, noted Arctic explorer; and A. Leo Stevens, the pioneer aeronaut who built the United States Army's first airship in 1908, with the late Capt. Thomas S. Baldwin, and was the Army's instructor and expert on lighter-than-air and parachutes during and after the war.

11. Having been pioneers in aviation, automobiling, and other branches of human endeavor, these experts looked into the future and visioned the possible aeronautic developments of the city of Washington, and they saw enormous possibilities, depending greatly upon having an extensive air junction where these activities can be centered, coordinated, and stimulated.

The site selected has all the necessary qualifications, besides holding the priceless distinction of being part of the ancestral homelands of the Father of this Country, who was also the father of American aeronautics and the first head of a nation to officially urge a nation to support scientific effort. Equally historic is the balance of the land, being the estates of George Mason, neighbor and friend of Washington, and author of the Nonimportation Resolutions, Fairfax Resolves, Virginia Bill of Rights, and other documents that opened the way for the Declaration of Independence.

12. It will interest you to know that we visited and surveyed over 60 large cities and have ascertained that not one affords such ideal facilities for a great air center as we have here at the gates of the Nation's Capital. In most cases they have difficulties in supplying a few hundred acres of suitable land for an airport from 10 to 30 miles away from the city, and they are all worried over the fact that they are too small and planes must be kept in the air from 10 to 15 minutes waiting for the runways to be cleared for landing. During a recent air survey of Chicago in which Lincoln Ellsworth and the writer participated, we were advised that their $2,000,000 airport was already so inadequate that planes often had to be kept flying overhead for 10 minutes waiting for runways to be cleared for landing.

13. Few cities have a thousand acres available for a substantial air junction, so they will be confined to having only airport facilities for local needs. An air junction must be a central place where air lines, airways and air routes meet and air traffic and air travelers may change from one mode of transport to another, and must be central in relation to the route of future national and international airways and accessible to many centers of commerce, in addition to supply the airport facilities for a city.

The site of the Washington air junction is so favorably and centrally located as to make it a natural air junction for 40 airways connecting with the centers of commerce of the United States and the future trans-Atlantic and trans-Pacific airways, as well as for making train and motor-bus connections for all points. The Washington and Richmond busses stop at the air junction entrance.

14. Having over 2,000 acres, the Washington air junction has ample space to accommodate large airships, and for general experimentations with lighter-than-air and parachutes, which will be in charge of the noted pioneer, A. Leo Stevens who, with the late Captain Baldwin, built the first airship used by the United States Army 20 years ago and had charge of lighter-than-air equipment and training during the war. Mr. Stevens was the inventor of the parachute pack adopted by the United States Army.

The highest authorities agree that preliminary training in lighter than air is necessary to teach pilots of planes the ways of the winds. Many accidents to pilots of planes are due to the pilots undertaking to fly without knowledge of the ways of the winds, which can best be learned with lighter-than-air craft. Such a school will be established at the Washington air junction.

15. A section of the Washington air junction appears to be especially adapted for making gliding flights with motorless planes. It is away from the runways to be used by the planes and from the section to be used for lighter-than-air craft, and has a hill suitable for launching gliders. This is important, as pilots of planes should be trained in the art of gliding to aid them in landing their planes when the motor stops or is shut off. Such training will prevent many of the accidents that take place on making landings.

16. It is also planned to have a section of the air junction for testing and demonstrating all sorts of devices and inventions tending to improve aircraft and promote safety and economy in flying. Manufacturers and inventors have suggested that if such tests and demonstrations are made on Saturday afternoon their experts will be able to attend them every week, whereas on other days it would not be so convenient. Therefore it has been decided to hold such tests on Saturdays, on which occasions the International Science Forum will hold conferences at which experts will discuss the vital problems that must be solved to make air travel safe and economic.

17. Thus the city of Washington will have the world's best airport and a scientific center without cost. It has been suggested that the District of Columbia may desire to have a section of the air junction as a municipal airport for the air mail, therefore we assure you that we shall stand ready to do here as we did in Richmond. There, as in this case, the postal authorities served notice that the air mail would be sent by another route unless the city provided a municipal airport, but the city did not have then the funds required for such an undertaking. Thereupon Col. A. A. Anderson and Mr. Henry Woodhouse acquired the best site available, a tract of 1,268 acres located near Seven Pines, and within 60 days sufficient land was conditioned for planes to land and take-off. The use was extended free to the Post Office Department, the War Department, Navy Department, and the Department of Commerce. Subsequently, when the city made provision for acquiring 300 acres, it was made available at the same price at which it had been bought, as Messrs. Anderson and Woodhouse declined to profit from the transaction.

The same policy will be applied in the case of the District of Columbia. We shall make available the facilities without expectation that the District will purchase any of the land, but if it is desirous of owning its own municipal airport, then we shall gladly make the land available at purchase price, as we do not desire to make any profits, but only to aid in supplying the Nation's Capital with a suitable airport.

18. Besides its importance as the Nation's Capital, Washington has great importance from an aeronautic standpoint on account of having a permanent population of 528,000, with approximately another 100,000 from neighboring communities—Alexandria having 18,000 inhabitants, Fairfax County 22,000. This means that aerial transportation facilities must be supplied for 600,000, besides a large transient population.

The special needs for speedy communication and transportation of officials and representatives of States, cities, and industrial establishments having interests in Washington are many, since it is here that the business of running the Nation is conducted, which includes the spending of appropriations which amount to $4,328,000,000 in 1929, and handling almost as large a sum in receipts, making a round turnover of $8,000,000,000 annually!

Since this enormous sum is collected from and spent throughout the Nation, hundreds of cases arise daily where aircraft can be used to advantage to gain time in the transportation of people, bids, contracts, remittances, statements, and so forth. So we may anticipate that hundreds of aircraft will fly to Washington on such missions, which will use the air junction as their terminal.

19. Army and Navy officers, to whom we have stated that the use of the Washington air junction will be extended to different Government departments, have advised us that the air junction will solve a serious

problem with which they have been confronted on account of Bolling Field being flooded or fog-bound from 50 to 100 days of the year, when flying is impossible. Their study and the data furnished by the Weather Bureau show that the Washington air junction site will be free of flood or fog when the Bolling Field is flooded or fog bound. Therefore the Army, Navy, Marine Corps, Department of Commerce, and other Government aviators will be able to fly on those days by using the air junction, which is outside of the flood and fog zone.

20. Having level runways of over one mile length, the air junction will be able to solve the difficult problem created by the limited space available at Bolling Field, which does not allow sufficient runways and clear surroundings for large, heavily loaded planes. These can use the air junction and no charge will be made for the use.

21. One aspect which adds to the desirability of using the air junction as the Capital's central airport is that the planes need not fly outside of the 2,000 acres when taking off, or flying in tests, as is the case in smaller airports, and in parachute tests there is no danger of the parachutes drifting outside of the safety zone.

22. A preliminary survey has shown that all these activities can be conducted without the necessity of cutting any of the beautiful trees that form attractive groves on the north and south ends of the Washington air junction. This is most gratifying because these are the groves mentioned by George Washington in his diary, in which he gives accounts of the occasions when he and members of his family and notables of his time went hunting in those groves.

These historic groves will be carefully preserved, but will be open to the public.

23. In making the preliminary surveys we found evidence of plenty of animal life, including quails, foxes, rabbits, and smaller game. One of the surveys through these beautiful groves was made while airplanes were flying over the trees and we noted that the quails and animals were not disturbed by the flying. Therefore a sanctuary for birds and animals can be established by forbidding hunting.

24. We shall be glad to show you the detailed plans for the Washington air junction and to escort you through these historic lands whenever it is convenient to your experts to inspect them.

25. While the decision to carry out the plan ourselves on such a gigantic scale is recent, the planning of this project goes back many years, and represents the thought and opinion of many Washington officials as well as civilian experts. The first proposal to have a flying field for Washington was made by Mr. Henry Woodhouse in December, 1916, at the city planning conference of the American Civic Federation at which he was a delegate, appointed by the Governor of the State of New York.

Thereafter Rear Admiral Robert E. Peary, discoverer of the North Pole and founder and president until his death of the Aerial League of America, Rear Admiral Colby M. Chester, the first admiral to fly, and other pioneers consulted with members of the Commission of Fine Arts, Institute of Architects, the Office of Public Buildings and Grounds, the Municipal Architect, the District surveyor, the Highway Commission, the Federal City Committee of One Hundred, the Capital Park Commission, the Committee on Plan of Washington and Environs, the Senate and House Committees on the District of Columbia, the Federation of Citizens Association, the War, Navy, Treasury, Post Office, and Commerce Departments, the District Commissioners, the engineer commissioner, the Director of Public Buildings and Public Parks, and other departments and bodies having possible interest in the subject, including the business organizations. The project is the outcome of all these authoritative opinions.

26. The fact that planes have been landing on the air junction site for the past two years—therefore aircraft can be accommodated immediately—is important in view of the pressing need for airport facilities for the District.

However, work will be started at once to make the improvements necessary to accommodate the hundreds of planes that may come on Washington's Birthday, February 22, and Inauguration Day, March 4. Therefore the hundreds of planes that were kept from flying to the Capital in recent celebrations because there were no landing places for them may now come to the air junction.

In view of the fact that Washington was first to express belief that aerial navigation would be beneficial to mankind, it will be most appropriate to have air pilgrimages from different cities to the Washington air junction and to Mount Vernon on Washington's Birthday.

Assuming that only 5 per cent of the 400,000 people who have been visiting Mount Vernon annually will use aircraft now that facilities are provided for landing at the air junction, there will be from 2,000 to 4,000 planes landing here in the course of the year in addition to the regular air traffic.

27. Assuring you that we and the public-spirited groups who will cooperate with us in realizing this great project appreciate the privilege of contributing toward making the Nation's Capital the world's greatest center of air and scientific activities, and of building another worthy monument to the memory of George Washington, I remain

Sincerely yours,

HENRY WOODHOUSE,
President of the Aerial League of America,
Chairman of the International Science Forum.

PRICELESS GEORGE WASHINGTON MEMORABILIA WILL BE EXHIBITED AT AIR JUNCTION

In addition to being a great center of aerial and scientific activities, the Washington air junction will be a shrine where there will be assembled and exhibited thousands of original letters and documents of the founders of this great Nation.

I have seen part of one of these priceless collections, owned by Mr. Henry Woodhouse, and have marveled at the wealth of precious memorabilia. It takes you back to the beginnings of the career of this Nation as if it were but yesterday and includes documents about all the important events up to the very latest, Commander Byrd's plan to fly to the South Pole.

The Hon. Wm. Tyler Page, of this House, who is the executive secretary of the United States Commission for the celebration of the Two Hundredth Anniversary of the Birth of George Washington, has considered another part of the collection of Washington memorabilia to be exhibited at the Washington air junction and has stated that he does not know of any other such collection in existence, at least in private hands.

Likewise, Prof. Albert Bushnell Hart, the eminent historian of the commission, who has traveled to different countries during the past two years to inspect Washingtonianas, stated that there is not the duplicate of this collection anywhere in the world, and Mr. W. Lanier Washington, the hereditary representative of the family of George Washington, after inspecting this collection wrote to Mr. Woodhouse as follows:

WESTPORT, CONN., *October 15, 1928.*

MR. HENRY WOODHOUSE,
280 Madison Avenue, New York City, N. Y.

DEAR MR. WOODHOUSE: As the hereditary representative of the family of George Washington, I have had the opportunity during the past 40 years to examine, read, or consider the most important historical collections of the Washington and allied families; but I never believed that there was in private hands such a monumental collection of documents, records, surveys, etc., concerning the Washington, Lawrence, Lee, Fairfax, Fitzhugh, Byrd, Mason, Madison, Monroe, Penn, Franklin, and other families of the founders of this Nation as you have shown me.

Despite the efforts of many capable investigators it appears to never before have been possible to discover historic evidence establishing the identity of the Washingtons and their associations and the part they played in the outstanding events in continuity for about 10 centuries. You have accomplished it; and you have discovered so much regarding these historic personalities that you actually can present them in their proper relation to the events in which they participated.

With congratulations for your splendid achievement, I am,

Very faithfully yours,

W. LANIER WASHINGTON.

We get an insight into the wide research conducted, and the thousands of records secured and what we may expect to see at the air junction from the following letter from Admiral Chester:

JUNE 18, 1928.

MR. HENRY WOODHOUSE,
280 Madison Avenue, New York.

DEAR MR. WOODHOUSE: I have read the first chapter of your monumental work entitled "The Washingtons and Their Associations and Times Through Ten Centuries," and marvel at the wealth of historic documents you have discovered, not only about the Washingtons of a thousand years ago, but also about that period in the history when the British Isle was not yet an English speaking nation, but was the melting pot of races.

Your foresight in having had the originals of thousands of important documents and records photostated and in having bought sets of ancient histories and original records and documents whenever you had the opportunity, has given you the largest amount of data ever possessed by a historian. And your ability to read the original documents, whether in ancient Latin, Norman-French, or primitive English or Italian, enables you to discover historic facts that have escaped less fortunate historians.

I shall be glad to read the chapters and collaborate with you, making additions as they may occur to me. Accordingly, I would add to the part which tells how Britain was, at various times, under Roman, Celtic, French, Saxon, Anglain, Jute, Danish, and Norman rule, the following:

Thus the native Britons became the vassals and serfs of different foreign invaders in the first 10 centuries of our era because they lacked naval defenses, while the invaders had fleets.

The Romans subdued Britain and held it as a province for over five centuries because they had fleets. The Danes came near converting Britain into a Danish settlement, and ravaged it for many years, until Alfred the Great, who was the Washington of his time, built a navy and proceeded to attack the invaders at sea, giving them no opportunity to land. Thereafter he kept peace with a navy to ward off further invasion, a powerful system of national defense to prevent resident alien tribes from continuing their plundering, and by fostering of

industries to keep the people busy and prosperous, by the enactment of just laws, enforced without bias or favor, and by guiding the people to the understanding of literature, especially poetry and art.

It is well to mention that the first American frigate, commissioned in 1775, was named *Alfred* in honor of Alfred the Great.

Yours very sincerely,

C. M. CHESTER,
Rear Admiral, United States Navy, Retired.

KENMORE RECORDS TO BE ASSEMBLED AT AIR JUNCTION

Another patriotic act of these public-spirited groups has been their effort to assemble and secure for the Nation the records and memorabilia of Kenmore, the romantic home of Betty Washington, George Washington's sister, at Fredericksburg, Va.

After spending some years of her girlhood with George Washington, who was then a little tot, at their father's home on Little Hunting Creek, on a site which is now part of the Washington air junction, when this home burned the Washingtons moved to Fredericksburg, and Betty Washington, while still in her teens, married Col. Fielding Lewis and they lived on the beautiful Kenmore estate, happily, with a distinctive family, until their patriotism during the Revolution exhausted their resources. Col. Fielding Lewis financed the manufacture of guns and ammunitions for the Revolution, and as the Colonies were poor he and his family gave and gave of their own wealth and resources until they had nothing more to give. The beautiful Kenmore home was sold, and the family possessions, including the family records, were sold.

In true Washington spirit they sacrificed themselves so that the newly born Nation might survive! Therefore Kenmore is an emblem of that true patriotism that is the safeguard of nations, and everything that belonged to it should be preserved with care as a part of a sacred shrine.

As President Coolidge has aptly stated:

Kenmore should be saved for its own sake; it must be saved for patriotic America.

Kenmore was saved through the untiring efforts of the Kenmore Association and its leaders, Mrs. V. M. Fleming and her daughter, Mrs. H. H. Smith, and their associates, Mrs. Thomas H. Taliaferro, president of the Washington branch of the Kenmore Association, and the eminent sponsor, which include Gov. Harry F. Byrd, ex-Governor Trinkle, of Virginia, Col. David B. Devore, Dr. Charles Moore, Mrs. Anthony Wayne Cook, Mrs. J. Taylor Ellyson, Mrs. Percy Goodsell, Messrs. John Stewart Bryan, Mark Sullivan, Garr Melchers, James A. Emery, Arthur Meeker, Charles M. Lewis, Frank C. Baldwin, Miss Anna Marshall Braxton, Mrs. Robert M. Littlejohn, Mrs. W. A. Bell, Mrs. Benjamin A. Morton, Mrs. James Starr, Mrs. Harris B. Childs, Mrs. Oscar McKenzie, Mrs. Charles Metcalf, Mrs. Benjamin D. Heath, Mrs. P. L. Mann, Mrs. R. H. Caldwell, Mrs. Tunstall Smith, Mrs. Marshall Terry, Mrs. Leroy Habenicht, Miss Anne C. Jordan, Mrs. William H. Alexander, Mrs. C. O'Conor Goolrick, Miss Elsie W. Lewis.

Their inspiring appeals brought the donation from Mrs. Wylie Moore of the table which once belonged to the beautiful Nellie Custis and contributions from many patriots, among them $1,000 from Mrs. Alfred Dupont, $1,000 from Col. I. N. Lewis, and $2,000 from Mr. E. G. Heflin.

But the priceless Kenmore records, bearing the signatures of Betty Washington, Colonel Lewis, and their sons, three of whom were aides of George Washington during the Revolution, had been lost, and it was as if the soul of this national shrine had been lost.

But they have been found. They had been sold and scattered among collectors, and no one knew where any one could be had. A number of these precious documents are owned by Mrs. William A. Bartlett, whose patriotic activities during the World War as chairman of the aviation committee of the National Special Air Society were recorded at pages 701 to 708 of the hearings before the Subcommittee on Military Affairs of the United States Senate, Sixty-fifth Congress.

Mrs. Bartlett, whose collateral ancestors included the illustrious signer of the Declaration of Independence, Josiah Bartlett, and the esteemed Member of this House, Jonathan Hunt, of Vermont, has agreed to make available these records, to be assembled first at the Washington air junction with the other Washingtoniana and ultimately to make them available to Kenmore.

Therefore the Washington air junction will have the additional importance that it will be the assembling place of the most precious historic memorabilia that can be assembled in this country.

COMMANDER BYRD AND LINCOLN ELLSWORTH RECORDS

The fact that George Washington was first in expressing belief that aerial navigation would become beneficial to mankind and that Commander Richard E. Byrd, the first man to fly to the North Pole, who is now on his way to the Antarctic, and Mr. Lincoln Ellsworth, who financed and was a party in the first crossing of the Polar Sea, are descendants of the Byrds, who had been friends of the Washingtons since the early colonial days, and of Chief Justice Oliver Ellsworth, friend of George Washington, makes the past and the present interchangeable terms.

It makes it quite appropriate to have the hundreds of photographs and records bearing the signatures of these intrepid heroes of our generation side by side with the records of the Washingtons, Lees, Masons, and other patriots of those days when this great nation was in its teens.

As stated to this House in my address printed in the RECORD for February 25, 1927:

The first flight to the North Pole and the first crossing of the Polar Sea, from the Atlantic Ocean to the Pacific Ocean, via North Pole, are major achievements that will live in history through the ages, ranking with the historic accomplishments of Marco Polo, Columbus, da Gama, Vespucci, Magellan, Ross, Sir John Franklin, Peary, and Amundsen's discovery of the South Pole.

They represent a new epoch in the triumph of man's indomitable spirit over the forbidding elements.

We would be proud of these heroes of our generation, regardless of their ancestry; but we are doubly proud that their ancestors were friends of Washington and that they are demonstrating what Washington prophesied, that aerial navigation would be beneficial to mankind. It is inspiring to know that Washington's lands are to be used to aid in carrying out the substance of his vision and to solve the problem of giving an airport to the city which he founded and which bears his name!

SPEECH OF HON. JOHN Q. TILSON BEFORE THE YALE CLUB OF MONTCLAIR, N. J.

Mr. GARRETT of Tennessee. Mr. Speaker, it is the custom of the Yale Club, of Montclair, N. J., and vicinity, to give an annual dinner to the Yale football club, at which dinner it is also their custom to present to one of the distinguished alumni of Yale a present. It will be, I am sure, gratifying to the House of Representatives to know that at the annual 1928 meeting held last Saturday evening the one who received that present was our very eminent and worthy colleague, the majority floor leader, the Hon. JOHN Q. TILSON. [Applause.]

It is a very beautiful present presented to him, the famous Yale Bowl, and I violate no confidence in saying that it is now in the office of the majority leader, and I am sure Members will enjoy looking upon it.

It bears a most appropriate inscription, as will appear from its reading.

Upon the presentation of this gift Mr. TILSON made a most appropriate address, filled with wisdom, couched in most excellent English, discussing the philosophy of public life; and I am sure it will be not only interesting to all of us here but of wide public interest, and I ask unanimous consent to extend in the RECORD my remarks by inserting the invitation, which is quite unique, that was extended to Mr. TILSON, the inscription on the bowl, and the remarks made by Mr. TILSON on that occasion. [Applause.]

The SPEAKER. Without objection, the request of the gentleman from Tennessee will be agreed to.

There was no objection.

The matter referred to is as follows:

INVITATION

Beacon of truth uplifted
Set in the northern sea
While yet they live
Thy sons shall give
Honour and love to thee
—Brave Mother Yale

JOHN QUILLIN TILSON '91
is invited to attend the annual smoker and barn party of the YALE CLUB of montclair and vicinity in honor of CAPTAIN EDDY and his 1928 team—the party will be held saturday evening december 8th, at 8:30 p. m. in nick roberts' old yale barn at 87 high street—montclair—n. j. _____
mal stevens, tad jones, winnie lovejoy, bill webster and many other distinguished yale grads will be present. _____
presentation of the montclair yale bowl for 1928 to _____

Rich in His Toil—Proud of His Deeds
The Yale Club of Montclair and Vicinity
Has Awarded the
Montclair Yale Bowl of 1928
to
JOHN QUILLIN TILSON '91
"He has made his Y in Life"

SPEECH OF THE HON. JOHN Q. TILSON, REPUBLICAN FLOOR LEADER OF THE HOUSE OF REPRESENTATIVES, DELIVERED AT THE ANNUAL SMOKER AND BARN PARTY OF THE YALE CLUB OF MONTCLAIR, N. J., AND VICINITY, IN HONOR OF THE YALE FOOTBALL TEAM, ON SATURDAY EVENING, DECEMBER 8—THE MONTCLAIR YALE BOWL IS PRESENTED ANNUALLY TO SOME ALUMNUS OF YALE WHO "HAS MADE HIS Y IN LIFE"

Mr. Toastmaster and fellow Yale men, I should be less, or more, than human if I did not respond with a feeling of appreciation to your generous act in picking me out from the great Yale brotherhood for this signal mark of honor and distinction as a Yale man who has won his Y after leaving college. It has taken me somewhat longer to earn my Y than it did these husky youths here to-night who wear the varsity letter so worthily, but I am all the more rejoiced to receive it now in what may possibly prove to be the last quarter period of the game. However, I can assure you that even though it should prove to be the last quarter, there is going to be some hard playing done before the final whistle blows.

Having at last made my Y in a particular field of activity, it may be expected of me to tell you something about how I did it, or at least tell you something of how the game in which I have won my Y is played. There is some risk in doing this, because, as you are well aware, other people always know so much more about the game than you know. Did any of you football men ever notice how many fellows there are comfortably seated in the grandstand who always know very much more about every play than you know? It is the same way in public life.

All the college professors and tutors, all the preachers, all the hack-writers for newspapers and magazines, all the barbers, bootblacks, and even the street-corner loafers know more about legislation and how the affairs of the Government should be conducted than I know after nearly a quarter of a century in the public service. I know this to be true, for they have told me so many times. I, therefore, have a feeling of hesitation in attempting to carry coals to Newcastle to enlighten you, who, by all the rules of the political game, already know more than I can tell you. Were I an entertainer it would be easy for me, for in the service of the public I have encountered many things humorous and some ridiculous, but entertaining is not in my line. I never could tell a story successfully. In fact, I have often found difficulty, as perhaps some of the rest of you have, in making even my own wife believe some of my best ones. As a last refuge I am thrown back upon the necessity of either saying something about my work, or of exposing the committee who selected me for this honor, to the charge of misfeasance in office for not dropping me from the squad instead of giving me my Y.

For 22 years I have served my State and Nation in a legislative capacity, the last four years as floor leader of the House of Representatives at Washington. During this time I have seen several thousand men come and go, and thus have had opportunity for forming a judgment as to why they came and why they went, and what are the qualities that caused them to go or to stay. The popular idea of a successful career in politics pictures a man of no fixed ideals, infirm of character, an opportunist, quick to catch every passing breeze that blows, and thus to retain his hold on popular favor. Nothing could be farther from the truth or more inaccurate as a characterization of the man in public life who arrives and abides. Character is the sine qua non of the useful, effective public servant. High ideals are necessary—ideals so lofty that no prize, however great, is worth giving them up. With a genuine love for one's fellows, and an earnest desire for their approbation, the true servant of the people must be ready and willing to earn their displeasure, if necessary, in order to hold to what he thinks is right.

Men possessing the high qualities just described usually find their true place in positions of responsibility and trust and there serve well their day and generation. Such a man now serves this fortunate land of ours in its highest office, while another such man, fully measuring up to the specifications, stands called ready to take his place on March 4 next. These are conspicuous examples; but in places less exalted, though of great importance and responsibility, all the way down the line, stand those possessing in some measure the same qualities, to whom public service is a matter of the highest trust as well as a sacred duty. Such public servants, possessing character and fidelity to their high trust, maintain their ideals, however arduous and difficult the given task may be, and these are the ones upon whom the most responsible tasks usually devolve. These are they who in the last analysis make our Government and its institutions something in which all its citizens may well feel a just pride.

There are, of course, the other kind of public men. Like Athene, springing from the brain of Zeus, they usually burst forth full grown, or at least they rarely grow larger, but, seeking front-page notoriety, for a season display themselves in the spotlight whenever possible, and then pass off the stage, usually unhonored, unwept, and unsung.

Yale has always stood for the finest spirit of devotion to the public service. For this reason it has seemed fitting for me to dwell for a moment upon the type of public servant which a Yale man has found to prevail among his fellows in public life, and which I believe to be the type that fitly represents the spirit of our alma mater. I wish you, as fellow Yale men, to get the idea that our Government at Washington, including the present Congress which convened last Monday, is in the last analysis, in spite of what jokesters and wise-crackers may say, dominated and in large measure controlled by such men as I have described, who do their work—the work of serving the welfare of the entire country—in what we rejoice to believe is the true Yale spirit. The men who are charged with the gravest responsibility at Washington need the support, backing, and constructive criticism of such men as are gathered here to-night to represent old Yale. They are only hindered in their task by unjustifiable criticism and abuse, but are greatly heartened by the encouragement of thoughtful people.

A number of difficult problems confront the Congress as we meet. No one more keenly realizes their difficulty and their importance than I as leader of the responsible majority in the House. The most difficult problem always for any Congress is to prevent raids upon the Treasury. I do not mean this in any sinister sense. There is no danger of crookedness or corruption in this connection, but there is always present the temptation to yield to the clamor and insistence of interested minorities for larger and ever larger expenditures of public funds for real or fancied needs.

For a number of years the farm-relief problem, like the poor, seems to be always with us. The greatest difficulty in reaching a solution is to agree upon the remedy to be applied and to be reasonably sure that the remedy is not worse than the disease it is sought to cure. My own belief is, and has been for some time, that there is no complete panacea that will cure all the ills of agriculture, but that helpful measures may be agreed upon as the special need for them may develop, and that these might well be acted upon without delay even at the present session. As to this being done, however, I am none too hopeful so far as the present short session is concerned.

Somewhat closely related to farm relief and as a part of it is the demand for a revision of our tariff laws. It has been seven years since our present tariff act was written. Conditions in some industries have changed, and our tariff laws should be changed to meet the changed conditions. It need not be a drastic revision or one that will in anywise disturb legitimate business. In fact, it should encourage business to know that protection to American industries has been at last accepted by all political parties as the permanent tariff policy of the country. Plans are already under way to go forward with the preliminary work necessary for such a revision, and I am glad to say that a fine spirit seems to prevail in connection with this work, so that there is a possibility of seeing the tariff revised with more of constructive study of the facts and less of partisan rancor and play for party advantage than ever before in tariff history.

Another effort will be made to reapportion representation in Congress on the basis of the 1930 census, in accordance with the letter and spirit of the Constitution. For eight years this solemn duty has been neglected because of the unwillingness of certain States to lose in their congressional representation. I now have hopes that the effort soon to be made may this time be successful.

The subject of the national defense is always an important one. At this session of Congress the principal contention will probably center around the proposal for additional cruisers. It seems to be agreed that our Navy is lacking in this regard; but the real controversy will probably be between those on one side who believe that all Navy construction should cease as an example to other nations, regardless of their action, and on the other side those who believe that prudence and common sense demand a Navy adequate for our own purposes. As for me, there is no trouble whatever in giving my adherence to the latter view.

Two special problems have arisen growing out of the development of hydroelectric power and flood control. The development at Muscle Shoals in the Tennessee River was entered upon as a war measure to procure nitrates from the air. Much money has been expended there, but the net result is an incomplete power possibility, unprofitable to the Government in its present state and very difficult to dispose of satisfactorily. If a suitable offer should be forthcoming the legislation necessary to its disposition would probably be enacted.

A proposition to erect a high dam in Black Canyon to control the flood waters of the Colorado River, provide for a future water supply for the cities of southern California, and the incidental development of water power was embodied in a bill that passed the House at the last session and is now pending in the Senate. A special commission appointed for the purpose made a study of the matter during the recess of Congress, and it is hoped that during the present session some satisfactory disposition may be made of this matter, with due regard to

the rights of the States most immediately interested and without putting the Government into the power business.

There are, of course, a number of other matters to which Congress must and will give attention during the present session, but most of the principal ones have been mentioned. The Senate has additional work to do in the consideration of the Kellogg peace pact and other treaties, the Constitution having given to that body the control over all foreign relations.

On the whole it looks now like an interesting short session of Congress, and probably an extra session some time next spring to deal with the tariff and farm-relief questions. I believe that the best interests of the country would be served by such a program, but whether this particular plan is carried out, or some other, I look forward to the immediate future with a feeling of confident optimism. Our Government is and will continue to be in good hands. I call upon you as good Yale men, loyal to the traditions of our great university, to give your best to uphold the hands of those who for the time being are charged with the responsibility of administering the affairs of our great Nation, for though we may be partisans—and I, myself, am a loyal party man—we are first, foremost, and always patriots.

To you, Mr. Roberts, and to your fellow members of the Yale Club of Montclair and vicinity, I wish to express my deep appreciation and heartfelt thanks for a most delightful evening, and especially for this handsome silver bowl bearing its flattering legend to the effect that I have made my Y in life. I shall treasure it as long as I live and hand it down to my dear boy in the hope that it may serve as an added stimulus to him to make in due time his own Y in life.

RESIGNATION OF A MEMBER FROM COMMITTEES

The SPEAKER laid before the House the following letter:

DECEMBER 10, 1928.

Hon. NICHOLAS LONGWORTH,
Speaker of the House of Representatives,
Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as member of the Insular Affairs Committee, Election Committee No. 3, and Committee on Territories, the same to take effect immediately.

HEARTSILL RAGON.

The resignation was accepted.

Mr. GARNER of Texas. Mr. Speaker, I offer the following resolution:

The Clerk read as follows:

House Resolution 256

Resolved, That HEARTSILL RAGON, of Arkansas, be, and he is hereby, elected a member of the standing committee of the House on Ways and Means.

The resolution was agreed to.

CONGRESSIONAL COMMITTEE TO ATTEND TWENTY-FIFTH ANNIVERSARY OF THE FIRST AIRPLANE FLIGHT, KITTY HAWK, N. C.

Mr. SNELL. Mr. Speaker, I am sending to the Clerk's desk House Joint Resolution 332 and ask to have it read, and I will state that I intend to prefer unanimous-consent request for its immediate consideration.

The Clerk read as follows:

House Joint Resolution 332, Seventieth Congress, second session

Joint Resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C.

Whereas on December 17, 1903, Wilbur and Orville Wright astounded the world by making the first successful airplane flight at Kill Devil Hills, Kitty Hawk, N. C.; and

Whereas the Congress of the United States has passed an act authorizing the erection of a memorial at Kitty Hawk, N. C., to commemorate this great epoch in history, the corner stone of which is to be laid on December 17, 1928, the twenty-fifth anniversary of the first flight; and

Whereas the delegates attending the International Aeronautical Conference called by the President in Washington will attend in a body the exercises to be held at Kitty Hawk, and the National Aeronautic Association will unveil a tablet to commemorate same, Orville Wright, the surviving brother, being the guest of honor; and

Whereas it is both fitting as well as the desire of the Congress to be represented on said occasion: Now, therefore, be it

Resolved, etc., That a committee composed of six Members of the House of Representatives and three Members of the Senate shall be appointed by the Presiding Officer of each House to attend said celebration at Kitty Hawk on December 17, 1928, the necessary expenses of said committee to be paid out of the contingent funds of the House and Senate.

Mr. SNELL. Mr. Speaker, there is just one line in this resolution that takes it out of the privileged class; but knowing there was no objection, or believing there was none, on the part of the House, and after consulting with members of the Accounts Committee, to which the expense account usually would be referred, I thought it best to try to get this up by unanimous consent, and I now ask unanimous consent for its immediate consideration.

The SPEAKER. The gentleman from New York asks unanimous consent for the immediate consideration of the resolution. Is there objection? [After a pause.] The Chair hears none.

The question was taken, and the resolution was agreed to.

The SPEAKER. House Joint Resolution 342 will lie on the table.

Mr. SNELL. I was going to ask that House Joint Resolution 342 lie upon the table.

SETTLEMENT OF INDEBTEDNESS OF THE HELENIC REPUBLIC TO THE UNITED STATES

Mr. SNELL. Mr. Speaker, I now present a privileged report from the Committee on Rules.

The SPEAKER. The gentleman from New York presents a report from the Committee on Rules, which the Clerk will report.

The Clerk read as follows:

Resolution 254

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 10760, to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918. That after general debate, which shall be confined to the bill and shall continue not to exceed three hours, to be equally divided and controlled by those favoring and opposing the bill, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the bill for amendment the committee shall rise and report the bill to the House with such amendments as may have been adopted and the previous question shall be considered as ordered on the bill and the amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SNELL. Mr. Speaker and gentlemen of the House, the resolution itself needs no explanation. It does provide for the consideration of a most important matter. As far as the resolution itself and a consideration of the measure at this time I do not understand there is any opposition from either side of the House, although there is opposition from certain quarters to the settlement as proposed under the conditions of this bill. I think it is most important that the Members of the House fully understand all the provisions of this settlement and know well all the conditions that lead up to the present time. It is natural at first blush for anyone of us, and I am frank to say that was my original opinion, that we do not want to send any more money abroad, and we do not want any more foreign loans.

While I do not intend to discuss the detailed merits of the claim I do want to present in a very limited way the facts that led up to the condition that confronts us at this time. In the fall of 1917 the combined allied forces appreciated the fact it was necessary to put additional fighting forces on the eastern front, and after a meeting with the Greek people the representatives of the Greek Government—and the Greek Government at that time was friendly to the allied cause—they entered into a tripartite agreement on February 10, 1918. That agreement roughly is this: That if the Greek Government would put nine complete divisions in the field on the eastern front, would spend 750,000,000 francs for ammunition, salaries, and the feeding of these divisions, that the countries of the United States, Great Britain, and France would furnish a definite credit to the Greek Government in the amount of 750,000,000 francs. To show that that was a definite complete agreement that was made at that time the Greek Government gave to each one of the members of the tripartite agreement their definite promise to pay 250,000,000 francs each. That definite agreement on the part of the Greek Government to pay the United States that amount of money is now in the Treasury of the United States, and there was at that time upon the books of the Treasury of the United States a definite credit to the Greek Government, or, in other words, it was practically the same situation as if an individual member discounted his note at a bank and the bank credits his checking account in the sum of 250,000,000 francs.

The reason we made that agreement with the Greek people at that time was for the purpose of their putting these additional forces in the field. That was the reason for making this agreement, and while there may be opposition at the present, no one has ever doubted the fact that Greece, so far as putting those divisions in the field and protecting the eastern front, has ever been criticized. Greece actually delivered the goods

we agreed to pay for at that time, and the United States has received full compensation for the money there promised. The only opposition comes from the fact of some legal matters corollary to the main agreement which have not been strictly lived up to by the Republic of Greece. As I look at the whole situation, it is a moral obligation, and in the present world affairs the Government of the United States can not afford in any way to quibble or back out of its original agreement. This is a very important matter and will be discussed thoroughly by different Members of the House, and it is very important each Member should stay here and listen to the entire argument.

It is important in connection with our foreign affairs. We have remained isolated to a certain extent; but, on the other hand, we can not afford, while we are trying to collect our ten billions of foreign loans, to be negligent as to this claim from a weaker nation or in any way give foreign nations an opportunity to criticize our fairness or honesty. To a large degree there is a moral responsibility in collecting all our foreign loans, and we can not afford to quibble, so far as our position is concerned, on this very important agreement with the Greek Republic, which involves a matter of about $12,000,000, especially when the main question of the agreement is beyond dispute.

Mr. ABERNETHY. Mr. Speaker, will the gentleman yield?

Mr. SNELL. Certainly.

Mr. ABERNETHY. Since the Debt Commission has ceased to function, I assume that all these matters are now carried out by the Treasury Department. Is that correct?

Mr. SNELL. The Treasury Department has had informal meetings with the commission, and the commission are practically united. They all agree except the gentleman from Georgia [Mr. CRISP]. That is the reason why the matter is referred back to Congress for settlement.

Mr. ABERNETHY. Can the gentleman tell us whether any effort has been made by the Treasury Department in reference to the payment of the indebtedness of France to this country?

Mr. SNELL. I can not give any information on that at this time. So far as I know, there is no opposition to the adoption of the rule or to the consideration of this bill at this time, and unless the gentleman from North Carolina [Mr. POU] wants time, I will move the previous question on the resolution.

Mr. GARNER of Texas. Mr. Speaker, will the gentleman yield?

Mr. SNELL. Certainly.

Mr. GARNER of Texas. I would like to make the request that each Member of the House, if he finds the time, will send and get a copy of the report on this bill. It is very exhaustive and gives all the facts.

Mr. SNELL. I think that suggestion is very timely. I move, Mr. Speaker, the previous question.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. HAWLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 10760) to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918; and pending that, I make the point of no quorum.

The SPEAKER. The gentleman from Oregon moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 10760. The question is on agreeing to that motion.

The motion was agreed to.

Mr. HAWLEY. Mr. Speaker, I withdraw the point of no quorum.

The SPEAKER. The gentleman from Michigan, Mr. CRAMTON, will please take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 10760, with Mr. CRAMTON in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 10760, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 10760) to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918

Be it enacted, etc., That the Secretary of the Treasury, with the approval of the President, is hereby authorized to conclude an agreement for the settlement of the indebtedness of the Hellenic Republic (hereinafter referred to as Greece) to the United States of America under the terms and conditions as set forth in Senate Document No. 51, Seventieth Congress, first session. The general terms of the agreement shall be as follows:

(1) The existing indebtedness amounting to $18,125,000 shall be funded over a period of 62 years. The computation of this indebtedness is set forth below:

Principal amount of obligations to be funded	$15,000,000.00
Interest accrued and unpaid thereon to Dec. 15, 1922, at the rate of 4¼ per cent per annum	744,333.79
Total principal and interest accrued and unpaid as of Dec. 15, 1922	15,744,333.79
Interest thereon at 3 per cent per annum from Dec. 15, 1922, to Jan. 1, 1928	2,383,588.88
	18,127,922.67
To be paid in cash by Greece upon execution of agreement	2,922.67
Total indebtedness to be funded	18,125,000.00

(2) The bonds aggregating in face amount $20,330,000 (the existing indebtedness, as computed above, together with the interest to be paid in respect thereof) shall be paid in annual installments beginning July, 1928, up to and including January 1, 1990, on a fixed schedule, subject to the right of Greece to make such payments in 3-year periods, any postponed payments to bear interest at 4¼ per cent per annum, payable semiannually. The amount of the first annual installment shall be $40,000, the annual installment to increase to $350,000 in the eleventh year, which shall be the amount of each remaining annual installment.

(3) In addition to the payment of the bond maturing on January 1 or July 1 of any year, Greece shall have the right on such dates to make payments on account of any unmatured bonds of this series under such conditions as to notice or otherwise as the Secretary of the Treasury may prescribe.

(4) Any payment may be made at the option of Greece in any United States Government obligations issued after April 6, 1917, such obligations to be taken at par and accrued interest.

(5) To assist in the completion of the work of the Greek Refuge Settlement Commission, the Secretary of the Treasury is further authorized to advance to Greece out of the appropriation "Purchase of obligations of foreign governments," established under authority of the Liberty bond acts, the sum of $12,167,000, for which Greece shall deliver to the Secretary of the Treasury its 20-year gold bonds bearing interest at the rate of 4 per cent per annum, payable semiannually, with provisions for a sinking fund sufficient to retire such bonds within 20 years.

(6) Greece shall, in accordance with the exchange of notes, dated January 18, 1928, between the United States and Greece and as set forth in Senate Document No. 51, Seventieth Congress, first session, furnish as securities for the loan referred to in paragraph (5), the excess of revenues under the control of the International Financial Commission, and shall procure the assurance of the service of the loan by that commission.

(7) Greece shall forego all claims for further advances under the tripartite loan agreement, dated February 10, 1918, and such agreement, so far as the United States and Greece are concerned, shall terminate upon the date on which the agreement authorized by this act becomes effective.

Mr. HAWLEY rose.

The CHAIRMAN. The gentleman from Oregon is recognized as in charge of the time for 1 hour and 30 minutes.

Mr. HAWLEY. There was a commission appointed in this country known as the Debt Funding Commission which had charge of the settlements between this country and our former allies. A Member of this House, the gentleman from Ohio [Mr. BURTON], was a member of the Debt Funding Commission and sat through all its sessions, including that which had to do with the Greek debt. He heard all the evidence at first hand, and since the expiration of the term of that commission he has sat with other members as a voluntary committee on the same subject. I yield to the gentleman from Ohio 30 minutes.

The CHAIRMAN. The gentleman from Ohio is recognized for 30 minutes.

Mr. BURTON. Mr. Chairman and gentlemen of the committee, both the House of Representatives and the country have reason for sincere congratulation because the settlement of debt from foreign countries arising out of the World War has come so near to a conclusion. When we realize the vastness of those transactions involving more than $10,000,000,000, the intricacy of the transactions, the delicacy of negotiation which must be maintained in dealing with foreign countries, and the further fact that payments are being made on most of the settlements, and that there has been no demur from responsible officials of any foreign country with which we have made agreement, I think the country and the House are to be congratulated.

The Debt Commission have completed practically all settlements except with Armenia, which has disappeared from the map, and with Russia, which has repudiated the obligation; and while the House passed provisions for settlement with France, action in the Senate was delayed and France has thus far refused to agree to the terms agreed upon by her minister. There must be a further settlement with Austria. But that is merely a modification of an agreement already made.

But there remains a settlement with Greece, and that is the subject of our discussion to-day. And I can say to the House that, having been a member of the commission for four years, from April, 1922, to May, 1926, and participating in all the agreements, there is none for which I am more anxious to obtain the approval of the House than this proposed settlement with Greece. To reject it would be, in the first place, unbusinesslike and in violation of not only a moral but a legal agreement, in my judgment. It would be altogether unworthy of this country, because the agreement is fair in its terms to the United States and is in fulfillment of obligations upon which we solemnly entered.

Now what are the circumstances? Up to 1917 there was an alternation in Greece of friendship for the Allies and friendship for Germany.

Her sovereign, King Constantine, a relative of the Kaiser, was altogether friendly to the cause of the Central Powers and even went so far as to allow the occupation of Greek territory by those who were acting on their behalf. But in 1917 the administration was friendly to the Allies. Our own country had entered the war, and it was suggested that one of the very best areas in which to make a drive upon the Central Powers was from Greece, against Bulgaria, which was in alliance with Germany and Austria. Negotiations were conducted, which lasted for a considerable time. Our commissioners abroad, General Bliss and Mr. Crosby, recommended that we give financial support to this drive. France and England agreed to furnish 600,000,000 gold francs for the equipment of a Greek army, which it was proposed should be increased from three to nine divisions.

That amount of 600,000,000 francs, approximately $116,000,000, was furnished by France and England, and there does not seem to this day to have been any repayment. Concurrently with this advance by England and France an agreement was entered into, which was solemnly approved by our Government and had the especial approval of President Wilson, that the three powers—Great Britain, France, and the United States—should each advance 250,000,000 gold francs, in all 750,000,000, for the support of this army in the field. The 600,000,000 francs were virtually for equipment and preparation, the 750,000,000 for maintenance while engaged in military operations. Greece was at that time entirely solvent, and the drachma, equivalent to the French franc, was as good as gold. It was agreed that these amounts so promised should be advanced by the Bank of Greece, but that when their balances with foreign powers—that is, of the Greek Government and the Bank of Greece—should fall to 100,000,000 francs they might call on the respective Governments for the advance of a part of the 750,000,000 francs, and that six months after peace was declared the balance should be due.

Let me call attention to the fact that while a great deal has happened since that fateful year of 1918 I wish you to concentrate your attention on what was done then in pursuance of that agreement which was agreed upon on the 10th of February, 1918. Greece complied with the agreement; the amounts were advanced by the Bank of Greece; she increased the number of her divisions to nine, and in conjunction with the French and others she marched upon Bulgaria and won a very notable victory.

On this subject I wish to read briefly from the account of historians who have described the part of Greece in the war. The agreement was made, as I have said, February 10:

Throughout the winter and spring of 1918 the Greek Army was reorganized and reequipped, and on the Macedonian front Greek troops gradually replaced British and French troops recalled to the western front—

Where they were sorely needed—

until the new Greek Army had been so greatly increased that it represented the largest allied contingent.

The Greek nation, having at that time slightly less than 5,000,000 people, raised 250,000 soldiers for this expedition, and on the 30th of May they won a preliminary battle. Now comes the great fight.

September 16, 1918: Beginning of the allied offensive on the Macedonian front, which culminated in the decisive allied victory. The allied armies were composed of 9 Greek divisions, 8 French, 5 Serbian, 4 British, and 1½ Italian. Both Franchet d'Esperey (commander in chief of the allied armies in Macedonia) and General Milne declared that the Greek Army had proved a decisive factor in the victory. The British general said: "Without the aid of the Greek forces, the present victory could not have been obtained."

September 29, 1918, barely two weeks after this victory, Bulgaria, crushed and humbled, sued for an armistice, and it is no exaggeration to say that was the beginning of the end. General Ludendorff in his memoirs, wrote:

There were no illusions about the seriousness of the situation created by the collapse of Bulgaria.

Count Burian, Minister for Foreign Affairs for Austria-Hungary, declares: "Fate took its course. When the Balkan Army with the newly enrolled Greek troops developed a strong offensive, the Bulgarian troops fled. A terrible experience for the veteran army accustomed to victory, it was a shattering blow, not only to the weakening morale of the other armies in the field, but also to the morale of the people at home.

"In dealing with the military situation, the Central Powers took steps to establish a new shortened front against the advance of the Entente troops through Serbia. In this they were not successful, as the following days soon showed. Nothing could now check the unrestrained development of events within the monarchy and Germany, which now took their headlong course, under the influence of a kind of panic that everything had been lost."

October 30, 1918: Armistice signed between the Entente Allies and Turkey.

I have described this at some length to show how much the Allies and how much the United States owe Greece for the conclusion of the terrible struggle. That comparatively small country put 250,000 troops in the field and, according to the military authorities and the admissions of their allies, without them this decisive victory, which was the entering wedge for the final conclusion, could not have been gained.

So I say it is not for us to quibble over technicalities in reaching a conclusion.

Now, what is the record? The six months after the conclusion of peace had not expired, indeed, when the Greek delegation came to see us they conceded that peace, so far as the United States was concerned, was in July, 1921, when President Harding issued his proclamation with regard to the close of the war, but the amount of Greek balances abroad which had sustained the exchanges gave them, under their agreement, the right to call upon the United States, which they did.

The total amount which was to be lent to Greece, 250,000,000 francs, by the United States was entered on the books of the United States Treasury as a credit and that entry remains to-day as a credit to the Greek Government. The Greeks presented their obligations to the United States for these amounts and those obligations, over against the entry, are in the Treasury Department to-day. We began by making advances to them of $5,000,000 in three separate installments. I will give in my remarks the exact dates and, Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. BURTON. I have the exact dates here. The first was on December 5, 1919; the next on January 30, 1920, and the next on September 11, 1920. There was a supplemental agreement, which I think, however, has little to do with this, to the effect that the advances should be made on purchases in the United States. It does not seem that either our Government or that of Greece has ever insisted upon the fulfillment of this agreement, and it must be conceded that the minutes in regard to purchases have not been taken care of by either country.

Now, the course of Greece has been along a stormy road. There was the difference between Constantine and Venizelos, leading to the abdication of Constantine. Then, with that reaction or alternation, which is characteristic of some popular governments and not entirely absent in our own, there was a reaction against Venizelos, and Constantine was called back to the throne. He came to Athens on the 19th of December, 1920, and assumed the crown. Immediately, France and England refused to recognize his government.

Naturally, negotiations in regard to these balances due Greece were suspended during the time of an unrecognized government, which lasted from December 1920, until January, 1924.

Our own Government, following the course of France and Great Britain, also refused to recognize the government of King Constantine, and that refusal continued during military dictatorships following his rule, and we did not resume relations until, as I have said, January, 1924.

In the meantime a compromise was made with Great Britain, under which she recognized her obligation for the payment of

this 250,000,000 francs. France, however, has not recognized her obligation nor paid any part of the amount agreed upon by her.

Now, the argument will be made that because Great Britain and France did not fully comply with this, we are released. I want to say to my colleagues that I do not think this argument should prevail with the Government of the United States. The agreement was several rather than joint. Each was to advance 250,000,000 francs. It may be said, without fear of contradiction, that we are much more able to comply with the agreement to pay the amount than either England or France, and with all due respect to these countries, I do not think that in the settlement of obligations with foreign peoples, we should pattern after any other country. We should rather have a standard of our own which should be characterized by the strictest regard for our engagements, and added to that, a spirit of generosity to a suffering people.

The officials of the Wilson administration, even after the coming of King Constantine, recognized our obligation. On this I will read briefly—and I do this in part as an appeal to my democratic friends—what was the attitude of the Wilson administration as to our obligation to meet this promise to Greece.

Under date of December 31, 1920, the Department of State wrote to Assistant Secretary Kelley, of the Treasury Department, who had charge of foreign loans:

> The President was informed by letter dated December 25, of the inquiry made by the Treasury. He has expressed his concurrence in the recommendation made by this department that the credit obligation negotiated with the Venizelos Government (referring to the credit of $38,000,000) should be considered as still binding on this government and that the chargé d'affaires, on proper application, should be recognized as representing the government of King Constantine.

Undersecretary of State Norman H. Davis, January 10, 1921, wrote:

> If and when this Government extends recognition to King Constantine, or establishes relations with the Greek Government, I do not see how the Treasury can legally or morally cancel its obligation to complete the advance to Greece under the terms stipulated.

Under date of January 14, 1921, Undersecretary of State Davis, wrote to Mr. Kelley:

> You are correct in your understanding of the President's views in respect of the financial arrangement with the Greek Government early in 1918.

There are two propositions in this bill which has been read in the hearing of the House. One is a provision for the repayment of the $15,000,000 advanced to Greece, with interest at 4¼ per cent to December 15, 1922, and at 3 per cent from that time to January 1, 1928.

I do not understand there is any objection to this part of the settlement. It involves a very considerable concession, but that has been true of our settlements with other countries.

Computed on a basis of 4 per cent we receive in present worth 34½ per cent of our advances to Greece; the Italian Government, 26½ per cent; Yugoslavia, 33 per cent.

The proposed agreement provides that there shall be paid, first, installments of $20,000 each semiannually—and I wish to say here that there is an omission in the bill, and the word "semi" should be included on the second page before the word "annual." These amounts increase to $25,000 semiannually, then $30,000, $110,000, $130,000, $150,000, and, finally, $175,000.

Mr. JOHNSON of Texas. Will the gentleman yield?

Mr. BURTON. Certainly.

Mr. JOHNSON of Texas. What amount of reduction, if any, is made in this indebtedness under the settlement as proposed? In other words, do we reduce the principal amount of the indebtedness?

Mr. BURTON. We do not reduce the principal amount.

Mr. JOHNSON of Texas. It is the interest on which the reduction is made.

Mr. BURTON. Yes; the principal is paid and $2,105,000 more.

Mr. JOHNSON of Texas. In dollars and cents, how much do we discount the interest?

Mr. BURTON. I think that is a matter which has not been computed by the Treasury Department.

Mr. JOHNSON of Texas. Well, approximately.

Mr. BURTON. And I do not want to give even an approximate statement because I am afraid it would be too much of a guess; but 34½ per cent is the present worth on a basis of 4 per cent.

Mr. GIFFORD. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. GIFFORD. To what extent, if any, does Greece participate in the reparations paid by Germany?

Mr. BURTON. I do not think at all. I am not sure on that; but, at any rate, in a very small amount. My attention has never been called to that question before.

I think if there are any reparations, they are from Austria.

Mr. GIFFORD. I have noted the statement on page 5 of the report to which the gentleman referred, that the obligations of the Greek Government bearing 5 per cent interest were received by our Government and are still held by us, although the money has not been paid. If the money has not been paid, they must be out of date. Why are they still held by our Government and why have they not been returned to Greece?

Mr. BURTON. Because the settlement has not been completed and because we have no agreement with Greece canceling the proposed agreement and our obligation under it.

I would like now to proceed until I am through with this statement.

The commission received a delegation from Greece and stated to them that for three reasons, the fact that Great Britain and France had not complied with the promise of February 10, 1918, the fact that they had not paid interest as they had agreed, and the fact that there was a certain guarantee of a loan due to Canada for food purchased, we were released from our agreement.

Mr. GARNER of Texas. Will the gentleman yield? Did you not give one other reason, and that was that they had not kept their promise to spend all the money in this country?

Mr. BURTON. That was not stressed.

Mr. GARNER of Texas. I do not know whether it was stressed or not, but that was one of the reasons, as I understood it.

Mr. BURTON. I can not allow any of these reasons to wipe out what Greece did in 1918. She passed through an era of woe. There was a time when her government was not recognized by the powers that had been her allies. There was a military dictatorship; a revolution after the World War. To insist upon a fixed accountability as in the case of a country in which there are settled conditions is, in my judgment, altogether unjust and I might say unworthy of the American people. I never was very proud of the answer the commission made to the Greek Government.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. HAWLEY. Mr. Chairman, I yield to the gentleman from Ohio 10 additional minutes.

Mr. BURTON. The commission was not like judges; they did not act in a judicial capacity; they were like advocates, seeking to get the best agreement they could for their country, hoping that the Greeks would withhold or waive all claims for an additional amount—thirty or more million dollars. That was our hope at the time.

We stated our case, as it was our duty to do, perhaps, in the best shape we could, but I question whether if it had been left to the commissioners as arbitrators they would have made such an answer. I question very much whether if left to our Supreme Court it would have reached such a conclusion.

Here let me make a point of vital importance. The Greeks all the while, to-day, and in every time, have offered to leave the whole matter to arbitration. What kind of position would this great Government be in on a financial obligation of this kind if we refused, and still refuse, to leave the matter to an impartial tribunal? Do we wish to take that stand before the world?

Another thing, not only to our Government, but to private individuals enormous sums are due in the way of debts; some of them from countries inferior in financial capacity. Do we by seeking through technicalities want to afford them an excuse, either for their debts to the United States or to private individuals to repudiate the billions that they owe to us?

There are two sides to this question. Now, we can not agree, and Greece proposes that we loan them the sum of $12,167,000. That would be placing the settlement between the United States and Greece on a par with the settlement that Great Britain made with Greece, a compromise in both cases. That is, we refuse to advance the rest of the $250,000,000 francs, and they refused to pay the $15,000,000 we advanced to them, unless we advanced the whole amount they claim. That created an impasse.

Now it is proposed to settle this by advancing to them the sum of $12,167,000. You call it a loan, and it is in its form a loan. But what is it in reality? It is a settlement of this controversy between the two countries, as a substitute for paying the whole amount which we clearly obligated ourselves to pay and for the payment of which Greece has very strong claims, and it is proposed to more than cut the balance that would be due from us in two, nearly down to one-third, making it $12,167,000 at 4 per cent for 20 years.

Mr. SIROVICH. What does Greece propose to do with the $12,000,000?

Mr. BURTON. I am coming to that. What does Greece propose to do with it? It was by international agreement that there should be shifted the population of 1,500,000 Greeks and approximately that number have come into Athens from Asia Minor and other places under Turkish rule. In addition 150,000 Armenians have come to Greece. This immigration has imposed upon Greece an almost unbearable burden, a burden which brought the League of Nations to provide a loan to help them in caring for the refugees who came there with food and clothing to last them but a day. What does Greece propose to do with the $12,167,000? It is to be applied, every dollar, to the comfort of these refugees—under the control of a commission, the chairman of which I may say is an American and the controlling interest is American. Can we refuse under such circumstances as these?

Mr. GREEN. About what percentage in the settlement does this give us?

Mr. BURTON. I have stated that, 34½ per cent.

Mr. GREEN. We all recognize that the gentleman has made a very great study of this matter, but does not the gentleman feel, in view of the fact that America's natural resources are undoubtedly being depleted, exhausted, and her population is increasing, that it is time America should quit canceling these debts and giving to our foreign creditors these huge amounts, which has been going on now for several years?

Mr. BURTON. Mr. Chairman, the gentleman from Florida [Mr. GREEN] could have made that argument very much more appropriately when we settled with Italy at 26½ per cent, 8 per cent less than this; when we settled with Yugoslavia at less, and I want to say that I stand here to justify those settlements, every one of them. True, we have a great population; but my, how we do abound in wealth! America, the golden wonder of the world, richest of them all, growing in wealth! Shall we say to any people under the sun, poor, struggling, "We refuse you aid out of our abundant resources"? When we do that, then I say America will be taking a stand which will lower her position among the nations of the earth.

Mr. MOORE of Virginia. Mr. Chairman, will the gentleman yield for a question?

Mr. BURTON. Yes.

Mr. MOORE of Virginia. Would the conditions attached to this agreement prevent the Greek Government from floating a general loan without limit as to amount? I ask that for the reason that it has been stated very reliably that the present Prime Minister of Greece, who came in on the 4th of July, 1928, M. Venezilos, is making an effort to negotiate such a general loan.

Mr. BURTON. So far as the $12,167,000 is concerned, that is paid from definite sources. I am satisfied that our Treasury Department would not agree to conclude this loan if that were done, and the figures that have been made by the experts show that there will be from Greek revenues a surplus of $28,000,000 a year beyond any commitments on prior loans. I may say, as regards the repayment of the amount advanced by us, that is paid in general from the Greek treasury, and there is no assignment of revenues for that purpose; but as far as the $12,167,000 is concerned, I do not think any question can be raised but that we have ample security. [Applause.]

Mr. GARNER of Texas rose.

The CHAIRMAN. Does the gentleman from Texas desire to control the time in opposition to the bill?

Mr. GARNER of Texas. I should like to do so.

The CHAIRMAN. The Chair understands the gentleman from Texas is supporting the bill.

Mr. GARNER of Texas. No; I am not supporting the bill.

Mr. CRISP. Mr. Chairman and gentlemen of the committee, it is with genuine regret that I find myself, from a sense of duty, compelled to differ with my former colleagues on the American Debt Funding Commission as to this settlement. I have whole-heartedly supported all other settlements made by the commission and have borne my full share of the brunt of battle in this House to have them ratified, but in this case I find myself unable to go along with them. I regret especially that I have to differ with the distinguished gentleman from Ohio [Mr. BURTON]—and it may interest you to know that we are really cousins—in his position on this matter. I think his case was so poor that he made the poorest speech I ever heard him make since he has been in the House. [Applause.]

Now, I am going to discuss the matter in a dispassionate way. I shall not attempt to appeal to your passion or prejudice, but I am going to endeavor to lay before you this whole picture, and when I have done so and have cast my vote against it I shall have discharged my full duty as a former member of the Debt Commission and as a Member of this House, and you should vote as your consciences dictate.

Mr. WAINWRIGHT. Will the gentleman yield?

Mr. CRISP. Yes.

Mr. WAINWRIGHT. May I ask the gentleman if he will not, if he thinks well of it, discuss the original agreement.

Mr. CRISP. I am going to make my own speech and the gentleman from Oregon [Mr. HAWLEY] and other gentlemen can make their own speeches.

Mr. WAINWRIGHT. I assure the gentleman I am only asking for information.

Mr. CRISP. I am going to try to discuss this case from its inception.

Mr. WAINWRIGHT. That is what I mean.

Mr. CRISP. And give the House the whole picture. This bill before us contains two substantive propositions. One is to fund an old indebtedness owing the United States by Greece of $15,000,000, and interest on it, making the total $19,500,000 due January 1, 1928. The settlement proposes to fund and settle that indebtedness over a period of 62 years on the basis of 34 cents on the dollar, and the only justifiable excuse or reason why we, representing the taxpayers of the United States, should be willing to take less than 100 cents on the dollar is the inability of Greece to pay more. All of these settlements have been made on the capacity to pay, and I think I can show before this discussion is over that the capacity of Greece to pay exceeds 34 cents on the dollar.

There is due under the old advance of $15,000,000, $19,500,000. It is proposed to cancel it for $6,500,000 on a present cash value, or a cancellation of $13,000,000 of the indebtedness. Now, if Greece were not able to pay more I would not cavil at that, and I have supported all of the other settlements, convinced that the settlements were up to the capacity of the debtor nations to pay, but I think the capacity of Greece to pay is greater than that. It is proposed in the second part of this bill for the Treasury of the United States to loan this debtor that is settling the old debt for 34 cents on the dollar, $12,000,000 more for a period of 20 years, and under a part of the settlement international bankers have loaned to Greece during this year $33,000,000 at 6½ per cent interest. Greece sold to international bankers in London and New York her bonds of $100 denomination for $91, and the bonds bear 6 per cent interest, but on account of the sale at $91 the investor gets a yield of 6½ per cent.

Under this agreement, and as a part of the scheme for the selling of those international bonds, the Treasury of the United States is to loan Greece $12,000,000 at 4 per cent interest, a saving of 2½ per cent interest to Greece. Now, if Greece is able to sell her bonds at $91 I am constrained to believe that her capacity to pay is greater than 34 cents on the dollar.

Mr. MANSFIELD. Will the gentleman yield?

Mr. CRISP. Please let me go on for a while. I want to be courteous, but I think if you will give me a chance I will anticipate your questions and answer them.

What is the history of this transaction? During the World War Greece announced neutrality and she had a force to maintain her neutrality, but it was common knowledge that the King, brother-in-law of Emperor William, and the officials of the government, were pro-German. Bulgarian troops and Austrian troops occupied large parts of the territory of Greece. The activity of Greece became so pronounced in favor of the Central Powers that the Allies landed troops in Athens. They were fired on and killed by the Greek troops. Then the Allies had warships anchor off Piræus. They bombarded the palace and forced the King to abdicate and required the Greeks to reduce their army from a large number of divisions down to three. After this the Government changed and in June, 1917, Mr. Venizelos became the head of the Government and the Government became friendly to the Allies. Then Venizelos issued a proclamation to the Greek people saying that:

> We will enter the war on the Allies' side for the purpose of driving our enemies from our midst and for the purpose of having a voice at the peace conference, where we will get larger territory and we will have a Greece that you have always dreamed of.

They entered the war for self-defense. That was what actuated Greece in going into the war and not to help us.

In February, 1918, there was made between Great Britain, France, and the United States a tripartite agreement that under certain conditions and covenants to be kept by Greece these three Governments would extend a credit to Greece to aid in the prosecution of the common war to the extent of 750,000,000 francs. I contend that was a joint war-time agree-

ment and that the only authority this Government had for making loans was under the Liberty loan act, that authority being to make loans to aid in the prosecution of the common war. Under that agreement Greece was to pay interest, and she obligated herself not to obtain any loan from any foreign country nor to pledge her securities or credits therefor without the consent of the United States. At this time the Greek Government was friendly to the United States. These credits were not made to Greece for any specific purpose—the organization of an army—but were to be used by Greece to aid her in financing her military operations. Greece was fighting to expel invaders from her territory, and when Greece was in the war it was her duty to use her resources to carry it on, just as it was the duty of the United States, and we expended over $30,000,000,000 for that purpose.

In the fall of 1918 the Greek troops did participate in battles on the Macedonian front and they participated by driving Bulgarians and Austrians from their own territory. They discharged themselves with ability, and as soldiers were the peers of the Allies operating with them, and I have the profoundest respect for them; but they were fighting in self-defense and the only battles they participated in were on the Macedonian front. When the armistice was signed the Greek drachma was at par, the finances of Greece, the economic conditions of Greece, were splendid, and Mr. Venizelos went to the Peace Conference and requested from the delegates that certain territory be granted Greece. The Peace Conference failed to give Greece the territory she asked and then Venizelos obtained permission for Greek troops to occupy Smyrna and this resulted in the Turco-Greek war, which resulted in the debacle of Asia Minor. This caused the downfall of economic conditions in Greece, caused the drachma to depreciate, but the United States had nothing in the world to do with it.

These credits were assigned by the Greek Government to the Bank of Greece to guarantee an issue of drachmas, and these credits were made on the books of the Treasury of the United States in the late fall of 1918, and no advance was asked for by Greece against these credits until November, 1919, after she was in the war with Turkey.

I am rather illogical in presenting this thought before I go back to certain other matters, but in November, 1919, diplomatic negotiations were entered into between the Greek Government and the Government of the United States as to these advances and a new agreement was made. The United States agreed that she would advance the $15,000,000 upon condition that the full amount was to be expended in the United States and the Greek Government was to furnish semimonthly itemized statements of the expenditures, and this agreement was to take the place of the original tripartite agreement so far as we were concerned, and under this new agreement, which wiped out so far as the United States was concerned the tripartite agreement, this $15,000,000 was advanced, and Greece breached it by not furnishing the itemized monthly statements of how the money was expended in the United States.

Gentlemen, I contend that the original tripartite agreement was a joint war-time undertaking and that the consideration was to aid a friendly government, and when the government changed and instead of being friendly to the United States became pro-German, the consideration of the agreement failed.

I take the further position that it was a joint undertaking that France was to advance $48,000,000, Great Britain $48,000,000, and the United States $48,000,000. France advanced nothing, the United States advanced $15,000,000, Great Britain advanced $31,000,000, and after that advance Greece privately released Great Britain from advancing the rest of the money, without the knowledge or the consent of the United States. Therefore, as a lawyer, I say that if it was a joint war-time agreement, when Greece privately released England from her part of the undertaking, without the knowledge and consent of the United States, this released the United States.

Now, my distinguished cousin says we should not pattern after any foreign country, but should pursue an American policy. I thoroughly agree to this, and that is exactly what I am doing in this case. The great reason urged by the majority in this report for the advance of the $12,000,000 is to make us advance to Greece the same amount that England advanced; therefore they urge that we pattern after England; England advanced, before the Government changed and when it was still friendly, $31,000,000. England has not advanced one cent since the Government became unfriendly, but the majority say that we should advance out of the Treasury $12,000,000 to make our advance to Greece equal to that which England advanced. I can not consent to this suggestion.

I would like for them to return us our $15,000,000 and let us be on a parity with France, who advanced nothing.

If this was a joint war-time undertaking and France failed to perform her part of the covenant and Greece released England from a part of hers without our knowledge and consent, and if the consideration of aiding a friendly nation failed, we are under no legal or moral obligation to advance anything else.

But Greece says this was not a joint, war-time undertaking. Greece says it was a several undertaking. Admit that for the sake of the argument, and we are also released. Greece failed to pay the interest. Greece without the knowledge or consent of the United States in 1923 obtained a loan in Canada of $8,000,000 and pledged certain of her revenues to the payment of that loan, and we only learned of it sometime afterwards, and to show that Greece did know that she had no right to obtain these loans without the consent of the United States, she did make other loans and did apply and did obtain the consent of Great Britain, France, and the United States to make these loans; but she did not do this as to Canada, and she thus breeched the agreement. Greece also covenanted to pay us 100 cents on the dollar, and under this settlement she is only agreeing to pay 34 cents on the dollar, another breech on her part.

Under the new agreement, which was to take the place of the tripartite agreement, she breeched that by failing to furnish the itemized statements of account as to how the money was expended in the United States.

Gentlemen, in January, 1926, after repeated urgings, Greece sent a commission over here to meet with the American Debt Funding Commission to see if they could fund and settle this indebtedness of $15,000,000. We met at the Treasury Department, and after conferences the Greek delegates blandly told us that the United States owed them $33,000,000 more; that if we would advance the $33,000,000 they would fund the $48,000,000 practically on any terms on earth we desired. They were not sticklers for rates of interest or details, but they were ready to fund on our terms if we would just advance them this $33,000,000.

The members of the American Debt Commission connected with the Federal Government were Secretary Kellogg, Secretary Mellon, President-elect Hoover, Senator SMOOT, Senator BURTON, and myself. There were also Mr. Hurley and Mr. Olney, but I am talking now of those connected with the Government.

That was the commission. The American commission unanimously in writing gave the Greek commission an answer that the United States was not under legal obligations to advance Greece another cent, and that we would not recommend to Congress legislation to authorize it. Here is a copy of the written report that the American Debt Commission furnished the Greek commission. You will also find a copy of this printed in the hearings before the Ways and Means Committee.

The Greek commission said they would not fund the 15,000,000 unless we advanced them 33,000,000 more, which we refused to do.

Upon that the Greek commission returned to Greece. In 1924 Secretary Hughes—I think one of the greatest lawyers of the world and one of the greatest Americans—as Secretary of State had taken the position that the United States was not legally liable to advance further sums after that agreement and instructed the minister at Greece so to notify the Greek Government. The Greek commission, when we refused to recommend the further advance refused to pay the $15,000,000 and went home.

Some months afterwards I read in the press that the Greeks were going to get $33,000,000 more from the United States. The American Debt Funding Commission's life expired a few months after we had the conference with the Greeks. It went out of existence in May, 1926. Further negotiations were conducted between the Greek Government and the Treasury Department.

As I said, I read in the press that they were going to get $33,000,000. I knew the power of the international financiers, because before us the Greek commission had contended that the $33,000,000 belonged to the Bank of Greece, and I have often wondered in this settlement why it was proposed to send the $12,000,000 to the Near East relief fund—I presume it was more appealing to the American Congress and the American people to furnish this money for humanitarian purposes rather than for an international bank.

But the Greek commission returned home. Last January I was courteously invited by Mr. Mellon to a meeting at the Treasury Department with the former members of the Debt Commission. He stated that the Treasury Department had tentatively made the agreement set out in the bill which you are called upon to vote on, and desired to submit it to us to see if we approved it. I found myself unable to agree, and

frankly stated that I could not agree to it. Now, gentlemen, as a member of the Debt Commission, in January, 1926, I took the position that the United States was not morally or legally obligated to advance any more funds to Greece. Nothing in the world has transpired to change the legal obligation, from that day in January, 1926, to January, 1928, when this agreement was made. If the Debt Commission was correct in 1926, that there was no legal liability on the part of the United States, there was no legal liability on the part of the United States in 1928, when this agreement was made.

Now my friends, the majority say this is a compromise. It is an attempt to compromise a bare claim on the part of Greece, a claim which the officials of the United States Government said was not legal. If there was no legal liability on us then it is unsound and illogical to attempt to compromise it, and in peace times to loan to a foreign government out of the Treasury of the United States, money for 20 years at 4 per cent interest, when we are funding and settling the old debt with them at 34 cents on the dollar.

I take the further position—the gentleman from Texas [Mr. GARNER] made part of my speech—that if we owe Greece $33,000,000 and she needs the money we should advance that $33,000,000, and not compromise. If the only excuse to compromise a financial obligation is inability to pay in full, no one can question the ability of the United States to pay in full every dollar she owes. I believe in the sacredness of international as well as individual obligations—I believe they should be sacredly kept. If I believed that the United States were legally obligated to Greece under this tripartite agreement, I would stand here and advocate letting her have the $33,000,000. But I do not believe there is a moral or legal obligation resting upon us, and I can not support the settlement. The compromise is based upon the idea of quieting or settling a dispute. I can not approve of this policy on the part of the United States, under all the facts of this case.

Gentlemen, this credit was assigned to the Bank of Greece. Greece issued drachmas on it. All during 1918, until after the armistice, the drachma was at par. The economic condition of Greece was good all during 1918, and the drachma depreciated, not because England furnished only $31,000,000, not because the United States furnished only $15,000,000, not because France advanced nothing, but as a result of her war in Asia Minor with Turkey. She brought on the debacle and that reduced the drachma, and if you want to appeal to the equity side of the court, to-day a million and a half dollars will buy and retire all of the drachmas that the Bank of Greece issued, based on this credit.

Mr. GIFFORD. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. GIFFORD. Did Greece, depending upon this credit of $38,000,000 or $48,000,000, expend that money expecting it from us for the purposes upon which it was agreed to make the loan?

Mr. CRISP. I do not think so. Greece declared war on Germany in June, 1917, as her prime minister said, to expel the enemy from her territory and to have a greater Greece by being allocated new territory at the peace conference. She engaged in the war, and these credits were made only in February, 1918, after she had been in the war for months, and they were loaned to her as a friendly government to aid in carrying on the common war.

Mr. JOHNSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. JOHNSON of Texas. When the gentleman from Ohio [Mr. BURTON] was speaking he was asked what he thought was expected to be done with this additional $12,000,000. He said it was to be expended for the benefit of refugees. From what the gentleman from Texas [Mr. GARNER] said, he seems to think that the $12,000,000 would have something to do with a loan that was obtained in New York from the National City Bank. Has the gentleman any information on that question?

Mr. CRISP. After the American Debt Funding Commission had refused to recommend any further advances to Greece and the Greek commission went home, Greece desired to obtain some money. So the Greek Government invited the kind officers of the Council of the League of Nations, and after negotiations the Council of the League of Nations approved a loan of this character to aid Greece. Seventeen million dollars of that loan was to be sold in London and $16,000,000 in New York at 6½ per cent to the purchaser, and the United States Government was given the kind privilege of loaning $12,000,000 for 20 years at 4 per cent, while the international bankers were selling their $33,000,000 at 6½ per cent; and under this bill—I think it is a sugar-coated pill, because they are generally more palatable when sugar coated—it is proposed, if this loan is made, that its entirety shall go to the Near East relief fund instead of to the Bank of Greece.

Gentlemen, let me say that I thoroughly approve of the splendid charity of the Near East relief fund. I think it is commendable. I rejoice that many of our philanthropists have contributed to it and I hope others will contribute to it, but I do not believe that you as a legislator have the right under the wildest stretch of imagination under the Constitution of the United States to vote money from the people's Treasury for any charitable or relief measure, no matter how worthy.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. PERKINS. When, after the armistice, if ever, did the Greeks ask for further advances on this credit?

Mr. CRISP. The first advance that Greece asked after the armistice was when Greece was at war with Turkey, in 1919, and she was advanced in the latter part of 1919 and in 1920 the $15,000,000, and the advance was made under the new contract I referred to, that we would advance it to her provided she would agree to expend it in the United States and furnish semimonthly itemized statements to how it was expended, which she did not do.

Mr. HASTINGS. Mr. Chairman, right at that point, if the gentleman will permit, what do the hearings disclose as to where it was expended? The gentleman says there is no report upon it, but do the hearings disclose where the $15,000,000 was expended?

Mr. CRISP. No, they do not; at least I have never seen it.

Mr. BURTON. The report of the military commission is that an amount not quite up to the 750,000,000 francs, but near to that, was expended for military purposes, without which Greece could not have kept her army in the field.

Mr. CRISP. Is that report of the military commission in our hearings?

Mr. BURTON. I am not so sure that it is.

Mr. CRISP. That was the gentleman's question and I said that, so far as I know, it was not in the hearings.

Mr. JOHNSON of South Dakota. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. JOHNSON of South Dakota. Does the gentleman know of any legal or equitable obligation upon the part of the United States to advance this money for these refugees? Was any promise ever made by anyone in authority? What reason is assigned for it?

Mr. CRISP. None whatever; and I shall have to let one of my brothers in the majority who are supporting this bill explain it to the gentleman. It just struck me as a little queer that, when the Greek debt commission was here, it was urged by them that this credit belonged to the Bank of Greece, that it had been assigned to the Bank of Greece, upon which she had issued drachmas, and in this settlement, lo and behold, the claim of the Bank of Greece has vanished, and it is proposed that the $12,167,000 shall all go to the Near East relief.

Mr. JOHNSON of South Dakota. That proposition was not presented to the Debt Commission of which the gentleman was a member at the time. It is a new matter?

Mr. CRISP. When the Debt Commission was conferring with the Greek commission not a word was said about making any advance on account of the Near East relief fund.

Mr. GIFFORD. Will the gentleman yield?

Mr. CRISP. Yes, sir.

Mr. GIFFORD. I am a little troubled about the authority as given on the first page of the minority report; but is it customary in making loans to a foreign country to stipulate as to the methods for which the money shall be used? After six months the money was to be used by the Bank of Greece without restriction. Is not this really a new loan, this 20 years at 4 per cent, and has this any relationship to the loan previously made for 62 years like the others? The question is, Is it not customary to make restrictions as to how the money is to be used before the money is loaned?

Mr. CRISP. I will say to my friend from Massachusetts I am just a mere country lawyer, without any experience whatever as to international banking or customs between foreign countries, and I do not know, but I think really this is a new loan of $12,000,000 and has nothing in the world to do with the other.

Mr. GARNER of Texas. If the gentleman will permit. I know the gentleman from Georgia is familiar with the history of the country. Does the gentleman know of a loan made by this country to a foreign country except in time of war?

Mr. CRISP. Except for Austria and Russia—a humanitarian purpose.

Mr. GARNER of Texas. That is the aftermath of the war.

Mr. GIFFORD. Will the gentleman yield again?

Mr. CRISP. I will.

Mr. GIFFORD. One more question. I do not like the gentleman to say that I do not approve this $12,000,000 loan. I think when we hold in the Treasury of the United States $48,000,000 in securities, there must be some adjustment pending. In view of the fact that France and England have not lived up to the letter of their agreement, an adjustment can be made on our part at this particular time.

Mr. CRISP. I disagree. I would return to Greece all the obligations except $15,000,000, that is what I would do, because I do not believe there is any legal or moral obligation on our part to pay more.

Now, gentlemen, I think it would be a bad policy for the United States Government to embark in making loans to foreign countries in peace time. The Government of the United States will not loan out of its Treasury a dollar to an American citizen, no matter how good the security is. They will not loan on United States bonds, and I know the distinguished Secretary of the Treasury would not favor making this loan, except to compromise the claim of Greece growing out of the tri parte agreement. I do not believe it is a legal obligation, and therefore I am not in favor of compromising it, but if you ratify this bill and authorize this loan, I fear in the future some other European countries who are friendly to us might seek to get the United States Government from its Treasury to loan them money at a lower rate of interest than they would have to pay to get it in the market, and if we refused, it might bring about discord and unfriendliness between those nations and our Nation where at present our relations are cordial. It is a dangerous precedent in peace time unless there is a legal obligation made during war time. I do not believe such obligation exists. I know constitutionally you have no authority to do it, and I call upon you to think well before you set this precedent.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. CRISP. I will.

Mr. COOPER of Wisconsin. As I understand it, the principal objection of the gentleman from Georgia to the making of this loan is that it is in time of profound peace and unconstitutional for the Government of the United States to take the taxpayers' money and loan it to the government of any nation?

Mr. CRISP. The gentleman states my position correctly. And I may say further that I take the position that we are under no legal obligation to do it, because Greece breached all the contract.

Mr. COOPER of Wisconsin. During the war the money loaned by our Government to the foreign nations was obtained from private individuals and at the same time private corporations in the United States were advancing the money and taking their bonds?

Mr. CRISP. Yes.

Mr. COOPER of Wisconsin. Now, then, does the gentleman hold that for the Government of the United States to take the place of these private money lenders, bond buyers, and corporation bond buyers, would be putting the Government of the United States into business?

Mr. CRISP. Yes; I think actively into the business of international banking and buying bonds at 2½ per cent less than the international bankers receive for the same service.

Mr. JOHNSON of South Dakota. Would the gentleman from Georgia favor this act if section 5 on page 3 were eliminated from the bill?

Mr. CRISP. The gentleman from South Dakota has asked me a question that I have thought about a good deal. I have advocated other settlements on a far less than 100-cents-on-the-dollar basis acting upon the best information I could get, that the settlement was up to the capacity of the debtor nations to pay. I have always taken the position that they should pay to the limit of their ability, considering their economic condition. All these previous settlements I have favored because I believed they were the best settlements we could get, and I thought it was to the best interests of the American taxpayers to accept them.

Now, does it seem that 34 per cent is the full capacity of Greece to pay, when she has just floated through international bankers her own bonds at 91 cents on the dollar? It seems to me she can pay more.

Mr. JOHNSON of South Dakota. If this section were eliminated it would eliminate many objections?

Mr. CRISP. Yes. But if within this year she had a $33,000,000 bond issue oversubscribed, selling at 91 cents on the dollar at 6 per cent, I do not believe 34 per cent on the dollar is her full capacity to pay.

Mr. WHITTINGTON. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Certainly.

Mr. WHITTINGTON. Something has been said about the settlement providing for the return of the security. What security does the United States hold on the $15,000,000 advanced to Greece?

Mr. CRISP. As I understand, when these credits were made in February, 1918, the credits were entered on the books of the United States, and Greece furnished her I. O. U. to the amount of them.

Mr. WHITTINGTON. None of those securities are held by the Government?

Mr. CRISP. No. Only the notes that were given at the time that the loan was made.

Mr. WILLIAMSON. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Certainly.

Mr. WILLIAMSON. Is the settlement of 34 per cent on the dollar on the basis of 6½ per cent?

Mr. CRISP. Oh, no. Greece borrowed from us $15,000,000. The settlement figures interest on this at 5 per cent up to January 1, 1928, so the total due us on that date, including principal and interest, is $19,659,836. This amount is to be amortized over a period of 62 years. Future interest from January 1, 1928, is negligible—for a few years no interest, then one-half of 1 per cent, then for a number of years 1 per cent, then 2 per cent, and the highest rate of interest ever to be paid is 3½ per cent, and this only to be paid on the last amortization payments.

It appears that financiers will take a debt due 62 years off and reduce it down to the present cash value and see how much that claim is worth to-day, and therefore they compute the present cash value. On the basis of 4 per cent interest the present cash value of this settlement is 34 cents on the dollar. In other words, about one-third of the $19,500,000, or $6,500,000 in cash to-day would pay the $19,500,000. Under this settlement you are canceling $13,000,000 of the debt due us to-day by Greece.

Mr. WILLIAMSON. Is 34 per cent based on $6,000,000? Is it $4,500,000 or $6,000,000?

Mr. CRISP. I can not answer the gentleman from North Dakota accurately as to the interest, but I think some of this will run at one-half of 1 per cent, and some at 1 per cent a year, and some at 2 per cent. It is practically no interest. But this $12,000,000 proposed to be loaned now is to bear 4 per cent.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. PERKINS. If we loan them this $12,000,000, they are willing to pay $2,922.67 in cash upon the execution of the agreement?

Mr. CRISP. Yes. Small favors thankfully received. [Laughter.]

Mr. GARNER of Texas. The loan is to be made to-day at 4 per cent, and the Treasury last week borrowed about $5,000,000 from the American people and agreed to pay 4½ per cent?

Mr. CRISP. Yes. Our President, in a very able message to Congress a few days ago, urged strict economy, adding that if new legislation was enacted our surplus of $37,000,000 will be dissipated.

If you vote for this bill, $12,000,000 of your $37,000,000 surplus is gone.

Mr. WHITTINGTON. Will the gentleman yield?

Mr. CRISP. Yes.

Mr. WHITTINGTON. What evidence or testimony was presented to the committee or may be found in the hearings as to the ability of Greece to pay?

Mr. CRISP. Well, now, I do not know what information my other friends on the commission may have, but I want to say this for the Treasury Department, the State Department, and everyone connected with the Debt Commission: They did everything in the world they could to collect every dollar they could for the United States in the funding of our war debts. They were earnest; they were active; they were zealous; and they obtained all available data as to the economic condition of those various countries; and I have nothing but admiration and praise, though of a different political party, for the way they discharged their duties. But as to this case, I myself have no information as to the economic condition of Greece, because there was an impasse at the beginning. Greece said she would not fund the $15,000,000 unless we were willing to recommend a further advance, and that we refused to do. Therefore, I myself have never had any data as to the economic condition of Greece.

Mr. COX. Will the gentleman yield?

Mr. CRISP. Yes.

Mr. COX. Except as to her ability to sell her bonds at 91.

Mr. CRISP. Yes; and I have already referred to that.

Mr. FREAR. Will the gentleman yield?

Mr. CRISP. Yes.

Mr. FREAR. The gentleman has referred to the other members of the commission repeatedly. Is it not a fact or is it a fact that all the other members of the commission and those interested in the settlement of the debt are agreed and approve of this settlement?

Mr. CRISP. Yes. I am the only hard-headed member of the jury, if that is what the gentleman is driving at; but I am reinforced in my position by this, that in January, 1926, every member of the commission took the same position I am now taking, and nothing in the world has transpired between then and now to change the legal status of the case, nor change me from standing pat, but they have changed. [Applause.]

Now, gentlemen, I have talked long enough; but let me sum up.

Mr. SIMMONS. Will the gentleman yield?

Mr. CRISP. I yield to the gentleman from Nebraska.

Mr. SIMMONS. Has the Greek Government refused to refund the indebtedness unless this loan is included in the settlement?

Mr. CRISP. I have repeatedly stated and can only repeat that in the conference I attended as a member of the funding commission with the Greek commission they took that position. Now, what has been done since the American Debt Commission went out of existence I know not.

Mr. PERKINS. Will the gentleman yield?

Mr. CRISP. Yes.

Mr. PERKINS. Is the gentleman aware of the saying "Beware of Greeks bearing gifts"?

Mr. CRISP. I have used that same saying. In June, 1926, when I saw in the press that the Greek Government was going to get a loan of $33,000,000 from the United States Treasury I made a speech on the floor of the House calling attention to that, and I said: "Beware of Greeks bearing gifts." [Laughter.]

Now, gentlemen, I have tried to present the facts as best I could. I do not believe there is any legal or moral obligation for the United States to advance this money. Why? In the first place, it was a joint war-time agreement, the consideration being to aid a friendly government. Venizelos was overthrown; Constantine returned and the government was unfriendly. We were released because France failed to fulfill her part of the contract. We were released because the Greeks privately, without our knowledge and consent, released England from furnishing a part of her contribution. We were released because Greece did not pay the interest. We were released because Greece, contrary to her covenant and agreement, without our consent, obtained a loan of $8,000,000 in Canada. We were released under the new agreement because Greece failed to carry out her covenant to furnish a semiannual itemized statement.

Mr. Chairman, I ask unanimous consent to extend my remarks by printing at the conclusion of them the minority report, which I wrote, in this case.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to revise and extend his remarks in the manner indicated. Is there objection?

There was no objection.

The minority report is as follows:

Mr. CRISP, from the Committee on Ways and Means, submitted the following minority views on H. R. 10760, Seventieth Congress, entitled, "A bill to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918":

We are opposed to the passage of this bill. It contains two substantive provisions: First, authorizing the funding of the principal sum of $15,000,000 and interest thereon, said sums representing advances made to Greece by the United States of $5,000,000 on December 15, 1919, $5,000,000 on January 16, 1920, and $5,000,000 on September 24, 1920 (all of said advances being made subsequent to the armistice of November 11, 1918), under the tripartite war agreement dated February 10, 1918. Second, authorizing a new loan out of the Treasury of the United States to the Republic of Greece of $12,167,000 for a period of 20 years at 4 per cent interest.

Our objections to the bill are principally against the provision of it authorizing a new loan out of the Treasury to Greece. The present cash value of the settlement with Greece as to the $15,000,000 due the United States is only 34 per cent of the amount due us as principal and interest. This proposed settlement, which would entail a great loss to the taxpayers of the United States, is based on the inability of Greece to pay the debt in full owing to her economic condition. The only justifiable reason for the United States to settle the debt of Greece for less than 100 cents on the dollar is the fiscal incapacity of Greece to pay in full. We, representing the taxpayers of the United States, can not get our consent to make a further advance to Greece of $12,167,000 at 4 per cent interest for a term of 20 years when the best obtainable settlement of her old debt was on a present cash-value basis of only 34 cents on the dollar, the payments extending over a period of 62 years. We do not believe there is any constitutional authority for the Congress of the United States in peace time to authorize a loan out of the Treasury to a foreign government. We do not believe the widest stretch of the general welfare clause of the Constitution of the United States would legally authorize such an act.

During the negotiations between the Greek Debt Commission and the American World War Debt Commission, having in view the funding of Greece's indebtedness to the United States, Greece contended that, under the tripartite agreement, the United States was obligated to advance her approximately $33,000,000 in addition to the $15,000,000 already advanced, and she refused to make any agreement as to the funding of the $15,000,000 except on condition of further advances. The American Debt Commission unanimously took the position that, under the tripartite agreement, the United States was not legally obligated to advance Greece any further sums whatever and the Greek Commission was so advised in writing. The negotiations ended and the Greek Commission returned to Greece.

Notwithstanding this position of the American Debt Commission in 1926 (and nothing has transpired since to change the legal status of the case), the agreement which this bill asks Congress to ratify proposes to advance Greece the additional sum of $12,167,000 on the theory of compromising the bare claim of Greece that the United States is under obligation to make her a further advance. We agree with the Debt Commission that, under the tripartite agreement, the United States is not legally obligated to make any further advance to Greece. Therefore we believe it illogical and unsound to compromise a supposed liability of the United States which does not in fact exist. We believe in the sacredness of international fiscal agreements, and we believe that individuals and nations should rigidly live up to the letter of their contracts and that the only equitable basis for compromising a financial obligation should be the inability of the debtor to pay in full. If the United States were legally obligated to advance Greece $33,000,000, with her great wealth, it would be inexcusable for her not to advance the full amount due by her. A compromise would be inexcusable. But we are thoroughly convinced that there is no liability whatever on the part of the United States to make any further advance to Greece.

Greece being affiliated with the Allies in the prosecution of the World War, on February 10, 1918, representatives of the United States, France, and Great Britain signed at Paris the tripartite agreement, whereby these nations agreed to make advances to Greece by equal shares during the year 1918 of 750,000,000 francs. It will be seen that the United States' proportion of this advance would have been 250,000,000 francs, then of the value of $48,236,629. This was a war-time agreement to aid in the prosecution of a common war against the Central Powers. The only authority under the Liberty loan act to make loans out of the Treasury to our allies was for "the national security and defense and for the purpose of assisting in the prosecution of the war." This was the only consideration moving the United States in making the agreement. Article 4 of the tripartite agreement expressly provided that the advances should be evidenced by obligations of the Government of Greece and that the Government of Greece, until the redemption of the aforesaid obligations, should not use any new security for an exterior loan without the assent of the Governments of the United States, France, and Great Britain. Greece also covenanted to pay the interest on the advances. It will be observed that this tripartite agreement was a joint war-time undertaking on the part of the United States, Great Britain, and France. Under the agreement Great Britain advanced Greece approximately $31,000,000, the United States advanced fifteen millions, and France advanced nothing. On December 22, 1921, without the knowledge or consent of the United States, Greece entered into an agreement with Great Britain releasing her from obligation to advance any further sums under the tripartite agreement, the consideration of releasing England being that she consented for Greece to obtain private loans in Great Britain.

As before stated, France advanced nothing. The failure of France to perform her part of the joint undertaking and the releasing of Great Britain without the consent of the United States from obligation to make further advances had the legal effect of releasing the United States from further obligation under the tripartite agreement. At the time the agreement was made Venizelos was the head of the Greek Government, and the Government was friendly to the allied cause. On December 19, 1920, the Greek Government changed, Venizelos fled, and King Constantine, the brother-in-law of Emperor Wilhelm, returned to Greece as its King, and the Government was no longer friendly to the Allies. On December 12, 1920, the American minister to Athens, Mr. Capp, wired our State Department that Great Britain and France had notified the Greek Government that they would not make further advances to Greece on the unused balances under the tripartite loan agreement in case of the return of King Constantine. King Constantine did return, and thereafter Great Britain and France made no advance. At this time, so far as we have been able to learn, the United States gave no instructions to Minister Capps in the premises. Upon the return of King Constantine the

United States Government severed all diplomatic relations with Greece, which condition obtained until 1924. When the tripartite agreement was made the United States covenanted to make advances to a friendly nation to aid in the prosecution of a common war. When the Greek Government changed and became unfriendly to our cause, the consideration of the war-time agreement failed and we were under no moral or legal obligation to make further advances.

It is interesting to note that during this period when no diplomatic relations existed between the Greek Government and the United States the Greek Government retaliated for not receiving further advances from the United States by very greatly raising the tariff duties on goods imported from the United States (on oleomargarine to the extent of 300 per cent). It is contended by the majority that the United States should advance from our Treasury this additional $12,167,000 to Greece because England advanced approximately $31,000,000 and we should advance to Greece a similar amount, and this advance of $12,167,000 and interest on the $15,000,000 already advanced would make our advance to Greece the same as England's. We see no merit whatever in this argument. England did not advance Greece any sum whatever after the Greek Government became unfriendly, and there is no moral nor legal reason why we should do so. This is especially true, as France has never advanced anything, though France was just as much a party to the tripartite agreement as the United States and England. But it is contended by Greece that the tripartite war-time agreement was not a joint but a several agreement. Even if this were conceded, the United States would have a complete defense against any liability under the agreement to make advances to Greece, owing to the failure of that Government to perform her covenants in the agreement, first, by failing to pay interest due the United States on the $15,000,000 already advanced her, and, second, contrary to her expressed covenant that she would not make another exterior loan without the assent of the United States, France, and Great Britain, she did in December, 1923, contract a loan in Canada in the sum of $8,000,000 without the knowledge or consent of the United States, pledging her surplus revenue for the services of the loan, thus clearly violating the terms of the original tripartite agreement and releasing the United States from further legal obligation under it.

Upon the completion of the war-time tripartite agreement of 1918 the Treasury of the United States opened on its books a credit for the amount the United States agreed to advance Greece under the joint war-time agreement, but no advance was requested by Greece until September 3, 1919 (at which time she was at war with Turkey), when diplomatic correspondence was conducted between the two Governments relative to advances.

That Greece did not request these advances for World War purposes is shown by a letter from M. Tsamados, chargé d'affaires of Greece, to Hon. Robert Lansing, Secretary of State, under date of September 3, 1919, in which he makes the statement: "However, the United States being the country having suffered least from the ravages of the war, as well as the country producing everything required by the allied nations, it is to her, very naturally, that Greece turns to procure all that she needs to feed her population, to run her factories, and to provide for the needs of her economic life." This diplomatic correspondence resulted in a new agreement and understanding between the two Governments, assented to by both in writing, that the United States would make advances to Greece with the distinct agreement that all the money advanced should be expended in the United States and that the Greek Government, through its embassy, should furnish itemized semimonthly statements to the United States Government showing the purposes for which such sums were used and expended. Under this new agreement the United States advanced to Greece the fifteen millions on the basis hereinbefore mentioned. Greece again failed to comply with her obligation and has never furnished the United States the semimonthly itemized statements showing the manner of expenditure of said $15,000,000. Therefore the United States is under no liability under this new agreement to make further advances to Greece.

In 1924 the United States resumed diplomatic relations with Greece. Some of our former officials of the Treasury Department took the position that the United States was obligated to make further advances to Greece under the tripartite agreement. Hon. Norman Davis, a previous Undersecretary of State, held that view. Hon. Charles E. Hughes, recognized as one of the greatest legal authorities of the United States, while Secertary of State, took the position that the United States was not obligated legally under the tripartite agreement to make any further advances to Greece, as evidenced by the fact that the American minister at Athens, under instructions from the Department of State, Mr. Hughes being Secretary of State, informed the Greek Government in 1924 "that the Government of the United States did not consider itself obligated to make any further advances under the terms of the 1918 agreement."

The American World War Debt Commission frequently urged the debtor nations to send commissions to the United States to negotiate the funding of their indebtedness to the United States, but, following the 1924 pronouncement of the State Department that the United States was not obligated to make further advances to Greece, Greece declined to take any steps toward the funding of her old indebtedness until January, 1926. At that time, during negotiations between the Greek Debt Commission and the American Debt Commission, the Greek commission insisted that the United States was obligated under the tripartite agreement to advance Greece $33,000,000 additional, and that Greece would not fund the $15,000,000 of her old indebtedness unless a further advance was made. The Greek commission insisted on the further advance, contending that this $33,000,000 of uncollected credit had been assigned and transferred to the Bank of Greece and that the Bank of Greece had issued drachmas on it, which drachmas were used by Greece for military purposes, and that the Bank of Greece was entitled to have this amount advanced out of the Treasury of the United States to protect it for having issued the drachmas.

Let us briefly consider the history of Greece during the World War: King Constantine, its ruler, was the brother-in-law of Emperor Wilhelm of Germany. The king, his counselors, and a majority of the Greek people were friendly to Germany. A minority of the population under the leadership of Venizelos were friendly to Serbia and the allied cause. The Greek Government officially declared itself neutral and maintained a large army for the purpose of enforcing its neutrality. It was common knowledge, however, that the official Government of Greece was secretly actively aiding and abetting the cause of Germany. Important parts of the territory of Greece were occupied by the Bulgarian allies and friends of Germany. Austrian troops occupied part of the Greek territory. The conduct of Greece became so threatening to the Allies that the Allies landed troops in Greece, who were fired upon by Greek troops and many of them killed. On September 1, 1916, an allied squadron, consisting of 23 warships and 7 transports, anchored 4 miles outside of Piræus. The Allies demanded of King Constantine satisfaction for the assault on the allied troops, and finally the Greek palace was bombarded. After months of negotiations, in June, 1917, Constantine abdicated in favor of his son, Alexander, and left Greece. The Allies forced the Greek Government to salute the allied flags and to demobilize their army to only the number required to maintain order.

In June, 1917, Venizelos became premier and the head of the Government of Greece, and a few days thereafter Greece formally entered the war on the side of the Allies. At this time part of Greece was in possssion of Bulgarian and Austrian troops, she had lost a large part of her territory, and Premier Venizelos made the following statement to the Greek people: "In taking part in this World War we shall not only regain the national territory we have lost, we shall not only reestablish our honor as a nation, we shall not only effectively defend our national interests at the peace conference and secure our national future, but we shall also be a worthy member of the family of free nations which that conference will organize, and we shall hand down to our children such a Greece as generations past have dreamed of." Greece entered the war for the purpose of self-defense, to expel invaders from her territory, and her course at this time was most honorable and commendable. The national security and honor of Greece demanded that she use all of her resources to conduct her military operations, just as the United States expended $30,000,000,000 in her military operations, and we received at the conclusion of the war neither territory, property in kind, or reparations, while the other Allies, including Greece, did obtain material and financial advantages.

At the time Greece joined the allies on June 29, 1917, her financial condition was good; the drachma was at par, and this condition continued until after the armistice of November 11, 1918. Under the Venizelos régime, upon her declaring war, her army, which had been demobilized, was recruited and reorganized.

During the spring of 1918 Greek troops did take part in battles of the Macedonian front, defending her own territory and expelling invaders. The army conducted itself with valor and great credit. The Greek soldiers were the peers of the allied troops fighting with them, and we have great admiration for them. After the signing of the armistice on November 11, 1918, Venizelos, representing Greece, attended the peace conference in Paris. He insisted that certain territory formerly belonging to the Central Powers be awarded Greece, but the peace conference failed to pass upon his demands. On May 5, 1919, he obtained consent of the peace conference for the Greek Army to occupy Smyrna, which resulted in a war between Greece and Turkey and in military operations of Greece in Asia Minor, which operations resulted in large financial expenditures by Greece, the impairment of her economic condition, and the depreciation of the drachma. The United States was not a party to this war. The reverses of the Greek Army in Asia Minor resulted in the overthrow of the Venizelos government, and King Constantine, upon the death of his son, King Alexander, returned to Greece as king on December 19, 1920. Thus the Government of Greece became again unfriendly to the allied cause. The allied governments refused to recognize the new régime in Greece and refused to make further financial advances under the tripartite agreement, for the consideration of it had failed. Thus it will be seen that it was not for the purpose of the prosecution of a common war that Greece in 1919 desired further advances from the United States, but because of financial necessities and reverses sustained in Asia Minor. I quote from page 390 of Doctor Gibbons's "Venizelos":

"Greece was in sore need of money for military expenses in Asia Minor, especially if she hoped to match the armaments the Turks were receiving openly from Russia and surreptitiously from Italy and France. But the United States used the change of government as an excellent pretext for not allowing Greece to draw further upon the credit granted her as a war measure. About $30,000,000 was thus suddenly rendered unavailable. At the same time France, invoking the pretext that the Constantinist Government was illegal, refused to pay back to the Bank of Greece the large sums of money advanced to the French Army at Saloniki when the rate of exchange had been unfavorable to the conversion of francs into drachmas."

As before stated, the whole contention of the Greek Debt Commission in urging additional funds from the United States Treasury was that the credit belonged to the Bank of Greece because it had issued drachmas on it which were used by the Greek Government in prosecuting its military operations as an integral part of the allied forces. Even if this were true, owing to the depreciation in the value of the drachma, to-day $1,500,000 would purchase and retire all the drachmas issued by the Bank of Greece on this credit. If $1,500,000 would make the Bank of Greece whole, under what stretch of the imagination should the taxpayers of the United States loan Greece $12,167,000? Even conceding for the sake of argument that there is a liability on the part of the United States under the tripartite agreement, in equity the greatest amount Greece could claim under it would be $1,500,000, or a sufficient amount to retire and cancel the drachmas issued by the Bank of Greece based on the credit.

The American Debt Commission combated and denied all of the contentions of the Greek commission and insisted that there was no liability on the part of the United States to make further advances to Greece and that they would not fund on that basis; neither would they recommend to Congress that additional advances be made to Greece out of the United States Treasury. Negotiations ended and the Greek commission returned home. A few months thereafter we read in the press a statement sent out from Athens, Greece, to the effect that Greece was going to get $33,000,000 from the United States Treasury. Shortly thereafter the public press contained the statement that the Secretary of the Treasury of the United States had appeared before the Finance Committee of the Senate in reference to the Greek indebtedness. If this bill becomes a law the Greek press notice will be partially verified at the expense of the American taxpayers.

It is interesting to note that under the proposed bill it is not proposed to turn over the $12,167,000 to the Bank of Greece, but to the Greek Near East refugee settlement. Why this change? Can it be that it will be more appealing to the American Congress and the American people to advance money out of the Treasury for humanitarian purposes than to advance it to an international bank? We sympathize with and approve of the humanitarian activities of Greece in caring for her needy and we rejoice that charitable Americans have largely contributed to this noble work, and we commend it to our philanthropists as a most deserving cause, but we do not believe that the Congress of the United States can appropriate from the Treasury for this deserving charity. Charity begins at home, and if the Government of the United States is to deal in such gratuities there is great distress among our own people that has first call on the United States Treasury. The Pennsylvania coal fields, the distress of the Mississippi flood sufferers, and the financial needs of thousands of American citizens out of employment, it seems to us, have a claim on the charity of the United States prior to that of the Greek refugee settlement.

When Greece failed to obtain the $30,000,000 out of the United States Treasury she then sought to obtain private loans. It may interest the House to know that the aid of the League of Nations was invoked for this purpose. On September 15, 1927, at Geneva, the Council of the League of Nations approved a loan of £9,000,000 (approximately $45,000,000) for the Republic of Greece. Under the approval of the League of Nations $17,000,000 of the loan is to be offered in London, Italy, and Sweden; $12,167,000 is to be loaned out of the Treasury of the United States at 4 per cent, provided Congress consents to it, and the remainder is to be offered in New York and Switzerland. Under the terms of the loan Greek bonds of $100 par value are to be sold to private bankers in London, New York, and elsewhere at $91, these bonds bearing interest at 6 per cent, thus netting the purchasers a yield of practically 6½ per cent; while the $12,167,000 to be loaned of the people's money out of the United States Treasury is to bear only 4 per cent interest. These statements are taken from an advertisement of international bankers in the London Telegraph, dated January 31, 1928, offering the bonds for sale in London and setting out in detail the activities of the League of Nations in connection with the approval of the loan.

We are advised that the bond issue offered by Greece through private bankers was oversubscribed. Therefore Greece is able to borrow money from private sources by paying 6½ per cent for it. The practical effect of the loan out of the Treasury would be to let Greece borrow $12,167,000 from the United States Treasury at 4 per cent, thus saving Greece on the loan 2½ per cent interest at the expense of the American taxpayers. This we consider unconscionable, unfair, and inequitable to the taxpayers of the United States.

We believe it a dangerous and unwise policy for the United States to make loans direct from the Treasury to any foreign nation. The Treasury will not make loans to American citizens, no matter how well the loans may be secured. If this loan is authorized, it will become a precedent and we fear that many of the European nations now friendly to us will request financial aid from the United States Treasury, and, if the applications are declined, that our present friendly relations with some governments may become impaired. In our judgment, the wise course for this Government to pursue is to refuse to make this loan and thereby let all nations of the earth know that the Treasury of the United States will not perform the function of a private international bank.

Summing up, we do not believe there is either a moral or a legal obligation on the part of the United States to make any advances whatever out of the Treasury of the United States to the Greek Government, for the following reasons: The agreement to make advances to Greece was entered into during the war for our national defense purposes when that Government was friendly to the Allies and the consideration of the agreement was negatived when the Greek Government became unfriendly upon the return of King Constantine; the United States was released from its joint war-time undertaking because France advanced nothing under it and England advanced 31,000,000 and was released by Greece from further advances without the consent of the United States; Greece breached the contract by failing to pay the interest due on the advances she had received; Greece further violated her expressed agreement by obtaining, without the knowledge or consent of the United States, a loan of $8,000,000 in Canada; and Greece violated the terms of the new agreement entered into between her and the United States in 1919 that she would expend within the United States all sums advanced and furnish semimonthly itemized statements of her expenditures, which she failed to do.

CHARLES R. CRISP

Mr. GARNER of Texas. Mr. Chairman, how much time have I consumed?

The CHAIRMAN. The gentleman from Texas has 19 minutes remaining and the gentleman from Oregon [Mr. HAWLEY] has 50 minutes remaining.

Mr. HAWLEY. Mr. Chairman, I yield two minutes to the gentleman from Ohio [Mr. BURTON].

Mr. BURTON. Mr. Chairman, in confirmation of the statement I made, that there had been an expenditure of the 250,000,000 francs, I want to quote from the hearings on pages 3 and 4. This statement has not been contradicted and it is also contained in another public document:

Advances were to be subject to the approval of an Interallied Financial Commission, composed of one representative from each of the signatory governments, and the use of funds was to be controlled by this commission and by a military commission similarly established. The reports of the American consul general at Athens, who represented the United States on this commission, showed that Greek expenditures under the agreement reached the total of 682,134,693.54 drachmas. One-third of that amount expressed in dollars aggregates $43,883,998.62. Actually, Greece spent the full 750,000,000 francs, though owing to the failure of the Interallied Financial Commission to meet, the balance of these expenditures was not formally checked.

I state this in confirmation of the statement I made that the amounts which were to be paid by us were used by the Greeks in the campaign against Bulgaria.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. HAWLEY. Mr. Chairman, I yield 15 minutes to the gentleman from Wisconsin [Mr. FREAR].

Mr. FREAR. Mr. Chairman, the reason I have been asked to speak on this bill is because of the fact that last summer I went through the Greek refugee settlements a few miles out from Athens, near Piræus, and saw the condition of the work being performed there by the Greek Refugee Commission, of which Charles Eddy, a citizen of this country, is chairman. I was with Sir John Simpson and others who went with Mr. Eddy and myself over all this work to show what they were doing and how they were accomplishing their task.

If you could only know the facts or if I had time and could present them to you as they ought to be presented, I am sure I would answer very much that my good friend, the gentleman from Georgia, Mr. Crisp, has said.

The gentleman has asked why loans were made by the international bankers and to whom. They were made to Greece primarily for these refugees, particularly the loan of 1924.

As everyone knows who is at all familiar with the subject, over £9,000,000 were realized from the 1924 sale of bonds and that amount, reaching over $45,000,000, was expended by the Greek Refugee Commission. That was a 7 per cent loan, made through the international bankers of the world to anyone who would buy the bonds—they are to-day quoted at 98—and this money was lent Greece to save the lives of hundreds of thousands of refugees in these Greek refugee camps. I can bring

you all kinds of evidence of this, which no one will question because the reports made by the commission to the League of Nations, that helped finance the loan, accounts for every dollar so used.

I was out there and saw the little hovels where these people were gathered in a great camp near Piræus. Originally 1,400,000 of these poor refugees were driven out from Smyrna, from Turkey, and from many other places, and they were suddenly thrown upon a little war-stricken country of 5,000,000 people. It was the same as though we were forced to provide for 30,000,000 destitute people after we had just passed through a disastrous war. That is the proportionate burden placed on Greece to-day.

The Greek commission, under the League of Nations, of which an American, Mr. Eddy, is chairman, has put 143,000 families out on farms to date. This is about one-half of the total number of refugees. Nearly 700,000 men, women, and children are thus taken care of. About 700,000 refugees are still in the camps—old men, women, and children who are cared for by the commission.

Now, what is the moral obligation and what is the legal obligation? My good friend, the gentleman from Texas [Mr. GARNER], who is a very able man, has not touched on the moral obligation, in my judgment, although he discussed the subject at some length. He asks what is the moral obligation on the part of our Government.

The moral obligation is that the Greeks saved the American Nation hundreds, yes, thousands of lives of American boys. How did they do this?

Mr. GARNER of Texas. Will the gentleman yield?

Mr. FREAR. In just a moment, when I have finished my statement.

In this agreement, entered into between the United States and Greece in February, 1918, they said they would put on the front nine divisions, or 250,000 men, one man for every 20 people that lived in Greece, and they did this, on the understanding they were to be financed by whom? By France, by Great Britain, and by the United States. A total of 750,000,000 francs was to be advanced. Our share was 250,000,000, or about $48,000,000. Did Greece perform her share of the agreement?

The statement has been made here, and I wish I could answer it in detail, that France did not pay her 250,000,000 francs. France and Great Britain had just spent 600,000,000 francs to finance Greece during the war. France contributed 300,000,000 francs of the amount. France put eight divisions, or 200,000 men, along with nine divisions of the Greeks, in the fighting on the Macedonian front. The combined force finally crushed Bulgaria and, on September 29, Bulgaria signed an armistice, only six weeks before the armistice that was signed in Paris on November 11, thus ending the war. That was the beginning of the end for the Central Powers. To Greece, as much as any small nation, goes the credit of breaking the morale of Germany. Let us get this moral and legal obligation clearly in mind, and I again repeat that 10 months after we entered the war the United States, Great Britain, and France agreed with Greece to finance Greece if she would raise nine divisions and start the Bulgarian campaign. I can not do better than quote from the report, which says:

In the winter of 1917 Great Britain, France, and the United States considered it urgently necessary that Greece should greatly increase her fighting strength in order to bring pressure to bear on the Central Powers along the eastern front. To enable Greece to lend the required assistance the United States, Great Britain, and France concluded with Greece the tripartite loan agreement of February 10, 1918. Under the agreement Greece was to expend immediately 750,000,000 francs of its own resources for the payment of soldiers, sailors, and other local military expenses. The United States, France, and Great Britain were to open on their books, in equal shares, credits to the Greek Government amounting to 750,000,000 francs, which were to support the bank notes issued by the National Bank of Greece for these war expenditures. This promised advance of 750,000,000 francs for soldiers, sailors, and local military expenses was in addition to an advance by France and Great Britain to Greece of 600,000,000 francs for munitions and supplies. During the war the United States, Great Britain, and France were not to make actual advances of the credits unless the foreign balance of the Greek treasury and the National Bank of Greece fell below 100,000,000 francs, but six months after the conclusion of peace the balance of these credits was to be available to Greece without any restriction. Thus the agreement expressly provides for advances to Greece subsequent to the conclusion of peace.

Relying upon the undertaking of the United States, Great Britain, and France, Greece actually spent the full 750,000,000 francs for the purposes specified in the tripartite loan agreement. She was thus enabled to put 250,000 men in the field, increasing her army from three divisions to nine, and, as shown by the following time table of events, secured the urgently desired victory on the eastern front, which played such an important part in the ultimate success of the allied cause:

1. February 10, 1918. Agreement by the United States, Great Britain, and France to loan 750,000,000 francs to Greece.

2. Throughout the winter and spring of 1918 the Greek Army was reorganized and reequipped and on the Macedonian front Greek troops gradually replaced British and French troops recalled to the western front, until the new Greek Army had been so greatly increased that it represented the largest allied contingent.

Mr. Chairman, now coming to the moral obligation that involves the honor and respect for this Government's word before the world: Relying upon our pledge made when we were unable to get American soldiers to the front equipped and trained for battle, Greece secured credit and hastily equipped an army, which in proportion to our own population would have meant 6,000,000 men for us, or 1 out of every 20 people in Greece; and then Greece fought with the courage of the early Spartans. Let me again quote from the high military officers who were in that offensive or who have measured its effect on the war. From the report we again learn:

3. May 20, 1918. The new Greek Army was successfully tested out in battle in the attack on Skra-di-Legen.

4. September 15, 1918. Beginning of the allied offensive on the Macedonian front, which culminated in the decisive allied victory. The allied armies were composed of 9 Greek divisions, 8 French, 5 Serbian, 4 British, and 1½ Italian. Both Franchet d'Esperey (commander in chief of the allied armies in Macedonia) and General Milne declared that the Greek Army had proved a decisive factor in the victory. The British general said: "Without the aid of the Greek forces the present victory could not have been obtained."

5. September 29, 1918. Armistice signed between the Entente Allies and Bulgaria.

Says General Ludendorff: "There were no illusions about the seriousness of the situation created by the collapse of Bulgaria." (Ludendorff's Own Story, Vol. II, p. 369.)

Count Burian, Minister for Foreign Affairs for Austria and Hungary (1915–1917 and 1918) declares:

"Fate took its course. When the Balkan Army with the newly enrolled Greek troops developed a strong offensive, the Bulgarian troops fled. A terrible experience for the veteran army accustomed to victory, it was a shattering blow, not only to the weakening morale of the other armies in the field but also to the morale of the people at home. * * *

"In dealing with the military situation, the Central Powers took steps to establish a new shortened front against the advance of the Entente troops through Serbia. In this they were not successful, as the following days soon showed. Nothing could now check the unrestrained development of events within the monarchy and Germany, which now took their headlong course, under the influence of a kind of panic that everything had been lost." (Austria in Dissolution, Burian, p. 395.)

October 30, 1918. Armistice signed between the Entente Allies and Turkey.

As a legal proposition how can any man contend that this Government is not bound to loan the full $48,000,000 to Greece which we agreed to pay on February 10, 1918, if called for? Did we not receive full consideration from Greece for the 1918 agreement? Did not Greece advance the money and did she not fight our battles as well as her own? If she had lost in that offensive our legal obligation would have been the same, but she won and shortened the war so that within six weeks it was ended. The moral obligation, far greater than any bare legal proposition, lies in the fact that not only did she perform her part of the agreement, but by shortening the war Greece saved this Nation a hundred million dollars for every day so saved in war expenses. Far greater to a hundred million Americans by winning the offensive and crushing Bulgaria, thousands of young American soldiers were saved and returned home to become good American citizens. To say we can welch out of our liability by any weasel words that Greece was to spend money for equipment with American munition makers lends color to the frequent charge that they were behind the war. Greece won whether the guns were bought in America or in France. To say that we can dodge our responsibility by saying that Greece afterwards negotiated a loan for necessary Government purposes is equally indefensible, because, when we failed to promptly pay our $48,000,000, Greece could not wait for us to decide whether we would keep our pledge to her. She had to get money somewhere and when we refused her bread she had to get it wherever civilization would offer it.

Greece has offered to leave it to arbitration but we refuse, and adding insult to injury, we refused to pay a just debt or arbitrate. Let us see if this is not so. Practically every

official authority in the Wilson administration that made the agreement has so declared. This Government has pledged itself to make the loan agreed to on February 10, 1918, of $48,000,000.

Again I quote from the report:

Under date of December 31, 1920, the Department of State wrote to Assistant Secretary Kelley of the Treasury Department:

"The President was informed by letter dated December 25 of the inquiry made by the Treasury. He has expressed his concurrence in the recommendation made by this department that the credit obligation negotiated with the Venizelos government (referring to the credit of $38,000,000) should be considered as still binding on this Government, and that the Greek chargé d'affaires, on proper application, should be recognized as representing the government of King Constantine."

Under date of January 10, 1921, the Undersecretary of State, Norman H. Davis, wrote Senator Williams:

"If and when this Government extends recognition to King Constantine or continuous relations with the Greek Government, I do not see how the Treasury can legally or morally cancel its obligation to complete the advance to Greece under the terms stipulated."

Under date of January 13, 1921, Assistant Secretary of the Treasury Kelley wrote to the State Department:

"I understand from Mr. Merle-Smith's reply of the 3d ultimo that the President has expressed his concurrence in the recommendation made by the Department of State that the financial arrangements made with the Greek Government early in 1918 should be considered as still binding on this Government."

Under date of January 14, 1921, the Undersecretary of State, Mr. Davis, wrote to Mr. Kelley:

"You are correct in your understanding of the President's views in respect of the financial arrangement with the Greek Government early in 1918."

On March 3, 1921, the last day of the Wilson administration, there was prepared by Assistant Secretary Kelley, who had been in charge of all foreign loans, a memorandum intending to inform the incoming administration as to the exact situation in respect of these loans, the policy of the department, and the obligations of the Government as viewed by the outgoing administration. In respect of the Greek loan, the memorandum of Mr. Kelley reads in part as follows:

"The Treasury is not in a position to complete any arrangements for further advances to Greece until the Department of State officially advises the Treasury that the present chargé d'affaires of the Greek Legation in Washington is the authorized person in charge of the legation with whom the Treasury may officially deal as having been accredited to this Government by the present King Constantine. After these advices are received the Treasury is, in my opinion, bound to make advances to Greece in accordance with the agreement of 1918, and it would be wise, unless the Department of State shows reason to the contrary, for the Treasury to continue in accordance with the arrangements set out in Mr. Davis's letter of November 23, 1919, to the Greek Minister in Washington to make advances in installments as requested by the Greek Government."

Thus these officials expressed themselves on the performance of Greece of her promise to raise her army and fight all in pursuance of the agreement of which I quote Wilson's approval:

I am disposed to feel that, in view of the joint recommendation of Colonel House, General Bliss, and Mr. Crosby, that this be done, we should join with Great Britain and France and advance one-third of the 750,000,000 francs to Greece, although this does involve expenditures outside of our country. If you approve, may I ask that you indicate your approval upon this letter, carrying as it will the establishment of a credit for Greece of 250,000,000 francs, or approximately $44,000,000 at the current rate of exchange.

Cordially yours, W. G. McADOO, *Secretary.*

The PRESIDENT,
The White House.

THE WHITE HOUSE, *December 10, 1917.*

Approved.

WOODROW WILSON.

Again I quote from the committee report to show the confidence which governed all parties in these negotiations:

There is no doubt but that Greece expended for war purposes under the 1918 agreement an amount largely in excess of the advances she has since received.

Upon the recommendation of the American delegate on the Inter-allied Financial Commission, the Secretary of the Treasury, with the approval of President Wilson, established on the books of the Treasury the following credits in favor of Greece for which the Treasury holds the obligations of that Government:

	Amount
June 20, 1918	$15,790,000.00
Dec. 3, 1918	23,764,036.00
Mar. 25, 1919	3,858,930.00
July 31, 1919	4,823,663.05
	48,236,629.05

Against these credits the Treasury made cash advances as follows:

	Amount
Dec. 15, 1919	$5,000,000
Jan. 16, 1920	5,000,000
Sept. 24, 1920	5,000,000

All told, we advanced $15,000,000, leaving credits amounting to $33,236,629.05 remaining on the books of the Treasury.

Greece financed this undertaking and put in every dollar, raised her army and fought our battles, expecting, of course, to get this loan. The loan to be paid by us was to be one-third of 750,000,000 francs, or $48,000,000.

This is the moral obligation that we owe her, because we agreed to finance Greece when she raised the army.

I now yield to the gentleman from Texas.

Mr. GARNER of Texas. We agreed to give her $33,000,000 more than we have given her; why does not the moral obligation carry us to that extent?

Mr. FREAR. That is just the question I wanted to answer, and I am very glad the gentleman has asked it.

If I wanted to borrow from the gentleman from Texas $33,000,000 or only $33, which would be nearer our capital, and I came to you and said, "Twelve dollars, John, will be sufficient to finance me; I do not need to borrow any more, because I can not pay the interest on the old debt and I can not pay interest on a new debt of $33, and I do not need the rest of the money," then there would be no moral obligation on your part to loan more, even though you had agreed to do so; but if you owed that to me and I did not ask you to reduce it, it would be a different matter. I am speaking in dollars where these Governments during the war and since speak in millions.

Now, my friends, this is the situation——

Mr. GARNER of Texas. Will the gentleman yield once more?

Mr. FREAR. I have answered the gentleman and my time is limited. The moral obligation is incurred because Greece performed her work; she fought our battles; Greece financed what she agreed to finance,. and we never did, although we finally loaned her $15,000,000 of the $48,000,000 we had agreed to pay and which she expended in raising her army.

Let me add that the statement of my friend, Mr. CRISP, that, he alone of all the reparation commissioners, opposes this settlement carries its own argument.

Now, I do not claim my good friends are playing politics, although the lines drawn sound largely on this side of the aisle. I would stand with them if I thought they were right, but is it not interesting to note what Senator BURTON has just read showing that practically every official of the Government—every Democratic official in the State Department, every official in the Treasury Department—with President Wilson agreed to this pledge made with Greece in 1918. The $15,000,000 loaned on the agreement and the credit of $48,000,000 stands against this Government in favor of Greece.

This is stated on page 18 of the hearings on the Greek debt settlement, and the only one against it to-day, or the one leading the fight against it, is one member of the Debt Funding Commission, my good friend from Georgia.

The Republican administration, let me say, is doing something that the Democratic administration morally and legally bound us to do in past years, and now we can not afford to welch on it, particularly since the action by Greece probably saved hundreds and thousands of lives of American boys, because Greece broke the line at that time and all authorities quoted show the effect of that offensive.

My friends, I have three or four different propositions which I would like to discuss briefly.

The $15,000,000, with interest added, means a total of $19,000,000. It is proposed that this $19,000,000 shall be refunded as we refunded the Italian and the other debts. I think the Italian debt was funded on the basis of 26 cents on the dollar, while this is at 34 cents, its cash value of more than one-half of the 65-cent cash basis of the British settlement. Certainly Greece could not be asked to do more.

We only paid $15,000,000 on the $48,000,000 that we agreed to put up to finance the war at that time. President Wilson and the entire war administration agreed to the full amount. Greece at that time borrowed the money wherever she could get it and financed the offensive, and now Greece asks not for $33,000,000, the balance, but for practically $20 per capita, to take care of these 700,000 refugees that they have in the camps and are practically destitute. Remember 700,000 in round numbers have been cared for, and about the same number remain, that the commission is providing for as rapidly as possible.

I went through these camps last summer with the commission, and, as I have said, the refugees live in little hovels. They live in places that are not as wide as this path between

the aisles, where you can hardly pass each other, but they are very clean. They sweep out their little places with the dirt floors and they look as happy and as well as they possibly could. The Greek Refugee Commission has established hospitals for them, and has cared for them in a hundred different ways, buying seed grain to start them, building homes at a cost of $200 in many cases, supplying medicine, food, and clothes when necessary, and in every way expending as carefully as possible the $50,000,000 in round numbers so far raised through the aid of the League of Nations. But remember that that amount of money used to relieve 1,400,000 destitute refugees during four or five years is small indeed.

Every dollar of this money is going to the Greek refugees, and every dollar of the bonds issued, of which I have spoken, has gone to the refugees. Greece is under a tremendous burden. I can not express it—you know what a small government it is—and they have a tremendous burden placed upon them. Greater than any other government in the world, according to her size. The commissioners are to care for them. I would not hesitate to give the $12,000,000 to them outright. We did so with Russia, with Austria, and other countries, why not to Greece that has helped us win the war? Out of the $4,700,000,000 appropriated this year, 75 per cent of it is going for wars, past and future. That is the history of our war activities—caring for our debts, interest, veterans, and for our Army and Navy. Now, we can not quibble where we owe a just debt of this kind, and we certainly owe it—it is a moral obligation and a legal obligation—not to be paid in cash but to loan Greece and to be repaid with interest. We had the benefit of the sacrifice of the Greeks. They put 250,000 men, nine divisions, into the field. They did exactly what they guaranteed to do. We have done nothing except to give the $15,000,000, and we did it grudgingly.

Now, I can not think of anything that is a greater humanitarian work, a better work for this Government to do, than to pay this comparatively small amount for the protection of these women and children, these old men that I saw there without any of the comforts of life. They have put about 700,000 out on the farms, as stated. I saw them working there, selling little carpets, mats, things that they had made. Many of them were without any furniture, only boxes. I am sorry that the gentleman from Florida [Mr. GREEN] said what he did. He has come into Congress asking for favors. He is entitled to ask for favors. Just as you gentlemen came last session and asked for $325,000,000 for flood control, and we gave you what we could, and the taxpayers are meeting these amounts, but this is to be a small loan that we have promised to make.

Mr. GREEN. They referred us to the Red Cross.

Mr. FREAR. But the Red Cross can not work over there; nor is it a matter for the Red Cross here. I believe that this Government ought to keep its promise even in this slight degree and should loan the money promised for the relief of these people.

Bear in mind again that the Greeks put 250,000 men under their agreement into the war and broke the Macedonian front; that we agreed to loan them $48,000,000, and we can not get behind the skirts of other countries if they failed to do their duty. Great Britain and France had given Greece 600,000,000 francs long before this last agreement. They gave many divisions of men to help Greece. We gave nothing but empty agreements, and later $15,000,000 on account.

My friends, $12,000,000, as the gentleman from Ohio has well said, will not crush this Government in paying its honest obligations. If we refuse to pay this $12,000,000 it will put us in the eyes of the world in a contemptible light—the richest Government that has had the benefit of the lives of these Greek soldiers, and that is a position that we can not afford to take.

I am willing to vote $100,000,000 or $300,000,000, if necessary, for my people here for floods or other needs; but this is not a gift; it is a loan of money to take care of the lives of women and children who are there now in the refugee camps.

Now I have concluded, and I am ready to answer any question that may be asked.

Mr. PERKINS. Under the terms of the original agreement to lend the money to Greece, was there any time set for repayment?

Mr. FREAR. There was no time fixed for the repayment of the Greece loan any more than there was to the loans given to Great Britain and France. When I was on the committee I discovered that we had not any evidence of any of these debts except memorandums from the ambassadors.

Mr. PERKINS. Then, if there was no time limit in which they were to make a repayment we could demand it at once as a moral obligation?

Mr. FREAR. We could do that with every loan during the past 10 years. But we could not have collected on our loans.

As I say, Greece gave the lives of her soldiers and we promised to help them. Now they need the money to care for these refugees.

When France was doing her share and Great Britain was doing hers, can we sit back and say, "We do not owe you anything because you did not demand it"? I am sure the House will not so decide.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. HAWLEY. Mr. Chairman, I yield 15 minutes to the gentleman from Illinois [Mr. CHINDBLOM].

Mr. CHINDBLOM. Mr. Chairman and gentleman of the committee, when the matter of settling this loan, with the inclusion of a provision for a further advance to Greece of $12,000,000, or any other sum, first came to my attention I was inclined, as I think many Members of the House have been, to question and to doubt first the wisdom and then the necessity for any advancement of money by our Government to one of our allies so long after the termination of the war. In fact, I was in my own mind opposed to it, unless it could be demonstrated that it was a proper and necessary thing to do. I have studied this situation quite carefully. I have read everything that I have been able to find upon it and I am prepared to vote for this settlement. I think it is just, fair, reasonable, and based not only upon a moral but upon a legal obligation upon the part of our Government.

The history of the participation of Greece in the World War has to some extent been recited. The Allied Powers needed the assistance of Greece in 1917 for the purpose of making attacks on Bulgaria and Turkey who were allied with the Central Powers. Our own representatives, General Bliss, Mr. Crosby, and Colonel House, an unofficial representative of the President, were upon the scene. They, with representatives of Great Britain and France, held a conference with representatives of the Greek Government, and it was then agreed that in consideration of certain military operations to be performed by Greece, the three Governments of the United States, Great Britain, and France would advance moneys to the Greek Government. The British Government and the French Government were to advance 600,000,000 francs in the first instance for the raising of troops, and these two Governments, together with the United States, were to advance 750,000,000 francs thereafter for the maintenance of these troops, and it was specifically agreed that Greece should increase her three divisions in the army to nine divisions for the purpose of engaging in the war on the eastern front. This money was to be placed to the credit of Greece upon the accounts of the three Governments of the United States, Great Britain and France. A financial commission was appointed to handle the money end of the proposition, and a military commission was appointed to handle the military operations. This military commision was to report to the financial commission when Greece had complied with the terms of the agreement, so that Greece would get the credits upon the books of the three countries.

So far as the United States is concerned, the military commission did report to the financial commission, and a statement as to this report is found on page 4 of the hearings, the same statement mentioned a while ago by the distinguished gentleman from Ohio [Mr. BURTON] to the effect that—

> The reports of the American consul general at Athens, who represented the United States on this commission, showed that Greek expenditures under the agreement reached the total of 682,134,693.54 drachmas. One-third of that amount expressed in dollars aggregates $43,883,998.62. Actually, Greece spent the full 750,000,000 francs, though owing to the failure of the Interallied Financial Commission to meet, the balance of these expenditures was not formally checked.

An examination of the war operations in Greece shows that Greece kept her part of the agreement so far as the manning and providing of the troops on the eastern front was concerned. The reports made to our own Government showed that the money had been expended with the approval of the two commissions and, as a result, upon the books of the United States Treasury, with the approval of President Wilson, there will be found in favor of Greece the following credits: As of June 20, 1918, $15,790,000; December 3, 1918, $23,764,036; March 25, 1919, $3,858,930; July 31, 1919, $4,823,653.05; or a total of $48,236,629.05. These are credits shown on the Treasury accounts of the United States to be due to Greece by reason of her fulfillment of her part of the tripartite agreement of February 10, 1918. The money was not actually paid to Greece. The original agreement provided, and some one asked that question a moment ago, I think the gentleman from New Jersey [Mr. PERKINS], that this money should be paid by the three Governments whenever the foreign balances of Greece amounted to less

than 100,000,000 francs and in any event within six months after the peace following the war.

Mr. SIMMONS. Mr. Chairman, will the gentleman yield?

Mr. CHINDBLOM. Yes.

Mr. SIMMONS. It is my understanding that the money was not actually paid to Greece until during the war with Turkey.

Mr. CHINDBLOM. Subsequently the arrangement was changed, as in all other cases, so that instead of paying money to Greece we gave her credit upon purchases made by her in the United States. In fact, that is the way the whole war was financed, so far as these foreign debts and loans are concerned.

Mr. SIMMONS. Am I correct in understanding that the money was not actually used by Greece, or the credit, until after the World War was over and when Greece was at war with Turkey?

Mr. CHINDBLOM. The war with Turkey has been brought in here but has nothing to do with this situation at all.

Mr. BURTON. Mr. Chairman, if the gentleman will permit, the Bank of Greece advanced these amounts under the agreement that when their foreign credits fell below 100,000,000 francs, or within six months after the close of the war, the amount was to be repaid. Their credit was good.

Mr. SIMMONS. It is the statement in the minority report that I want checked up.

Mr. CHINDBLOM. I will say to the gentleman that he will find no reference to the war between Turkey and Greece anywhere in the hearings, in the documents, or in any of the reports, except in the minority views of the gentleman from Georgia [Mr. CRISP].

Mr. CRISP. Oh, I am sure that my friend desires to be accurate. If he will take the majority report, he will see that it states all about the participation of Greece on the Macedonian front.

Mr. CHINDBLOM. Oh, yes.

Mr. CRISP. I injected that in the minority report to answer the argument of the majority that brought in the Greco-Turkish War.

Mr. CHINDBLOM. But nowhere else is there any statement that this money was to be used in any way in connection with the Turkish War.

Mr. SIMMONS. In the minority report on page 27 there is one sentence—

> But no advance was requested by Greece until September 3, 1919, at which time she was at war with Turkey.

Does that mean Greece did not actually get $15,000,000 in credit or cash until some time after the 3d of September, 1919?

Mr. CHINDBLOM. The actual payments to Greece were made as follows: December 15, 1919, $5,000,000; January 3, 1920, $5,000,000; and September 11, 1920, $5,000,000. These payments would have been continued had it not been for the fact that King Constantine returned to the throne of Greece, and we thereafter refused to have any diplomatic relations with the Government of Greece.

Mr. FREAR. The old government.

Mr. CHINDBLOM. In the combined annual reports of the World War Foreign Debt Commission, page 325, it will be found that there is nothing strange in the fact that the payments to Greece were delayed until a proper adjustment and audit of the accounts between the two countries could be made. The last payments on loans to various governments by our Government were made as late as the following dates:

May 29, 1922, to Czechoslovakia	$717,834.36
Mar. 30, 1921, to Italy	16,695,063.91
Sept. 28, 1920, to France	10,000,000.00
Sept. 24, 1920, to Greece	5,000,000.00
Sept. 17, 1920, to Czechoslovakia	732,165.64
Aug. 31, 1920, to France	10,000,000.00
Aug. 26, 1920, to Belgium	10,469,467.89
Aug. 5, 1920, to France	10,000,000.00
July 28, 1920, to Czechoslovakia	1,000,000.00
July 6, 1920, to France	10,000,000.00

It will be observed that Czechoslovakia, Italy, and France all received payments on account of loans later than the last payments to Greece.

Mr. NEWTON. Will the gentleman yield?

Mr. CHINDBLOM. I will.

Mr. NEWTON. Am I to understand it was the change in the Government of Greece that delayed further payments after the three $5,000,000 installments?

Mr. CHINDBLOM. Yes. I had intended to quote, and will quote, statements by the heads of the last administration, the Wilson administration, on the question of the obligation of our Government, and I will say that some of us find ourselves in the very unusual position of standing up here to defend the action of that administration and insisting that its obligations and commitments shall be performed:

Under date of December 31, 1920, the Department of State wrote to Assistant Secretary Kelley, of the Treasury Department:

"The President was informed by letter dated December 25, of the inquiry made by the Treasury. He has expressed his concurrence in the recommendation made by this department that the credit obligation negotiated with the Venizelos Government (referring to the credit of $38,000,000) should be considered as still binding on this Government, and that the Greek chargé d'affaires, on proper application, should be recognized as representing the Government of King Constantine."

Under date of January 10, 1921, the Undersecretary of State, Norman H. Davis, wrote Senator Williams:

"If and when this Government extends recognition to King Constantine or continuous relations with the Greek Government, I do not see how the Treasury can legally or morally cancel its obligation to complete the advance to Greece under the terms stipulated."

Under date of January 13, 1921, Assistant Secretary of the Treasury Kelley wrote to the State Department:

"I understand from Mr. Merle-Smith's reply of the 3d ultimo that the President has expressed his concurrence in the recommendation made by the Department of State that the financial arrangements made with the Greek Government early in 1918 should be considered as still binding on this Government."

Under date of January 14, 1921, the Undersecretary of State, Mr. Davis, wrote to Mr. Kelley:

"You are correct in your understanding of the President's views in respect of the financial arrangement with the Greek Government early in 1918."

On March 3, 1921, the last day of the Wilson administration, there was prepared by Assistant Secretary Kelley, who had been in charge of all foreign loans, a memorandum intending to inform the incoming administration as to the exact situation in respect of these loans, the policy of the department, and the obligations of the Government as viewed by the outgoing administration. In respect of the Greek loan, the memorandum of Mr. Kelley reads in part as follows:

"The Treasury is not in a position to complete any arrangements for further advances to Greece until the Department of State officially advises the Treasury that the present chargé d'affaires of the Greek Legation in Washington is the authorized person in charge of the legation with whom the Treasury may officially deal as having been accredited to this Government by the present King Constantine. After these advices are received, the Treasury is, in my opinion, bound to make advances to Greece in accordance with the agreement of 1918, and it would be wise, unless the Department of State shows reason to the contrary, for the Treasury to continue in accordance with the arrangements set out in Mr. Davis's letter of November 23, 1919, to the Greek minister in Washington to make advances in installments as requested by the Greek Government."

Therefore, the Wilson administration, up to the very hour of 12 o'clock noon on the 4th day of March, 1921, when it went out of office, held consistently and persistently that Greece was entitled to receive advances in full up to the amount of $48,000,000; and well it might.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BURTON. I yield to the gentleman one additional minute.

Mr. CHINDBLOM. I want you to examine, if you will, the reasons given by my distinguished friend from Georgia [Mr. CRISP] why this $12,000,000 advancement should not be made now. His objections may fairly be classed as technicalities.

The objection based on the Canadian loan is a technicality, and the charge that the interest was not paid is a technicality. Greece did pay some interest on its loan and in that respect was different from some of our other creditors. The substance of the agreement was that this advance should be made in consideration of the fact that Greece enlarged her military forces on the eastern front.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. HAWLEY. I yield to the gentleman one minute more.

Mr. CHINDBLOM. This in conclusion: It is said that because we will not allow Greece the whole $33,000,000, we should not loan the $12,000,000. Greece is satisfied now to accept $12,000,000. This is a compromise between the two governments, and, inasmuch as we have insisted that foreign countries shall pay their obligations to us, I trust America will carry out all the obligations she has incurred, including proper and necessary compromises. [Applause.]

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. CHINDBLOM. Mr. Chairman, under the leave to extend by remarks, I will merely add that I deem it unfortunate that this settlement with the Hellenic Republic has been so long delayed. If it had been undertaken soon after the close of the war, I am sure an amicable arrangement would easily and speedily have been reached. The people of Greece suffered great losses and made great sacrifices, under very unhappy conditions, during the World War, and they are now engaged in a great humanitarian enterprise in caring and providing for the million and a half of refugees whose only hope for future welfare, aye, for their very existence, rests with the people and Government of Greece. We should rejoice that, in compromising and settling an international dispute, we are also privileged to contribute something to the promotion of so noble a cause.

Mr. CRISP. Mr. Chairman, acting for Mr. GARNER, I yield three minutes to the gentleman from Texas [Mr. BLANTON].

The CHAIRMAN. The gentleman from Texas is recognized for three minutes.

Mr. BLANTON. Mr. Chairman, I am against the provisions of this bill to lend more money to Greece. The minority report of the gentleman from Georgia [Mr. CRISP] has been on file in this House and printed since the 15th day of last March. The gentleman from Wisconsin [Mr. FREAR] urges that this is a matter of great importance and a matter of urgent necessity; that this money is to be used in advances to Greek refugees. Why was he not so insistent during the last 15 days in March and during all of the month of April and during all of the month of May if this $12,000,000 should have been advanced?

Mr. FREAR. Like the influence of my friend from Texas, my influence in the House is very modest, indeed.

Mr. BLANTON. Yes; but the influence of the gentleman from Wisconsin is growing rapidly with the Republican administration, and has been growing after the election.

Mr. FREAR. This is following the Democratic recommendations all the way through.

Mr. BLANTON. The fact is that this minority report of the gentleman from Georgia is unanswerable, and his speech here to-day and that of my colleague from Texas [Mr. GARNER] are unanswerable. And if there were such a great and urgent necessity as the gentleman from Wisconsin would indicate, then it was a matter of sufficient importance that the Rules Committee of this House during the last days of March and all of April and all of May should have brought in a rule to bring up this bill and pay an honest obligation of this Government. That is unanswerable.

Mr. FREAR. There is no doubt about it.

Mr. BLANTON. But there was no hurry about it then. We should keep this $12,000,000 in the Treasury. I shall vote against lending it.

Mr. CRISP. Mr. Chairman, I yield five minutes to the gentleman from Florida [Mr. GREEN].

The CHAIRMAN. The gentleman from Florida is recognized for five minutes.

Mr. GREEN. Mr. Chairman and members of the committee, I am glad to have this opportunity to register my protest against the passage of the bill. It has been with considerable interest that I have listened to the eloquent remarks of the gentleman from Ohio, the gentleman from Georgia, and others. In my opinion there is neither a moral nor legal obligation upon the part of the United States to Greece. I do not agree with the gentleman from Wisconsin when he states that there is a moral obligation on our part. I can not see where it is our duty to have paid great bills for army and navy which were incurred by the Greek soldiers and sailors.

The gentleman from Ohio stresses the fact that he has voted for the cancellation of the war debts of other foreign nations. I am glad to say that it gave me pleasure to register my vote and protest against the cancellation of the foreign debt owed by Italy and some of the other nations to the United States, and may I remind my colleagues that this man Mussolini, who is now carrying on such a high hand in the political history of Europe, is, in my opinion, bound to bring the next serious trouble to the United States. I predict that if this man should live 15 years longer he will make trouble for us, and I believe it is time that America should cease playing Santa Claus for Europe.

No nation is more generous to its friends or more merciful to its enemies than is America, but our generosity and mercy has gone far enough relative to the European nations. It is bad practice to, as a Government, continue to donate and pour American money into the coffers of European nations. The manner in which the present Republican administration has canceled foreign war debts owed us by foreign nations, and thus make room for private American loans in foreign nations, is astounding. It is not good policy to cancel public debts owed our Nation by foreign nations in order that a few millionaire banks in America may make safe their 6 per cent loans to these foreign nations. I believe in safeguarding American public funds just the same as if they were individual funds. I do not believe in shirking one inch from any just debt or obligation which our Government owes. I should uphold the integrity of our Nation should it take every dollar in the Federal Treasury, but this continual donating of American funds to foreign governments should cease, and I for one shall do my part toward culminating it by voting against the passage of this bill.

The nations which are supposed to have lost the war—Germany, for instance—is now profiting more by the war than any nation which was the victor. The victorious nations are maintaining large armies and navies and going to various other expenses in collecting reparations from the Central Powers. These reparations are costing the Central Powers far less than it would cost them to maintain a large army and navy. It has been argued by the gentleman from Wisconsin [Mr. FREAR] and the gentleman from Ohio [Mr. BURTON] that our Nation is so rich and that it should look with generosity upon the less fortunate European nations, and may I remind these gentlemen and others of the Republican faith that while the United States is a rich Nation to-day, this condition can not long exist if they continue to deplete and squander the American resources, sending them to these foreign nations as they have been doing in the recent past. The resources of America are being rapidly consumed. Many millionaires have grown up in America overnight almost, and these few touting millionaires have about taken possession of our Government and would use it as a means by which public debts may be canceled and private loans may be negotiated. This practice, if continued, will soon reduce the financial condition of America to a level with that of foreign nations. The American population is rapidly growing while her natural resources are becoming less and less. The very best business practice should be exercised by our Government in safeguarding the wealth of America for Americans.

We may not expect friendly turns and friendly favors from foreign nations of Europe as we have had heretofore, because they look upon us with jealous and envious eyes, therefore we must make America safe for her own people. It is not unusual to see in the press, almost daily, of great donations being made by American millionaires to foreign countries or to citizens of foreign countries. It is not unusual to read almost daily of American heiresses exchanging their fortunes in matrimony for some foolish European title, thus selling the wealth of America for useless, pompous European titles. This is a splendid system used by so-called royalty of Europe to drain from America millions of dollars annually. I look upon such practice with disgust and contempt and for me the title of plain American citizen is all that I should have and all that I ever desire. It is good enough for me. These millionaire individuals who are sending our money to Europe are doing that as a result of a drain from the American common people, either directly or indirectly. For instance, when the Rockefellers and other oil magnates make a big donation to some foreign country or foreign individual, you will probably in the immediate future pay 1 cent per gallon more for the gasoline consumed in your automobile, thus showing that these millions are drained from the American public and lavishly squandered on foreign governments or foreign individuals. And may I admonish my colleagues that the bill which is now before the House has a tendency to cause our Government to do as these few millionaires are doing and I for one am not willing to give my sanction to any such legislation. I refuse to vote for a bill which will indirectly tax my own people for moneys which go for the benefit of foreigners and foreign governments when obligation on the part of my Government to said individual or government does not exist.

The gentleman from Wisconsin [Mr. FREAR] referred to the necessity of Federal aid for Florida. I grant you, my colleagues, that we should have Federal aid for control of floods in the Everglades, Suwannee River Valley, and other sections of our State, but when we called upon our Government to come to our aid we were respectfully referred to the American Red Cross. The Red Cross, that great auxiliary of humanity, came to our relief, but we now expect our Government to authorize moneys by which future floods may be prevented in these areas, so the gentleman from Wisconsin would extend to the Near East relief such moneys as have been denied our own American people in Florida. I refuse to subscribe to such doctrine. I will go as far for charity as an individual or for my Government as is possible or consistent, but I refuse to help to cancel by my vote the debt which is due my Government from a nation which is able to pay. I refuse to squander American

public funds because American individual banks desire to make safe loans to that country. I shall vote against the passage of the bill. [Applause.]

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. CRISP. Mr. Chairman, I yield five minutes to the gentleman from Virginia [Mr. MOORE].

Mr. MOORE of Virginia. Mr. Chairman, I want to talk about this case exactly as it is for a few minutes without straying outside and discussing matters that might seem more or less irrelevant. I may say by way of preface that I have voted for all of the debt settlements negotiated by the Debt Funding Commission. But I can not vote for this bill, which proposes a settlement of a debt due the United States, and proposes something else, because I do not believe the facts as I understand them to exist are sufficiently clear to justify the support of the latter proposal. I would have no hesitation at all in acquiescing in the portion of the bill which provides for the refunding of the indebtedness of Greece, but when I come to the other portion of the bill I find myself unable to give it my approval.

Now, it is a curious sort of a case. It is said that an obligation accrued to Greece in 1918 to receive from this Government a very large amount of money. It is rather a strange circumstance if the Government and its advisers did not doubt the obligation that during the period of a decade since the initial transaction Greece, always needing money, money has never been paid. That is certainly one fact of significance, which indicates at least the doubt in which the entire matter was shrouded in the estimation of those who have been conducting our Government.

Now, my friend from Illinois [Mr. CHINDBLOM] undertook to give the attitude of the Wilson administration. When the report came from the Ways and Means Committee last spring I addressed an inquiry to Mr. GLASS, who was the Secretary of the Treasury under Mr. Wilson in 1919 and who certainly has a high sense of any legal or moral obligation under which the Government may be placed, and here is what Mr. GLASS said in reply:

> Responding to yours of March 19, there is little I can say about the proposed loan to Greece of $12,000,000 at 4 per cent beyond my recollection of the fact, now confirmed by inquiry of former Treasury officials intimately identified with the transaction, that the Treasury suspended payments to Greece on the original commitment when King Ferdinand was reenthroned and Venizelos practically exiled. We were notified that England had discontinued payments for this reason and that France had refused to make any payment at all under the tripartite commitment. The feeling was, as I remember, that Greece, having recalled its pro-German sovereign, all moral obligation to extend further loans was obliterated, and for this reason payments on the original commitment were stopped.

Now, if any moral obligation was extinguished there are certainly no gentlemen here who will deny that any legal obligation was likewise extinguished.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. CRISP. Mr. Chairman, I yield the gentleman two additional minutes.

Mr. MOORE of Virginia. That is an expression from one of the ablest and most responsible officials under President Wilson with reference to this matter.

Now, something else. During the Harding administration there was not a dollar paid, though Greece was in need of money, and during that administration the Secretary of State, who is not surpassed by anybody in this country in his ability and experience as a lawyer and who certainly has as keen a conception of the effect of obligations as any of us, said emphatically that in his judgment no liability remained.

Mr. FREAR. No legal obligation?

Mr. MOORE of Virginia. No legal obligation; and if so, how can there be any moral obligation? It is pretty difficult in a case of this kind to separate legal and moral obligation.

Then something further. In 1926, in the Coolidge administration, no payment was made, as there had been none made under the Harding administration, and in 1926 the Debt Funding Commission, after full and meticulous consideration of the matter, came to the conclusion that no obligation rests upon the Government.

The CHAIRMAN. The time of the gentleman from Virginia has again expired.

Mr. CRISP. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. SABATH].

Mr. SABATH. Mr. Chairman and gentlemen, during the war, and for many years thereafter, I heard many attacks from the Republican side on the Democratic administration for the broad and liberal aid it gave to the allied nations. Therefore I am, indeed, pleased to see some of my Republican colleagues to-day approve, as they have been forced heretofore by facts, of the acts of the Democratic administration during and since the war.

The bill under consideration provides as follows:

> The existing indebtedness, amounting to $18,125,000, shall be funded over a period of 62 years. The computation of this indebtedness is set forth below:
>
> | | |
> |---|---|
> | Principal amount of obligations to be funded | $15,000,000.00 |
> | Interest accrued and unpaid thereon to Dec. 15, 1922, at the rate of 4¼ per cent per annum | 744,333.79 |
> | Total principal and interest accrued and unpaid as of Dec. 15, 1922 | 15,744,333.79 |
> | Interest thereon at 3 per cent per annum from Dec. 15, 1922, to Jan. 1, 1928 | 2,383,588.88 |
> | | 18,127,922.67 |
> | To be paid in cash by Greece upon execution of agreement | 2,922.67 |
> | Total indebtedness to be funded | 18,125,000.00 |
>
> (2) The bonds aggregating in face amount $20,330,000 (the existing indebtedness, as computed above, together with the interest to be paid in respect thereof) shall be paid in annual installments beginning July, 1928, up to and including January 1, 1990, on a fixed schedule, subject to the right of Greece to make such payments in 3-year periods, any postponed payments to bear interest at 4¼ per cent per annum, payable semiannually. The amount of the first annual installment shall be $40,000, the annual installment to increase to $350,000 in the eleventh year, which shall be the amount of each remaining annual installment.
>
> To assist in the completion of the work of the Greek Refuge Settlement Commission, the Secretary of the Treasury is further authorized to advance to Greece out of the appropriation "Purchase of obligations of foreign governments," established under authority of the Liberty bond acts, the sum of $12,167,000, for which Greece shall deliver to the Secretary of the Treasury its 20-year gold bonds bearing interest at the rate of 4 per cent per annum, payable semiannually, with provisions for a sinking fund sufficient to retire such bonds within 20 years.
>
> Greece shall, in accordance with the exchange of notes, dated January 18, 1928, between the United States and Greece, and as set forth in Senate Document No. 51, Seventieth Congress, first session, furnish as securities for the loan referred to in paragraph (5) the excess of revenues under the control of the International Financial Commission, and shall procure the assurance of the service of the loan by that commission.
>
> Greece shall forego all claims for further advances under the tripartite loan agreement dated February 10, 1918, and such agreement, so far as the United States and Greece are concerned, shall terminate upon the date on which the agreement authorized by this act becomes effective.

The fact that France has not met its obligations and that Great Britain has in a measure failed to meet its obligations does not excuse us from fulfilling ours. It has been stated that we should look at this adjustment from the American and not from the Greek point of view, and that is what I am doing. I look upon it from the American point of view, that our Nation should at all times, under all conditions, meet its obligations even though not legally bound when, however, it is morally bound.

Though there may be a question about our legal obligation surely no one can justly disclaim our moral obligation under the agreement which we have entered into with the Hellenic Government. The mere fact that due to unwise influences the overthrow of the Venizelos government was brought about, the people of that historic nation should not be deprived of their rights.

Under the Venizelos government Greece entered the war on the side of the Allies, not only for the purpose of self-defense, to expel invaders from her territory, as has been charged, but to aid the Allies and thereby comply with the wishes—yes, the persistent—appeals of the Allies, and her course at that time was considered as a great accomplishment and achievement on the part of our diplomatic representatives.

A few days after the agreement was signed by Premier Venizelos, at that time the head of the Greek Government, he made the following statement to the Greek people:

> In taking part in this World War we shall not only regain the national territory we lost; we shall not only reestablish our honor as a nation; we shall not only effectively defend our national interests, but we shall also be a worthy member of the family of free nations.

Mr. Chairman, I recognize that at that time the Bulgarian and the Austrian troops were in possession of a large area of her territory, but on September 16, 1918, due to the bravery of nine Greek battalions, which it had placed in the field on the Macedonian front, in accordance with the agreement, the Bulgarian forces were defeated, yes crushed, and within a few

days thereafter Bulgaria was eliminated from further activity in the war and within two weeks pleaded for peace.

No one can truthfully deny that this great victory could not have been attained on the Macedonian front without the heroic, brave, and courageous Greek forces. The Greek Army conducted itself with valor and honor. It began the allied offensive on the Macedonian front, which culminated in the decisive allied victory. Both Franchet d'Esperey, commander in chief of the Allied armies in Macedonia, and General Milne, declared that the Greek Army had proved a decisive factor in the victory. The British general said:

> Without the aid of the Greek forces, the present victory could not have been attained.

Says General Ludendorff:

> There were no illusions about the fighting seriousness of the Greek Army.

And no one can successfully deny that this victory did bring about an earlier ending of the World War, which in all probability might have lasted for weeks—yes, perhaps months longer. But if it shortened it only a day, it was worth the amount that this bill provides, not only to give but to loan to Greece. From the day that great statesman, Venizelos, became its leader, the Hellenic Government and a great majority of its people demonstrated their sympathy and friendship, not only for the Allies but especially for United States.

Unfortunately, came the war with Turkey. The reverses of the Greek Army in Asia Minor resulted in the overthrow of the Venizelos Government and King Constantine, upon the death of his son, King Alexander, returned to Greece as King on December 19, 1920. The allied governments and the United States refused to recognize the new régime in Greece and refused to make further financial advances. I quote from Doctor Gibbon's "Venizelos":

> Greece was in sore need of money, but the United States used the change of government as an excellent pretext for not allowing Greece to draw further upon the credit granted her as a war measure. About $30,000,000 was thus suddenly rendered unavailable. At the same time, France, invoking the pretext that the Constantinist government was illegal, refused to pay back to the Bank of Greece the large sums of money advanced to the French army at Saloniki, when the rate of exchange had been unfavorable to the conversion of francs into drachmas.

It is worthy of note that up to March 4, 1921, both the State Department and the Treasury Department were definitely of the opinion that our Government was under a strong moral and legal obligation to make further advances to the Greek Government and that our agreement expressly provided for advances to Greece subsequent to the conclusion of peace.

Relying upon the undertaking of the United States, Greece actually spent the entire amount for the purposes specified in the loan agreement. She was thus enabled to put 250,000 men in the field, increasing her army from three to nine divisions, and secured the urgently desired victory which played such an important part in the ultimate success of the allied cause. No one denies that the agreement was entered into in good faith on the part of our Nation in conjunction with the other nations and Greece.

For the sake of argument let us concede that Greece violated, as argued, some provision of the agreement. If they did, it was only a technical violation. For that reason I feel that it would be unfair for a great Nation like ours to take advantage of technicalities to evade our responsibility, because if we are not legally we are morally bound to carry out the agreement we had influenced Greece to enter into in those trying days, in the midst of that great conflict and at a time when conditions did not look any too favorable.

It is true that Greece did not request or draw any part of this loan until two years after the agreement was made and after they had expended tremendous sums of money in fitting out the additional battalions, providing and maintaining them during the war. This is to her credit and proves conclusively that she did not seek the American dollar, and were it not for the unfortunate war with Turkey, in all likelihood she would never have asked for a single dollar which her agreement called for, but that war, and her humanitarian spirit, in taking care of and providing for 1,400,000 Greek and over 100,000 Armenian Christian suffering refugees, has taxed her financial resources to such an extent that she was obliged to insist that the agreement to make her the loan, as agreed upon, be fulfilled, agreeing, however, to accept twelve in place of thirty million which we obligated ourselves to loan her on condition that early action be taken on the reduced amount.

There is no question in the mind of anyone who has studied or read the committee hearings or the record of her achievements on the front that Greece played its part; that it performed its obligation.

In view of the recommendations that were made at that time by Secretary McAdoo, Secretary Houston, Mr. Crosby, Mr. Norman Davis, and approved by the late President Woodrow Wilson, I feel that this bill should receive our approval, because justice demands it, and we should not at this late date disregard the recommendations of those great Democrats.

In conclusion I wish to call your attention to the fact that the bill provides that this loan be turned over and used by the Refugee Settlement Commission for the purpose of providing for the unfortunate refugees that are being cared for by the Greek people, which is more than much stronger financial nations have done.

I feel that this bill should pass not only because of the moral responsibility of our great Republic but because of the deep appreciation we owe to that heroic, younger sister nation, the Hellenic Republic. [Applause.]

Mr. HAWLEY. Mr. Chairman, I yield the gentleman from Ohio [Mr. BURTON] nine minutes.

Mr. BURTON. Mr. Chairman, I have already covered most of the ground in regard to this controversy. I will take up briefly the arguments made on the other side.

First, I can not agree that this is a joint agreement or, as has been said by the gentleman from Georgia and the gentleman from Texas, that it is a joint agreement.

Let us note the illogical result of such a conclusion. If it is a joint agreement, the United States would be responsible for the whole 750,000,000 francs and not for the 250,000,000 francs alone. Again, the wording of the agreement shows that, while three nations joined, each had a separate obligation to perform, to wit, the payment of 250,000,000 francs. Still further, all the dealings between the parties were on the theory that the United States had its obligation to perform, France had its obligation, and Great Britain its obligation, and thus I come to the conclusion that the failure of France or the compromise with Great Britain is no excuse for us to say that we will not comply with that which was a clear agreement to advance 250,000,000 francs. Indeed, to the very close of the Wilson administration that obligation seems to have been recognized by our diplomatic officials.

Now, another point, that Greece has failed to pay interest. Greece did pay interest until the 2d of October, 1921, in amounts aggregating some $2,000,000. By that time there was an impassé between the two Governments, and Greece could very well maintain the position that we had failed in our agreement, that if she were to pay any more it would be in the form of a credit on the 250,000,000 francs that had been promised to her.

There is another claim, that an agreement was made by Greece with Canada. On this subject there was a technical discussion, the Greeks maintaining that the language used, gage affecté, did not mean the ordinary security such as contemplated in the security for which the 750,000,000 francs was to be advanced.

I have given a good deal of attention to this, and while I do not want to contradict the American contention on the subject, I say that at least it is a very close question whether the agreement with Canada was in any degree a violation of the agreement not to give security to another country. A fact that throws very strong light on the whole situation is that when a further loan for the refugees was proposed, Greece did ask the acquiescence of the United States. In the other case, which was a debt for food, she claims, and certainly with a vestige of more than plausibility of right, she was under no obligation to do this.

I pass by, as hardly worthy of notice, that if we owe anything we owe all. When the other side in a controversy says that we only desire such and such sums, we can not say, "At one time we agreed to pay $50,000,000 and now you are asking to settle for $25,000,000. We will not settle for $25,000,000. We will not settle under any circumstances unless we pay you $50,000,000." It does not lie in our mouths to make that kind of argument.

The argument is made that private investors have received a much larger rate of interest.

Mr. BEEDY. Before the gentleman discusses that, will the gentleman yield for a question?

Mr. BURTON. Yes.

Mr. BEEDY. In the spirit of one who likes to follow the gentleman, would he be good enough to explain to the House why the gentleman and the other members of the commission have reversed themselves on the question of whether there is any legal or moral obligation on the part of our Government.

Mr. BURTON. Partly because we saw a new light on the subject; partly because we recognized that a long-standing controversy was bound to result and that we would get nothing for our advances. So it was desired that we make a compromise

such as this is. It was the unanimous opinion of the commission [Mr. Hurley and Mr. Olney were away], with the exception of my good friend and kinsman, Mr. CRISP, with whom I so much dislike to disagree, that we should make this settlement.

It has the recommendation of the President, the Secretary of State, the Secretary of the Treasury, and is very strongly supported by our diplomatic representatives in Greece.

I may say in this connection that we have a great interest in Athens. We have a school there and large contracts for public improvements. The Greeks like to deal with America. They say that we are fairer than other countries. I have recently received a letter from our minister to Greece, who strongly recommends, and even insists, on this settlement.

One thing further. I do not think there was any agreement with the United States to which Greece was a party that all of the money should be expended in the United States. It is clearly the case that they did spend much more money in the United States than the proposed loan, but a statement was neglected and not insisted upon by either side.

Mr. GARNER of Texas. Will the gentleman yield?

Mr. BURTON. I will.

Mr. GARNER of Texas. In connection with the statement that private bankers were willing to pay a larger rate of interest, this bill was drawn six or eight months ago, and the rate of interest was placed at 4 per cent. We are now refinancing the deficit at 4¼ per cent. What would the gentleman say as to increasing the rate of interest to 4¼ per cent?

Mr. BURTON. The difficulty about that is that it would involve a great amount of further negotiations, and it is our hope that the higher interest will soon be diminished.

Mr. CHINDBLOM. Within a short time the United States may be able to finance loans at less than 4¼ per cent.

Mr. BURTON. I think so. If I had a longer tenure in the House, I might have some remarks to make on the conditions in Wall Street.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. HAWLEY. I yield to the gentleman from Ohio two minutes more.

Mr. BURTON. I refer briefly to the friendly relations between Greece and the United States. Our country has one of its most notable monuments of foreign relations in the friendliness of this country to Greece. In this House Daniel Webster and Henry Clay made an appeal to Congress for Greece which rose to the highest standards of American eloquence. We have always had a certain friendliness for that country. We rejoiced in their freedom from Turkish misrule in 1829. They look to us for friendship. I do not believe that a country that has gone through such horrible experiences as Greece has in the last 10 or 12 years—a country that has taken upon itself to support 1,500,000 refugees, a work of charity, a work involving a large amount of money—when they ask us now not to pay all that we promised to pay, but say that if we pay a part they will even see that it is expended for the refugees and offer adequate security, I say, let us as a generous nation agree upon this settlement at once. [Applause.]

Mr. HAWLEY. Mr. Chairman, we are proposing this settlement with the Hellenic Republic under the premiership of Venizelos, the very man with whom the original undertaking was made. We offered to various countries in the world money to assist them in the prosecution of the war to a total amount of some $10,000,000,000. It became necessary in the conduct of the war to destroy all the relations of the interior allies with the East. For the accomplishment of that purpose an arrangement was made between three leading allies to assist Greece if she would put into the field additional men with proper equipment to make a fight to break the eastern enemy front. She increased her divisions from three to nine and provided them with munitions of war from the 600,000,000 francs that France and England had theretofore supplied.

The Greeks have been noted in history for their ability to fight, and in that decisive battle it was Greece that broke the eastern front, the aid rendered by Greece was the material factor. It is the consensus of the opinion of the military authorities and the historians that that activity and that breaking the eastern front of the enemy meant the collapse of the activities of the interior Allies and brought the war to an early close, saving us from a possible loss of millions more of expense on the western front and uncounted lives and suffering.

Greece now, in cleaning her slate, finds that she can, on account of previous advances made by England and France, excuse them from further loans; but she does need some more money. She is not asking all that she might, under at least public obligations, if not legal obligations. She says to the United States: "We are in a very serious condition, under circumstances not anticipated heretofore, by reason of the million and a half refugees coming into Grecian territory, for whom we must provide, and for 700,000 of whom we have already provided. We will settle our indebtedness of $15,000,000 on terms similar to those that you have agreed to with other countries; but we ask you, out of consideration of our present need and your agreement, your promise, the promise of a great American people, supported by the administrations of both of the great parties, to help us at this time by giving us a further loan of a little over $12,000,000, for which we will promise payment in 20 years at 4 per cent, and we pledge the revenues in the hands of the International Finance Commission, over which we have no control, for the payment of the interest and the principal as accrued."

Mr. Chairman, this will be the safest loan that we have made, or the best settlement that we have made; and I say I think the money we have advanced Greece did more toward an early termination of the war than any similar amount that we advanced to any other country.

In conclusion, I have time only to say that the gentleman from Georgia [Mr. CRISP] was in error, perhaps, because he was asked the question on the spur of the moment; and that we have loaned to other countries since the war for their relief a sum that approximates, outside of the loans for war material purchased by them, over $86,000,000 out of the revolving fund of $100,000,000 created for that purpose. The American Relief Association loaned $86,000,000 of that revolving fund, and $56,000,000 more was loaned for a similar purpose on a different account. I believe the national honor requires the passage of the pending bill.

The CHAIRMAN. The time of the gentleman from Oregon has expired. All time has expired. The Clerk will read the bill for amendment.

The Clerk proceeded to read the bill.

Mr. GARNER of Texas (interrupting the reading). Mr. Chairman, would it be proper to wait until the conclusion of the bill, or should amendments be offered as these various paragraphs are read?

The CHAIRMAN. The bill consists of but one section, and amendments will necessarily be offered at the completion of the bill.

The Clerk concluded the reading of the bill.

Mr. BURTON. Mr. Chairman, I offer the following amendment which I send to the desk, which is a perfecting amendment.

The Clerk read as follows:

Amendment by Mr. BURTON: Page 2, line 7, strike out the word "annual" and insert the word "semiannual."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. GARNER of Texas. Mr. Chairman, I move to strike out paragraph 5.

The CHAIRMAN. The gentleman from Texas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. GARNER of Texas: Page 3, line 7, strike out paragraph 5, as follows:

"(5) To assist in the completion of the work of the Greek Refuge Settlement Commission, the Secretary of the Treasury is further authorized to advance to Greece out of the appropriation 'Purchase of obligations of foreign governments,' established under authority of the Liberty bond acts, the sum of $12,167,000, for which Greece shall deliver to the Secretary of the Treasury its 20-year gold bonds bearing interest at the rate of 4 per cent per annum, payable semiannually, with provisions for a sinking fund sufficient to retire such bonds within 20 years."

Mr. GARNER of Texas. Mr. Chairman and gentlemen of the committee, the principal controversy in this proposed legislation is the question of making a loan of $12,167,000 to Greece. The purpose of this amendment is to strike that out of the bill and settle the Greek indebtedness to the United States upon the basis of 34 cents on a dollar. If you strike out of the bill the proposed loan to Greece, then the Congress of the United States will propose to settle with Greece her present indebtedness of nineteen million and a half dollars in round numbers for six and a half million dollars in round numbers. I am willing to go along in that direction. All other countries have been settled with upon the basis of from 26 per cent plus to 64 per cent plus.

Mr. CRISP. I think Great Britain paid a little more than that.

Mr. GARNER of Texas. From 26 per cent to Italy to something like 65 per cent, which England agreed to pay. It comes

now to the proposition of settling the indebtedness which Greece owes the United States. How shall we settle it? It is proposed to take nineteen and a half million dollars that they now owe us and settle for it in round numbers for six and a half million dollars. In addition to that it is proposed to loan them $12,167,000 in order to secure such a favorable settlement. I think 34 per cent is too low, but since the commission in 1926—and the honorable gentleman from Ohio [Mr. BURTON] advocates this legislation as a member of it—stated to the Greek Government that they owed them nothing and would contribute nothing toward the settlement of this matter other than the reduction of their indebtedness, since the Secretary of State at that time, Mr. Hughes, said to the Greek Government through our ambassador, or minister, "We owe you nothing; we are under no obligation to you, legally or morally"; it seems to me that Greece could very well accept a settlement based on 34 cents on the dollar. The question was asked the gentleman from Ohio why he had changed his position since 1926, and he said because of a new light, but what light that was he did not reveal to the House, whether it came from the city of New York, or the National Co., whether it was a white light, a blue light, or even a red light. The gentleman from Ohio did not take the House into his confidence in that respect. The present administration took the position in 1926 that it was wholly unnecessary to insert section 5 in any law that had for its purpose the settling of the indebtedness that Greece owed the United States.

No one has given a single reason that has developed since 1926 as to why it should be changed. Every effort has been made to find out if there has been any change in facts or conditions since 1926 up to the present time that caused this Commission or the Secretary of State or the administration to change its views, and we have not a single iota, not one fact or suggestion, except the mere statement of the Senator from Ohio [Mr. BURTON] that he had a new light. Now I submit that that new light is not a sufficient fact to justify a change or condition existing in 1926 or 1928, especially when it involves an expense of $12,167,000.

Gentlemen, I was impressed with what the President of the United States said to Congress in reference to a deficit. I agree with him, in a certain way, with his reflection on the Congress, if not the administration—I would say it was more on Congress than the administration—should we have a deficit on July 1. Two months more——

The CHAIRMAN. The time of the gentleman has expired.

Mr. GARNER of Texas. I ask for two additional minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. GARNER of Texas. He says we will have $37,000,000 as a surplus on July 1. And there are more than two months in which Congress will be in action. Just what emergency there may be I do not know, but one thing is certain—if this legislation becomes a law there will be less than $25,000,000 surplus on the first day of July, 1929. Now, I submit, if you are concerned about that surplus at all, you must take into account the amount of money we appropriate and the very first bill brought in proposes to invade that surplus and take money out of the Treasury and send it to a foreign country. I do not believe it is good public policy to do that.

Mr. BURTON. Will the gentleman yield?

Mr. GARNER of Texas. I will.

Mr. BURTON. The gentleman has challenged me to state what new light I have seen and plays upon the different colors of red and white. This is the answer. I, together with the rest of the commission, with the exception of Mr. CRISP, after a more careful consideration upon our conclusions were led to doubt if they were correct. Another reason in regard to it was this: There was in any event a certain amount of equity on behalf of the Greek claim that was emphasized by the tremendous services that the Greek troops rendered in bringing the war to a close, and they suggested a compromise more favorable than formerly, so that we came to the conclusion that it was not only generous but just and fair to meet the Greeks.

Mr. GARNER of Texas. I am surprised that such men as Mr. Mellon, Senator BURTON, CHARLEY CRISP, and others who considered these matters, who fully understood every reason it was possible to think of when they came to the conclusion in 1926—and Mr. Hoover, the President elect, who was a member in 1926, and it is understood he generally understands a subject before he comes to a conclusion—I repeat, I am surprised that after they came to a full conclusion they should turn around and conclude the other way. [Laughter.]

Mr. TILSON. Mr. Chairman and gentlemen, we ought to understand the parliamentary effect of the adoption of the amendment offered by the gentleman from Texas. It is not the usual case where you can strike out one paragraph and leave the remaining paragraphs a completed whole. Striking out this paragraph 5 entirely destroys the agreement. The whole bill as presented here is an agreement. To remove any essential feature of the agreement destroys the agreement itself, so that a vote for the pending amendment is exactly equivalent to voting to defeat the bill. That there may be no misunderstanding as to the effect of the pending amendment, I repeat that if we strike out paragraph 5 we destroy the bill.

I am one of those who believe that when we make an agreement, whether a good bargain or a bad bargain, we ought to abide by it. [Applause.]

I believe further that this should apply, whether it be an agreement between individuals or between nations. The fact remains and it has not been disputed that we did enter into an agreement with Greece back in the days when we needed everything in the way of help that we could get to end the war. Greece on her part entered into the agreement with us and two other countries, all greatly interested in the outcome of the war. She agreed to put nine divisions in the field. She did put nine divisions in the field, and those extra divisions were influential upon the result, possibly decisive. Certainly the action of Greece in putting those nine divisions in the field caused the Macedonian front to crumble, and that was the beginning of the end. As one gentleman this afternoon has suggested, if it shortened that conflict by one single day, it would mean far more in money alone than the amount here involved, to say nothing of the saving in human life.

I consider that there is not only a moral obligation here, but that there is a legal obligation as well. The fact that the obligation was not fully complied with by France, and only partially by Great Britain, does not in any respect release us from our obligation. We made the agreement and in good faith we ought to abide by it. The administration which made the agreement for the excellent purpose of ending the war contended until the very last day of its official life that this obligation should be complied with. In 1921 a new administration came into power, of opposite political faith, and whatever changes in views anyone representing the new administration may have had, the present administration, as did its predecessors in power, believes that this settlement with Greece should be made and asks us as the legislative branch of this Government to authorize it and thus comply with the agreement made in the time of stress and war. We should not place ourselves in the position of failing to meet a war-time obligation.

If the agreement made with Greece is not a legal obligation, why is there an unwillingness on our part to arbitrate this question? I understand that Greece at all times has been ready and willing to submit this matter to arbitration. We believe in arbitration. We advocate the settlement of disputes by arbitration. Why are we unwilling to go into a court of arbitration and arbitrate this settlement? Because it is believed that such a court would decide against us. If we refuse to agree to a reasonable settlement and are unwilling to arbitrate the matter we are like the proverbial big bully, insisting that the only way in which a little fellow can get satisfaction is to resort to a physical contest. In the interest of friendly relations with all nations great and small do we wish to place ourselves in such a position? [Applause.]

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. HASTINGS. Mr. Chairman, I want to offer an amendment to the amendment offered by the gentleman from Texas [Mr. GARNER] to strike out paragraph 6. Paragraph 6 relates to paragraph 5, and it would perfect that amendment.

The CHAIRMAN. The gentleman from Oklahoma offers an amendment. The Chair understands its purpose is to strike out subdivisions 5 and 6.

Mr. HASTINGS. Yes. They both relate to the same thing.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. HASTINGS to the amendment offered by Mr. GARNER of Texas: Page 3, line 7, strike out all of paragraphs 5 and 6.

Mr. HASTINGS. Mr. Chairman, I have not voted for any of these debt settlement bills, and I am not going to vote for this one. I refuse to stand on the floor of the House and vote to place increased burdens upon the taxpayers of my country for the benefit of foreign governments. I feel absolutely certain that not 1 per cent of the American people understand upon what basis these various debt settlements have been made.

In looking over the RECORD I find that the foreign debts heretofore funded aggregate $11,522,354,000. It is represented that the principal in each case has been paid, but the people do not know how much we have lost in these various settlements. All

of them have been extended over a period of 62 years. If we had gotten 4¼ per cent interest on the settlements instead of the interest we are to receive, we have lost $10,705,618,006.90.

It is urged that we are settling on the "capacity to pay" of each government. The hearings disclose that no economist will hazard an opinion as to the capacity of any government to pay during a period of 62 years.

Secretary Mellon, in the hearings on the French debt settlement—page 5—on the question of capacity to pay, said:

> I appreciate, as all reasonable men must, that it is not possible for any set of men to determine with mathematical accuracy the future capacity of a great nation to tax itself and to transfer the avails of taxation to another nation. We are forced to look at the present and to estimate the future.

In connection with the Italian debt settlement Secretary Mellon said:

> The capacity of a nation to pay over a long period of time is not subject to mathematical determination. It is and must be largely a matter of opinion.

Everyone appreciates, of course, that the capacity to pay, of a government in Europe, under present conditions, is very speculative and that no one has any good grounds upon which to base an opinion. No one could base an opinion upon an unsecured obligation of an individual over that period, and surely with conditions such as they are in Europe, no one is justified in venturing an opinion as to the capacity of any European government to pay, extended over a period of 62 years.

We fund the $15,000,000, owing to the United States by Greece, in this bill. At the rate of 5 per cent per annum, to January 1, 1928, it amounts to $19,659,836. By extending it over a period of 62 years, without interest, the present value of the payments to be received, under the proposed settlement, on a basis of 4 per cent interest per annum, payable semiannually, amounts to $6,787,000, or about 34½ per cent of the original amount due. In other words, we are to receive obligations which, if ultimately paid, only amount to 34½ per cent of the amount Greece owes the United States. We cancel or remit 65½ per cent of the debt.

We received 26½ per cent of the debt in the Italian debt settlement and 49 per cent in the Belgian debt settlement. In the French debt settlement, which has not yet been ratified, we received approximately 50 per cent and remitted the balance.

This is perhaps the worst of all the settlements except that the amount involved is not so large. In addition to extending the amount to be funded, over a period of 62 years, without interest, we agree to loan to this government, without capacity to pay, an additional sum of $12,167,000, at 4 per cent interest, payable in 20 years.

It is stated in the debate, and not denied, that international bankers recently made a loan to Greece at 6 per cent interest and sold it on a basis of 91, which makes the loan cost the Greek Government approximately 6½ per cent.

I have but little patience with the argument advanced as to capacity of a government to pay extended over a period of 62 years. If Greece can float a loan through international bankers, that Government, over a period of years, can pay the comparatively small amount owing to the United States.

All of these settlements are made in the interest of international bankers. In each case it is found that loans have been floated to all of these governments. That is true of the Austrian Government and I am not going to vote for that debt settlement bill.

We remitted 73½ per cent of the amount due our Government by Italy on the theory that the Italian Government has not the capacity to pay, when Mussolini has found funds to maintain a large army and to increase Italy's navy to menace the peace of Europe.

I agree that in each case perhaps time should be given to these foreign governments to repay these loans, but I do not favor the remission or cancellation, either principal or interest, of any of the sums due by any foreign government to our Government. Every dollar remitted or canceled, either principal or interest, is an additional burden upon the taxpayers of our country. How can we stand on the floor of the House and argue that we are in favor of economy and refuse to make adequate appropriations for the various activities of our Government, under the plea of economy, and at the same time remit $10,705,618,006.90 to foreign governments? The people of our country are demanding more public buildings to house the various activities of our Government throughout the country. They demand more Federal appropriations in aid of road building. When increased appropriations are urged for these purposes we are met with the argument that our present revenues will not justify these expenditures.

I think our generosity should commence at home. The depressed farmers of the country have been urging that relief be granted to them, and a bill has been pending before Congress for the past two years authorizing an appropriation of $400,000,000 as a revolving fund to be used to aid the farmers in marketing their surplus products. This appropriation is criticized and denounced by those who are voting for these debt settlements.

I favor the internal development of our country and the expenditure of our revenues for the benefit of the people of the United States. The amount of money remitted in these settlements would gridiron the entire country with a network of highways. It would build adequate public buildings in every city of 2,500 people. It would connect every county seat in the United States with a concrete road. It would provide for the reclamation of arid lands and would make them productive. It would permit the deepening and dredging of our larger streams and would make them navigable and lessen freight rates and enable us to build reservoirs to impound waters and prevent disasters which go with great floods, and the money could be used in many other ways for the general prosperity of our country. If this question were left to the people as to whether the money should be expended for these purposes or remitted or canceled in favor of foreign governments, is there any doubt as to what the decision would be?

Everyone expected when these loans were made that they would be collected in full, applied to a reduction of our public debt, and that our interest charge would be lowered, and we could further reduce the tax burdens on our people. Following this settlement we may expect the press to advise of large loans by eastern bankers, as in the Italian case, with large commissions and interest. Thus are the interests of the people betrayed. I am one of the trustees of the people, and I am not justified in giving away the money of the people to foreign governments.

I am inserting an official table prepared by the Treasury Department showing (1) the countries with which settlements have been made, (2) the date of agreement, (3) the amount of debt funded, (4) interest to be received, (5) total amount to be received, (6) the amount that would have been received on a British basis (3–3½ per cent interest), (7) total amount that would have been received on a 4¼ per cent interest basis, (8) total amount canceled on a 4¼ per cent interest basis, and (9) total aggregate amount, being $10,705,618,006.90, canceled, lost, or remitted in all of the settlements:

Countries	Date of agreement	Funded principal	Interest to be received	Total	Total that would be received on British basis (3–3½ per cent interest basis)	Total that would be received on 4¼ per cent interest basis	Total canceled on a 4¼ per cent interest basis
Belgium	Aug. 18, 1925	$417,780,000.00	$310,050,500.00	$727,830,500.00	$1,041,597,000.00	$1,191,052,000.00	$463,221,500.00
Czechoslovakia	Oct. 13, 1925	115,000,000.00	[1] 197,811,433.88	312,811,433.88	252,890,000.00	327,854,000.00	15,042,566.12
Estonia	Oct. 28, 1925	13,830,000.00	19,501,140.00	33,331,140.00	[1] 33,331,000.00	39,428,000.00	6,096,860.00
Finland	May 1, 1923	9,000,000.00	12,695,055.00	21,695,055.00	[1] 21,695,000.00	25,658,000.00	3,962,945.00
France	Apr. 29, 1926	4,025,000,000.00	2,822,674,104.17	6,847,674,104.17	9,708,825,000.00	11,474,900,000.00	4,627,225,895.83
Great Britain	June 19, 1923	4,600,000,000.00	6,505,965,000.00	11,105,965,000.00	[1] 11,105,965,000.00	13,114,172,000.00	2,008,207,000.00
Hungary	Apr. 25, 1924	1,939,000.00	2,754,240.00	4,693,240.00	[1] 4,693,000.00	5,538,000.00	834,760.00
Italy	Nov. 14, 1925	2,042,000,000.00	365,677,500.00	2,407,677,500.00	4,923,820,000.00	5,821,552,000.00	3,413,874,500.00
Latvia	Sept. 24, 1925	5,775,000.00	8,183,635.00	13,958,635.00	[1] 13,959,000.00	16,464,000.00	2,505,365.00
Lithuania	Sept. 22, 1924	6,030,000.00	8,501,940.00	14,531,940.00	[1] 14,532,000.00	17,191,000.00	2,659,060.00
Poland	Nov. 14, 1924	178,560,000.00	257,127,550.00	435,687,550.00	[1] 435,688,000.00	509,058,000.00	73,370,450.00
Rumania	Dec. 4, 1925	44,590,000.00	[1] 77,916,260.00	122,506,260.05	107,488,000.00	127,122,000.00	4,615,739.95
Yugoslavia	May 3, 1926	62,850,000.00	32,327,635.00	95,177,635.00	154,651,000.00	179,179,000.09	84,001,365.00
Total		11,522,354,000.00	10,621,185,993.10	22,143,539,993.10	27,819,134,000.00	32,849,158,000.00	10,705,618,006.90

[1] Settlement made on British basis.

This table is official. The figures prepared by the Treasury Department can not be disputed. We lose, cancel, forgive, or remit on the settlements with the 13 countries, based on 4¼ per cent interest, the amount we pay on our Liberty bonds, the proceeds from which we loan these Governments, $10,705,618,006.90.

On the basis of the British settlement, 3 per cent for the first 10 years and 3½ per cent interest thereafter, we cancel or lose $5,675,474,006.10.

Surely this is a large burden for the taxpayers to bear to appease the greed of the bankers who are making loans at high rates and upon large commissions. The people, when they know the truth, will withhold their approval of these settlements. [Applause.]

Mr. BEEDY. Mr. Chairman, I rise in opposition to the amendment. Gentlemen of the committee, I confess I have been very much exercised about the measure now pending before the House, and while following the debate carefully have at times been led to the conclusion that I could not support it. However, upon mature consideration I should like to explain to the committee my mental attitude at the moment. If this were a single proposition of making another foreign loan, I should oppose it with all the power at my command. I am sincerely exercised over the tremendous amounts that have been loaned abroad through intermediaries known as private bankers. Vast sums of the money thus loaned are to be invested in the upbuilding of industries which compete with industries of this country. In the pending resolution, however, are the terms of a possible international agreement which have been agreed upon by the representatives of two great nations. The agreement must either be voted up or voted down just as it stands.

I hesitate to make the statement which I am about to make, yet I think I owe it to the House, for it makes more clear, perhaps, my view of this situation. In 1923 Lausanne, Switzerland, I had the privilige and honor of an hour's interview with Venizelos, the great leader and patriot of the Greek Nation. For the greater part of that hour this very subject was under discussion. Mr. Venizelos and the Greek officials are just as sincere and earnest in their belief that from the outset—and that that same situation continued down to the moment, or, at least, until 1923—there was an obligation on the part of the American Government to advance every dollar of the $48,000,000 which it originally obligated itself to advance. But the American Debt Funding Commission in 1926, having reviewed all the facts, and under the advice of our then Secretary of State, said there was then no such obligation on our part to Greece. The facts in the matter have not changed at all. But here is the situation: Two nations being equally sincere on an issue, the one being at direct odds with the other, what is to be done about it? The gentleman from Oklahoma [Mr. HASTINGS] says he can not stand here and vote to give away his country's money.

I can not stand here and vote in a manner that would lead other nations to say that I was a party to voting away my country's honor. [Applause.]

The Greek nation says, "Let us submit this to arbitration." The United States of America says, "We can not afford to do it," the reason, I apprehend, being that we fear the outcome. What shall we then do? We must determine what constitutes a sound course of international policy.

We should do, I submit, with nations just as we would do with individuals. When there is a decided difference of opinion as to rights and obligations, we must get together on a compromise.

Here in the resolution before us are the terms of the possible compromise agreed upon by the representatives of both nations. From the high viewpoint of our country's honor, which ought not on any plausible grounds to be brought in question, when we would not arbitrate we should compromise. I urge the Members of the House to vote for this resolution and maintain the honor of the United States of America. [Applause.]

Mr. HAWLEY. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment and all amendments thereto close in 10 minutes.

Mr. GARNER of Texas. Mr. Chairman, it seems to me that is going a little bit fast. Here is a bill that has just one section, with a number of paragraphs. A number of other amendments may be offered. Gentlemen on each side of the aisle may want to offer some amendments. Does the gentleman propose to cut off all debate on the bill? I think this is a little unreasonable.

Mr. HAWLEY. Mr. Chairman, then I ask unanimous consent that all debate on the pending amendment and all amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Oregon?

There was no objection.

Mr. O'CONNOR of New York. Mr. Chairman, I ask unanimous consent to have inserted in the RECORD at this point certain correspondence with reference to this matter by Mr. Henry Morgenthau, former ambassador to Turkey.

Mr. CHINDBLOM. Mr. Chairman, reserving the right to object, and I shall not object, did the gentleman state the nature of the correspondence?

Mr. O'CONNOR of New York. In favor of the Greek debt settlement.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

NEW YORK CITY, *December 8, 1928.*

Dr. WILLIAM I. SIROVICH,
House of Representatives, Office Building,
Washington, D. C.

MY DEAR DOCTOR: I am inclosing you herewith a copy of the letter that I wrote last spring to CORDELL HULL, which, I think, states the case very clearly.

I am very interested in this matter, because some of these funds will go to the Greek Refugee Settlement Commission to enable them to complete their task, and it is generally admitted now that there never has been a finer piece of philanthropic work undertaken than the one of helping these poor, forlorn Greek refugees.

I thank you in advance for anything you may do for this great cause for humanity.

With kindest regards.

Yours very sincerely,

H. MORGENTHAU.

NEW YORK, N. Y., *March 29, 1928.*

Hon. CORDELL HULL,
Washington, D. C.

DEAR SIR: Having given some study for the past five years to the matter of the obligations of the United States to Greece under the war-credits agreement of February 10, 1918, and with the cooperation of some others who have been in close touch with the situation, I beg to submit a few brief observations on the report of the minority members of the Ways and Means Committee on H. R. 10760, which is a bill to compromise the questions arising out of the war-time agreement and to fund the indebtedness of Greece to the United States.

I cite the principal objections made by the minority. Those objections are as follows:

1. That the representatives of the United States have taken the position in the negotiations running over eight years that the United States has been absolved from the obligations of the 1918 agreement.

It will appear that, until politics came into the case, the opposite was true. The brief written in controversy with Greece has no more merit than the further points I am about to mention.

2. That the advances called for by Greece under the agreement were not for war purposes; that this will be a peace-time loan, and not within the welfare clause of the Constitution.

This is not a new loan, but the settlement of a war-time obligation. Greece's part of the contract was performed during the war when she mobilized her entire resources of men and material and broke the Macedonian front. In order to do this she issued bank notes of the National Bank of Greece in the amount of 250,000,000 drachmas against the promised United States credit of $48,236,629 which was intended to be the "cover" for the bank note issue. Receiving $15,000,000 from the United States she retired 77,337,500 drachmas, but there remained outstanding 172,262,500 drachmas corresponding to the balance of the credit of $33,236,629 granted by the United States. The failure of the United States to make good this credit was a main cause of the collapse of the drachma.

The Greek expenditures were all for war-time purposes and precisely within the four corners of the 1918 agreement:

a. The American financial representative at Athens, Mr. Weddell, so certified after examination of the vouchers.

b. The Treasury representative, Mr. Rathbone, directed the opening of the credit on Mr. Weddell's certification.

c. Mr. Norman Davis, in the Department of State, expressed himself in writing to the effect that the Treasury can not "legally or morally cancel its obligation to complete the loan to Greece under the terms stipulated."

d. The Department of State and the President on December 31, 1920, formally expressed the opinion "that the credit obligation negotiated with the Venizelos Government should be considered as still binding on this Government," and on January 19, 1921, the Secretary of the Treasury confirmed this opinion by letter to Senator John Sharp Williams.

3. That the loan was a joint one on the part of Great Britain, France, and the United States; that France advanced nothing; and

that this had the legal effect of releasing the United States "from further obligation under the tripartite agreement."

The answer is that the loan was not joint. There was not to be a series of combined advances by the three governments but separate advances; the advances were to be "in equal shares" in the language of the agreement. The advances were made separately. No one of the three great powers in making its advances paid any attention to what the others were doing, the United States no more than the others. Each of the three opened a credit on its treasury books for its equal share. The United States advanced $15,000,000 over a period of a year, taking no account of the fact that France had advanced nothing. Great Britain more than doubled the advances of the United States without waiting to see what France was doing or the United States. Greece similarly subdivided the loan on her books and made a separate account for each country.

If the thing had not been done this way, if the agreement were for a joint loan and had been so handled by the three great powers, then Greece had the legal right—the author of the minority report is too good a lawyer not to know this—to demand the full 750,000,000 francs of the entire loan from any one of the three lenders; could now demand it from the United States, leaving the one which bore the whole burden to collect from the other two their respective thirds by what the law calls "the right of contribution." The objection is tantamount to offering Greece a check of the United States for the whole unpaid balance of 750,000,000 francs, leaving us to collect from France and Great Britain.

Neither the language of the agreement nor the acts of the parties under it afford the slightest ground for any such interpretation. Each of the three great powers had a separate policy in regard to its own advances. Great Britain and France made heavy advances in material in which the United States did not share. The United States on its part negotiated some new terms in 1919 as to a part of its own advances, which it would have had no right to do if it had been jointly bound with the other two lenders. (This is referred to on page 27 of the print of the minority report.)

4. That the loan being joint, a release by Greece of Great Britain from her obligation to continue her advances released the United States as a matter of law.

Answer:

a. I have shown that the obligation was not joint, but several; the rule of law cited does not apply.

b. There was no release by Greece of Great Britain. Great Britain gave Greece permission to negotiate a £15,000,000 loan on the London market, in return for which Greece was to release the British Government from its separate obligation under the 1918 agreement, but the £15,000,000 loan was never made.

c. This arrangement required the assent of the Greek Parliament or Boule, the equivalent of an act of Congress, and that was never given. There was never in law anything more than a negotiation between Greece and Great Britain.

5. That Greece obtained a loan of $8,000,000 in Canada in December, 1923, "contrary to her expressed covenant that she would not make another exterior loan without the assent of the United States, France, and Great Britain."

There is no such provision in the agreement. The provision is that "no new security may be used for an exterior loan without the assent of the Governments of the United States of America, France, and Great Britain."

When Greece borrowed in Canada she gave no new security at all; there was nothing faintly resembling a breach of the 1918 agreement. The "security" for the "exterior loans" of Greece is all in the hands of an International Financial Commission sitting in Athens. Whenever Greece gives "security" for an "exterior loan" she and the lender agree that the International Financial Commission shall hold certain Greek revenues, which are under their direct control, as security for the loan and that the International Financial Commission shall "serve" the loan by paying interest and amortization direct to the lenders out of the revenues. Greece is the pledger, the International Financial Commission a pledgee-trustee for the lender who is the beneficiary of the pledge.

The word "security" in the agreement of 1918 was used in its exact legal sense. In the French text the phrase was "aucun gage nouveau ne pourra être affecté a un emprunt extérieur." "Un gage affecté" is the precise equivalent of the English "pledged security." In the Canadian loan agreement Greece gave no "security," "pledge," or "lien." She agreed that out of the surplus revenues coming to her own treasury from the International Financial Commission she would guarantee the payment of the Canadian loan. This is no more than an agreement by a debtor to pay his debt out of his own revenues; it is neither "security" nor a "pledge" nor a "lien" nor a "gage affecté."

6. That Greece broke the agreement by failing to pay interest on the $15,000,000 already advanced.

Greece paid interest until the spring of 1922, two and a half years after the last of the United States advances, and would have gone on paying interest had not the representative of the Greek Government, sent to Washington expressly to obtain the continuance of the advances, found that neither the Secretary of the Treasury nor any other American official was prepared to go on with the agreement by continuing the advances. On this basis it is unfair to charge Greece with a breach of the agreement. Per contra, it would appear that if Greece had paid interest, notwithstanding the refusal of the United States to go on with the advances, Greece would have recognized that the obligation of the United States had come to an end.

7. That Greece did not come forward to fund her war debt of $15,000,000.

This is a political not a legal objection, for there is no provision on this subject in the agreement. The objection becomes absurd when it is known that Greece was the first to send a commission to the United States to settle a war debt. The Greek commission arrived in Washington in the winter of 1921 and remained until the midsummer of 1922; it left because the United States was at that time not ready to discuss the Greek debt, and the commission was never officially received.

8. That the drachma is now worth 1.33 cents, and that to-day $1,500,000 "would purchase and retire all the drachmas issued by the Bank of Greece on this credit."

As the fall of the drachma is largely due to the failure of the United States to continue the advances which were to be "cover" for Greece's increased note issue, this objection of the minority amounts to saying that the United States may take advantage of its own wrong; that having arranged for the note issue and having failed to protect it, the United States should now have the advantage of buying in the notes at the market price to which they have fallen, owing to the unsecured inflation for which it is responsible.

9. That the agreement was made when Greece was friendly to the Allies and that the "consideration of the agreement was negatived when the Greek Government became unfriendly upon the return of King Constantine."

There is nothing in the agreement about the kind of government Greece is to have for the indefinite future. Greece loyally complied with the terms of the agreement by putting all her resources into the war. Her effort was largely responsible for the success of a major operation and the collapse of Bulgaria in September, 1918. King Constantine returned to Greece in December, 1920, two years after the war was over. Since then several Greek elections have been held, going one way or the other, and Greece has become a republic. None of these internal affairs of Greece has the slightest bearing on her war-time effort. It is extraordinary that the minority report should quote Mr. Gibbons on this subject, for as he says, "the United States used the change of government as an excellent pretext for not allowing Greece to draw further upon the credit granted her as a war measure." The position of the United States on this point is exactly what Mr. Gibbons calls it—pretext is another word for subterfuge, an effort to find a way out of the situation where no clear ground of escape exists.

Very sincerely yours,

H. MORGENTHAU.

Mr. CRISP. Gentlemen, I shall detain you but a moment, because I have already fully discussed the case. I simply desire to say that I agree fully with what the majority leader, the gentleman from Connecticut [Mr. TILSON] has said, that if this amendment should be adopted, the effect of it, of course, would be to kill the agreement as made with the Government of Greece; but the effect would also be that the United States Government, so far as this House is concerned, would say to Greece that we are willing to fund the $15,000,000 at 34 cents on the dollar if Greece is willing to do that. Of course, it would require further action on the part of Greece to bring about this settlement of her indebtedness.

I only desire to say in further answer to the majority leader that I believe as firmly as he does in the sacredness of international obligations. I would do anything to maintain the honor of our beloved country, and I would not take any position in this House that I thought in any way violated the solemn obligations of this country, no matter whether the trade was a hard or a good one.

I am firmly convinced, in my own mind, that there is no legal or moral obligation under existing conditions for us to make further advances. Therefore, I can not vote for a bill appropriating $12,000,000 out of the Treasury for this purpose.

I believe in arbitration. I am not a spokesman for the administration, but as an American citizen and as a Member of this Congress, I would be perfectly willing for this claim to be arbitrated. I prefer it to be arbitrated rather than to pay $12,000,000 out of the Treasury under existing conditions, and if it is arbitrated and the arbitrators say that the United States Government owes the Greek Government $33,000,000, I will vote to pay it. [Applause.]

Mr. HOWARD of Nebraska. Mr. Chairman and gentlemen of the committee, ever so much has been said in this debate about loyalty to our obligations to the Government of Greece. I just want to touch on that subject ever so briefly and call the

attention of the House to that one master obligation that we owe to our own men who served in the late war, whether on the eastern front or on the western front.

Mr. Chairman and gentlemen, in my capacity as a member of the World War Veterans' Committee, I recall that we had before our committee last year a bill proposing additional hospitalization for the disabled men of the late World War and we could not get all the hospitals that we wanted, because a great, big, nasty word stood in the pathway—"economy." And here you come to-day proposing to take a sum of money which would build all of the new hospitals we need and give it away for the amelioration of the condition of people over the sea.

My own heart beats in sympathy, I think, with the poor, with the oppressed, with the unfortunate everywhere, but I challenge the attention of the Members of the House now that we are much in need of hospitalization in behalf of our own disabled men of the World War, and we ought to hesitate before we vote to give this $12,000,000 to a foreign nation.

I am quite sure if you could go with me—and I know that many of you have been there—to the different hospitals and to the different branches of the Veterans' Bureau you would discover the vast need in which we stand for a greater amount of money to properly care for our injured soldiers of the war.

The Veterans' Bureau is doing all it can do, I think, considering the legislation under which it functions, but I feel that if we could broaden the powers of General Hines to some extent and give him this $12,000,000 which we are now sending to Greece, by the aid of it he might carry relief to thousands of disabled ex-service men.

I offer nothing further in defense of my own action in opposition to this bill than the suggestion that my own people and your own people, the soldiers of the late World War, need this money for their care and comfort, and I deem that a sufficient reason for opposing this entirely unnecessary appropriation to be sent beyond the seas. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio [Mr. HASTINGS] to the amendment offered by the gentleman from Texas [Mr. GARNER].

Mr. GARNER of Texas. Mr. Chairman, I will accept that amendment if it will facilitate the matter.

The CHAIRMAN. It will require a vote.

The question was taken; and the amendment of Mr. HASTINGS to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. GARNER].

The question was taken; and on a division (demanded by Mr. GARNER of Texas) there were 117 ayes and 119 noes.

So the amendment was rejected.

The CHAIRMAN. If there is no further amendment, the committee rises automatically under the rule.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CRAMTON, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10760 and had directed him to report the same back with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

The SPEAKER. The question is on the amendment.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. GARNER of Texas. Mr. Speaker, let us have the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 171, nays 155, not voting 104, as follows:

[Roll No. 2]

YEAS—171

Ackerman	Butler	England	Hancock
Aldrich	Campbell	Englebright	Hardy

Davey	Igoe	Porter	
Dempsey	Jacobstein	Pou	
Denison	Jenkins	Prall	
Dickinson, Iowa	Johnson, Wash.	Purnell	

So the bill was passed.

The following pairs were announced:

Mr. Watson (for) with Mr. Pou (against).
Mr. Hudson (for) with Mr. Hammer (against).

General pairs:

Mr. Connolly of Pennsylvania with Mr. O'Connell.
Mr. Curry with Mr. Hudspeth.
Mr. Davenport with Mr. Goldsborough.
Mr. Free with Mr. Dickstein.
Mr. Dowell with Mr. McClintic.
Mr. Hale with Mr. Fletcher.
Mr. Reid of Illinois with Mr. Bell.
Mr. Purnell with Mr. Griffin.
Mr. McFadden with Mr. Casey.
Mr. Kendall with Mr. Mooney.
Mr. Moore of Ohio with Mr. Black of New York.
Mr. Porter with Mr. Peery.
Mr. Denison with Mr. Doyle.
Mr. Taylor of Tennessee with Mr. Carew.
Mr. Faust with Mr. Montague.
Mr. Griest with Mr. Corning.

Mr. Yates with Mr. Linthicum.
Mr. Jenkins with Mr. Buchanan.
Mr. Zihlman with Mr. Carley.
Mr. Wurzbach with Mr. Morrow.
Mr. Golder with Mr. Combs.
Mr. Fenn with Mr. Moore of New Jersey.
Mr. Dickinson of Iowa with Mr. Sears of Florida.
Mr. Begg with Mr. Kunz.
Mr. Kurtz with Mr. Underwood.
Mr. Welsh of Pennsylvania with Mr. Lindsay.
Mr. Johnson of Washington with Mr. Tillman.
Mr. Robsion of Kentucky with Mr. Weller.
Mr. Menges with Mr. Igoe.
Mr. Beck of Pennsylvania with Mr. Greenwood.
Mr. Burdick with Mr. Tucker.
Mr. Crail with Mr. Fulbright.
Mr. Dempsey with Mr. Sullivan.
Mr. Evans of California with Mr. Davey.
Mr. Haugen with Mr. Jacobstein.
Mr. Doutrich with Mr. Reed of Arkansas.
Mr. Buckbee with Mr. Somers.
Mr. Leatherwood with Mr. Evans of Montana.
Mr. McLeod with Mr. Fitzpatrick.
Mr. Strother with Mr. Oliver of Alabama.
Mr. Welch of California with Mr. Quayle.
Mr. Tatgenhorst with Mr. Cole of Maryland.
Mr. Graham with Mr. Cohen.
Mr. Morin with Mr. Oliver of New York.
Mr. Thurston with Mrs. Norton.
Mr. White of Kansas with Mr. Cullen.
Mr. Peavey with Mr. Prall.
Mr. Palmer with Mr. Celler.

The result of the vote was then announced as above recorded.

On motion of Mr. HAWLEY, a motion to reconsider the vote whereby the bill was passed was laid on the table.

INTERIOR DEPARTMENT APPROPRIATION BILL

Mr. CRAMTON, from the Committee on Appropriations, by direction of that committee, reported the bill H. R. 15089 (Rept. No. 1938), making appropriation for the Department of the Interior for the fiscal year ending June 30, 1930, and for other purposes, which was referred to the Committee of the Whole House on the state of the Union and ordered printed.

Mr. GARRETT of Tennessee reserved all points of order.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H. J. Res. 332. Joint resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled a bill and joint resolutions of the following titles, when the Speaker signed the same:

H. R. 13824. An act authorizing L. L. Montague, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Columbia River at or near Arlington, Oreg.;

H. J. Res. 76. Joint resolution for the relief of Leah Frank, Creek Indian, new born, roll No. 294;

H. J. Res. 260. Joint resolution for the relief of Eloise Childers, Creek Indian, minor, roll No. 354;

H. J. Res. 261. Joint resolution for the relief of Effa Cowe, Creek Indian, new born, roll No. 78; and

H. J. Res. 332. Joint resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C.

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 3171. An act providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States.

ORDER OF BUSINESS

Mr. SNELL. Mr. Speaker, I desire to make an announcement. It is expected that to-morrow at the close of the disposition of matters on the Speaker's desk, the Austrian debt settlement bill will be taken up, and that will be followed by the Interior Department appropriation bill.

ST. LOUIS POST-DISPATCH

Mr. COCHRAN of Missouri. Mr. Speaker, I ask unanimous consent to proceed for one minute.

The SPEAKER. Is there objection?

There was no objection.

Mr. COCHRAN of Missouri. Mr. Speaker and ladies and gentlemen of the House, I rise to call your attention to a special edition of the St. Louis Post-Dispatch, one of the great newspapers of the world, which has just arrived and can be found in the reading room.

This edition celebrates the fiftieth anniversary of the establishment of the St. Louis Post-Dispatch by the elder Joseph Pulitzer. It probably represents the most ambitious effort ever made by a newspaper in producing a single edition. It contains articles by more celebrated contributors than have ever before been assembled in one place, and in addition it contains also cartoons by the most celebrated of American and European artists. Among the outstanding contributors to the edition are President Coolidge, Chief Justice Taft, Foreign Minister Stresemann, of Germany, H. G. Wells, Dean Inge, Bertrand Russell, Count Keyserling, Prof. Albert Einstein, B. S. Haldane, Commander Byrd, Henry Ford, Owen D. Young, Maxim Gorky, Senators Borah, Thomas J. Walsh, and Norris, and numerous others. The illustrators include such famous artists as Max Beerbohm, Louis Raemaekers, Frank Brangwyn, Boris Epimov, and Daniel R. Fitzpatrick.

An interesting feature of the edition is a facsimile of the first number of the Post-Dispatch. This 4-page paper was issued December 12, 1878, and its brevity and crude typographical appearance forms an extraordinary contrast with the anniversary edition of which it is a part; the latter consisting of 232 pages, including seven sections printed in rotogravure style on smooth white paper.

Among the interesting features contributed to the edition by the members of the paper's own staff are an intimate history of the elder Joseph Pulitzer by his former companion, a history of St. Louis in the last 50 years, and a history of the Post-Dispatch since its founding.

As an illustration of the elaborate pains and expense which attended the production of this remarkable edition it may be observed that it was sold on the streets of St. Louis at the regular price of 10 cents whereas the white paper on which it was printed cost more than twice that amount and the cost of mailing copies as first-class postage from St. Louis to Washington was $2.32 each.

The handsome character and extraordinary content of this edition thoroughly illustrates the character which the paper has consistently maintained in the past.

The Post-Dispatch's platform found daily on the editorial page written by Joseph Pulitzer, sr., at the time of his retirement, April 10, 1907, is as follows:

I know that my retirement will make no difference in its cardinal principles; that it will always fight for progress and reform, never tolerate injustice or corruption, always fight demagogues of all parties, never belong to any party, always oppose privileged classes and public plunderers, never lack sympathy with the poor, always remain devoted to the public welfare, never be satisfied with merely printing news; always be drastically independent; never be afraid to attack wrong, whether by predatory plutocracy or predatory poverty.

In concluding I might say that 34 years ago, at the age of 14 years, I secured my first job, that of office boy in the editorial department of this newspaper.

ADDRESS OF HON. JOHN M'DUFFIE

Mr. MANSFIELD. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by including therein an address delivered by the gentleman from Alabama [Mr. MCDUFFIE] before the Mississippi Valley Association.

The SPEAKER. Is there objection?

There was no objection.

Mr. MANSFIELD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by the gentleman from Alabama [Mr. MCDUFFIE] before the Mississippi Valley Association:

OUR INLAND WATERWAYS

Mr. MCDUFFIE. After listening to a vast array of experts with all their convincing logic and pleasing eloquence in dealing with the subject of waterways, it is with great diffidence yet with some degree of temerity that I assume a place on this rostrum. Any effort of mine to add anything to this remarkable program is to me seemingly as futile as trying to "paint the lily" or "gild refined gold." It is a great privilege, however, to stand in this presence and greet those who are giving of their time and means for the proper development and full utilization of those unlimited natural resources to be found in our wonderful system of waterways. No organization has done more than the Mississippi Valley Association to fasten the public mind upon the necessity for the conversation and utilization of the Nation's natural resources. Under its progressive leadership during a long period of years, together with

that of the National Rivers and Harbors Congress and similar organizations, the American people have come more and more to recognize the potentialities of our inland waterways for the creation of vast wealth and the multiplication of taxable values. Recognizing such possibilities, the people of this country are now so determined to make use of our waterways we can write into law any reasonable program desired for the consummation of such a purpose. Within recent years Congress has laid new and definite plans to be promptly executed with a view of ending the long delay which has handicapped water transportation and prevented the proper usage of our water courses. In the working out of the country's waterway program the name of one man stands out boldly upon the record. With farseeing vision and untiring zeal he has given many of the best years of his life to the great problems of conservation.

The American people owe a debt of gratitude to that noble "Old Roman," that fine, courtly gentleman, James E. Smith. Verily, he has been the Lindbergh of waterway development in the United States, representing not only the spirit of St. Louis, but indeed the spirit of America.

The American frontiers have disappeared as the courage and genius of our people have planted our civilization on every hilltop and in every vale. The United States, especially since the World War, with all her energy and marvelous resources, is setting a new pace in the onward march of the world's progress and development. No longer here can we say East is East and West is West, but to-day East is West and West is East. In the Rivers and Harbors Committee, this has always been so, for there we have no section or partisan politics. Only a few days ago, however, I also learned with some degree of consternation that, not only economically but politically speaking, South is North and North is South. Surely we have more and more become one large family with interests more mutual than ever before. Though we have our family rows, after all, we are a great, proud, and patriotic people, working together for the common weal and predestined progress of a great Nation. What a privilege to live in the most progressive age of American history, as well as in the history of the world. It would seem man has conquered the earth, the heavens above, and the waters beneath the earth. The "tick" of the telegraph, the "hello" of the telephone, the use of electricity, not only turning the wheels of countless industries, but flashing instantaneous communication from continent to continent has made neighbors of distant peoples and brought to the human family marvelous advantages and comforts of life.

Despite the boasted progress of our people with their vast national wealth we can not escape the fact that this Nation has moved at a snail's pace in the development of our inland waterways as compared to many of the older and smaller nations of the world. In the development of harbors there never was a division of the sentiment of all our people, but the development of inland waterways has heretofore met with opposition from the railroads. This is but natural in the light of possible competition. In the words of Commissioner Taylor of the Interstate Commerce Commission, "It is as natural for the rail to fight the water as for a dog to fight a cat."

In answer to this indictment of delay in developing our waterways we might set up the plea of "confession and avoidance" in that we have on the American Continent the most magnificent system of railways in the world, which until recent years were probably capacitated to adequately transport the commerce of the Nation. However, with the cessation of railroad building and the normal increase of our population; with the building up everywhere of new industries and their mass production; with the multiplication of the Nation's tonnage, which, according to Mr. Hoover, who is, in my judgment, most excellent authority on this subject, trebles itself every 30 years, our transportation system is facing new burdens which must and can only be solved by the proper coordination of the rail lines with the waterways. Realizing this, it is gratifying to know that several of our largest railroads are to-day lending their cordial, sympathetic, effective, and satisfactory cooperation. The time is at hand, or will soon come, when all rail lines must assume the same attitude of cooperation. Inland water transportation has come back. It is here to stay, and the American people will give it every protection needed for its success. It is just as futile to deny the necessity of inland waterway transportation as it would be to deny the necessity for an adequate highway system if the products of our fields and factories are to move with quick dispatch and less cost to all the busy markets of the world. The Congress, recognizing the necessity for the use of our river system in the general scheme of transporting the Nation's commerce, sought a director to demonstrate their value. We wisely selected a man who has shown to America beyond peradventure that transportation on our inland rivers is feasible, successful, and an economic necessity. Though hedged about more or less with that red tape which is incident to government operation of any business, the American people are happy to learn of the success of the Inland Waterway Corporation under the splendid management of Gen. T. Q. Ashburn.

In addition to transportation, especially since the coming of the alternating electric current, we have found new uses for our water courses. After many years of expending public funds for navigation, we have come to forcefully recognize the fact that the water which floats barges and boats on many streams can be used for the generation of power to turn the wheels of industry, and with the impounding of headwaters and flood tides behind high dams the control of floods naturally follows, while swamp and arid lands are reclaimed for the production of food and raiment for mankind. The act of Congress authorizing and directing the study of all our inland streams with a view of their development for navigation, power, and the control of their flood hazards, was the greatest step forward which has ever been undertaken for conservation in America. On the Cumberland River the Congress authorized many years ago a series of low navigation dams, reaching from South Fork to Burnside, to be constructed at an enormous cost to the Public Treasury. Studies of this stream by expects have revealed that within this stretch of many miles there can be constructed at less cost, three high dams instead of nine low ones, with the result that we can secure better navigation channels and at the same time generate annually millions of kilowatt-hours of hydroelectric power. You are familiar with the possible power development on the Tennessee River, which is one of the world's most remarkable waterways. In 1920 a study of the Tennessee was authorized by the Congress with a view of ascertaining its potential power. Up to that time no one even guessed that more than 1,900,000 horsepower was possible to be developed. Yet a careful survey by the Army engineers, which is just now concluded, discloses 130 dam sites and 7,000,000 horsepower available on the Tennessee River and its tributaries.

In America we have entered the electrical age. Electricity has become the "hewer of wood and the drawer of water," and has destroyed the drudgery of the work in the home. It is turning more wheels of industry than steam itself, while its marvelous flash has carried the comforts of the city to the countryside and has brought the country into town. Through its mystifying processes nitrates for death-dealing instrumentalities of war and food for plant life are snatched from the air, while experiments are daily being made which actually promise enrichment of depleted soils by passing through them electric currents. Blessed as we are in this Nation with coal, gas, and oil, we are not assured that our supply of these important energy-producing commodities is unlimited, therefore the American people must of necessity conserve, for development to their maximum capacity, the power possibilities of every water course throughout the Nation.

Belonging to that school of thought which does not teach that the Government, as a policy, should enter the field of ownership and operation of all public utilities, I would not urge the construction of power dams on all streams where only power possibilities exist for the production and distribution of electrical energy by the Government. Where power is incident to navigation and flood control, however, the Federal Government should construct such dams as will serve both purposes. Market demands for power are daily increasing and at no distant day would it be difficult, by lease or otherwise, to realize such a return on the cost of construction as would more than pay for the navigation and flood control improvement, and eventually amortize the cost of power dams. It is nothing less than neglect, if we refuse to follow such a course. It is not only unsound, but wasteful, if we fail to serve our people and conserve our resources in this way in our programs for the improvement of our navigable streams.

On some of our smaller streams improvement for navigation alone has been deemed impractical because the immediate benefit to the commerce of the Nation is not commensurate with the cost. Likewise the improvement for power alone might not appear feasible, because of the lack of a reasonable return on large investments, yet if such streams were developed as joint navigation, power, and flood control projects, the element of excessive cost for either purpose might be eliminated. In certain instances if such a policy could be carried out jointly by the Government and private capital interested in power development, the Government assuming that portion of improvement costs chargeable to navigation and flood control and private capital that portion incident to power development, such projects would be rendered feasible and more immediately available for transportation, as well as for the building up of additional industries. Such a policy, satisfactorily evolved, wherein the welfare of the public is thoroughly safeguarded, and the interests of private capital likewise protected, would hasten the development of many streams now susceptible of quick development really needed in our waterway system. In Seattle sometime ago, Mr. Hoover announced the need for such a policy in one of the most comprehensive and best considered speeches ever delivered upon the subject of waterway development in America.

Definite plans for carrying out such a policy must be worked out and the quickest way to work them out is for the Mississippi Valley Association and similar organizations to take up the subject, study it, analyze it, define the plans, and submit them to Congress. Navigation development and flood control should not be delayed because power interests are not ready in every instance to construct power dams, and, whether or not political and business genius combined formulate the definite plans I have mentioned, the time will soon come when the people will demand that Congress improve certain of these projects, even though the whole cost comes from the Public Treasury. On many streams, if the Government builds high dams, sooner or later private capital interested in power will use them. In this electrical age the power available on

many of our streams should give us in the immediate future adequate channels at a minimum cost, with the possibility that within a period of years even that minimum cost will be amortized.

A detailed survey by the United States engineers is now being made of the proposed Bear Creek cut-off canal to join the waters of the Tombigbee with those of the Tennessee, an example of such projects as I have described. This improvement has been the dream of a century, but as a navigation project exclusively our engineers in the years gone by did not approve it because of the estimated excessive cost. Water-power development, however, having become so extensive and having assumed such large proportions in the growth of the Nation's commerce, it is now declared by many expert engineers that this project is feasible. The construction of a power dam below the mouth of Bear Creek would raise the waters of the Tennessee practically one-half the elevation of the crest between the two streams. The cutting of a short canal and construction of a series of power dams down the Tombigbee, which is already canalized from its mouth to Demopolis, would afford a 9-foot channel to the Gulf at Mobile. This project would shorten the waterway mileage from Cairo to the Gulf more than a hundred miles, from points above Paducah on the Ohio, 200 miles, and from points east of Riverton on the Tennessee 650 miles. Let me respectfully commend this project to the membership of this association in the hope that it will have your careful and sympathetic consideration upon the completion of its study by the engineers. The Arkansas and Coosa Rivers might also be classed with the type of development just mentioned.

The program committee of this association has been kind enough to me, even though inconsiderate of those who hear me, not to confine me to any one subject for discussion, incidentally suggesting, however, that with your permission I might discuss for a few moments some of the many advantages of one of the major ports of the Gulf coast. In doing so, briefly, may I express the hope that I am not breaching the proprieties of this occasion. The waterway advocates of Alabama and especially of Mobile are quite proud and appreciative of the privilege accorded us in recent years of being associated with and becoming a part of this organization. As new members, more or less, you will, with patience I am sure, pardon our overweening enthusiasm, as we grasp every opportunity to tell you of ourselves and our section.

A new day is dawning for the South as we rapidly become an industrial section. There we have the raw material, climate, soil, an abundance of cheap power, and all the forces of nature so ready to respond to the intelligent and scientific touch of man. In only two States, namely, Mississippi and Arkansas, and possibly Florida, does the value of the annual agricultural production exceed the value of the annual mineral and other industrial production. We are highly pleased with the statement of Mr. Schwab, that great captain of industry and pioneer steel producer, who on a recent visit to the Gulf coast, predicted an unprecedented development of the Gulf territory. Recognizing the South's industrial growth, and its proximity to our Latin-American neighbors, Congress has wisely provided in recent years vast sums of money for harbor development, as well as for the canalization of the inland and coastwise waterways of the Gulf States. Our major ports have sufficient depth to accommodate, with few exceptions, the largest freight-carrying steamers that ply all the seven seas. The possibilities of trade with Latin America are attracting the captains of industry everywhere. With approval I quote him who said, "Trade is the magic which opens the door to good will and friendship and makes for the peace of the world."

The American people are to be congratulated that our President elect, with his keen perception and thorough understanding of world affairs, has set sail upon a good-will tour amongst our South American neighbors. We can but believe that a better international understanding, a broader vision, a more friendly feeling, and a closer communion between North and South America will result from the timely visit of our next President of the United States, Herbert Hoover.

With an abiding faith in the future, and realizing the possible expansion of our commerce with Latin-American nations, the far-visioned people of Alabama, by their vote, in 1923, determined to build at Mobile the most modernized port in America. Under the direction of Maj. Gen. William L. Sibert, an outstanding figure in the building of the Panama Canal, and one of the world's greatest engineers, $10,000,000 have been expended in the construction of a new port at old Mobile. In a spirit of friendly rivalry, with no intention to discredit New Orleans, the "Queen City," in which all the Nation takes a just pride; with no purpose to discount the great cotton and grain ports of Houston and Galveston, or the other major ports of the Gulf, with whom we are to-day joining hands in an effort to have the tonnage from this section, and the primary markets of the Mid West, flow its natural course "downhill" to deep water for export, the port of Mobile, the most conspicuous land-locked harbor from Hampton Roads to the mouth of the Amazon River, now offers to the commerce of the world an open port, with the most modernly equipped terminal facilities on the entire American coast line. Since the beginning of operation of the first unit our tonnage has increased from approximately 3,000,000 to approximately 5,000,000. A belt-line railroad of 37 miles, including switching and pier trackage, connects the terminals with our five trunk-line railroads assuring receipt and delivery at a minimum of time and cost. A vast equipment specially provided for handling cargoes of flour, and coal-handling facilities, with a capacity of 1,000 tons per hour, Pier B, occupying 20 acres—with 14 acres under shed—is the largest steamship pier of its kind in the world.

In the harbor of Mobile we have the largest and best shipbuilding industries south of Newport News. Nearer the Panama Canal, the west coast of South America, nearer St. Louis, Chicago, and Cincinnati than any other major Gulf port; connected with the Intracoastal Canal; situated at the mouth of 1,500 miles of navigable rivers, reaching with an 8-foot channel into the coal and iron district of Birmingham—the Pittsburgh of the South, where steel is manufactured at less cost than anywhere else in America—Mobile, Alabama's only seaport, is inviting and attracting commerce from all parts of the world. Still possessing its old-time hospitality, charm, and romance, historic Mobile is moving forward with renewed life and quickened pace, inviting capital everywhere to come and share her opportunities and advantages, while her deep, safe, and new port is beckoning to the world's commerce.

To those who seek locations for industries we offer ideal sites free of charge for a period of years, or at nominal cost on a deep industrial canal connected with the new terminals; to those capitalists who would build up trade and venture their fortunes in the development of the marvelous resources of Central and South America we now give assurance that the quickest route, the most available gateway, for their products is through the port of Mobile. To those who would play she invites you to come to the land of azalias, magnolias, and the sweet-scented blossoms of her orange groves, where you may bask in the sunny clime of the center of America's Riviera, listen to the songs of birds mingling with those of children all the year round, and enjoy the gentle breezes of Mobile Bay.

REPORT OF BUREAU OF EFFICIENCY

The SPEAKER laid before the House the following message from the President of the United States, which was read and, with the accompanying papers, referred to the Committee on Expenditures in the Executive Departments.

To the Congress of the United States:

As required by the acts of March 4, 1915, and February 28, 1916, I transmit herewith the report of the United States Bureau of Efficiency for the period from November 1, 1927, to October 31, 1928.

CALVIN COOLIDGE.

THE WHITE HOUSE, *December 8, 1928.*

ARLINGTON MEMORIAL AMPHITHEATER

The SPEAKER also laid before the House the following message from the President of the United States, which was read and, with the accompanying papers, referred to the Committee on Public Buildings and Grounds:

To the Congress of the United States:

In compliance with the requirements of the act of Congress of March 4, 1921, I transmit herewith the Annual Report of the Commission on the Erection of Memorials and Entombment of Bodies in the Arlington Memorial Amphitheater for the fiscal year ending June 30, 1928. The attention of the Congress is invited to the renewal of the recommendation of the commission that the Tomb of the Unknown Soldier be completed and that the balance of the $50,000 authorized for the completion of said tomb, $47,500, is carried in the Budget estimates for the fiscal year 1930.

CALVIN COOLIDGE.

THE WHITE HOUSE, *December 8, 1928.*

PUBLIC SERVICE COMMISSION OF PORTO RICO

The SPEAKER also laid before the House the following message from the President of the United States, which was read and, with the accompanying papers, referred to the Committee on Insular Affairs:

To the Congress of the United States:

As required by section 38 of the act approved March 2, 1917 (39 Stat. 951), entitled "An act to provide a civil government for Porto Rico, and for other purposes," I have the honor to transmit herewith certified copies each of 15 franchises granted by the Public Service Commission of Porto Rico. The franchises are described in the accompanying letter from the Secretary of War transmitting them to me.

CALVIN COOLIDGE.

THE WHITE HOUSE, *December 8, 1928.*

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to—

Mr. HUDSON, at the request of Mr. MAPES, for two days, on account of official business.

Mr. O'CONNELL, for three days, on account of illness in family.

Mr. TATGENHORST, for 10 days, on account of important business.

Mr. HUDSPETH, indefinitely, on account of sickness.

Mr. DENISON, indefinitely, on account of official business.

ADJOURNMENT

Mr. HAWLEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; and accordingly (at 4 o'clock and 54 minutes p. m.) the House adjourned until to-morrow, Tuesday, December 11, 1928, at 12 o'clock noon.

COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Tuesday, December 11, 1928, as reported by clerks of the several committees:

COMMITTEE ON APPROPRIATIONS

(10.30 a. m.)

War Department appropriation bill.

COMMITTEE ON AGRICULTURE

(10 a. m.)

To amend the packers and stockyards act, 1921 (H. R. 13596).

COMMITTEE ON INSULAR AFFAIRS

(10.30 a. m.)

For the relief of Porto Rico (H. J. Res. 333).

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

655. A letter from the Secretary of the Treasury, transmitting draft of a bill to amend Public Law No. 543, Sixty-eighth Congress, approved March 3, 1925, which provides for the restoration of Fort McHenry, in the State of Maryland; to the Committee on Military Affairs.

656. A letter from the Secretary of the Treasury, transmitting the report of the Surgeon General of the Public Health Service for the fiscal year 1929 (H. Doc. No. 346); to the Committee on Interstate and Foreign Commerce.

657. A letter from the Secretary of War, transmitting statement showing permits and licenses issued under the authority of the act (41 Stat. 1063) during the fiscal year ended June 30, 1928; to the Committee on Interstate and Foreign Commerce.

658. A communication from the President of the United States, transmitting supplemental estimate of appropriation amounting to $60,000 for the fiscal year 1929, to enable the Secretary of Agriculture to continue the operation of the Center Market at Washington, D. C., from February 1 to June 30, 1929 (H. Doc. No. 459); to the Committee on Appropriations and ordered to be printed.

659. A letter from the Secretary of War, transmitting annual report of the American National Red Cross for the year ending June 30, 1928; to the Committee on Military Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

[*Submitted December 8, 1928*]

Mr. SNELL: Committee on Rules. H. J. Res. 342. Joint resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Hills, Kitty Hawk, N. C.; without amendment (Rept. No. 1931). Referred to the House Calendar.

Mr. SNELL: Committee on Rules. H. Res. 254. A resolution providing for the consideration of H. R. 10760, a bill to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918; without amendment (Rept. No. 1932). Referred to the House Calendar.

Mr. SNELL: Committee on Rules. H. Res. 255. A resolution providing for the consideration of H. J. Res. 340, a joint resolution to authorize the Secretary of the Treasury to cooperate with the other relief creditor governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States; without amendment (Rept. No. 1933). Referred to the House Calendar.

[*Submitted December 10, 1928*]

Mr. BRITTEN: Committee on Naval Affairs. H. R. 13249. A bill to authorize an increase in the limit of cost of alterations and repairs to certain naval vessels; without amendment (Rept. No. 1934). Referred to the Committee of the Whole House on the state of the Union.

Mr. BRITTEN: Committee on Naval Affairs. H. R. 14660. A bill to authorize alterations and repairs to the U. S. S. *California;* with amendment (Rept. No. 1935). Referred to the Committee of the Whole House on the state of the Union.

Mr. BRITTEN: Committee on Naval Affairs. H. R. 14922. A bill to authorize an increase in the limit of cost of two fleet submarines; without amendment (Rept. No. 1936). Referred to the Committee of the Whole House on the state of the Union.

Mr. DARROW: Committee on Naval Affairs. H. R. 13685. A bill to regulate the distribution and promotion of commissioned officers of the Marine Corps, and for other purposes; with amendments (Rept. No. 1937). Referred to the Committee of the Whole House on the state of the Union.

Mr. CRAMTON: Committee on Appropriations. H. R. 15089. A bill making appropriations for the Department of the Interior for the fiscal year ending June 30, 1930, and for other purposes; without amendment (Rept. No. 1938). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 8205) granting a pension to Benjamin Bothwell; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14886) granting a pension to Dena Phillips; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14945) granting an increase of pension to Sarah O'Neill; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASWELL: A bill (H. R. 15067) to authorize the State of Louisiana and the State of Texas to construct, maintain, and operate a free highway bridge across the Sabine River where Louisiana Highway No. 21 meets Texas Highway No. 45; to the Committee on Interstate and Foreign Commerce.

By Mr. BACHMANN: A bill (H. R. 15068) authorizing the Moundsville Bridge Co. to construct a bridge across the Ohio River at or near the city of Moundsville, W. Va.; to the Committee on Interstate and Foreign Commerce.

By Mr. GARNER of Texas: A bill (H. R. 15069) authorizing the Rio Grande City-Camargo Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande at or near Rio Grande City, Tex.; to the Committee on Interstate and Foreign Commerce.

By Mr. McMILLAN: A bill (H. R. 15070) to provide for the construction of a retaining wall at Fort Moultrie, S. C.; to the Committee on Military Affairs.

Also, a bill (H. R. 15071) to authorize an appropriation of $2,500 for the erection of a marker or tablet in memory of Col. Isaac Hayne over his grave in Colleton County, S. C.; to the Committee on the Library.

By Mr. SPROUL of Illinois: A bill (H. R. 15072) granting the consent of Congress to the commissioners of the county of Cook, State of Illinois, to reconstruct the bridge across the Grand Calumet River at Burnham Avenue in said county and State; to the Committee on Interstate and Foreign Commerce.

By Mr. ANTHONY: A bill (H. R. 15073) to authorize an appropriation for the construction of 2 barracks buildings, 1 hospital wing, and 2 sets of double quarters for doctors at the Western Branch, National Home for Disabled Volunteer Soldiers; to the Committee on Military Affairs.

By Mf. BLAND: A bill (H. R. 15074) to authorize an appropriation of $630,000 for construction of additional hospital facilities and doctors' quarters at Southern Branch of National Home for Disabled Volunteer Soldiers at Hampton, Va.; to the Committee on Military Affairs.

By Mr. FREE: A bill (H. R. 15075) to amend section 15a of the interstate commerce act, as amended; to the Committee on Interstate and Foreign Commerce.

By Mr. HADLEY: A bill (H. R. 15076) to aid in the survey and location of a low-level tunnel under the Cascade Mountains,

between Skykomish and Leavenworth, in the State of Washington; to the Committee on the Public Lands.

By Mr. HILL of Alabama: A bill (H. R. 15077) declaring Armistice Day to be a legal public holiday; to the Committee on the Judiciary.

By Mr. HILL of Washington: A bill (H. R. 15078) to aid in the survey and location of a low-level tunnel under the Cascade Mountains, between Skykomish and Leavenworth, in the State of Washington; to the Committee on the Public Lands.

By Mr. HOUSTON of Hawaii: A bill (H. R. 15079) to amend the act entitled "An act to regulate the immigration of aliens to and the residence of aliens in the United States"; to the Committee on Immigration and Naturalization.

Also, a bill (H. R. 15080) to amend section 319 of the act entitled "An act to codify, revise, and amend the penal laws of the United States," approved March 4, 1909; to the Committee on the Judiciary.

By Mr. JOHNSON of Illinois: A bill (H. R. 15081) to extend the times for commencing and completing the construction of a bridge across the Mississippi River at or near the city of Savanna, Ill.; to the Committee on Interstate and Foreign Commerce.

By Mr. MORIN: A bill (H. R. 15082) to amend section 47c, national defense act, as amended, relating to military training required to entitle members of the Reserve Officers' Training Corps, to receive commutation of subsistence; to the Committee on Military Affairs.

By Mr. O'CONNELL: A bill (H. R. 15083) for postal employees longevity; to the Committee on the Post Office and Post Roads.

By Mr. PORTER: A bill (H. R. 15084) granting the consent of Congress to the county of Allegheny, Pa., to construct, maintain, and operate a bridge across the Ohio River between a point at or near Reedsdale Street in the north side and a point at or near Carson Street in the west end of the city of Pittsburgh, Allegheny County, Pa.; to the Committee on Interstate and Foreign Commerce.

By Mr. SUMMERS of Washington: A bill (H. R. 15085) providing for the necessary surveys, studies, investigations, and engineering of the Columbia Basin reclamation project, and for other purposes; to the Committee on Irrigation and Reclamation.

By Mr. VESTAL: A bill (H. R. 15086) to authorize the President of the United States to effect and proclaim the adhesion of the United States to the convention for the protection of works of literature and art signed at Rome on June 2, 1928; to the Committee on Patents.

By Mr. HOWARD of Oklahoma: A bill (H. R. 15087) to compensate the Delaware Indians for services rendered by them to the United States in various wars; to the Committee on the Public Lands.

By Mr. NELSON of Maine: A bill (H. R. 15088) to provide for the extension of the boundary limits of the Lafayette National Park, in the State of Maine, and for change of name of said park to the Acadia National Park; to the Committee on the Public Lands.

By Mr. CRAMTON: A bill (H. R. 15089) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1930, and for other purposes; committed to the Committee of the Whole House on the state of the Union.

By Mr. DAVILA: A bill (H. R. 15090) to authorize the acquisition for forestry purposes of lands within the Territory of Porto Rico; to the Committee on Agriculture.

By Mr. CRAMTON: A bill (H. R. 15091) exempting certain Indian lands from taxation for a period of 25 years; to the Committee on Indian Affairs.

By Mr. SWING: A bill (H. R. 15092) to authorize an appropriation to pay half the cost of a bridge on the Soboba Indian Reservation, Calif.; to the Committee on Indian Affairs.

Also (by request), a bill (H. R. 15093) to increase the pensions of certain soldiers of the Civil War and widows of Civil War soldiers; to the Committee on Invalid Pensions.

By Mr. NEWTON (by request): A bill (H. R. 15094) to create a board for the safety and betterment of the people; to the Committee on Interstate and Foreign Commerce.

SENATE

TUESDAY, *December 11, 1928*

(Legislative day of Monday, December 10, 1928)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

SENATOR FROM INDIANA

The VICE PRESIDENT laid before the Senate the credentials of ARTHUR R. ROBINSON, chosen a Senator from the State of Indiana for the term commencing March 4, 1929, which were read and ordered to be placed on file, as follows:

STATE OF INDIANA,
EXECUTIVE DEPARTMENT.

To all to whom these presents shall come, greeting:

Whereas it has been certified to me by the proper authority that ARTHUR R. ROBINSON has been elected to the office of Senator of the United States from the State of Indiana:

Therefore, know ye, that in the name and by the authority of the State aforesaid I do hereby certify that the said ARTHUR R. ROBINSON was duly elected for the term of six years from the 4th day of March, 1929, until his successor shall have been elected and qualified.

In witness whereof I have hereunto set my hand and caused to be affixed the seal of the State at the city of Indianapolis this 27th day of November, A. D. 1928, the one hundred and eleventh year of the State, and of the independence of the United States the one hundred and fifty-second.

By the governor:

ED JACKSON.

[SEAL.] F. E. SCHORTEMEIER,
Secretary of State.

SENATOR FROM ARIZONA

Mr. HAYDEN presented the credentials of HENRY F. ASHURST, chosen a Senator from the State of Arizona for the term commencing March 4, 1929, which were read and ordered to be placed on file, as follows:

STATE OF ARIZONA,
OFFICE OF THE SECRETARY.

UNITED STATES OF AMERICA,
State of Arizona, ss:

I, James H. Kerby, secretary of state, do hereby certify that in accordance with the provisions of chapter 20, Laws of Arizona, 1925, results of the official canvass of the returns of the votes cast at the general election held in the State of Arizona on November 6, 1928, as certified to by all the boards of supervisors of the several counties, show that HENRY F. ASHURST, who was the Democratic candidate for the office of United States Senator, received the highest number of votes cast for any candidate for this office, and having complied with all the provisions relating to the filing of statements of campaign expenses and having complied with all other requirements imposed by law upon candidates for office is therefore declared elected, all of which is shown by the original returns on file in this department.

In witness whereof I have hereunto set my hand and affixed the great seal of Arizona.

Done at Phoenix, the capital, this 26th day of November, A. D. 1928.

[SEAL.] JAMES H. KERBY,
Secretary of State.

VISIT OF PRESIDENT-ELECT HOOVER TO PERU

The VICE PRESIDENT laid before the Senate a cablegram from the President of the National Chamber of Deputies of Peru, which was referred to the Committee on Foreign Relations and ordered to be printed in the RECORD, as follows:

[Translation]

DECEMBER 5, 1928.

His Excellency Mr. CHARLES E. DAWES,
President of the United States Senate,
Washington, D. C.:

The National Chamber of Deputies of Peru in its session of yesterday, at the instance of the Chair, unanimously approved the following motion on the order of the day:

The National Deputies, who sign below, considering

That the good-will voyage which the President elect of the United States of North America is making to the republics of the continent evinces the interest felt by that distinguished statesman in familiarizing himself with the conditions and problems of the different peoples of America:

That this laudable effort to acquire in person a clear vision and correct conception of our true conditions in order to base thereon the international action of his Government and the influence of his people is an augury of efficiency as well as an example ever worthy of imitation by all statesmen who assume the responsibility of governing a people such as that of the United States;

That the interdependence of peoples is growing ever stronger and closer through the effect of modern means of communication which by eliminating all differences have overcome even geographical frontiers;

That the postulates of the new jurisprudence, in establishing the necessity of harmony and cooperation, require, together with that respect for justice which is absolutely necessary, knowledge of the special means and resources of each people for the accomplishment of its ends;

That these ideals, on which Peru has always based her international life, constitute the permanent essence of the ideal of liberty which presided over the birth of our countries, and determine, on the free soil of America, the providential destiny in accordance with which a new human civilization is rising on its soil, which is free from stain;

Have the honor to submit to the consideration of the Chamber the following motion on the order of the day;

The National Chamber of Deputies resolves

To express to His Excellency Mr. Herbert Clark Hoover, President elect of the United States of North America, its high appreciation on the occasion of his visit to this country;

Applauds the praiseworthy purposes inspiring his tour through the other republics of the continent; and

Resolves at the same time to express to the people of the United States, through their national representatives, the satisfaction of Peru at this tour, which can not fail to be of advantage for the solidarity and greatness of America.

C. MANCHEGO MUNOZ,
FRANCISCO GRANA,
CARLOS A. OLIVARES,
GUILLERMO REY,
LAMA MARIANO ALVAREZ,
EDUARDO C. BASADRE.

LIMA, *December 3, 1928.*

In carrying out the resolution of the Chamber of Deputies, I take pleasure in conveying to the Federal Senate of your great Republic the sentiments of cordial friendship which animate Peru toward your great Nation, the champion of democracy, and to express to it our sincere admiration for the gigantic effort with which she contributes to the well-being and the progress of the world.

I feel it an honor to offer to your excellency, on so significant an occasion, the assurance of my highest consideration.

C. MANCHEGO MUNOZ,
President of the National Chamber of Deputies of Peru.

PETITIONS

Mr. EDGE presented the petition of Albert W. Harrison, jr., and sundry other members of the Broad Street Park Methodist Episcopal Church, of Trenton, N. J., praying for prompt ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

He also presented a resolution unanimously adopted by the Kiwanis Club, of Atlantic City, N. J., favoring the ratification of the so-called multilateral treaty for the renunciation of war, which was referred to the Committee on Foreign Relations.

Mr. McLEAN presented a letter in the nature of a petition from the Department of Connecticut Woman's Relief Corps, Danielson, Conn., praying for the adoption of the proposed naval building program, which was referred to the Committee on Naval Affairs.

He also presented petitions and letters in the nature of petitions from the Connecticut League of Women Voters, of Hartford; the League of Republican Women, of Meriden; the Connecticut Woman's Christian Temperance Union, of Bristol; and sundry citizens of Portland and Wilton, all in the State of Connecticut, praying for the passage of the so-called Gillett resolution (S. Res. 139) suggesting a further exchange of views relative to the World Court, which were referred to the Committee on Foreign Relations.

He also presented petitions and papers in the nature of petitions from the Northwest Child Welfare Club, of Hartford; the Woman's Foreign Missionary Society, of Meriden; the Republican Woman's Club, of Westport; the Connecticut League of Women Voters; the Connecticut section of the National Committee on the Cause and Cure of War; the State Federation of Men's Bible Classes; the Current Events Club, of Hartford; the faculty of Wilby High School and the Bunker Hill Literary Club, both of Waterbury; and members of the Church of the Holy Trinity, of Middleton, and the Community Congregational Church, of Eastford, all in the State of Connecticut, praying for the prompt ratification of the so-called multilateral treaty for the renunciation of war, which were referred to the Committee on Foreign Relations.

REPORTS OF COMMITTEES

Mr. KEYES, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 4739) authorizing the Secretary of the Treasury to sell certain Government-owned land at Manchester, N. H., reported it without amendment and submitted a report (No. 1340) thereon.

Mr. BINGHAM, from the Committee on Territories and Insular Possessions, to which was referred the joint resolution (S. J. Res. 172) for the relief of Porto Rico, reported it with amendments and submitted a report (No. 1341) thereon.

ENROLLED BILL PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that on December 11, 1928, that committee presented to the President of the United States the enrolled bill (S. 3171) providing for a Presidents' plaza and memorial in the city of Nashville, State of Tennessee, to Andrew Jackson, James K. Polk, and Andrew Johnson, former Presidents of the United States.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. EDGE:

A bill (S. 4828) to grant relief to those States which brought State-owned property into the Federal service in 1917; to the Committee on Claims.

By Mr. HALE:

A bill (S. 4829) granting an increase of pension to Susan I. Brown (with accompanying papers); to the Committee on Pensions.

By Mr. PITTMAN:

A bill (S. 4830) granting an increase of pension to Clarence E. Carpenter; to the Committee on Pensions.

By Mr. NEELY:

A bill (S. 4835) granting an increase of pension to John J. Hughes; to the Committee on Pensions.

By Mr. CAPPER:

A bill (S. 4836) for the relief of John P. T. Davis (with accompanying papers); to the Committee on Military Affairs.

By Mr. SHIPSTEAD:

A bill (S. 4837) granting a pension to Annie Benton (with accompanying papers);

A bill (S. 4838) granting a pension to Albert Schrank (with accompanying papers); and

A bill (S. 4839) granting an increase of pension to Emilie Sipple (with accompanying papers); to the Committee on Pensions.

By Mr. BROUSSARD:

A bill (S. 4840) to recognize commissioned service as active commissioned service while on the retired list in determining rights of officers of the Regular Army; to the Committee on Military Affairs.

By Mr. McNARY:

A bill (S. 4841) establishing a fund for the propagation of salmon in the Columbia River district; to the Committee on Commerce.

By Mr. BLACK:

A bill (S. 4842) to provide for the suspension of immigration of aliens into the United States; to the Committee on Immigration.

By Mr. JOHNSON:

A bill (S. 4843) granting employees' compensation to the next of kin of R. E. Covert (with accompanying papers); to the Committee on Claims.

A bill (S. 4844) granting compensation to Charles C. Terry; to the Committee on Finance.

A bill (S. 4845) for the relief of Hobart M. Hicks (with accompanying papers); to the Committee on Military Affairs.

A bill (S. 4846) granting an increase of pension to Carrie S. Baxter (with accompanying papers); and

A bill (S. 4847) granting an increase of pension to Katherine French (with accompanying papers); to the Committee on Pensions.

RECONSTRUCTION OF SENATE WING OF THE CAPITOL

Mr. McNARY. I ask unanimous consent to introduce a Senate joint resolution, and ask that it be referred to the Committee on Appropriations and read at the desk by the clerk.

The VICE PRESIDENT. Without objection, the joint resolution will be received and read.

The joint resolution (S. J. Res. 176) to suspend the operation of the provisions of the legislative appropriation act for the fiscal year ending June 30, 1929, authorizing the reconstruction of the Senate wing of the Capitol was read the first time by its title and the second time at length, as follows:

Resolved, etc., That the Architect of the Capitol is directed to report to the Senate at the beginning of the first regular session of the Seventy-first Congress upon the efficacy of the air-conditioning apparatus installed in the Hall of the House of Representatives. Until January 1, 1930, no further action shall be taken under the provisions of the second paragraph under the caption "Capitol Buildings and Grounds" in the act entitled "An act making appropriations for the legislative branch of the Government for the fiscal year ending June 30, 1929,

and for other purposes," approved May 14, 1928, authorizing the rearrangement and reconstruction of the Senate wing of the Capitol and making an appropriation therefor, except that the appropriation made by such paragraph shall remain available for payment for work done and materials furnished prior to the approval of this resolution and for payment of damages, if any, suffered by reason of the suspension of the work under any contract made pursuant to such paragraph prior to such approval.

Mr. SMOOT. Mr. President, I desire to ask if there was a reference made of the joint resolution?

Mr. OVERMAN. What was done with that joint resolution?

Mr. SMOOT. I am just asking what action was taken by way of reference of the joint resolution.

The PRESIDING OFFICER (Mr. McNARY in the chair). Inasmuch as the original legislation came from the Committee on Appropriations, it is the opinion of the present occupant of the chair that it should be there referred.

Mr. OVERMAN. I move that the joint resolution be referred to the Committee on Rules, inasmuch as this whole question is now before our committee. It had the matter up on last Saturday, and is to consider it again next Saturday. The subject is before that committee, and I move that the joint resolution be sent to the Committee on Rules.

The PRESIDING OFFICER. If there is no objection, the joint resolution will be referred to the Committee on Rules.

COLORADO RIVER INVESTIGATIONS (S. DOC. NO. 186)

Mr. ODDIE. Mr. President, I have here a document that has been prepared by Mr. George W. Malone, of whom I spoke a few days ago.

This work has been prepared at great expense to the Nevada Colorado River Commission, with the assistance of prominent officials of the Bureau of Reclamation and United States Geologic Survey, and represents a compilation of authentic data that has been accumulated over a period of years.

This is a review of all of the reports up to the present time, and is a reference work so that for any statement made the supporting data can be found without loss of time, and really represents a "brief" of the entire proceedings in this important matter from the beginning to the present time.

The Fall-Davis report, the E. C. La Rue report, the Weymouth report, consisting of nine volumes, upon which the Government expended nearly $400,000, the Arizona Engineering Commission report, the various congressional hearings, and lastly the Colorado River Board report, only recently rendered to the Secretary of the Interior, have been reviewed and referenced, not with an idea of supporting any particular set-up but so that all of this important data may be immediately available to the Members of Congress working on this important piece of legislation.

Mr. Malone is, as I have previously said, State engineer of Nevada and president of the Western Association of State Engineers, comprising 17 Western States, and is a particularly able man in matters of this kind.

Mr. President, I therefore request that this work, entitled "Colorado River Investigations, Water Storage and Power Development, Grand Canyon to Imperial Valley," be printed as a Senate document, with illustrations, so that the Members of this body may have the benefit of the referenced work.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nevada? The Chair hears none, and the papers will be printed as a Senate document.

PROHIBITION ENFORCEMENT

Mr. BLEASE. Mr. President, I find the following clipping in this morning's Washington Post.

I desire to have it printed in connection with article inserted on page 158 of the CONGRESSIONAL RECORD of December 6.

Also, I desire to have inserted a clipping from the Greenville (S. C.) News of December 10, 1928.

It seems while the United States Government is protecting the Christmas whiskies of foreigners the South Carolina officials are endeavoring to enforce the law against home folks.

Why not enforce the law impartially to all the people?

I favor a strict enforcement of the Volstead Act and eighteenth amendment by both Government and State officials.

There being no objection, the clippings were ordered to be printed in the RECORD, as follows:

[From the Washington Post, December 11, 1928]

LIQUORS FOR ENVOYS RESCUED IN HOLDUP—DRIVER FIGHTS TWO HIJACKERS AT BALTIMORE—TWO CAPITAL MEN ARRESTED

Christmas cheer for half a dozen diplomatic missions here was imperiled yesterday when four hijackers tried to steal a truck load of rare liquors and wines destined for embassies and legations, as it was being transferred in Baltimore from the pier to the customhouse.

Two of the three alleged hijackers who were arrested later said they were from Washington. They were John Herbert, who said he lived at 1708 Good Hope Road SE., and Howard Dublen, who refused to give police his street address.

The cargo of the truck was valued at about $10,000 and was saved by Carroll Poole, the driver, who, after he had been beaten over the head with a pistol, continued to fight the hijackers until a crowd of citizens gathered and frightened them off.

[From the Greenville (S. C.) News, December 10, 1928]

SEVEN HUNDRED AND FIFTY-ONE STILLS CUT BY GOVERNOR'S FORCE

COLUMBIA, December 9.—Seven hundred and fifty-one stills were destroyed by the detectives operating under the governor's office between January 1 and November 1, according to a report issued from the office of Governor Richards yesterday, covering the activities of the State constabulary for the first 10 months of the year.

The report also shows the following facts: Beer destroyed, 1,066,470 gallons; whisky poured out, 36,222 gallons; home brew destroyed, 16,529 gallons; automobiles confiscated, 61; arrests made, 1,376; investigations made, 1,342; slot machines confiscated, 124; wagons confiscated, 21; mules or horses confiscated, 22; cases made against offenders, 1,329; convictions secured, 769; cases pending, 196.

The report does not, it says, cover the activities of two of the governor's constables who have worked on murder and arson cases almost exclusively.

MESSAGE FROM THE HOUSE

A message fom the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed the following bill and joint resolution, in which it requested the concurrence of the Senate:

H. R. 10760. An act to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918; and

H. J. Res. 340. Joint resolution to authorize the Secretary of the Treasury to cooperate with the other relief creditor governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States.

HOUSE BILL AND JOINT RESOLUTION REFERRED

The following bill and joint resolution were each read twice by title and referred to the Committee on Finance:

H. R. 10760. An act to authorize the settlement of the indebtedness of the Hellenic Republic to the United States of America and of the differences arising out of the tripartite loan agreement of February 10, 1918; and

H. J. Res. 340. Joint resolution to authorize the Secretary of the Treasury to cooperate with the other relief creditor governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States.

BOULDER DAM

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 5773) to provide for the construction of works for the protection and development of the lower Colorado River Basin, for the approval of the Colorado River compact, and for other purposes.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Colorado [Mr. PHIPPS] to the amendment of the Senator from Arizona [Mr. HAYDEN] to the substitute amendment of the Senator from California [Mr. JOHNSON].

Mr. WALSH of Montana. Mr. President, may the clerk state the various amendments, starting with the amendment of the Senator from California?

The VICE PRESIDENT. The amendments will be stated.

The CHIEF CLERK. On December 5 the Senator from California [Mr. JOHNSON] moved to substitute the House bill for the Senate bill, which was done, and thereafter offered as a substitute amendment the Senate bill (S. 728) as printed. To that amendment the Senator from Arizona [Mr. HAYDEN] offered an amendment to section 4–A, and on yesterday the Senator from Colorado [Mr. PHIPPS] offered an amendment to the amendment of the Senator from Arizona to the substitute offered by the Senator from California.

Mr. ASHURST. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	George	McMaster	Shortridge
Barkley	Gillett	McNary	Simmons
Bayard	Glass	Metcalf	Smith
Bingham	Glenn	Moses	Smoot
Black	Goff	Neely	Steck
Blaine	Greene	Norris	Steiwer
Blease	Hale	Nye	Stephens
Borah	Harris	Oddie	Swanson
Bratton	Harrison	Overman	Thomas, Idaho
Brookhart	Hawes	Phipps	Trammell
Broussard	Hayden	Pine	Tydings
Bruce	Heflin	Pittman	Tyson
Capper	Johnson	Ransdell	Vandenberg
Caraway	Jones	Reed, Mo.	Wagner
Couzens	Kendrick	Reed, Pa.	Walsh, Mass.
Curtis	Keyes	Robinson, Ark.	Walsh, Mont.
Deneen	King	Robinson, Ind.	Warren
Edge	Larrazolo	Sackett	Waterman
Edwards	Locher	Schall	Watson
Fess	McKellar	Sheppard	Wheeler
Frazier	McLean	Shipstead	

Mr. NORRIS. I desire to announce that my colleague the junior Senator from Nebraska [Mr. HOWELL] is unavoidably detained by illness.

Mr. WAGNER. I wish to announce that my colleague the senior Senator from New York [Mr. COPELAND] is necessarily detained by illness in his family.

Mr. SHEPPARD. My colleague the junior Senator from Texas [Mr. MAYFIELD] is unavoidably detained on account of illness. This announcement may stand for the day.

The VICE PRESIDENT. Eighty-three Senators having answered to their names, a quorum is present.

Mr. HAYDEN. Mr. President, I should like to have the attention of the Senate, that I may discuss the parliamentary situation as it exists and what I may do, if possible, to remedy it, in order that the amendment offered by the Senator from Colorado [Mr. PHIPPS] may be perfected.

As I understand the situation, the amendment offered by the Senator from Colorado [Mr. PHIPPS] is an amendment in the second degree, an amendment to the amendment which I have offered, and therefore not subject to amendment. The Senator's amendment contains three substantive propositions, upon which there is a difference of opinion between the States of Arizona and California, and we must vote upon all of them as one if his amendment is not subject to amendment. But if the Senator's amendment could be made subject to amendment the Senate could vote upon the various propositions separately. For example, the Senator has taken from another part of the bill a provision that the State of California shall have 4,600,000 acre-feet of water on the Colorado River. Arizona agrees that the State of California shall have 4,200,000 acre-feet of water.

I desire it arranged so that the Senate may vote upon the question of whether it shall be one figure or the other.

I should like to inquire of the President of the Senate, whether, if I should withdraw the amendment which I have offered, would then the amendment offered by the Senator from Colorado be an amendment in the second degree and subject to amendment?

The VICE PRESIDENT. Will the Senator state his question again?

Mr. HAYDEN. If I should withdraw the amendment which I have offered, to which the amendment of the Senator from Colorado is a substitute, will his amendment then be an amendment in the first degree and subject to amendment?

The VICE PRESIDENT. The amendment of the Senator from Colorado would have to go along with the amendment of the Senator from Arizona if the Senator from Arizona withdraws his amendment.

Mr. HAYDEN. Would it not then be possible for the Senator from Colorado to immediately reoffer his amendment?

The VICE PRESIDENT. The Senator from Colorado could do that.

Mr. HAYDEN. I want to state to the Senate that what I am trying to accomplish is to get a vote on the one particular question of whether the quantity of water which the State of California may divert from the Colorado River should be 4,200,000 acre-feet or 4,600,000 acre-feet. I can state in 15 or 20 minutes all the reasons why Arizona favors the lesser figure, and then the Senate may have a vote upon that question.

Mr. PHIPPS. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. PHIPPS. I desire to call attention to the fact that 4,600,000 acre-feet was the figure adopted by the Senate committee and was written in the substitute bill offered by the Senator from California [Mr. JOHNSON]. Therefore it seems to me that the point comes right down to the question of 4,600,000 acre-feet as recommended by the Senate committee and 4,200,000 acre-feet as written in the amendment of the Senator from Arizona.

Mr. HAYDEN. And upon that particular issue and upon nothing else I desire to have a vote of the Senate at this time.

Mr. PHIPPS. The other item that is in the amendment to which the Senator calls attention, as I understand, is the provision regarding the Federal Power Commission. That is the only other matter, is it not?

Mr. HAYDEN. My amendment as originally offered provides for a 7-State ratification of the Colorado River compact. The Senator from Colorado in his amendment provides for a 6-State ratification. That is another question upon which I should like to have the Senate take a vote. If the Senate will bear with me for a moment, I desire to say that it is only fair to the State of Arizona that the several substantive propositions which are contained in the amendment of the Senator from Colorado and in my amendment be voted upon, each upon its own merits by the Senate, and not grouped together in one particular amendment. If I am privileged to do so, Mr. President, I withdraw, without prejudice, the amendment I have offered.

The VICE PRESIDENT. The Senator has that right. The amendment of the Senator from Arizona to the so-called Johnson amendment is withdrawn.

Mr. HAYDEN. Now, if the Senator from Colorado [Mr. PHIPPS] will again offer his amendment just as it is, we can proceed to debate it, to amend it, and to vote upon it.

Mr. PHIPPS. Mr. President, I understand the Senator from Arizona has withdrawn his amendment. I desire again to offer my amendment as it is now before the Senate.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Colorado [Mr. PHIPPS].

Mr. HAYDEN. I offer the following amendment to the amendment offered by the Senator from Colorado.

Mr. SMOOT. Let the amendments be now read.

The VICE PRESIDENT. The clerk will state the amendment of the Senator from Colorado and the amendment of the Senator from Arizona to the substitute amendment.

The CHIEF CLERK. On page 4 it is proposed to strike out all of lines 22 to 25, inclusive, and on page 5 to strike out lines 1 to 14, inclusive, and to insert in lieu thereof the following:

SEC. 4 (a). This act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the work or structures provided for in this act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 12 hereof, and the President, by public proclamation, shall have so declared, or (2) if said States fail to ratify the said compact within one year from the date of the passage of this act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions save that of such 6-State approval, and the President by public proclamation shall have so declared, and, further, until the State of California, by act of its legislature, shall agree with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use (diversions less returns to the river) of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,600,000 acre-feet of the waters apportioned to the lower basin States by the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

On page 6, strike out line 25, and on page 7, lines 1 to 8, inclusive, and insert in lieu thereof the following: "permanent service and shall conform to paragraph (a) of section 4 of this act. No person shall."

On page 12, after line 14, add the following paragraph to section 6:

"The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this act shall become effective, as provided in section 4 herein."

Mr. HAYDEN. I have offered an amendment to amendment proposed by the Senator from Colorado, which I ask the clerk to read.

The VICE PRESIDENT. The Chief Clerk will state the amendment to the amendment.

The CHIEF CLERK. The amendment of Mr. HAYDEN to the amendment offered by Mr. PHIPPS is, on page 3, line 2, to strike out the words "four million six" and to insert "four million two."

Mr. HAYDEN. Mr. President, I shall now explain the reasons why my amendment to the amendment should be adopted. When I shall have made that explanation the Senate may vote upon the question, so far as I am concerned.

The amendment I have offered is predicated upon a finding made by four governors—the Governors of Colorado, New Mexico, Wyoming, and Utah—at a conference held in the city of Denver during the summer of 1927. At that conference, which was called in the kindliest spirit by the governors of the States of the upper basin in a sincere effort to bring about an amicable adjustment of the dispute which has existed between the States of Arizona and California in the lower basin with respect to water and other issues, the governors requested each State to put down upon paper how much water it desired to receive from the Colorado River.

The State of Nevada advised the governors that out of the 7,500,000 acre-feet allocated to the lower basin by the Colorado River compact that State desired only 300,000 acre-feet.

The State of Arizona then said that she was perfectly willing that Nevada should have 300,000 acre-feet and that she would divide equally with the State of California the remainder of the water. A division of that character would give to California 3,600,000 acre-feet and to Arizona 3,600,000 acre-feet.

The State of California advised the governors that its necessities were such that it must have 4,600,000 acre-feet of water, and, based upon the plea of necessity—and that was all the argument presented—they asked for that quantity of water.

The four governors took the three proposals under advisement, and, after careful and mature consideration, proposed that the quantity of water requested by the State of Arizona be reduced from 3,600,000 acre-feet to 3,000,000 acre-feet. They made that decision after a careful study of the total quantity of water now in use in each of the States of Arizona and California. They found that vested rights had to be respected, and came to the conclusion that California was now using 600,000 acre-feet more water than Arizona. Therefore they recommended that Arizona's demand be reduced by 600,000 acre-feet and that California be allotted an additional 600,000 acre-feet. So the finding of the governors was—and there is no dispute about it—that the State of California is only entitled to 4,200,000 acre-feet of water out of the Colorado River; that that is the quantity which she should receive. All other questions relative to tributaries and all other issues raised have no relation whatever to that one finding of fact by four governors, who, after weeks of study and after careful consideration of all of the evidence, arrived at that conclusion.

Be it remembered by all Senators that the State of Arizona accepted that finding and agreed to take only 3,000,000 acre-feet of water out of the Colorado River instead of 3,600,000 acre-feet which was its original demand, whereas the State of California refused to accept that finding and still insists upon 4,600,000 acre-feet of water.

The State of Arizona asserts in this presence that the Governors of the States of Wyoming, Colorado, Utah, and New Mexico were better advised than the Senate of the United States can ever possibly be, and knew more about the entire situation than the Senate can ever know. They were interested in a proper solution of the controversy; it affected their State; they were anxious to bring the States of the lower basin together. They made that finding, and upon that finding the State of Arizona stands here to-day and asks that it be approved by the Senate of the United States.

The argument which has been advanced as to why the State of California should be given 4,600,000 acre-feet of water instead of 4,200,000 acre-feet, as recommended by the four governors, is that the State of California needs that much water. For what purpose does that State need it? There can be only two purposes, namely, irrigation and domestic use. I shall concede every figure that the Senator from California [Mr. JOHNSON] has placed in the RECORD with respect to irrigation uses in California; every figure of that kind may be conceded; but I do not concede that the city of Los Angeles and the municipalities in southern California, who are asking for 1,095,000 acre-feet of water, need that much water or will need it for a hundred years.

I shall prove that statement by pamphlets which have been presented to every Senator in this body, issued by the bureau of water and power of the city of Los Angeles. That is the bureau which proposes to build a great aqueduct to carry water from the Colorado River to the city of Los Angeles. In a pamphlet entitled "The River of Destiny," issued this year by the department of water and power of the city of Los Angeles, we find this statement:

> As planned by Mulholland—

That is the city engineer—

> the Colorado River aqueduct will be by far the largest domestic water-supply system in the world. It will be 260 miles long and will be capable of delivering 1,000,000,000 gallons of water a day to the cities of southern California, enough to meet the domestic and industrial needs of 7,500,000 people.

There is in Los Angeles and vicinity now a population of less than 2,000,000. It is proposed to provide a water supply for seven and one-half million people in addition thereto.

From another pamphlet issued by the bureau of water and power of the city of Los Angeles entitled "The Romance of Water and Power," a pamphlet which was issued very recently, I find this statement:

> When Los Angeles in 1913 completed its Owens River aqueduct the people of this city confidently believed they had solved their domestic water problem for generations to come. This great artificial waterway is capable of supplying the needs of 2,000,000 people.

In other words, the city of Los Angeles now has a water supply for 2,000,000 people, and there are not a total of 2,000,000 people drawing water from that supply to-day. I understand that the number is approximately one million and a half.

This pamphlet further states:

> With a capacity of 400 second-feet, the Owens River Aqueduct is capable of meeting the water needs of 2,000,000 people—

That is the present water supply—

> the Colorado River carrier will have a capacity of 1,500 second-feet and will be able to supply 7,500,000 people with domestic water.

The evidence, therefore, is undisputed that what the city of Los Angeles is seeking to obtain is a water supply for seven and a half million people. The population of the city of Los Angeles in the past 15 years has increased 1,000,000, and if it should increase at the same rate it would require over 100 years for seven and a half million more people to live in that locality. In this bill the city of Los Angeles is asking to be guaranteed a water supply for the next century and more, because if the rate of growth is the same as it has been in the past 15 years it will take 112 years for seven and one-half million more people to move to Los Angeles.

If the amount of water provided in this bill is reduced by 400,000 acre-feet, as my amendment proposes, it will still leave an adequate water supply for 5,000,000 people in addition to the number of people who now live in Los Angeles. We in Arizona say that that is enough. According to the present rate of growth, it will take at least 75 years for that increase of population to be accomplished. If the quantity of water is reduced, as proposed in my amendment, the city of Los Angeles will still have guaranteed to it under the terms of the Colorado River compact and by this bill enough water for 5,000,000 more people than now live in that city. Then, 50 or 75 years from now, if the question should arise as to a need for domestic water in the city of Los Angeles, that city would be faced with the same situation that it has once before met. It would be necessary somewhere, at some place, for the State of California to acquire water rights that are used for irrigation and apply them to domestic use.

The city of Los Angeles constructed an aqueduct to the Owens River Valley, an irrigated valley. Water was needed by the city for domestic use. That is a superior use to that of irrigation. The city acquired water rights there by purchase and by condemnation. It now uses that water, conveying it through an aqueduct from the Owens River Valley to the city of Los Angeles. If, 50 or 75 years from now, after 5,000,000 more people have gone to live in Los Angeles, they arrive at a similar situation, the city must again condemn some irrigation water rights for domestic use. They will be met with the same situation after they have an additional seven and a half million people in Los Angeles.

If the city continues to grow and becomes the greatest metropolis in all the world—greater than the combined population of London and New York, as some of the enthusiastic citizens of that locality believe it may—they will be compelled, in order to obtain water for a city of that great magnitude, to condemn irrigation water rights, because that is the only place where water can be obtained.

The effect of this bill is, by taking 400,000 acre-feet of water away from the State of Arizona and reserving it for 50 or more years for the city of Los Angeles, that a hundred thousand acres of land which otherwise could be irrigated in Arizona will

be compelled to remain a desert. Arizona can use the water. We have the land. We can place it to beneficial use and provide homes, farms, for American citizens for use for 50 years at least before the city of Los Angeles needs the water. We can use it to excellent advantage. The city of Los Angeles insists that the water shall be reserved for it. Arizona says that if the time comes, after more than 5,000,000 people have been added to the population of the city of Los Angeles, when the city needs more water, let it condemn irrigated land in the State of California, as it has a right to do under the laws of that State, and acquire that water, and not in advance condemn an area of a hundred thousand acres in the State of Arizona to remain a desert.

That is the simple proposition that is presented to the Senate by this amendment.

In reply to the argument made by the senior Senator from California [Mr. JOHNSON] that the State of Arizona could not use the total quantity of water which it asks to secure, let me state that the Senator's statement is a bald assertion, and that I assert, just as the Senator asserted, with equal vehemence, that the State of Arizona can use it, and that back of my assertion I have just as good engineering authority as the Senator has.

The Senator was very careful in his remarks to limit the pump lift for irrigation in Arizona or California to 150 feet; and yet the Senate yesterday passed a bill for an investigation of the Columbia Basin project, which contemplates as one alternative the lifting of water 450 feet out of the Columbia River at Grand Coulee. I have here a report by Gen. George W. Goethals, who examined into the two projects, and he did not find $10 an acre difference in the cost between the pumping scheme at Grand Coulee and the delivery of water to the Columbia Basin project by gravity. In addition thereto, a majority of a board of engineers appointed under authority of the Federal water power act has found that the pumping scheme at Grand Coulee to lift water over 400 feet is more economical and more feasible than to deliver water to lands within the Columbia Basin project by gravity.

Will anyone say that lands in the State of Washington are more fertile than those in the State of Arizona? Will anyone say that in the State of Washington they have a longer growing season than we have in Arizona? It takes two things to produce crops in an irrigated country—water and sunshine. Everyone knows that there are more days when the sun shines in Arizona than anywhere else in the American Union.

That is the reason why, every month in the year, crops can be produced from the ground in the State of Arizona.

So there is no merit at all in the argument made by the Senator from California that the State of Arizona can not use this water. We can use it. Arizona can use all of the water of the Colorado River. Arizona has never asked for more than half of it; and then, at the insistence of the governors of the upper-basin States, Arizona agreed to accept less than half. Therefore we ask the Senate not blindly to follow the mere demand of the State of California, but to be guided by the advice of the governors of four States intimately familiar with irrigation conditions, who have found that the State of California was not entitled to more than 4,200,000 acre-feet of water, as stated in my amendment. That is the position of Arizona on this issue, and I submit it to the Senate.

So far as I am concerned, the Senate may vote now on that question.

Mr. PHIPPS. Mr. President, I merely want to say one word, so that the position of the Committee on Irrigation and Reclamation may be understood.

All of the points referred to by the Senator from Arizona [Mr. HAYDEN] were given full consideration by that committee. As Senators know, the hearings extended over three or four years at least, and months of study were given to this very problem; and the figure of 4,600,000 acre-feet awarded to California is the figure recommended by that committee.

The VICE PRESIDENT. The question is on the amendment of the Senator from Arizona [Mr. HAYDEN] to the amendment of the Senator from Colorado [Mr. PHIPPS].

Mr. BRATTON. I call for the yeas and nays on the amendment of the Senator from Arizona.

Mr. KING. Mr. President, I do not desire to discuss the question just presented, and ably presented, by the Senator from Arizona [Mr. HAYDEN]. I rise rather for a parliamentary inquiry, if I may have the attention of the Senator from Colorado.

The inquiry is this: What parliamentary procedure may be resorted to, in view of the parliamentary status now, in order to secure a vote upon the single proposition that the ratification shall be by the seven States, with no alternative?

Mr. HAYDEN. Mr. President, if the Senator will yield to me, I think the parliamentary situation is perfectly simple.

I have withdrawn my amendment; and the amendment which the Senate now has under consideration is the amendment of the Senator from Colorado [Mr. PHIPPS], which has been reoffered, and is subject to amendment. I have offered an amendment to that amendment changing the quantity of water that shall be apportioned to the State of California. That is all I have done at this time. There are other propositions in that amendment that are subject to amendment, of course.

Mr. KING. I thought the Senator had offered an amendment which would preclude a vote upon the one proposition as to whether or not the compact should be ratified by seven States.

Mr. HAYDEN. I have distinctly stated to the Senate that I desire a vote upon that issue when we reach it.

Mr. ASHURST. I call for the yeas and nays.

Mr. HEFLIN. Mr. President, as I understand, the vote now is on the amendment of the Senator from Arizona [Mr. HAYDEN] to the amendment of the Senator from Colorado [Mr. PHIPPS].

Mr. HAYDEN. Yes, sir.

Mr. ASHURST. Let us have the yeas and nays.

The yeas and nays were ordered, and the Chief Clerk proceeded to call the roll.

Mr. TYDINGS (when his name was called). On this vote I have a pair with the senior Senator from Ohio [Mr. FESS]. If he were present and permitted to vote, he would vote "nay." If I were permitted to vote, I would vote "yea."

The roll call was concluded.

Mr. BLAINE. I desire to announce that my colleague [Mr. LA FOLLETTE] is unable to be present to-day. He is paired with the Senator from Mississippi [Mr. HARRISON].

Mr. MCMASTER. I desire to announce that my colleague [Mr. NORBECK] is unavoidably absent. If present, he would vote "nay."

Mr. HARRISON. On this vote I am paired with the senior Senator from Wisconsin [Mr. LA FOLLETTE]. If he were present, I understand he would vote "nay." If permitted to vote, I would vote "yea."

Mr. ROBINSON or Arkansas. I desire to announce that the senior Senator from New York [Mr. COPELAND] is necessarily detained from the Senate on account of illness in his family. He is paired on this amendment with the senior Senator from Rhode Island [Mr. GERRY].

I also desire to announce that the senior Senator from Florida [Mr. FLETCHER] and the junior Senator from Florida [Mr. TRAMMELL] and the junior Senator from Washington [Mr. DILL] are necessarily absent on official business.

The result was announced—yeas 29, nays 48, as follows:

YEAS—29

Ashurst	Glass	McKellar	Swanson
Barkley	Harris	Neely	Tyson
Black	Hawes	Overman	Wagner
Blease	Hayden	Reed, Mo.	Walsh, Mass.
Broussard	Heflin	Robinson, Ark.	Waterman
Bruce	King	Smith	
Caraway	Larrazolo	Smoot	
Edwards	Locher	Steck	

NAYS—48

Bayard	George	Moses	Sheppard
Bingham	Gillett	Norris	Shipstead
Blaine	Glenn	Nye	Shortridge
Borah	Goff	Oddie	Simmons
Bratton	Greene	Phipps	Steiwer
Brookhart	Hale	Pine	Stephens
Capper	Johnson	Pittman	Thomas, Idaho
Couzens	Jones	Ransdell	Vandenberg
Curtis	Kendrick	Reed, Pa.	Walsh, Mont.
Deneen	Keyes	Robinson, Ind.	Warren
Edge	McMaster	Sackett	Watson
Frazier	McNary	Schall	Wheeler

NOT VOTING—18

Copeland	Gerry	McLean	Trammell
Dale	Gould	Mayfield	Tydings
Dill	Harrison	Metcalf	
Fess	Howell	Norbeck	
Fletcher	La Follette	Thomas, Okla.	

So Mr. HAYDEN's amendment to Mr. PHIPPS's amendment was rejected.

The VICE PRESIDENT. The question recurs on the amendment offered by the Senator from Colorado [Mr. PHIPPS] to the substitute amendment of the Senator from California [Mr. JOHNSON].

Mr. BRATTON. Mr. President, I offer an amendment in the nature of a substitute to the amendment offered by the Senator from Colorado, and ask that it be read.

The VICE PRESIDENT. The clerk will read.

The LEGISLATIVE CLERK. On line 2, page 3, of the amendment offered by the Senator from Colorado [Mr. PHIPPS], as modified,

strike out the word "six" and insert in lieu thereof the word "four," so as to read:

SEC. 4 (a). This act shall not take effect and no authority shall be exercised hereunder and no work shall be begun and no moneys expended on or in connection with the works or structures provided for in this act, and no water rights shall be claimed or initiated hereunder, and no steps shall be taken by the United States or by others to initiate or perfect any claims to the use of water pertinent to such works or structures unless and until (1) the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming shall have ratified the Colorado River compact, mentioned in section 12 hereof, and the President by public proclamation shall have so declared, or (2) if said States fail to ratify the said compact within six months from the date of the passage of this act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions save that of such 6-State approval, and the President by public proclamation shall have so declared, and further, until the State of California, by act of its legislature, shall agree irrevocably and unconditionally with the United States and for the benefit of the States of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming, as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use (diversions less returns to the river) of the water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,400,000 acre-feet of the waters apportioned to the lower basin States by the Colorado River compact, plus not more than one-half of any excess or surplus waters unapportioned by said compact, such uses always to be subject to the terms of said compact.

Mr. BRATTON. Mr. President, I propose to amend the amendment of the Senator from Colorado by striking out the word "six" in line 2, on page 3, and inserting in lieu thereof the word "four," so that the language will read "shall not exceed 4,400,000 acre-feet."

Mr. President, it is perfectly obvious to all of us that we have an immense project here, respecting which the two States, California and Arizona, can not agree. The dispute has narrowed itself primarily to 400,000 acre-feet of water, California saying that 4,600,000 acre-feet is her irreducible minimum, and Arizona insisting that California shall be limited to 4,200,000 acre-feet.

If this legislation shall be effectuated, the dam constructed, and the river controlled, and the benefits designed to be accomplished by the measure given full fruition, these States must ratify the compact. In my judgment that will never be accomplished if we give to one all that she asks and deny to the other everything she seeks.

It seems to me, therefore, Mr. President, that in justice to the two States, they having been unable to agree, we should tender our offices by dividing the difference and requiring California to limit herself in her act of ratification, irrevocably and unconditionally, to a maximum consumptive use of 4,400,000 acre-feet. That divides the difference and is the amount fixed in the amendment I have proposed. It differs from the proposal of the Senator from Colorado by reducing California's claim 200,000 acre-feet. It differs from the amendment of the Senator from Arizona by increasing California's consumptive use by 200,000 acre-feet.

I believe this is an equitable solution of the problem. It may not be entirely satisfactory to either State, but in my judgment it is the best compromise that is available at this time.

Mr. ASHURST. Mr. President, for years, in some portions of the press and on the floor of the Senate, Arizona has been accused of being unwilling to extend the hand of amity, compromise, and friendship on this bill. The accusation is false. Arizona scorns all bribes and wears no chains.

I am going to vote for the amendment just offered by the Senator from New Mexico, and by so doing Arizona makes another step looking toward a compromise of the differences surrounding this legislation. In making this advance looking toward some composition of our differences, and in hope of reaching some modus vivendi, I trust that Arizona shall no longer be accused of stubbornness.

Mr. JOHNSON. Mr. President, the offer that has been made by the Senator from New Mexico [Mr. BRATTON] is, I take it, an offer by way of compromise. The Senator from New Mexico represents one of the States of the upper Colorado River Basin. He, of course, is intensely interested in what shall be done with the waters of the Colorado, just as the States of the lower basin are equally interested in what shall be done with the waters of the Colorado.

It is a fact, sir, that in the State of California there are rights perfected to-day and those which may be perfected in the near future, rights indeed that under the law no human agency can take from the people who reside in the State of California, that far exceed the amount of water that is fixed as the maximum in the amendments that California ever shall use. Were I here in disinterested position, Mr. President, were the dire necessity of Imperial Valley not so clearly before me, sir, if I did not understand as few men upon this floor understand the absolute necessity of legislation of the character that has here been proposed, never for one instant would I assent to an amendment such as has been presented by the Senator from Colorado or that which has now been presented as an amendment by the Senator from New Mexico.

I venture the assertion, and I call upon men whose vision is greater perhaps than a mere limited territory that they may represent, that never in the history of legislation has there been written into a law such a drastic provision as that which is suggested by the Senator from Colorado and that which is in part suggested by the Senator from New Mexico.

Do Senators realize what this provision is? In order that its citizens may be protected from flood, in order that its citizens may have what God gives even to the birds of the air and the beasts of the field, which is potable drinking water, it compels the State of California, before it shall consider even legislation of this sort, by act of its legislature "irrevocably and unconditionally"—and I read the language of the amendment itself—to agree with the United States and for the benefit of the other States of the Colorado River Basin—

as an express covenant and in consideration of the passage of this act, that the aggregate annual consumptive use of water of and from the Colorado River for use in the State of California, including all uses under contracts made under the provisions of this act and all water necessary for the supply of any rights which may now exist, shall not exceed 4,600,000 acre-feet.

More than that and within a brief period by perfected rights, that the law can not touch in this particular territory that is thus assured, can be obtained. Talk to me of taking water from the State of California? Not a bit of it! Not a bit of it! All the expert testimony—and I have put in the RECORD that of the distinguished engineer of the State of Nevada—is that if we give to the State of Arizona the water that the State of Arizona now asks, she can not by any possible process of irrigation use that water to the full or utilize all of it. All of the testimony that has been adduced reaches that conclusion, save that, of course, of some of the gentlemen connected with the State of Arizona.

But that is neither here nor there. I want Senators to understand what the amendment is. It is the most drastic amendment that was ever written into a law against the people of a State, the most drastic thing that was ever asked of them. I would stand here and never tolerate it if I did not know that 60,000 people are in jeopardy in the Imperial Valley who demand and who ask and who beg and who pray that they may have the consideration of the Congress.

I say to the gentlemen from Arizona, "You say that California shall have but 4,200,000 acre-feet." We say, and the testimony of Mr. Francis Wilson is the best upon that subject, that the irreducible minimum of the State of California is 4,600,000 feet. You say to us, "You must bind your people for all time in the future never to go beyond it by this amendment." The amendment does not divide the water between Arizona and California. It fixes a maximum amount beyond which California can not go. I say to the gentlemen from Arizona, though I think it is a wicked amendment, though I think it is an amendment that harnesses the State of California and its people as they never should be harnessed in the days to come, though I believe it to be an injustice against those who reside in California and in its southern part to-day and those who may reside there in the future—I say to you that if 200,000 acre-feet of water will settle this controversy with them, whatever the wrong, whatever the injustice, whatever may be the yoke that is put upon our people, I will take that as a compromise and a settlement of the differences that exist.

But unless it be by compromise, this injustice ought not to be put upon us and the compromise should be that the amendment as written, with the permanent amount of water that the Senator from New Mexico [Mr. BRATTON] offers, shall be adopted, and then that the bill shall be passed without further delay and without any filibuster at all. If we can compromise, let it be done upon that basis, but do not require us to do what

is unnecessary and what ought not to be crowded down our throats unless it be actually by way of compromise.

Mr. PITTMAN. Mr. President, I want to say that the amendment of the Senator from Colorado [Mr. PHIPPS] now offered is substantially recommended by the committee. The bill as originally introduced by the Senator from California [Mr. JOHNSON] had no reference in it to water at all, but it became evident to the committee that there had to be some reference with regard to water because not only were the States of California and Arizona interested in this larger supply of water but the four upper States were interested as well. This amendment was offered in committee by the Senator from Wyoming [Mr. KENDRICK] for the purpose of protecting the water rights of the four upper States. In other words, there are only 15,000,000 acre-feet in the river. Seven million five hundred thousand are forever to be retained in the upper States, to be put in use some time in the future.

Now, unless there was an agreement as to exactly how much water should go to the lower States out of the 7,500,000 acre-feet that went down to them, what might be the result? If Arizona stays out of the agreement, she would have her legal right to appropriate as much water as she could put to beneficial use. On the other hand, California would only be restricted by the 7,500,000 acre-feet that went down, with the result that there would be nothing in the compact to prevent California from using the entire 7,500,000 acre-feet and there would be nothing in the compact to prevent Arizona from using the 7,500,000 acre-feet if she never went into the compact.

So the upper States said: "We have got to be assured that there is not used in the lower basin more than the 7,500,000 acre-feet, because, if there is more used, then when we get ready to use it in the future it will not exist under the law of appropriation that applies in that section of the country." Consequently, in view of the fact that Arizona might never go into the compact, might never be bound by the compact, might be perfectly free to exercise her equal right and put to use as much as she could put to beneficial use, it was said in the committee, "If Arizona does not come in and if it is limited to six States only, then we must be assured that California will not take the full 7,500,000 acre-feet and then Arizona take some more." So the Senator from Wyoming [Mr. KENDRICK] offered an amendment in committee, to which the committee agreed, and that amendment provided that California should never consumptively use of the Colorado River over 4,600,000 acre-feet.

The Phipps amendment does not do anything else except that it states how California shall ratify. The Congress of the United States could not impose it upon California unless California assented to it, because California already has sovereign rights over the water, and the law recognizes her right to use as much as she can put to beneficial use. Consequently the Senator from Colorado [Mr. PHIPPS] has simply taken the amendment which was recommended by the committee and put it in legal language and provided a legal method for California to ratify it. I do not think it is any harder on California than it was before.

Let me now call attention to the fact that the committee adopted the Kendrick amendment. They adopted the amount that California demanded, which was 4,600,000 acre-feet. I voted for that amendment. Why? I voted for it because otherwise Arizona would not participate in the compact and would not participate in the division of water. In other words, it was apparent to me that California was so dissatisfied with it that we had to treat without Arizona. We treated without Arizona in the committee, and we put the amount in there that California demanded before the four governors at Denver.

I participated as a representative of Nevada for four weeks in the hearing at Denver, where the governors of the seven States met. Those governors decided that California was entitled to only 4,200,000 acre-feet of that water. They may have been right or wrong. The dispute has been going on for a long time. On the other hand, California contended that she had to have 4,600,000 acre-feet.

Now, we have this situation: We have the committee, which adopted the Kendrick amendment, standing for 4,600,000 acre-feet. We have the four governors of the upper States who arbitrated, standing for 4,200,000 acre-feet. We have a difference of just 400,000 acre-feet out of a total of 7,500,000. I think the proposition of splitting that in two is going to accomplish more good and get rid of more disputes than anything else that can possibly be done. I believe that if the two Senators from Arizona vote for 4,400,000 acre-feet, in accordance with the amendment of the Senator from New Mexico [Mr. BRATTON], they will be able to go before their legislature and sustain that position, and I believe if they do go before their legislature and sustain the proposition, that Arizona will ratify the 7-State agreement.

Mind you, this 6-State agreement is only an expedient. It is not what any of the seven States want. All of the seven States want a fair treaty between the seven States, and we have been striving to that end for several years. It looks to me as though we are on the eve of getting an agreement. I do not believe it is possible for the two Arizona Senators to pledge what the Arizona Legislature will do in this matter, but I believe that they have influence with it, and I believe when they go before the legislature and say "We stated on the floor of the Senate that this was a fair compromise, and we were representing the sentiment of the people of the State," the legislature will ratify it.

I think it would be a terrible mistake when everyone has reached the point of compromise as we have here. If California's allotment is reduced 200,000 acre-feet out of 7,500,000 and Arizona concedes 200,000 acre-feet to California for the purpose of compromise, we should vote for it, because if we do not bitterness is bound to exist between these States. If we do not, there have got to be a number of other provisions in the bill to satisfy the other States, because there is fear in the four upper States with regard to any kind of a ratification except by all the States. That fear does not exist in my mind; I think it is perfectly groundless. I think it is as groundless as is the fear of Mexico getting any more water than she is getting now. However, I plead with the Senators to allow us to make the first compromise that has ever been made in seven years with regard to this matter, and vote to split these 400,000 acre-feet and make the quantity that California will receive 4,400,000 acre-feet.

Mr. JOHNSON. Mr. President, I thought I made myself plain upon this matter, but I want to make it doubly so. If we are compromising on the question of water, I will submit to what I think is an injustice; if we are compromising our controversy, I am willing to accept it; but I want to know first whether we are settling the controversy and whether or not we are settling the matters of difference. The junior Senator from Arizona [Mr. HAYDEN] has been very active, and I ask him if that is the situation?

Mr. HAYDEN. Mr. President, I have been very active submitting various suggestions of compromise to those who spoke for the State of California. I have had no response to those offers. The only thing that I could do was what I have done this morning, to submit the issues separately to the judgment of the Senate, and that is what we are doing now. We are taking up the question of the quantity of water that the State of California shall receive, and let the Senate vote on it. When we come to other issues we shall again ask the Senate to vote on those. That is all we can do.

Mr. ROBINSON of Arkansas. Mr. President, if I may ask a question, are there other issues in the bill than the mere division of water?

Mr. HAYDEN. Yes.

Mr. ROBINSON of Arkansas. Is it the position of the Senator from California [Mr. JOHNSON] that all issues in the bill must be compromised if a compromise shall be made respecting the division of water?

Mr. JOHNSON. I do not know what other issues there are.

Mr. ASHURST. There is the power issue.

Mr. ROBINSON of Arkansas. I can not state them, but I understood there were a number of other issues involved in the some 50 amendments which have been offered to the bill.

Mr. JOHNSON. Yes; but I thought they were offered at the last session for various other reasons than because the bill required them. However, that is neither here nor there.

Mr. ROBINSON of Arkansas. It occurred to me, I will say frankly to the Senator from California, that, perhaps, by settling the pending controversy relating to the distribution of water it might facilitate the final disposition of the measure.

Mr. JOHNSON. I should like very much to do it, but I want to know that we are settling something. Do Senators realize what this amendment requires? Just see the safeguards that we have given the upper basin States. We are considering a bill every feature of which is written around the 7-State pact. Then the amendment requires that the seven States, Arizona among them, shall ratify the compact. Further the amendment provides that if the seven States shall not ratify the compact within six months, six States may ratify it, with this addendum concerning California's water. What is the position of Arizona?

Mr. HAYDEN. Mr. President, I have repeatedly stated to the Senate that there are three fundamental differences between the State of Arizona and the State of California. One was the question of the division of water in the lower basin; another was whether or not the Colorado River compact should be ratified by seven States; and the other was whether Arizona should receive some income from power in lieu of taxes.

The Senator from California continually refers to some one item and wants to know if we are pleased with it, and if he agrees to that item it will settle the others. We have been unable to arrive at any conclusion in that regard. So I shall state frankly to the Senator that if this amendment be adopted, the next proposal that the Senators from Arizona shall offer to the Senate will be whether there shall be a six or a seven State ratification of the Colorado River compact. Let the Senate settle that issue, and so on down, until the Senate itself has determined what the legislation shall be.

Mr. ASHURST. Mr. President, will the Senator from California yield to me?

Mr. JOHNSON. I yield to the senior Senator from Arizona.

Mr. ASHURST. Mr. President, I agree with what my worthy colleague, the junior Senator from Arizona [Mr. HAYDEN] has said. Arizona desperately needs votes at this time in the Senate, as to the division of the waters under discussion, but I am not going to seek or receive one vote upon this amendment under a misapprehension. If the Senator from California [Mr. JOHNSON] beguiles himself into the belief that because of the adoption of this amendment, opposition will relax as to other features of this bill, he is sadly mistaken. The adoption of this water division amendment will by no means remove the thorns and blades of injustice that would yet remain in the bill respecting power and other subjects, and we shall contend to the last, indeed we shall retire into the rocky passes of the Senate rules and there fight until we secure a bill which will, amongst other features, require a 7-State ratification of the so-called Santa Fe—or Colorado River—compact. Is there any misunderstanding about this language?

Mr. JOHNSON. No; and I am very much obliged indeed, to the Senator from Arizona for what he has said. It is a demonstration that the accomplishment of this injustice will accomplish absolutely nothing. I ask those who favor this legislation, therefore, to defeat this particular amendment, and I trust we will go forward with the measure with such rapidity as we may. I am grateful to the Senator from Arizona for his frankness; that is the way we ought to speak; and, feeling that way, it is obvious, sir, that this is nothing at all in the nature of a compromise, nothing at all in the nature of a settlement of the controversy that has existed.

Mr. BRATTON. Mr. President, I think both Senators are unduly alarmed or aroused. The Senator from Arizona says that there are three questions involved. One is the division of water; another is whether there shall be a seven or a six State ratification. If this amendment shall be adopted it will settle those two questions. It will divide the water and it will cover the subject of ratification by providing that a 7-State ratification shall be had if it can be obtained within six months and a 6-State ratification thereafter. So if this amendment shall be adopted the question of the division of water and the question of ratification both will be settled. That leaves the single question of whether Arizona will be permitted to tax the output from the operation of the power plant. It seems to me that the Senate will expedite this measure upon the most equitable basis by adopting this amendment, and then leaving the question of revenue to be derived by or paid to the State of Arizona to be determined later.

Mr. ROBINSON of Arkansas. When that amendment is reached we will vote on that, and after that question shall have determined the principal issues will have been disposed of.

Mr. BRATTON. The principal issue will be determined by this amendment. I repeat for emphasis that we will expedite the legislation on the most equitable basis by adopting the amendment in the form in which it now stands.

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. BRATTON. I yield.

Mr. BARKLEY. Whether we agree to this compromise or do not agree to it, what effect will the action have upon the question as to whether Arizona shall have the right to tax the power?

Mr. BRATTON. None at all; that is a separate question that we will discuss and decide later.

Mr. BARKLEY. So that those who favor the principle of the bill as a whole may consistently support this amendment without in any way embarrassing themselves as to the right of Arizona to tax the power?

Mr. BRATTON. Emphatically, yes. This amendment relates to the division of water. Then when we turn to the subject of power, whether Arizona shall tax it or whether she shall accept 18¾ per cent of the surplus revenue provided in the bill is an entirely separate and distinct question.

SEVERAL SENATORS. Vote!

Mr. ASHURST. Let the question be stated.

The PRESIDING OFFICER. The question is on the amendment of the Senator from New Mexico [Mr. BRATTON] to the amendment of the Senator from Colorado [Mr. PHIPPS].

Mr. BRATTON. I ask for the yeas and nays.

The yeas and nays were ordered, and the legislative clerk called the roll.

Mr. HARRISON (when his name was called). On this vote I am paired with the senior Senator from Wisconsin [Mr. LA FOLLETTE]. If he were present and free to vote, he would vote "nay." If I were permitted to vote, I should vote "yea."

The roll call was concluded.

Mr. McMASTER. I desire to announce that my colleague the senior Senator from South Dakota [Mr. NORBECK] is unavoidably absent. If present, he would vote "nay."

Mr. JONES. I desire to announce that the Senator from Ohio [Mr. FESS] is necessarily absent from the Senate. He is paired with the Senator from Maryland [Mr. TYDINGS]. If present, the Senator from Ohio would vote "nay" on this question.

I also desire to announce that the Senator from South Dakota [Mr. NORBECK] is paired with the junior Senator from New Mexico [Mr. LARRAZOLO]. If the Senator from South Dakota were present he would vote "nay," and if the junior Senator from New Mexico were present he would vote "yea" on this question.

Mr. ROBINSON of Arkansas. I desire to announce that the Senator from Missouri [Mr. REED], the Senator from Oklahoma [Mr. THOMAS], and the Senator from Mississippi [Mr. STEPHENS] are necessarily detained from the Chamber on official business.

I also desire to state that the senior Senator from New York [Mr. COPELAND] is detained by illness in his family. On this amendment he has a pair with the Senator from Rhode Island [Mr. GERRY].

The result was announced—yeas 48, nays 29, as follows:

YEAS—48

Ashurst	Edwards	King	Simmons
Barkley	Fletcher	Locher	Smith
Bayard	George	McKellar	Smoot
Bingham	Glass	Metcalf	Steck
Black	Glenn	Moses	Swanson
Blease	Hale	Neely	Trammell

Gerry	Larrazolo	Stephens	
Greene	McLean	Thomas, Okla.	

So Mr. BRATTON's amendment to Mr. PHIPPS's amendment was agreed to.

The VICE PRESIDENT. The question is on the amendment of the Senator from Colorado [Mr. PHIPPS], as amended.

Mr. HAYDEN. Mr. President, as the senior Senator from California is well aware, there have been other issues in controversy between the States of California and Arizona with respect to the apportionment of water, one issue being whether or not the States of Arizona and California should share equally the burden of furnishing water to Mexico. Another was whether the Gila River, one of the principal tributaries of the Colorado River in Arizona, should be completely reserved for use in the State of Arizona.

In offering my original amendment I provided for both of those matters. I have had conferences with some gentlemen from California, and they have suggested some changes in that part of my proposal. I intend to submit it now, so that it may be printed for the information of the Senator from California and the entire Senate, in order that we make take it up for consideration later.

I now send the amendment to the desk and ask the clerk to read it for that purpose. I shall offer it later.

Mr. JOHNSON. Mr. President, has the amendment been printed?

Mr. HAYDEN. My original amendment was printed. I have made some changes in it.

Mr. JOHNSON. The original amendment that the Senator refers to is the one we passed upon, is it not?

Mr. HAYDEN. No, sir. The Senator will remember that I offered an amendment which was pending, which comprised——

Mr. JOHNSON. Why not have the amendment printed and lie on the table?

Mr. HAYDEN. I desire to have it read and printed and lie on the table.

Mr. HEFLIN. Let us have it read.

Mr. JOHNSON. Let us dispense with the reading of it for the moment and go on with the bill. Of course, the Senator has that right if he wishes.

Mr. HAYDEN. I prefer to have it read, so that the Senate may understand what it contains.

Mr. JOHNSON. All right.

The VICE PRESIDENT. The amendment will be read for the information of the Senate.

The legislative clerk read the amendment, as follows:

Amendment by Mr. HAYDEN to the amendment offered by the Senator from Colorado [Mr. PHIPPS]: On page 3, after line 7, insert a new paragraph, as follows:

"The said ratifying act shall further provide that if by tri-State agreement hereafter entered into by the States of California, Nevada, and Arizona the foregoing limitations are accepted and approved as fixing the apportionment of water to California, then California shall and will therein agree (1) that of the 7,500,000 acre-feet annually apportioned to the lower basin by paragraph (a) of Article III of the Colorado River compact, there shall be apportioned to the State of Nevada 300,000 acre-feet and to the State of Arizona 2,800,000 acre-feet for exclusive beneficial consumptive use in perpetuity, and (2) that the State of Arizona may annually use one-half of the excess or surplus waters unapportioned by the Colorado River compact, and (3) that the State of Arizona shall have the exclusive beneficial consumptive use of the Gila River and its tributaries within the boundaries of said State, and (4) that the waters of the Gila River and its tributaries, except return flow after the same enters the Colorado River, shall never be subject to any diminution whatever by any allowance of water which may be made by treaty or otherwise to the United States of Mexico but if, as provided in paragraph (c) of Article III of the Colorado River compact, it shall become necessary to supply water to the United States of Mexico from waters over and above the quantities which are surplus as defined by said compact, then the State of California shall and will mutually agree with the State of Arizona to supply, out of the main stream of the Colorado River, one-half of any deficiency which must be supplied to Mexico by the lower basin and (5) that the State of California shall and will further mutually agree with the States of Arizona and Nevada that none of said three States shall withhold water and none shall require the delivery of water which can not reasonably be applied to domestic and agricultural uses and (6) that all of the provisions of said tri-State agreement shall be subject in all particulars to the provisions of the Colorado River compact."

The VICE PRESIDENT. The amendment will be printed and lie on the table.

The question is on the amendment of the Senator from Colorado [Mr. PHIPPS], as amended.

Mr. HAYDEN. Mr. President, I offer an amendment which I send to the desk and ask to have stated.

The VICE PRESIDENT. The amendment to the amendment will be stated.

The LEGISLATIVE CLERK. On page 2, lines 7 to 17, it is proposed to strike out the words:

if said States fail to ratify the said compact within one year from the date of the passage of this act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions save that of such 6-State approval, and the President by public proclamation shall have so declared, and, further——

Mr. HAYDEN. Mr. President, the amendment I have offered to the amendment offered by the Senator from Colorado strikes out that part of his amendment which states that the Colorado River compact may be ratified by six instead of by seven States.

The Colorado River compact, as originally written, contemplated that the seven States of the Colorado River Basin would enter into an agreement apportioning 7,500,000 acree-feet of the waters of that basin to the upper basin, 7,500,000 acre-feet to the lower basin, and reserving to the lower basin the right to increase its beneficial consumptive use of water by an additional 1,000,000 acre-feet. The compact was not to go into effect until ratified by all of the seven States and until it was subsequently approved by Congress.

The compact was ratified without qualification by the States of Wyoming, Utah, Colorado, New Mexico, Nevada, and California.

Subsequently the State of California withdrew its unqualified ratification of this interstate agreement and ratified it upon the condition that there should be constructed upon the Colorado River, at or near Boulder Canyon, a dam which would impound at least 20,000,000 acre-feet of water. The enactment of this legislation would comply with the California reservation.

The State of Arizona has never approved the Colorado River compact—would not ratify it, as I have previously explained to the Senate—primarily because it provided merely for a division of water between the two basins and did not provide specifically the quantity of water which each State in the respective basins might receive. When the time came to make the compact, although the acts of all the State legislatures and the act of Congress contemplated that there would be a division and apportionment of water to each one of the seven States, specifically providing just how much water they should receive, Mr. Hoover and the seven State commissioners found it impossible to carry out that intention. They therefore divided the water between the upper and the lower basins of the Colorado River.

So far as the upper basin of the Colorado River is concerned, there is no immediate hurry about any division of water, because the agricultural development of that region will be long delayed. In the lower basin, however, both in Arizona and in California, particularly in the latter State, there is immediate prospect that the water will be placed to beneficial use. So, with an apportionment to the lower basin as a whole, and without any division of water between the States in the lower basin, the State of California could immediately appropriate and put to use the major portion of the water. We were greatly alarmed in the State of Arizona to learn that the State of California had made filings, had given notice to the world that they intended to appropriate out of the Colorado River all of the water apportioned to the lower basin, which would leave absolutely no water from the main stream for the State of Arizona.

If the filings made by the State of California have the value assigned to them by the senior Senator from California, if they do establish perfected rights as he has asserted, then, without an agreement between the States of Arizona and California, if those filings are valid, there would be absolutely no water left in the Colorado River for the State of Arizona. So, when the Colorado River compact was submitted to the Arizona Legislature the question was immediately raised, If we approve this general division of water does it follow that there will be a supplemental agreement apportioning certain waters in the lower basin to the State of Arizona and certain waters to the State of California; the other waters to Nevada? In the absence of any such agreement the Legislature of Arizona, after very mature deliberation, decided not to approve the compact.

The demand in my State has been, ever since that time, for a supplemental agreement between the States of Arizona and California, before the compact be approved. The failure of the State of Arizona, however good the reason might be, to approve the Colorado River compact, resulted in resentment among the other States of the Colorado River Basin. They felt that the State of Arizona should have approved the compact first, and then have taken the chance as to whether a supplemental agreement could be reached with the State of California. As the result of that resentment it was proposed that the Swing-Johnson bill, then pending in Congress, be modified to provide that the Colorado River compact should be approved by the Congress of the United States and should go into effect when ratified by six States instead of by seven States.

So we find in the pending bill and in the amendment offered by the Senator from Colorado, who merely transposes words from the bill itself into his amendment, the proposal that if all of the seven States fail within six months to ratify the compact, then it shall go into effect when ratified by six States.

The State of Arizona is compelled to object most seriously to any such proceeding. The Colorado River compact proposes to divide the waters of the Colorado River among seven States. It is conceded that if the compact is legally sound the water in that river and its tributaries belongs to the seven States and not to the Federal Government. If the seven States own the water of the Colorado River and its tributaries, if they have a common interest in it which they are seeking to divide by a compact, how can an agreement be made effective dividing the property of seven States merely with the consent of six of them and without the consent of the seventh State?

I want to seriously inquire of the Senator from Colorado upon what theory he justifies the proposal that the Colorado

River compact shall go into effect if approved by six States only?

Mr. PHIPPS. Mr. President, the time that has been afforded the States in which to indicate their assent to the 7-State compact has continued to such an extent that many of us have given up hope of eventually arriving at a 7-State compact.

As I understand it, the States of the upper basin much prefer a 7-State compact, but they desire a compact of some kind, and with a provision under which one of the lower basin States—California—practically steps into the position of guarantor, so that the upper basin would be reasonably assured that its requirements of practically 7,500,000 acre-feet would not be infringed upon, that they then could go ahead safely in developing their irrigation enterprises and taking water for domestic use.

It seems to me that if the Congress should go through the motion of passing this bill, authorizing these works—the dam, the power plants, and so on—predicated upon the unconditional ratification by all the seven States of the compact, it might be an interminable length of time before all seven would agree to come in.

The upper-basin States desire to be assured of their rights to the use of water, and, as they see it, the means of accomplishing that is to have the States in control of the waters going into the lower basin protect them to the extent that they are assured of their own water uses.

Mr. HAYDEN. Mr. President, let me see if I understand the Senator. It is due to the fact that the States of the upper basin fear development by California, and do not fear development by Arizona, that they are willing to subscribe to a 6-State compact, rather than to a 7-State compact, provided the State of California makes one of the six States.

Mr. PHIPPS. Not rather than. As I have stated, the preference is decidedly for a 7-State compact, and it is to be hoped that a 7-State compact will become effective. It is also felt, however, that, in view of the time which has passed during which one of the seven States has definitely refused to come in, having allowed a reasonable length of time for that State to come into accord with the others, and accept the compact, the upper-basin States would be reasonably safe in going ahead with the concurrence of the six States.

Mr. KING. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. KING. I hope the Senator from Colorado, in making that statement, is not attempting to speak for the State of Utah.

Mr. PHIPPS. I was speaking in general terms. The State of Utah, I believe, has declined to assent to a 6-State compact. The conditions of this bill I believe to be such that the State of Utah would again decline to assent to a 6-State compact.

Mr. KING. May I ask the Senator from Colorado if he thinks it will be conducive to securing the assent of the State of Utah to a 6-State compact, or to a 7-State compact for that matter, if the provisions of the bill, after it shall become a law, leave Arizona and California in a controversial condition with respect to a division of the water? In other words, if the rights of each of these States is not defined, will not there be a prolonged dispute as to the rights of each in and to the waters of the Colorado River?

Mr. PHIPPS. But the provision in the bill would protect the upper basin States in that California agrees that there shall be a limitation on the quantity of water which she may take and use.

Mr. KING. Does California agree there shall be a limitation if there is a 7-State compact?

Mr. PHIPPS. If there is a 7-State compact, in the terms of this amendment, yes. May I ask the Senator from California if I am correct?

Mr. JOHNSON. My impression is that the amendment provides, first, for a 7-State compact and, secondly, for a 6-State compact, in which event the Legislature of the State of California pledges itself never to use a greater amount than 4,400,000 acre-feet.

Mr. PHIPPS. The Senator is quite correct. With the 7-State compact, then, of course, the States of the upper basin are protected, in that the provision allows them to use 7,500,000 acre-feet, or, putting it the other way, their only obligation is to send down during the course of 10 years not less than 7,500,000 acre-feet of water.

Mr. KING. But it would leave California and Arizona, if there were a 7-State compact, to divide the water between themselves, and they might reach no agreement, and with California's superior strategic situation to use the waters of the river, Arizona's share, or claimed share, might be taken by California.

Mr. PHIPPS. To agree upon a division of the waters.

Mr. KING. And there is no assurance that California would be satisfied with the division prescribed in the amendment which has just been adopted.

Mr. PHIPPS. And no assurance that Arizona would be satisfied.

Mr. KING. Is there any assurance that California would consent to be limited to that amount?

Mr. PHIPPS. No; and there is no assurance that Nevada would be willing to take her 300,000 acre-feet which she is now willing to accept. That is to say, the whole thing would be thrown open for negotiation. If the States could come into agreement among themselves as to a division of the water, that agreement naturally would have to be ratified by the United States Government.

Mr. KING. May I ask the Senator if he should not be interested in getting a bill which would contain provisions that will permit Arizona to ratify? It seems to me that if we pass a bill which does not settle the controversy between Arizona and California in the matter of a division of the water there is danger that Arizona may not feel disposed to ratify the compact.

Mr. PHIPPS. I have always understood the principal bone of contention to be the division of the water. Now, by vote of the Senate, if it is carried into effect by concurrence of the House, that figure is fixed. The maximum to California would be 4,400,000 acre-feet. There is every reason to believe that would be acceptable to California.

Mr. KING. But, as I understand the statement just made by the Senator, the limitation of 4,400,000 acre-feet is based solely upon the 6-State compact, and if there is a 7-State compact there is no limitation.

Mr. PHIPPS. That is correct.

Mr. KING. Then if there is no limitation what advantage is there to Arizona if she does ratify the compact? California is in a superior position to appropriate the water and Arizona might get no water. California might then appropriate all of the 7,500,000 acre-feet allocated to the lower basin and Arizona, when ready to appropriate water from the river, and finding her share used by California might come to the upper basin States and make demands upon them.

Mr. PHIPPS. Arizona is ready to say that California shall put the water to beneficial use. Arizona has about 350,000 acres of land which can not be reached by gravity flow from the proposed dam, as our committee was informed.

Mr. KING. But the Senator must know that the statement has been made in the committee and on the floor of the Senate that neither Arizona nor the upper States are in a position to immediately appropriate the waters allocated to the upper States, or the share of the waters allocated to the lower States which Arizona thinks she is entitled to appropriate. If there is in the bill no division among the lower basin States of the water allocated to them, then Arizona might be unwilling to ratify the compact. She might say, "If we ratify, California is not restricted in the quantity which she may appropriate, and being in a position to appropriate all or most of the 7,500,000 acre-feet allocated to the lower States less what Arizona now uses, she may assert a claim to the entire flow." In this situation Arizona might feel constrained when ready to appropriate her share of the 7,500,000 acre-feet to make demands upon the upper States.

It seems to me that the Senator from Colorado is jeopardizing the rights of his own State, as well as the upper States, by assenting to a policy——

Mr. PHIPPS. I prefer that the Senator in speaking would not use the personal pronoun.

Mr. KING. I referred to the Senator as the Senator from Colorado.

Mr. PHIPPS. He should refer to me definitely as one member. I am only one member of the committee. I have my views as to what is the best procedure and the best form of legislation that can be adopted or carried out. I am perfectly willing to hear the Senator's argument from his viewpoint, but I hope he will not charge me with being the sole proponent of any feature of the bill or the amendment.

Mr. KING. I have not credited the Senator with being the sole proponent. He has defended the 6-State compact. I was merely calling attention to the fact that a compact which does not provide for a final division of the waters between Arizona and California will leave the upper States in a situation where they may not be fully protected, because if the allocation of water which has been provided in the amendment just adopted is not to apply in the event of a 7-State compact, then that may be regarded by Arizona as sufficient for objecting to ratifying the compact. If Arizona fails to ratify the compact the Senator must, it seems to me, appreciate the fact that the upper States are in jeopardy, because if Arizona does not ratify the

compact and California in the meantime should appropriate water which should go to Arizona, the latter, when ready to appropriate her just portion of the 7,500,000 acre-feet, and finding it used by California, might demand from the upper States sufficient to supply her needs. This danger might be increased if at the time of such demand the upper States had not applied to beneficial use the 7,500,000 acre-feet allocated to them. It seems to me that is vital for the protection of the upper States that the compact be ratified by the seven States.

I am more interested in securing a 7-State compact than in any other feature of the bill. If the compact is ratified and if the ratification and the provisions of the bill are of such character as to compose the differences between Arizona and California, then the upper States may go forward with a good deal of assurance, having only the apprehension that may arise from the fact that some of the water of the river may reach Mexico and be the basis of a claim by that country for a share of the river beyond that which may have been used prior to this time.

Mr. PHIPPS. Mr. President, will the Senator from Arizona yield further to me?

Mr. HAYDEN. Certainly.

Mr. PHIPPS. Just in a word, I wish to state that my understanding of the effect of the pending amendment is that under it or under a 7-State compact, the upper States would be compelled to send down 7,500,000 acre-feet of water in 10 years; or, to put it the other way, they would have for their own uses 7,500,000 acre-feet annually. If the 7-State compact is entered into, it settles that question so far as the upper basin States are concerned.

If we enact this legislation without providing for a 6-State compact, the discussions and the differences between the lower basin States may continue indefinitely and the upper basin States have no assurance that they are going to be protected in what they conceive to be their rights. The language of the amendment providing for a 6-State compact has incorporated in it the engagement upon the part of California that she will not take for her consumptive use more than 4,600,000 acre-feet—or now 4,400,000 acre-feet—of water out of the estimate 7,500,000 acre-feet annual flow.

Mr. HAYDEN. Mr. President, the State of Arizona feels that a gross injustice would be done to that State by the passage of an act of Congress which would provide that six States may divide the waters of a stream which belong to seven States without the consent of the seventh. No such bill should be introduced in Congress unless it were upon the assumption that Congress had the right and the power to divide the waters of the stream. Let me point out, Mr. President, a parallel instance to the one that we now have under consideration.

The States of Pennsylvania, New York, and New Jersey are using the waters of the Delaware River for domestic purposes. In the present unregulated condition of the Delaware River a shortage of water for cities in New York, New Jersey, and Pennsylvania has developed. Competent engineers have examined the stream and have determined that by the construction of reservoirs, either on the Delaware River itself or upon its tributaries, water may be conserved to satisfy the needs of all the cities which require it for domestic purposes. In order to arrange for an equitable apportionment of the waters of the Delaware River commissioners were appointed under authority of the legislatures of the three States. They drafted a compact allocating a quantity of water to New York, an equal quantity to New Jersey, and a larger quantity to Pennsylvania, because the larger part of the drainage of the Delaware River is in the State of Pennsylvania. That compact was very promptly ratified by the States of New York and Pennsylvania. The Legislature of the State of New Jersey, on examining the terms of the compact, decided that the references therein to vested rights might give title to certain riparian land, the ownership of which the State disputed, and therefore failed to ratify the compact.

Now, if the California procedure had been followed in that instance the States of New York and Pennsylvania would have appealed immediately to Congress and would have urged that because the three States interested in the Delaware River were unable to come to an agreement with respect to an apportionment of its waters. Congress should pass a bill approving the compact as ratified by the Legislatures of New York and Pennsylvania, and let it go into effect by virtue of an act of Congress, even though the Legislature of New Jersey has not approved of it.

That is what this bill does with respect to the Colorado River compact. It states that, whereas the legislatures of all of the seven States have not approved of the compact, nevertheless the Congress shall approve it and measures shall be taken to put that compact into effect whether the seven States have approved it or not.

The States of New York, New Jersey, and Pennsylvania, being of the original thirteen States of the Union, never thought of coming to Washington to ask that a compact which had been negotiated by the commissioners appointed by three of them, and which had been approved by two of them, should be put into effect by an act of Congress. They knew that that could not be done; that the waters of the Delaware River belonged to the three States; that those States alone could enter into an agreement to apportion the waters, and that it was wholly beyond the power of the Congress of the United States, by an act approving an agreement which two of the States had ratified and which the third had not, to place that agreement into effect. No such proposal was made.

The only interest the Federal Government has in the Delaware River is that if by reason of the reservoirs proposed to be built in New York or New Jersey or Pennsylvania the flow of that stream were interfered with to an extent that shipping could not enter the port of Philadelphia, then a Federal interest would be violated. But so long as interstate and foreign commerce were not interfered with, those three States might divide the water as they saw fit. So we say that the same is entirely true in the Colorado River, that the States alone, and all seven of them—because all seven of them own the river just as much as the three States of New York, New Jersey, and Pennsylvania own the Delaware River—the States and the States alone, and only by a unanimous agreement, can divide the waters of that river. Therefore an assertion in this bill that the compact shall be approved, not when ratified by seven States but when ratified by six States, is a wrong and a wholly improper procedure for the Congress of the United States to follow. Therefore I have moved to strike out of the amendment offered by the Senator from Colorado the provision that the Colorado River compact shall be approved by the Congress of the United States to go into effect when ratified by six States and not by seven States.

It seems to me, Mr. President, that the proposition is so simple that it does not need much argument. Here is a river that belongs to seven States. Each one of the seven States appointed commissioners to work out an arrangement whereby the waters of that stream would be divided. Six of the States approved that agreement, but the seventh State, for good and substantial reasons, declines to approve it until a supplemental compact shall have been made between that State, which is Arizona, and the State of California further apportioning the waters that are allocated to the basin in which they lie.

The State of Arizona insists that as a condition precedent to her ratification of the main Colorado River compact the State of California shall agree with her upon a division of the water of the lower Colorado River Basin.

Mr. BORAH. Mr. President——

Mr. HAYDEN. I yield to the Senator from Idaho.

Mr. BORAH. I merely wish to ask a question. Does the Senator from Arizona contend that the passage of this bill will affect any rights which Arizona has as a State or her citizens have by reason of being citizens of the State? Does he contend the passage of the bill could take away those rights, notwithstanding she has not entered into the pact?

Mr. HAYDEN. We do not know. We look upon the passage of the bill as an assault upon the sovereignty of the State of Arizona. It could be based upon no other theory than that Congress has the right to apportion the waters of the Colorado River and its tributaries in accordance with a certain document, regardless of the wishes of the State of California. It seeks to impose the terms of the Colorado River compact upon the State of Arizona without the consent of that State. Therefore we resist it. Whether all that we fear could be accomplished or not we do not know. I think the Senator from Idaho would be inclined to take the view that such a thing could not be done; the Supreme Court of the United States would not permit anything of that kind. To pass a bill of this kind, however, places the burden upon the State of Arizona of filing suit and of arguing it before the Supreme Court of the United States. No one can tell in advance what the decision of the Supreme Court will be. Therefore we feel justified in opposing the passage of any proposed legislation that in any manner may seek to divide the waters of the Colorado River, in which the State of Arizona has an interest, without the consent of that State.

Mr. BORAH. Mr. President, I do not desire to argue the question, but lest I may be misunderstood in the future—because this question is likely to come back here in another form with reference to some other bill—when I shall vote for

this bill I shall vote for it upon the supposition that a mere act of Congress can not take away any rights of the State of Arizona.

Mr. HAYDEN. Mr. President, in connection with the remarks just made by the Senator from Idaho, I wish to say that one can not blame the Senators from Arizona for being as persistent in the defense of the rights of their State as the Senator from Idaho has been as to the rights of his State. When the Columbia Basin project was under consideration by the Senate the Senator from Idaho offered an amendment which I shall now read:

Provided, That no appropriation for construction under the gravity plan shall be made until a compact shall have been entered into between the States, either to determine the allocation of waters and definite storage elevation and areas or to determine the basic principles that for all times shall govern these matters: *And provided further*, That the passage of this act shall not in any respect whatever prejudice, affect, or militate against the rights of the State of Idaho, or the residents, or the people thereof, touching any matter, or thing, or property, or property interests relative to the construction of the Columbia Basin project.

The senior Senator from Arizona [Mr. ASHURST] has offered an amendment to this bill in almost the identical language of the amendment offered by the Senator from Idaho which I have just read, except that he struck out the name of the State of Idaho and inserted the name of the State of Arizona. If an amendment of that kind were adopted to this bill, the rights of the State of Arizona would be protected.

Mr. BORAH. My opinion is, though I may be in error, that while that amendment was attached to the Columbia Basin project bill, the law was just the same and would have so remained without the adoption of the amendment. It was quite proper for me to add the amendment and it is quite proper for the Senators from Arizona to take such action as will preclude any presumption of acquiescence, but I think the law to be as I have stated. I do not see how we can, by an act of Congress, take away the rights which belong to a State or to its citizens by virtue of their being citizens.

Mr. HAYDEN. The Senator from Idaho may remember the position of the office of the Attorney General of the United States which has been asserted in briefs filed before the Supreme Court of the United States in the famous cases of Kansas against Colorado and Colorado against Wyoming. In one instance the brief was filed by John W. Davis, the then Solicitor General, and in another instance, more recently, by Mr. Beck, as Solicitor General; but in each instance it was asserted that, while it may be true that the doctrine of appropriation exists in the Western States, it exists only by the sufferance of the Federal Government, and that the Federal Government could at any time, as the owner of the riparian land in the West, reassume jurisdiction and entirely wipe out the doctrine of appropriation, so that it would be no longer applicable in the West. In other words, the Attorney General's department asserts that the Federal Government has absolute and complete jurisdiction and control of all the streams which flow through the public lands.

Mr. BORAH. If streams flow through lands owned by the Government, the Government has a proprietary interest the same as any other proprietor, but not as a sovereign.

Mr. HAYDEN. Whatever interest that may be, whether as sovereign or as proprietor, the Federal Government has no such interest under the laws of the State of Arizona and of other Western States, of which, I believe, the State of Idaho is one. The simon-pure appropriation States of the West assert that the doctrine of riparian rights does not exist, and that the right to appropriate water may be only acquired under the law of the State. Therefore we are menaced by the attitude of a department of the Federal Government, the Attorney General's office, asserting that the States have no right to control the waters of streams where they flow through public land, an instance of which we have before us here. On each bank of the Colorado River at Boulder Dam the lands belong to the United States and are not in private ownership.

Mr. BORAH. The Supreme Court did not follow the brief of the respective Attorney Generals, did it?

Mr. HAYDEN. It did not. The representations thus made were entirely ignored. In the opinion in the case of Colorado against Wyoming, the Supreme Court held that the doctrine of appropriation was common to both the State of Colorado and Wyoming, and therefore it was applicable to the entire stream, and that an earlier appropriator lower down on the stream in Wyoming was entitled to receive his water as against a subsequent appropriator higher up on the stream in Colorado.

Mr. WATERMAN. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. COUZENS in the chair). Does the Senator from Arizona yield to the Senator from Colorado?

Mr. HAYDEN. I yield.

Mr. WATERMAN. In the Elephant Butte Dam case, in 174 United States, where there was an attempted intervention in the Rio Grande River, the Supreme Court of the United States held, did it not, that the only control or influence of the United States in connection with the flowing of the waters of an interstate stream was predicated exclusively on the commerce clause of the Constitution of the United States? Is not that correct?

Mr. HAYDEN. The Senator is correct.

Mr. WATERMAN. And that was reaffirmed in the Kansas-Colorado case, was it not?

Mr. HAYDEN. The Senator is again correct in his statement.

Mr. WATERMAN. If that be so, how is it possible for the Congress of the United States to legislate in such a manner as to hamper in any way Arizona or my State with reference to the waters that are within or contiguous to it unless they exercise the power in relation to navigation? How can it be done?

Mr. HAYDEN. It has always been the contention of the State of Arizona that the rights of the United States in and to the Colorado River or any other stream in the State were limited to navigation.

Mr. WATERMAN. Exactly. Take the 6-State compact, so called, which purports to put into effect, without the consent of Arizona, the provisions of the 7-State compact, how can Congress by the passage of this bill in any way hamper or limit Arizona in the utilization of the waters that pass through that State?

Mr. HAYDEN. It is evidently the idea of the authors of this bill that the works to be erected under it would be operated in some manner to carry out the terms of the Colorado River compact, and that the practical effect of the legislation would be to prevent the State of Arizona from enjoying any benefit from that structure that was not in accord with a compact which that State had not approved.

Mr. WATERMAN. If, then, the 6-State compact is impressed by this legislation upon this river, and Arizona is left out of it, does not ratify it, does not approve it, does not become a party to it, what is to prevent Arizona from going into the stream where she owns both banks of the river and appropriating water for power purposes, assuming that there is no prohibitive legislation, and in that way getting title to the waters of that river, and depriving my State—which furnishes 70 per cent of the water that passes down through and into the Gulf—of the use of any of the waters that flow in the river there? How can it be done; and can not Arizona, by that method, deprive my State of her rights in that respect?

Mr. HAYDEN. If the State of Arizona had not approved the Colorado River compact, it would undoubtedly have the right to do just what the Senator has suggested.

Mr. WATERMAN. That is where the interest of the people of my State comes into this question. I believe that they must insist upon the ratification of the 7-State compact by the seven States in order to settle the controversy which may arise, and undoubtedly will arise, among the States with reference to the partitioning out of the waters of that stream. That is a vital question, and I am intensely interested in it; and I must stand for such legislation in this body as will protect the interests of my State in the waters of that stream which flow out of it, so that they can not be taken away. The 7-State compact, in my judgment, will do it; and that is why I stand for that compact.

Mr. HAYDEN. The Senator from Colorado will understand that each and every reason ever alleged by the State of Arizona for failure to ratify the compact was not because of a desire in any way to deprive the State of Colorado, which the Senator so ably represents, or the other States of the upper basin, of the share of water allocated to them by the compact; that Arizona's failure to ratify the compact was due solely to the refusal of the State of California to enter into a supplemental agreement dividing the water in the lower basin.

Mr. WATERMAN. I may say to the Senator that I did not intend to intimate anything of that kind. The time may come when I shall say something about that proposition.

Mr. BORAH. Mr. President——

Mr. HAYDEN. I yield to the Senator from Idaho.

Mr. BORAH. I can see how Arizona might lose her rights, not by reason of this legislation, but by reason of acts of appropriation going on in carrying out the terms of this bill in case Arizona did not assert her rights in court. If she stood by and water were appropriated to beneficial use in other States, she might lose her rights. She would not lose them, however,

by reason of this legislation, but by reason of the acts of appropriation.

Mr. HAYDEN. That is exactly what we fear—that if, subsequent to the passage of this legislation, a great dam is erected in the Colorado River without the consent of the State of Arizona, the water impounded behind that dam will be claimed and controlled by the Federal Government, and the State of Arizona will have no jurisdiction over it. The Secretary of the Interior may then enter into contracts to permit the use in California of a much larger quantity of water out of that dam than is fair to the State of Arizona. The State of Arizona will be helpless unless it does proceed, as the Senator suggests, by filing a suit in the Supreme Court of the United States to determine its rights.

Mr. KING. Mr. President——

Mr. HAYDEN. I yield to the Senator from Utah.

Mr. KING. I desire to suggest to my friend from Idaho this situation:

By this bill the Federal Government is asked to appropriate more than $100,000,000 to construct a dam in the States of Arizona and Nevada particularly for the purpose of generating power. The bill requires that the Secretary of the Interior shall make contracts for the sale of power and stored water. It is obvious that Arizona, not being ready to utilize all of the water of the river to which she believes herself entitled, may lose her right largely because of the acts of the Federal Government. The construction of the dam and the use of a portion of the water for the generation of power places the Government in the position of aiding California in appropriating water which Arizona claims.

By this bill the Government is aiding California, by taking money out of the Treasury of the United States, to appropriate a part of the river flow for power, irrigation, and domestic purposes. This appropriation may be, and probably is, a part of the stream to which in all justice Arizona is entitled. Under the terms of the bill we are requiring contracts to be entered into by the Secretary of the Interior to raise sufficient sums to annually meet the expenditures made by the Government. These contracts will require that power be developed by utilizing a portion of the water claimed by Arizona. Contracts are to be made requiring that a portion of the waters of the river be diverted therefrom and taken to Los Angeles and other coastal cities for domestic and other purposes; so that the United States is asked to become a party to a policy which may deny to Arizona the future consumptive use of her just share of the waters of the Colorado River.

Arizona is vitally interested in this proposed legislation, and in securing an agreement with California as to a division of the water; doubtless she feels that before she can vote to ratify the compact there should be an agreement dividing the water of the river. She may feel that if no agreement is entered into, and she is not in a position to utilize her share of the water for some time, California, with the aid of the Government, will use for power and other purposes water which is justly hers. In this situation, when Arizona is in a position to require the water, and it is claimed by California, a demand might be made upon the upper States for a portion of the quantity allocated to them.

It will be observed that there are serious problems involved in the proposed legislation which we are considering.

Mr. BORAH. Mr. President, of course it would have been extremely satisfactory to all Members of the Senate if the seven States could have agreed. They have been unable to agree, however; and we must, therefore, make our choice of whether we will do nothing, or whether we will pass such legislation as is now proposed.

Then, again, here is a river some 1,700 miles long, I think, national and international in its scope, affecting immediately seven States, and indirectly as many more. There is no one except the Government of the United States who can deal with that river so far as flood control and such matters are concerned. No one else is able to do it; no one else could do it; no one else really has the authority to do it; and, fundamentally, the flood-control proposition is what most immediately concerns me.

Undoubtedly, if Arizona stands idly by and does not protect her rights, either by appropriation or by such action in the courts as will protect them, she will lose her rights ultimately. That is one of the penalties of living under the doctrine of prior appropriation. If an individual has a farm or ranch, and the water is running by it, if he does not use it, his neighbor below him or above him can appropriate it and take it away from him, ultimately. So here, I presume, if Arizona should not act, she perhaps would be prejudiced by this legislation in the sense that the acts carrying it out would result in appropriations by others. It would not be the act of Congress which took away her rights, however, but the acts of appropriation following as a result of it.

Mr. HAYDEN. Mr. President, that is why we oppose the passage of a bill which authorizes large appropriations of money to construct a dam and other works which will inevitably lead to appropriations of water which are adverse to the State of Arizona, unless and until there is an agreement between Arizona and California apportioning those waters. We desire an agreement so that if Arizona is not in position to use her share of the water immediately, it will be reserved for her. In other words, Arizona's position in this matter is exactly and identically on all fours with the position of the States of the upper basin. We ask no more and no less in the way of protection from immediate development in California than do the States of the upper basin.

I understood the senior Senator from Colorado to say that the reason why he was willing to abide by a 6-State agreement, provided California was one of the six States that entered into the agreement, was because they feared California, and they did not fear immediate development in Arizona.

Mr. WATERMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Colorado?

Mr. HAYDEN. I yield.

Mr. WATERMAN. In view of what the Senator from Idaho has just stated with reference to flood control I will say that that proposition, as I understand, is not fettering this legislation at all. I imagine that if this bill were framed for the purpose of flood control and flood control only, Arizona would not refuse to support that sort of legislation. When, however, you go in there and propose to put in this dam 550 feet high and propose to give the State of California 4,600,000 acre-feet of water out of the seven and a half million under the 7-State compact, Arizona says, "No; we are entitled to a greater proportion of the 7,500,000 acre-feet than that will allow." So what the Congress is doing is departing from the proposition of flood control as such and going to the basis of creating a great reservoir for storage and power purposes, with all the things that will follow the construction of power plants, and there is where the trouble arises.

Nobody, I presume, wants to oppose any legislation which will protect the situation from the menace of floods. While I know of no constitutional provision which warrants the Government in entering into the field of flood control, it has been practiced so long and has remained so long unquestioned that probably fundamentally the Congress has the power to do it. At any rate, it has been doing it all the time and nobody is complaining about it. So if we come back to the proposition of flood control and erect a dam in that river which will prevent floods or injury from floods, I imagine we will have no trouble with this legislation.

Mr. HAYDEN. There would be no objection at all on the part of the State of Arizona to the construction of a mere flood-control dam in the Colorado River to perform the Federal function of improving navigation or regulating interstate commerce. We have said consistently that to do that alone would be a waste of public funds; that it would be much better to combine with it the other advantages that could be obtained by building a larger and better dam which would furnish an income to the Federal Government from the sale of power.

We have had no major quarrel with the things that are proposed to be done so far as they are physical facts, but we quarrel with the ways and the means with which the dam itself would be operated, or the power plant would be operated, to the detriment of the State of Arizona. We have insisted that there must be some agreement with our sister State of California before the works at Boulder Canyon are constructed the operation of which would be detrimental to the State of Arizona and in violation of her rights.

Mr. FLETCHER. Mr. President, may I inquire of the Senator, as a practical matter, if it is proposed that these contracts shall be made with reference to the disposition of the water and the power, and whether the theory is that out of those contracts there shall arise a fund which will liquidate the amount which the Federal Government may put into the enterprise?

Mr. HAYDEN. That was the theory of the proponents of this bill in the beginning. That theory will have to be modified if the bill carries out the recommendations made by the Sibert engineering board, which reviewed the original plan. That board found that the original proposal was to have the receipts from power pay not only for the dam but for an irrigation canal, known as the all-American canal. Owing to the increased costs, the Sibert board found that such a plan would be economically unsound, and the Federal Government could not be reimbursed in the time specified in the bill. The

board reported that if the irrigation enterprise in the Imperial Valley and the Coachella Valley were eliminated, and it made to carry itself, and if a share of the cost of the dam were appropriated by Congress as a Federal contribution for flood control, then the remainder of the cost of the dam could be reimbursed within the 50-year period specified in the bill.

Mr. FLETCHER. Is it contemplated under the bill that the Federal Government will also construct the power plant or have anything to do with the plant itself?

Mr. HAYDEN. The bill as it passed the House authorizes and directs the Secretary of the Interior to build a power plant; he has no other alternative than to build a power plant. After it is once constructed the Secretary may lease the power plant or he may enter into contracts for the sale of power from the plant. Those are the provisions of the House bill. The Senate committee has proposed to amend the bill by a third alternative, that the Secretary of the Interior may lease the privilege of generating power from the water at the dam and allow somebody else than the Federal Government to build the power plant.

Mr. FLETCHER. The situation now is, though, that we have substituted the Senate bill for the House bill.

Mr. HAYDEN. We have stricken out all after the enacting clause of the House bill and are now perfecting the Senate bill as a substitute for the House bill.

Mr. FLETCHER. So that it would seem that if the bill passes this appropriation will amount to a contribution by the Federal Government of some hundred million dollars, which it never expects to get back.

Mr. HAYDEN. The only amendment which has been offered has been proposed by the Senator from Colorado [Mr. PHIPPS], who suggested $25,000,000, not to be reimbursable. Am I correct in that assumption?

Mr. FLETCHER. If California is limited as to the amount of water she is to have, that necessarily limits the proceeds that could be derived from contracts disposing of that water, so that we could not expect to get revenue beyond a certain amount from the sale of water.

Mr. HAYDEN. Let me say to the Senator from Florida that there is absolutely no connection between the quantity of water which may be used for irrigation or for domestic purposes in California, as limited in this bill, and the amount of power which may be produced at Boulder Dam. All the water available would be utilized at the dam for power, and at another point lower down the stream the water would be divided between the States of Arizona and California and diverted for irrigation and domestic uses.

Mr. FLETCHER. Exactly; but, as I understand it, there will be some revenue derived from the sale of that water by contract.

Mr. HAYDEN. Only a nominal sum. The largest estimate I have seen is very much smaller than that of the revenue expected to be derived from power.

Mr. PHIPPS. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. PHIPPS. The estimate of receipts from the use of water, aside from power, is $1,500,000 per annum, and from the power, $10,800,000 per annum. As to the definite contribution which I have proposed to be made by the Government for purposes of flood control, my suggestion was to designate $25,000,000 of the advances as being for flood-control purposes, to be reimbursed after the other advances have been returned to the Government with interest. The Senate bill does not contemplate paying for the construction of the all-American canal out of power receipts. The Senate bill provides that that should be a burden upon the land to be benefited by irrigation. If the power plants were to be constructed, as proposed by the Senate bill, by the States, municipalities, or other political subdivisions, or private enterprise, that would eliminate another $38,000,000, plus interest, or about $45,000,000 altogether. So that the amount to be advanced by the Federal Government initially would not exceed perhaps $75,000,000, of which $25,000,000 would be allocated initially for purposes of flood control, to be repaid after the other amounts are repaid.

Mr. FLETCHER. May I ask the Senator if that has been agreed to, or is that still a matter that has to be determined by a vote of the amendment?

Mr. PHIPPS. The amendments which have been offered, cover all of those points. As to one, as to the all-American canal, nothing is required, because we are considering the Senate bill as recommended by the Senate committee. On the question of power, the Senate bill—and I think it requires slight amendment in form—has a power alternative, and by eliminating those two, and by providing the $25,000,000 as an advance fund on account of flood control, we get down to a comparatively small figure to be repaid out of power proceeds.

Mr. HAYDEN. Mr. President, I want to make it perfectly clear to the Senate, so that there can be no misunderstanding of the attitude of the State of Arizona with respect to this legislation, that if a bill were passed based upon a 7-State compact the State of California might with propriety say, "Well, we are right back where we were before," and nothing would be done. But such is not the case. In the time intervening between the date when the Legislature of Arizona refused to ratify the original compact and the present time many important events have occurred. There have been conferences between the States, conferences particularly at Denver, under the kindly auspices of the governors of the upper basin States, and our differences were narrowed down until to-day the Senate, by a compromise, has suggested a settlement which brings the States within 200,000 acre-feet of their difference so far as the water in the main stream is concerned.

The question of whether the State of Arizona shall receive revenue equivalent to the taxes that would be paid if power were developed at the Boulder Canyon site by a private power company is conceded by those who represent the city of Los Angeles to be a just contention. The representatives of that city have stated to us frankly that, so far as the city of Los Angeles is concerned, if that city goes outside of the State of California to construct a power plant at this Government dam, it would expect to pay taxes upon that plant and upon the power generated there just as a private power company would. So that we are not far apart on principle. The same principle has been agreed to by every State in the basin except California. When the Pittman resolution was adopted at Denver that resolution stated that the States were entitled to compensation for the use of their lands and their waters if used to generate hydroelectric energy. So that it is not fair, it is not just, to say that if this bill passed with provision for a 7-State compact the State of Arizona would not ratify the compact.

Conditions have materially changed, and changed in such a manner that if the bill is a fair measure, a bill which represents the best judgment of the Congress of the United States, the State of Arizona will look upon it with favor. Although we are not in complete accord, we are close to an accord, and there is much more reason to expect that the State of Arizona would approve the Colorado River compact and put it into effect than there would be if accommodations had not been made on both sides in the intervening time.

I say to the Senate in all seriousness, in all sincerity, that the people of Arizona are as tired of this Colorado River controversy as the Senate itself may be. A controversy among seven States that lasts for seven years should be brought to an end. There can be no reason to doubt that all the parties to it are equally anxious to bring it to a close.

I know that the people of Arizona—and I have a right to speak for them on this occasion—are just as anxious to see that great natural resource, the Colorado River, brought into development as are the people of any other State in the Union, even though not a kilowatt-hour of power were ever transported over a transmission line into the State of Arizona; even though not an acre of new land were ever brought under irrigation by the water from the Colorado River. Nevertheless, if this bill will accomplish the wonderful results which its proponents claim will occur, if it will add not only a million but seven and a half million more to the population of Los Angeles; if it will add, as the chief of the bureau of power and light of the city of Los Angeles has said, ten to twelve billion dollars to the wealth of southern California; if that is to be the effect of this legislation, certainly we who live as neighbors to southern California could not fail to share in some way in their prosperity. Although we might not benefit directly, but indirectly, Arizona is bound to be benefited. Therefore, so far as the people of Arizona are concerned, the only way they can gain any advantage from the now wasted resources of the Colorado River is to have those resources put to use; to be developed.

We are not in disagreement about the main principle here involved. We are not in disagreement that the Colorado River is a flood menace. We do not disagree with the claim that power can be developed on that stream. We agree that water may be impounded and placed to beneficial use for the reclamation of arid lands. Our disagreement with the State of California is about details of the plan, and not upon the principle which underlies it.

Mr. FLETCHER. Mr. President, may I ask the Senator to state briefly, if he will, what, if any, has been the experience with reference to floods in that valley? Will he not give us an idea about the importance of flood control? Has there been any great devastation, any great trouble, arising from floods heretofore on the Colorado River? If so, I will ask the Senator to state when and where.

Mr. HAYDEN. The Colorado River on more than one occasion has broken out of its banks and entered the Imperial Valley. At no time has any considerable area of the Imperial Valley, particularly any cultivated part of that valley, been overflowed in the manner with which the Senator is familiar in streams in the southern part of the United States. When the stream broke the levee and entered the Imperial Valley it followed an old river channel which led into the Salton Sea. The only immediate effect of the break was, first, to increase the level of the Salton Sea very gradually by backing up the water, so that some farming land was, after a considerable length of time, covered with water.

Mr. FLETCHER. But that break in the levee occurred in Mexico, did it not?

Mr. HAYDEN. Yes; beyond the Mexican boundary line. A further effect of the break was to scour out the channel and prevent water from being diverted into the canal used in irrigating lands in the Imperial Valley, and that would be the most serious effect of a new break in the river.

The truth is, and it is a fact that is wholly unappreciated by many Senators, that the chief injury that would occur to the Imperial Valley by reason of a break in the levee would be a change in the channel of the Colorado River, so that instead of flowing into the Gulf of Mexico it would flow into the Salton Sea. There would be no reason for any person or any number of persons to lose their lives, nor would it be necessary for the people immediately to leave their homes. The effect would be that by scouring the channel below the level of the head gates of existing canals, water would cease to be available for cultivation of the crops by irrigation, and it would be a drought and not a flood that would drive the people now residents of Imperial Valley from their farms.

Mr. FLETCHER. Would the remedy be the building of the proposed dam?

Mr. HAYDEN. The dam would remedy that situation. In fact, it is the only remedy. There is no other way in which the flood waters of the Colorado River could be controlled except to impound the same at this point or some other point in the canyons of that stream above. That is the advice of all engineers who have reported to Congress upon the subject.

Mr. President, I think I have as fully explained the opposition of the State of Arizona to the 6-State ratification of the compact as time will permit. Unless some other Senator desires to address the Senate upon the subject I am willing that we shall have a vote on my amendment.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Arizona [Mr. HAYDEN] to the amendment of the Senator from Colorado [Mr. PHIPPS].

Mr. ASHURST. I demand the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The clerk will state the pending amendment.

The CHIEF CLERK. The Senator from Arizona [Mr. HAYDEN] proposes to strike out of the amendment of the Senator from Colorado [Mr. PHIPPS] the following words:

> if said States fail to ratify the said compact within one year from the date of the passage of this act then, until six of said States, including the State of California, shall ratify said compact and shall consent to waive the provisions of the first paragraph of Article XI of said compact, which makes the same binding and obligatory only when approved by each of the seven States signatory thereto, and shall have approved said compact without conditions save that of such 6-State approval, and the President by public proclamation shall have so declared, and, further,

Mr. ASHURST. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	Fletcher	McKellar	Shortridge
Barkley	Frazier	McMaster	Simmons
Bingham	George	McNary	Smith
Black	Gillett	Metcalf	Steck
Blaine	Glass	Moses	Steiwer
Blease	Glenn	Neely	Swanson
Borah	Goff	Norris	Thomas, Idaho
Bratton	Hale	Nye	Trammell
Brookhart	Harris	Oddie	Tydings
Broussard	Harrison	Overman	Tyson
Bruce	Hawes	Phipps	Vandenberg
Capper	Hayden	Pittman	Wagner
Caraway	Heflin	Ransdell	Walsh, Mass.
Couzens	Johnson	Reed, Pa.	Walsh, Mont.
Curtis	Jones	Robinson, Ark.	Waterman
Deneen	Kendrick	Robinson, Ind.	Watson
Dill	Keyes	Sackett	Wheeler
Edge	King	Schall	
Edwards	Locher	Sheppard	

The VICE PRESIDENT. Seventy-four Senators having answered to their names, a quorum is present. The question is on the amendment of the Senator from Arizona to the amendment of the Senator from Colorado. The yeas and nays having been ordered, the clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. WAGNER (when Mr. COPELAND'S name was called). My colleague the senior Senator from New York [Mr. COPELAND] is detained from the Senate by illness in his family.

Mr. KING (when his name was called). The Senator from Minnesota [Mr. SHIPSTEAD] was called away from the Senate on business in connection with his official duties. I am paired with that Senator and by reason of that fact withhold my vote. If the Senator from Minnesota were present and voting, I think he would vote "nay." If I were permitted to vote, I should vote "yea."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from Wyoming [Mr. WARREN], and therefore withhold my vote.

Mr. REED of Pennsylvania (when his name was called). I have a general pair with the Senator from Delaware [Mr. BAYARD]. I transfer that pair to the senior Senator from Wisconsin [Mr. LA FOLLETTE] and vote "nay."

Mr. TYDINGS (when his name was called). On this vote I have a pair with the senior Senator from Ohio [Mr. FESS]. I understand that if he were present he would vote "nay." If I were permitted to vote, I should vote "yea."

The roll call was concluded.

Mr. BLAINE. I desire to announce that my colleague the senior Senator from Wisconsin [Mr. LA FOLLETTE] is unavoidably absent. If he were present, he would vote "nay."

The result was announced—yeas 17, nays 53, as follows:

YEAS—17

Ashurst	Edwards	Hayden	Tyson
Blease	Fletcher	Heflin	Waterman
Broussard	Glass	Smith	
Bruce	Harris	Steck	
Caraway	Hawes	Trammell	

NAYS—53

Barkley	George	Metcalf	Sheppard
Bingham	Gillett	Moses	Shortridge
Black	Glenn	Neely	Simmons
Blaine	Goff	Norris	Steiwer
Borah	Hale	Nye	Swanson
Bratton	Harrison	Oddie	Thomas, Idaho
Brookhart	Johnson	Phipps	Vandenberg
Capper	Jones	Pittman	Walsh, Mass.
Couzens	Kendrick	Ransdell	Walsh, Mont.
Curtis	Keyes	Reed, Pa.	Watson
Deneen	Locher	Robinson, Ark.	Wheeler
Dill	McKellar	Robinson, Ind.	
Edge	McMaster	Sackett	
Frazier	McNary	Schall	

NOT VOTING—25

Bayard	Greene	Mayfield	Smoot
Copeland	Howell	Norbeck	Stephens
Dale	King	Overman	Thomas, Okla.
Fess	La Follette	Pine	Tydings
Gerry	Larrazolo	Reed, Mo.	Wagner
Gould	McLean	Shipstead	Warren

So Mr. HAYDEN'S amendment to Mr. PHIPPS'S amendment was rejected.

The VICE PRESIDENT. The question is on the amendment of the Senator from Colorado as amended.

Mr. ASHURST. I now propose an amendment to the amendment proposed by the Senator from Colorado.

The VICE PRESIDENT. The amendment will be stated.

The CHIEF CLERK. On page 3, line 17, after the word "tributaries," it is proposed to insert the words "except the Gila River."

Mr. ASHURST. I shall read the paragraph of the amendment which I now propose to amend. It is the paragraph commencing in line 14 of the amendment proposed by the Senator from Colorado and reads as follows:

> The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this act shall become effective, as provided in section 4 herein.

The adoption of my amendment will be notice to the Federal Power Commission that it may, in its discretion, issue permits or licenses under the water power act upon the Gila River and the Gila tributaries.

Naturally, Senators may ask why I make an exception of the Gila River and its tributaries. In reply, let me say that the practical effect of the amendment of the Senator from Colorado in its present form is to penalize Arizona. The Senator's amendment is construed throughout the State of Arizona as an at-

tempt to force and coerce the Legislature of Arizona into ratifying the Colorado River compact.

If Senators will bear with me, I shall try to indicate by the map on the wall at the rear of the Chamber just the course of the Gila River.

The Gila River debouches into the Colorado River about a mile above the city of Yuma [indicating on map]. The Gila River, as Senators will see from the map [indicating], has its earliest sources and upper reaches in the mountains of east central Arizona, although some of the waters of the Gila River rise in New Mexico. Probably 15 per cent of the waters of the Gila come from New Mexico.

This [indicating] is a rugged, a rough country, and the Gila River [indicating] is formed by small alpine springs fed by snows and rains on the mountain tops.

At the town of Clifton, in Arizona, two important streams come together as tributaries of the Gila, whereupon the river proceeds across Arizona. It passes through the Gila Valley [indicating], where for more than 50 years industrious settlers have cultivated land by building irrigation ditches and using the waters of the Gila. Thus the thriving town of Safford, the county seat of Graham County, and the towns of Pima, Solomonsville, Thatcher, and Central and other communities have been built up.

The river then passes on, fed by other important tributaries, as may be perceived from the map, and enters the Box Canyon of the San Carlos. This arrow on the map [indicating] indicates the Coolidge Dam, which, Mr. President, was completed not over 20 days ago.

The reservoir created by the building of the Coolidge Dam is filling with water, and from the waters of this reservoir 100,000 acres of land, indicated by the green on this map, will be irrigated. Over half of that area is Indian land.

I digress at this juncture to say that the building of the Coolidge Dam was one of the wisest, most beneficent acts that the Government has lately performed. The Indians there—Pimas—never had a war or even a quarrel with the Federal Government. The Congress may, therefore, congratulate itself that it enacted legislation that takes care of the Indian rights and at the same time irrigates approximately 50,000 acres of other land.

The Gila River then flows on and forms a junction with the Salt River. This green tract [indicating] is the irrigated portions of the Salt River Valley. But, Mr. President, by the time these Gila River waters have done their duty and have served the various appropriations, the Gila River is at times so reduced in volume that when it debouches into the Colorado River it is sometimes nothing more than a trickle or small stream.

Now, it is proposed by the amendment of the Senator from Colorado that there shall be no power permits or licenses issued upon these little mountain streams making up the Gila and the Salt. To do that, Mr. President, would be an act of injustice to Arizona and to the Indians, and would not be of any help in leading to any early ratification of the compact, because the Gila River is going to make no contribution—it is impossible for it to do so—to the main stream of the Colorado River except in flood tide, and that is when the Colorado River least requires such contributions.

Although Arizona is rich in agriculture, livestock, and in minerals—indeed, in her hills and caverns there is more wealth than Ophir had to burden the mighty fleets of Solomon and Arizona produces one-sixth of the copper of the world—we do not as yet produce any coal or oil. We are hopeful of producing those fuels, but so far we have not done so. If our citizens and communities could be free to appeal to the Federal Power Commission to issue permits and licenses for the generation of hydroelectric power upon these little streams, it would be of immense benefit to Arizona.

I respectfully submit that this present provision in the bill would be construed merely as a threat, and an attempt to penalize Arizona, and would lead to no good result. I do not say that such is the intention of the protagonists of the legislation; but that would be its effect. Anything touching our waters in Arizona is like the most delicate nerve center of a human being. As I said the other day, there are times in our State when an acre of water is worth more than an acre of molten silver.

Members of the Senate Committee on Indian Affairs will recall that we had up this very question last winter, and it was discussed at length before the committee. I do not wish to appear vain or presumptuous, but I believe I convinced the Committee on Indian Affairs that it should, and it did, favorably report a bill which I introduced, permitting the Federal Power Commission to issue permits on these little streams.

What reason is there to deny us the right to ask the Federal Power Commission for licenses or permits to generate hydroelectric power upon streams that originate wholly within Arizona, and never reach Arizona's external boundaries?

Arizona is entering, indeed has entered, upon a great era of expansion and development. We have doubled our population since we were admitted into the Union. We have gridironed the State with good roads. Commodious, yea palatial, hotels are numerous. We have built school houses, a great university, and other similar evidences of growth. We are only asking power permits upon streams that originate wholly within Arizona, and the waters of which, except at flood tide, never reach the Colorado River; and when they do reach the Colorado River are an unwelcome visitor.

Mr. McKELLAR. Mr. President——

Mr. ASHURST. I yield to the Senator from Tennessee.

Mr. McKELLAR. Are those streams that are wholly within the Senator's State navigable?

Mr. ASHURST. No; Mr. President.

Mr. McKELLAR. Then what possible authority or jurisdiction would the Federal Water Power Commission have over such little streams, wholly within the State of Arizona?

Mr. ASHURST. That question was argued ably for three or four years here in the Senate when we were considering the water power act. A large number of Senators and Members of the other House of Congress argued that the Congress had no authority to interfere, but, be that as it may, the Federal water power act does give the Federal Power Commission the authority to issue permits.

Mr. McKELLAR. They may assume the authority, but I do not think they have it.

Mr. FLETCHER. Mr. President——

Mr. ASHURST. I yield to the Senator from Florida.

Mr. FLETCHER. The Senator mentioned, I think, two dams on the Gila River.

Mr. ASHURST. Yes.

Mr. FLETCHER. Is there no power generated there?

Mr. ASHURST. Yes; power is generated there. We will take first the Coolidge Dam, which, as I say, was completed not a fortnight ago and is now filling. Power will be generated there, because it would be uneconomical, unstatesmanlike, and a waste of energy to allow the water to pour over the dam and not generate such hydroelectric energy as could be there generated.

Mr. WHEELER. Does the Senator say they are generating it now?

Mr. ASHURST. No; they propose to do so.

Mr. NEELY. Mr. President, I beg the able and eloquent Senator from Arizona not to say "Salt River" again. It is a turbulent and turbid stream upon which some of us have just made a melancholy voyage. Therefore, in order that the Senator's words may, as usual, be like apples of gold in pictures of silver, let him avoid the repetition of the irritating name of Arizona's briny river. [Laughter.]

Mr. ASHURST. No one regrets more than I that the handsome and able Senator from West Virginia [Mr. NEELY] has taken an involuntary voyage upon the briny bosom of that stream—Salt River—upon whose crest so many statesmen have floated to the ocean of oblivion.

Mr. WHEELER. We all hope the Senator from West Virginia will come back.

Mr. ASHURST. Mr. President, on the Salt there is the Roosevelt project. I shall not pause to go into any extended description of it, more than to say that it is possibly one of the greatest irrigation projects in the United States. We in Arizona think it is the greatest. The power generated there is enormous. It is sold to adjacent mining companies and some is sold to the city of Phoenix.

Mr. McKELLAR. Is it a Government project?

Mr. ASHURST. The Government, under the reclamation law of 1902, advanced the money; but that project is paying back to the Government, without delay and without default, every penny the Government has advanced. The project has been turned over to the water users' association. It is not now controlled by the Federal Government but is controlled by the water users' association, and every year, or whenever the payments fall due, they are promptly made.

Mr. SMITH. Who compose that association?

Mr. ASHURST. The water users' association is an organization or corporation formed by the water users in which each acre has 1 vote; and they elect a 2-chambered legislature and elect a governor, which legislative body and executive control the destiny of the project.

Mr. McKELLAR. The Government, though, still owns the plant, does it?

Mr. ASHURST. The Salt River Valley Water Users' Association operate it, but it may be said to be hypothecated for the amount due to the Government, and the payments are being made without default and without delay.

Mr. SMITH. Do I understand the Senator, then, to say that those who use the water for irrigation purposes and for other pertinent purposes will be the owners of the plant when it shall have been liquidated?

Mr. ASHURST. Yes, sir; absolutely.

Mr. FLETCHER. Mr. President, may I ask the Senator why it is that you wish to except that river from this provision in the amendment, if in fact you are already using it for the development of water power, as you say?

Mr. McKELLAR. What is the language of the Senator's amendment?

Mr. ASHURST. The provision reads in this way:

The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries—

I propose to insert "except the Gila River."

Mr. ROBINSON of Arkansas. Mr. President, will the further development of power on the Gila River, or on the small streams tributary to it, interfere with the consummation of this project?

Mr. ASHURST. Not in the slightest degree; and I thank the able Senator for that question. It will at once occur to Senators, that the pouring of the water over the wheel, and the generation of hydroelectric energy, does not diminish the flow or deplete it, or deteriorate the waters.

Mr. BROOKHART. Mr. President, are there any power sites on the Gila River over which the power commission would have jurisdiction that are not now utilized?

Mr. WHEELER. Do they not have that right now, under the Federal water power act?

Mr. ASHURST. Yes; but this amendment would deprive the water power commission of the power to issue permits.

Mr. SMITH. Mr. President, before the Senator leaves that point about the Roosevelt Dam, as I understand, the water users are gradually getting control.

Mr. ASHURST. Yes, sir.

Mr. SMITH. Do I understand the Senator to say that the power incident to the dam erected for the purpose of irrigation is controlled by them and sold by them for the purpose of liquidating their indebtedness?

Mr. ASHURST. Yes, sir.

Mr. SMITH. So that they own all the power that is generated?

Mr. ASHURST. Yes, sir.

Mr. SMITH. They have the use of the water?

Mr. ASHURST. Yes, sir.

Mr. SMITH. And from such revenues as they receive they are liquidating the amount of the Government loan; and when they shall have canceled that, then they own it in fee?

Mr. ASHURST. Absolutely.

Mr. McKELLAR. Now, Mr. President, I want to ask the Senator if the land upon which run these little streams flowing into the Gila River are public lands or private lands?

Mr. ASHURST. A very small percentage of the land is private. A vast deal of it is public land or is some sort of a reservation, such as a forest reservation or an Indian reservation.

Mr. McKELLAR. Of course, under those circumstances the Government would have absolute control.

Mr. ASHURST. Absolute; yes, sir.

Mr. McKELLAR. And therefore the Senator's amendment would be proper.

Mr. BLAINE. Mr. President——

The PRESIDING OFFICER (Mr. ODDIE in the chair). Does the Senator from Arizona yield to the Senator from Wisconsin?

Mr. ASHURST. I yield.

Mr. BLAINE. Am I mistaken in the suggestion that has been made that Congress passed an act that placed an embargo upon the issuing of permits on the Colorado River, including the Gila, which will not expire until March, 1929?

Mr. ASHURST. The Senator is not mistaken.

Mr. BLAINE. The purpose of this is to continue that prohibition until one year after the act comes into effect?

Mr. ASHURST. Yes; that would be the effect of this provision offered by the Senator from Colorado.

Mr. BLAINE. Then am I right in this conclusion that the same reason for Congress passing an act imposing the embargo for two years would apply for imposing the embargo for another year in view of the adoption of this measure?

Mr. ASHURST. The same reasons, I presume, motivating those who wished the embargo would apply; but although Arizona has opposed—and thinks she is correct in opposing—an embargo on the main stream, she realizes the futility of now attempting to make the correction in that regard.

We have not particularly quarreled with that. But it so happens that in the application of the embargo they have worked, and they continue to work, a great injustice on an innocent part of the State, hampering, seriously hampering, the progress of the State.

Suppose the Federal Power Commission were to grant permits to generate power on these little streams. The Boulder Dam project need fear no competition, because it is 400 or more miles away. So you need not fear competition.

Mr. WHEELER. On what theory do they want to prevent you from doing it?

Mr. ASHURST. I suppose there is the thought in their minds that it might come into competition with the power generated at Boulder. In reply to that, that power would not be ready for delivery at Boulder for four years.

Mr. REED of Missouri. Suppose it did come into competition with power generated at Boulder; what harm would that do to the public?

Mr. ASHURST. Not the slightest.

Mr. BROOKHART. Are there not some power sites on the Little Colorado?

Mr. ASHURST. Yes.

There has been a vote to-day in which the Senate increased Arizona's supply of water 200,000 acre-feet. You reached that conclusion in the belief that it might lead to a composition of the difficulties, and, gentlemen of the Senate, believe me when I say that if you have grown impatient with the Senators from the seven Colorado River Basin States, if they have vexed you and have split the ears of Senators, remember that the Colorado River Basin is an empire larger in extent than that which Pizarro gave to Peru, and richer than all the empires of the Cæsars. If, therefore, four or five years' delay has occurred, that is only natural. You are dealing not with millions but you are dealing with an inland empire that within its bosom has billions of dollars of wealth of all kinds.

If the bill in bald and harsh terms says, "You are not going to be allowed to apply for power permits on the upper reaches of the Gila River," when every well-informed person in the United States knows that the waters of the Gila can never in a practical way become involved with the waters of the Colorado River, except as a menace, it looks to a wayfaring man as if there is some sort of reprisal, some sort of coercion or threat, although you and I know such is not intended.

Therefore not pledging myself as to what I shall do on other features of the bill, even if you should adopt this amendment, because we can not bargain on such an important matter, I do say, adopt this amendment and you have ameliorated and you have softened the situation somewhat.

I will ask the Secretary to read a telegram from the Governor of Arizona on this subject, and my colleague has received a like message.

The PRESIDING OFFICER. The Secretary will read.

The legislative clerk read as follows:

PHOENIX, ARIZ., *December 8, 1928.*

Senator HENRY F. ASHURST,

United States Senate, Washington, D. C.:

Press reports that Congressman TAYLOR has introduced resolution to bar Federal Power Commission from granting permits for development on Colorado River and its tributaries until 7-State compact is ratified. We have no objection to this resolution so far as it applies to the Colorado River above the mouth of the Gila. Attempt to apply it to the Gila can only be construed as harassment of Arizona. As matters now stand New Mexico and Arizona are only States concerned in development of Gila. Arizona Legislature has appropriated money to meet Federal appropriation and New Mexico appropriation for exploration of Upper Gila. Waters of Gila River are now overappropriated. Litigation is being carried on concerning return flow. Forbidding develoment power on Gila would result in curtailing development projects already started, and using water already appropriated to its maximum efficiency, Gila and its tributaries, particularly the Agua Fria and Verde and the Salt, should not be prevented from development as proposed in Taylor resolution.

GEO. W. P. HUNT, *Governor.*

Mr. PHIPPS. Mr. President, the language of that telegram is not new to me; I was favored with a copy of it, which, I believe, came in yesterday. But that action in the other body, in the House of Representatives, by Congressman TAYLOR, from my own State, has nothing really to do with this measure before us, nor did I have his proposal in mind when this amendment was introduced.

Mr. President, the purpose of this amendment is merely to continue the existing embargo against the granting of power per-

mits by the Federal Power Commission from the time of the expiration of the embargo, March 4 next, until this bill can become effective.

There was no attempt to distinguish as between the States of the basin or between the particular rivers or the tributaries; they are all taken in. So that the division of water, the flow of the stream, the appropriations, would not be affected by any new permits until the States came into agreement, if this legislation were adopted. The language is the same and the purpose is the same.

Mr. NORRIS. Mr. President, may I ask the Senator a question?

Mr. PHIPPS. I yield.

Mr. NORRIS. I would like to inquire of the Senator what possible effect it would have upon this legislation to build a dam particularly in a stream that flows into the Colorado River below this dam?

Mr. PHIPPS. I was about to come to that point. The claim that the Gila River should be considered separately from other tributaries of the Colorado River is because the waters can not be used by any other State. As a matter of fact, they are utilized to-day because the Gila flows into the Colorado main stream about 1 mile above Yuma and above the intake of the Mexican canal which irrigates the Imperial Valley.

Mr. McKELLAR. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Tennessee?

Mr. PHIPPS. I yield.

Mr. McKELLAR. Can dams be built below where the Gila flows into the Colorado?

Mr. PHIPPS. Not a permanent structure that would be considered safe, on account of the depth of the soil.

Mr. McKELLAR. Then, if that is so, the water would just flow over the dam and there would be no particular loss of water, or at least it would be inconsequential?

Mr. PHIPPS. The Senator is anticipating the point I wanted to make. As a matter of fact legislation was under consideration and was pending last year and, as the Senator from Arizona stated, our Committee on Indian Affairs approved a bill that would allow a diversion and a use of the water of one of the tributaries of the Gila River.

Mr. ASHURST. Mr. President, will the Senator permit an interruption?

Mr. PHIPPS. Certainly.

Mr. ASHURST. The Senator of course is trying to be fair. The diversion was not for agricultural or domestic use, but just for the water to go over a wheel and return to the stream, not in any way to deplete the stream.

Mr. PHIPPS. To lay this tributary of the Colorado, the Gila River, open to further development while this dispute is on means that Arizona could perfect her rights, could institute a new irrigation project, and that inevitably affects the claims of Arizona as against California for the amount of water that is being put to a beneficial use. When the first embargo was put on over two years ago the purpose was to hold matters in statu quo until an agreement could be arrived at with reference to a division of the water.

Mr. NORRIS. I can see how it might have some effect. We ought not, while this legislation is pending, permit the building of a dam above this dam or so close below it that it would interfere with its operation or so that it might back the water up and interfere with the land we are going to irrigate with this dam. I can see how that would be appropriate, but I can not understand why we should say, if Arizona or anybody in Arizona wants to build a dam on the Gila River or any other stream that flows into the Colorado below the place where this dam provided in the bill is to be erected, that they should not be permitted to do it. Suppose Arizona does take out water even for irrigation from the river, what harm does that do? Why should we interfere with that? What has that to do with this pending legislation?

Mr. PHIPPS. It has something to do with it. The Gila River rises in Arizona. Some of the tributary streams and small creeks rise in Arizona, but some of them rise in New Mexico. New Mexico also has projects which she desires to develop on the Gila River.

Mr. NORRIS. Suppose she does develop them.

Mr. PHIPPS. That would affect the balance of the water appropriations between New Mexico and Arizona. This would affect the appropriations of water as between Arizona and California.

Mr. NORRIS. The Senator is now talking about irrigation schemes, but the amendment only applies to water power.

Mr. PHIPPS. It is possibly limited by the amendment to water power, but I do not think there is any question that the ultimate object is to use the water for purposes of irrigation. If we give permission to erect a dam in the stream any place where there are irrigable lands lower down under tributaries to it, beyond any question of doubt it is only a matter of time until that water will be utilized for purposes of irrigation.

Mr. NORRIS. Personally I do not see any objection to using it in that way, but this legislation would not apply to that situation. Here it is proposed merely to build a dam and let water flow over it to generate electricity. It does not contemplate depleting the waters. The waters are there just the same. Any person who has a right farther down stream has not been injured in any way.

Mr. ROBINSON of Arkansas. The water goes on down and irrigates the land.

Mr. NORRIS. The Gila River flows into the Colorado River many miles below where it is intended to build this dam. This dam can not affect the waters of the Gila River. That is an impossibility.

Mr. PHIPPS. If it were only a question of one dam and the water were to be used for power purposes alone, that would be a different question.

The other States have streams which they desire to develop. There is at least one enterprise in Utah that is being held in abeyance pending the settlement of this question. There are one or two small projects in Colorado that I have heard of. There is a case where a deal was pending for the sale of land, and when it was found that this embargo existed all negotiations were called off. There is no thought of singling out the Gila River or any other stream in writing this provision into the amendment. It was simply to continue the law we have been living under for the last two years until the bill can become effective.

Let me say further with reference to the Gila River that there were people of my own State who recommended that the appropriations for the Coolidge Dam on the Gila River should be withheld until this water controversy between Arizona and California could be settled. There are many people to-day—and there may be some Senators—who feel that if we had refused to go ahead with the Coolidge Dam or had withheld the appropriation until the question of Boulder Dam could have been settled, Arizona would have been a signer of the 7-State compact to-day.

Mr. HAYDEN. Mr. President, if the Senator will yield to me——

Mr. PHIPPS. Certainly.

Mr. HAYDEN. I can assure him that the State of Arizona would have used no such coercion.

Mr. PHIPPS. Arizona was asking really more than she was entitled to when she put forth so strenuously her claims for governmental appropriations to build that great structure on the Gila River while at the same time she was fighting the construction of Boulder Dam. It affected many other States as well as Arizona.

Mr. HAYDEN. I can assure the Senator that the authorization for the construction of the Coolidge Dam has changed public opinion in Arizona and made it much more favorable to the ratification of the Colorado River compact and the approval of the plan proposed in this bill than any other single act that has taken place. In other words, the State of Arizona would not be coerced. On the other hand, if treated justly it would be glad to meet the situation.

Mr. PHIPPS. I think the development of the Gila River can well afford to wait for another six months until this bill has become effective as a law. I could not agree to accept the amendment offered to my amendment.

Mr. SMITH. Mr. President, I should like to ask the Senator from Arizona [Mr. HAYDEN] a question. According to the showing made by the water users and power users at the Roosevelt Dam, handed to me to-day by the Senator from California [Mr. JOHNSON], it is only a question of a short time until the water users will have liquidated the amount that the Government put into the Roosevelt Dam. In the meantime they will have had the beneficial results accruing from irrigation and the profits accruing from the sale of power to help them liquidate. It seems to me if the showing made there is correct, including something over $700,000 in the last few days in one check, that that should go largely toward allaying the fears of the people of Arizona that a Government project and a people's project can not be a success.

Mr. HAYDEN. I thoroughly agree with the Senator.

Mr. BRATTON. Mr. President, we are dealing with the Colorado River system; that is to say, the main stream and its tributaries. A joint resolution was passed by Congress and approved March 4, 1927, in this language:

Resolved, That the Federal Power Commission is hereby directed not to issue or approve any permits or licenses under the provisions of the act of Congress approved June 10, 1920, known as the Federal water

power act, upon or affecting the Colorado River or any of its tributaries in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until and unless the Colorado River compact, signed at Santa Fe, N. Mex., November 24, 1922, pursuant to the act of Congress approved August 19, 1921, has been approved by the Congress of the United States or in the event said compact is not sooner approved until March 5, 1929.

So that two years ago, anticipating the many confusing and complicated angles of the problem confronting us, we enacted a joint resolution suspending the operation of the water power act as to the Colorado River and all of its tributaries, including the Gila River. We decided then, that it was conducive to a just resolution of the whole problem to suspend the granting of additional power permits in order that the status quo might be preserved until a final solution was offered. We did that two years ago. The embargo is in effect now. It expires March 4 of next year.

Mr. HAYDEN. Mr. President, will the Senator yield?

Mr. BRATTON. Certainly.

Mr. HAYDEN. The Senator will remember that that action was taken by unanimous consent of both Houses, and that neither the senior Senator from Arizona nor the Congressman from Arizona at that time objected.

Mr. BRATTON. Yes. That emphasizes that if it was sound then, it is sound now.

Mr. HAYDEN. Only to this extent, if the Senator will pardon me, that in the meantime under the operation of that joint resolution, we found a legitimate power development in Arizona interfered with in a manner that we thought to be unfair, and now we are willing, so far as the main objection is concerned, to have the same embargo applied.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. BRATTON. Certainly.

Mr. NORRIS. The Senator said in substance, that if it was good to have this embargo two years ago it is good now; but I think he will have to concede that the fact that we passed such a joint resolution is not conclusive evidence that it was good even then.

Mr. BRATTON. Oh, no.

Mr. NORRIS. If my attention had been called to it——

Mr. ROBINSON of Arkansas. And the further fact that we placed a limitation in it is almost conclusive that it was not the intention of Congress that it should be continued indefinitely.

Mr. NORRIS. It seems to me that way. So far as I am concerned, I should like to say to the Senator from New Mexico that I think I am consistent in supporting this legislation. However, I do not want to take any action or to put anything in the bill that to my mind is unjust. I can not see the justice of the provision that is in the amendment offered by the Senator from Colorado. So far as I am able to see, I would support an amendment to that proposed amendment that would exclude every stream that flows into the Colorado River below the proposed site of this dam. I can not see how that would interfere with it or how it could have any connection with it. The Senator from Arizona said that he thought those who were behind it fear that it would get into competition with the power generated at the Boulder Dam. I can not see how any Senator could sustain a proposition of that kind.

So far as I am concerned, while I want to build the dam and should like to see the Government do it and do it right away, I do not mean by that action that I want to prevent anybody else from building a dam anywhere else on earth. The more competition we can get the better it will suit me. I do not suppose the Senator from New Mexico bases this amendment on any ground of that kind. I do not know whether any other Senator does, and I would not have mentioned it if it had not been suggested by the Senator from Arizona. I wish the Senator would tell us how the building of a power dam on any of the tributaries below can possibly have any effect upon the dam that is proposed in this bill to be built on the Colorado River.

Mr. BRATTON. Mr. President, so far as competition with the power generated at the Black Canyon site is concerned, I can assure the Senator from Nebraska that I have no interest in that whatever—no more than has he. I am not moved in my opposition to the proposed amendment by any such consideration.

If the Senator will permit me to continue, this is an interstate stream; about 20 per cent of its water rises in my State. We have power sites in my State, and we think it is unjust to let Arizona have the opportunity to acquire prior rights upon a stream that is interstate in character when we contribute a part of the water and are willing to have other streams in our State, interstate in character, a part of this system, remain under the embargo.

Mr. NORRIS. I should like to say to the Senator that I agree with him entirely that we ought not to give an advantage to the power sites in Arizona over those in New Mexico, but does not the amendment to the amendment permit the building of a power dam in New Mexico on the Gila River just as it does in Arizona?

Mr. BRATTON. Yes.

Mr. NORRIS. Then, it seems to me the States are on an equality.

Mr. BRATTON. But this is a part of the system, and I think that if we are going to apply the embargo until the bill goes into effect it should apply to the whole.

Furthermore, let me call the attention of Senators to the fact that last May we passed an act authorizing an appropriation of $12,500 to be used by the Secretary of the Interior in making a survey of this very stream system for the purpose of determining its possibilities for irrigation and other purposes in the States of New Mexico and Arizona, and we provided that a like sum should be furnished from local sources.

Following that, the two States have entered into negotiations looking to raising the other $12,500, so that when we match the appropriation of the Federal Government thus made a survey of the stream system will be made by the Secretary of the Interior to determine the best uses to which the water of the stream can be put. We have embarked upon that program in developing the Gila River. That law was passed during the last session of the Congress. It was approved on May 25, 1928. Nothing has been done under it because the legislatures of the two States have not met to make their appropriations.

Mr. HAYDEN. Will the Senator pardon an interruption?

Mr. BRATTON. Let me continue——

Mr. HAYDEN. I should like to advise the Senator that the Legislature of Arizona is in session and it has appropriated Arizona's share of that fund.

Mr. BRATTON. I thank the Senator for that information, and I modify my statement by saying that the Legislature of New Mexico has not yet met, but will meet next January, and it is expected that New Mexico's share of the money will then be appropriated, so that the survey of the river may be made.

In view of the fact that it is a part of the system that is giving rise to so much controversy, that it is an interstate stream, with the two States possessing power possibilities and irrigation possibilities, the principle of embargo for power purposes applies. One State may advance more rapidly than the other for purposes of reclamation and irrigation and acquire prior rights; one State may advance more rapidly than the other for power purposes and acquire prior rights under the doctrine of prior appropriation. I can not see why this stream should be exempted if the other tributaries are to go with the main stream and to share the burden placed upon the main stream under the compact.

Furthermore, this will constitute an abrogation of the compact to that extent, because so long as one State declines to ratify and stays on the outside she can acquire prior rights both for irrigation and power and assert them against other States that have ratified. If we are proceeding upon the theory of a compact settling the whole question, we should continue the present situation as nearly as possible until that can be done.

Far be it from me to pursue a course which I think is unfair to Arizona, a neighboring State to the west, but we are jointly interested in the whole system and the embargo should be continued until the compact is put into force. It should not be released as to an interstate stream of which one State produces 20 per cent of the volume of water and has power sites and applied as to the other tributaries of the stream. If an unusual situation should arise such as the Senator from Arizona referred to a while ago, where some of the power could be used in behalf of the Indians, it easily and quickly could be dealt with through a special act lifting the embargo as to the particular project; but that we should not single out this system and make an exception of it and release it from the terms of the embargo.

Mr. ASHURST. Mr. President, I ask for the yeas and nays upon my amendment.

Mr. BRATTON and Mr. PHIPPS. Let us have the yeas and nays.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Arizona [Mr. ASHURST] to the amendment proposed by the Senator from Colorado [Mr. PHIPPS], on which the yeas and nays are demanded.

The yeas and nays were ordered.

Mr. SMITH. May the amendment to the amendment be stated before the vote is taken?

The PRESIDING OFFICER. The clerk will state the amendment.

The LEGISLATIVE CLERK. It is proposed by the Senator from Arizona [Mr. ASHURST] to amend the amendment offered by the Senator from Colorado [Mr. PHIPPS], on page 3, line 17, after the word "tributaries," by inserting the words "except the Gila River," so as to read:

The Federal Power Commission is hereby directed not to issue or approve any permits or licenses under said Federal water power act upon or affecting the Colorado River or any of its tributaries except the Gila River in the States of Colorado, Wyoming, Utah, New Mexico, Nevada, Arizona, and California until this act shall become effective, as provided in section 4 herein.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KING (when his name was called). I have a general pair for the afternoon with the Senator from Minnesota [Mr. SHIPSTEAD]. Not knowing how he would vote upon this question, I withhold my vote.

Mr. OVERMAN (when his name was called). As before announced, I have a general pair with the senior Senator from Wyoming [Mr. WARREN], and therefore withhold my vote.

Mr. REED of Pennsylvania (when his name was called). I transfer my general pair with the Senator from Delaware [Mr. BAYARD] to the Senator from South Dakota [Mr. NORBECK], and will vote. I vote "nay."

Mr. WHEELER (when the name of Mr. WALSH of Montana was called). My colleague [Mr. WALSH of Montana] is unavoidably absent. If he were present, he would vote "yea."

The roll call was concluded.

Mr. TYDINGS. I have a general pair with the senior Senator from Ohio [Mr. FESS]. I transfer that pair to the senior Senator from Montana [Mr. WALSH], and will vote. I vote "yea."

Mr. JONES. The senior Senator from Kansas [Mr. CURTIS] is necessarily absent. He is paired on this question with the Senator from Kentucky [Mr. BARKLEY]. If the Senator from Kansas were present, he would vote "nay" on this amendment.

I also desire to announce the following pairs on this amendment:

The Senator from Wisconsin [Mr. LA FOLLETTE] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Massachusetts [Mr. GILLETT] with the Senator from Tennessee [Mr. TYSON];

The Senator from New York [Mr. COPELAND] with the Senator from Rhode Island [Mr. GERRY]; and

The Senator from New Mexico [Mr. LARRAZOLO] with the Senator from Mississippi [Mr. STEPHENS].

Mr. ROBINSON of Arkansas. Mr. President, I desire to announce that the senior Senator from New York [Mr. COPELAND] is necessarily detained by illness in his family.

I also desire to announce that the junior Senator from Arkansas [Mr. CARAWAY], the junior Senator from Mississippi [Mr. STEPHENS], the senior Senator from Mississippi [Mr. HARRISON], and the junior Senator from Tennessee [Mr. TYSON] are detained on official business.

The result was announced—yeas 33, nays 28, as follows:

YEAS—33

Ashurst	George	Pine	Trammell
Black	Glass	Ransdell	Tydings
Blaine	Glenn	Reed, Mo.	Wagner
Borah	Harris	Robinson, Ark.	Walsh, Mass.
Brookhart	Hayden	Simmons	Waterman
Broussard	Heflin	Smith	Wheeler
Bruce	McKellar	Smoot	
Dill	Neely	Steck	
Fletcher	Norris	Swanson	

NAYS—28

Bingham	Johnson	Moses	Schall
Bratton	Jones	Nye	Sheppard
Capper	Kendrick	Oddie	Shortridge
Couzens	Keyes	Phipps	Steiwer
Frazier	McMaster	Reed, Pa.	Thomas, Idaho
Goff	McNary	Robinson, Ind.	Vandenberg
Hale	Metcalf	Sackett	Watson

NOT VOTING—34

Barkley	Edwards	King	Shipstead
Bayard	Fess	La Follette	Stephens
Blease	Gerry	Larrazolo	Thomas, Okla.
Caraway	Gillett	Locher	Tyson
Copeland	Gould	McLean	Walsh, Mont.
Curtis	Greene	Mayfield	Warren
Dale	Harrison	Norbeck	
Deneen	Hawes	Overman	
Edge	Howell	Pittman	

So Mr. ASHURST'S amendment to Mr. PHIPPS'S amendment was agreed to.

The VICE PRESIDENT. The question is on the amendment of the Senator from Colorado, as amended.

Mr. PHIPPS. Mr. President, a parliamentary inquiry. I understand that the junior Senator from Arizona [Mr. HAYDEN] has presented another amendment to the pending amendment which he desired to have printed and go over until to-morrow. As I take it, it is an important part of the pending amendment. I desire to know if it would be in order to ask that this amendment be passed over temporarily until to-morrow, and in the meantime that other amendments be proceeded with?

The VICE PRESIDENT. It would be in order.

Mr. PHIPPS. I then make that request; and I send to the desk an amendment which I should like to have considered at this time.

Mr. McKELLAR. Mr. President, I did not hear the Senator's request. What was it—to postpone action on this amendment?

Mr. PHIPPS. To postpone action on the pending amendment until to-morrow, so that the further amendment offered by the Senator from Arizona may be printed.

Mr. HAYDEN. I greatly appreciate the courtesy of the Senator from Colorado in that matter.

Mr. PHIPPS. Do not mention it. I send to the desk an amendment which I ask to have stated.

The VICE PRESIDENT. The Senator from Colorado offers an amendment, which will be stated.

The CHIEF CLERK. On page 3, line 11, it is proposed to strike out the figures "$125,000,000," and to insert the following:

$165,000,000. Of this amount the sum of $25,000,000 shall be allocated to flood-control, and shall not be repaid to the United States except out of revenues, if any, in excess of the amount necessary to meet periodical payments during the period of amortization as provided in section 4 of this act.

On page 4, line 21, strike out the figures "$125,000,000" and insert "$165,000,000."

Mr. PHIPPS. Mr. President, if I may state briefly my views about this matter, repeating in part what I told the Senate a day or two ago when this amendment was proposed, instead of adopting the total figure of $176,000,000, the full authorization indicated by the report of the commission that has been presented to the Senate, the best information I could get convinced me that it would not be necessary to go beyond the figure of $165,000,000, for the reason that there are possib lities of the adoption of an alternative route for the all-American canal, and in all probability action on that would be delayed for some time. So, following this amendment, I have another which would give to the department the authority to proceed with the main construction work—that is to say, the dam proper—so soon as the department had satisfied itself that it would come within the provisions of the act for repayment.

The further amount estimated for the power plants, if constructed by private enterprise, would not have to be advanced by the Federal Government; so, assuming that the power plants would be built by private enterprise or by the States or municipalities, and that the work on the all-American canal, which will be a charge against the properties when constructed, would in all probability be deferred for a time at least, I figure that the amount which might be required for expenditure during the construction of the dam proper would be, in round figures, about $75,000,000.

I have given my reason for believing that the amount of $25,000,000 included in that figure should be considered as a deferred payment, namely, that the Federal Government certainly has an obligation resting upon it to provide flood control for the lower reaches of the Colorado River territory; and the figure of $25,000,000 is a little less than the figure which has been estimated as the cost of a dam located at the most convenient and available point for the purposes of flood control alone.

Mr. President, I believe this to be a proper amendment, in proper form. I have consulted many of the Senators interested, and I trust the amendment will receive the approval of the Senate.

Mr. HAYDEN. Mr. President, will the Senator yield?

Mr. PHIPPS. I yield.

Mr. HAYDEN. My understanding from reading the report of the board of engineers who examined the estimates for this project is that they recommended a Federal appropriation in the nature of a contribution for flood control. The Senator's amendment does that.

Mr. PHIPPS. True.

Mr. HAYDEN. But the amendment goes on and says that if there should be some excess revenues, then the Federal Government should be reimbursed for its contribution toward flood control. There is no reimbursement to the United States for flood-control appropriations on the Mississippi River or any other river in the United States. Why is it necessary to add the words that the Senator adds in his amendment—

except out of revenues, if any, in excess of the amount necessary to meet periodical payments during the period of amortization as provided in section 4?

Upon what theory does the Senator suggest the addition of those words?

Mr. PHIPPS. If there is more than necessary in the way of receipts from the revenues, why should it not be devoted to reimbursement to the Government for its advances? Otherwise, what would become of the money?

Mr. HAYDEN. But if there were excess revenues, where could the money go, otherwise than in the Treasury of the United States? Of course it would go into the Treasury of the United States. It could not go anywhere else.

Mr. PHIPPS. That is true.

Mr. HAYDEN. So it is not necessary to specify it in this bill.

Mr. PHIPPS. I do not see that there could be any objection to it. It seems to me to be a proper phrase to use. I think it gives a different appearance to the picture. In one case you make the flat contribution, and those who look at it say, "Well, there is no hope of ever getting back this money." This does, perhaps, afford some little hope that it will be returned. Personally, I believe that in time it will be returned from the revenues from that dam structure.

Mr. HAYDEN. But as the bill is now drafted there is a provision that if there are excess revenues, 37½ per cent of the excess revenues shall be divided between the States of Arizona and Nevada. The remainder of the excess revenues must be deposited in the Treasury of the United States. That is the only place where the money could go.

Mr. PHIPPS. The language of this amendment would not diminish the percentage that is provided in one clause of the bill for the States of Nevada and Arizona.

Mr. HAYDEN. It seems to me that the way to handle the matter is to provide that the $25,000,000 allocated to flood control shall not be repaid to the United States, and stop right there. Congress would not then be setting up any policy that is different from any other flood-control appropriation in the United States. To do otherwise would establish a precedent that may prove to be embarrassing on some other river.

Mr. JONES. Mr. President, I think it is hardly correct for the Senator from Arizona to say that there is no contribution to flood control on the Mississippi. There was no provision in the bill that we passed at the last session to that effect, but that was based squarely upon the proposition that the people affected had already contributed something like $200,000,000 toward flood control, and the act itself reaffirmed expressly the doctrine of contribution.

Mr. HAYDEN. In this instance there will be a contribution paid out of the pockets of the consumers of power generated at this dam, paid out of the pockets of farmers who use water from the dam if there is a charge for irrigation water, and paid out of the pockets of the citizens of Los Angeles and other municipalities in southern California who may use domestic water from this dam in case there is a charge for service of that kind. So there is a contribution from other sources, and the only part of it not reimbursable is $25,000,000 out of a total of $165,000,000.

Mr. JONES. I made that statement because the statement the Senator made a moment ago seemed to be very broad, that there should be no contribution for flood control, and that there was no contribution required on the Mississippi, when, as a matter of fact, it was set out that the people down there had already contributed $200,000,000.

Mr. HAYDEN. I thank the Senator from Washington for correcting me, because I want to be accurate in my statements.

In this case there is to be reimbursement, and, according to the plan of the senior Senator from California, certain reimbursement for the construction cost of this dam. The part of the cost of the dam required to be repaid will be repaid from power and from other sources. That amount will be repaid, and it will not be any ultimate expense to the Government of the United States. So that out of a total appropriation of $165,000,000 the Federal Government will contribute only $25,000,000. Why not make the appropriation as a Federal contribution for flood control and stop right there?

Mr. PHIPPS. Mr. President, I do not take the same view the Senator has expressed with regard to the effect of this language. I do not believe it will increase at all the rates that will be charged for hydroelectric power, the storage charge that will be made for desilting and conserving the water in the dam, or the charge for water for potable or irrigation uses. Those matters will have to be figured on what competition means in the power business, in the first instance, which is the largest item. The other charges will have to be made on a reasonable basis, and be what the users of the water can stand and afford to pay.

Of course, I can realize that any amendment or any bill which the Senator might draft I could go over and perhaps frame in different language, but, as the Senator admits, the effect in the long run is the same. It will not affect the amount of charges for power produced or for the storage of water or anything else, in my judgment.

Mr. HAYDEN. In making that statement the Senator has raised a second objection that I have to the incorporation of those words. The first objection is that if his premise is sound they mean nothing; without them nothing would be done more than would otherwise be done, because the excess revenues would be deposited in the Treasury, and that is all there is to it. But if including these words would have the effect of causing the Secretary of the Interior, in making a contract for the sale of power, to feel it incumbent upon himself to acquire excess revenues, if possible, then the consumers of power in southern California will be required to pay more for their power than otherwise.

Mr. JOHNSON. Do I understand the Senator to display a tender solicitude for the consumers of power in southern California?

Mr. HAYDEN. I have, indeed. We consider them our best customers.

Mr. JOHNSON. I can not tell the Senator how much I appreciate that solicitude! It does infinite credit not only to the smiling countenance of the Senator from Arizona but to his desire to be eminently fair and just to southern California.

Mr. HAYDEN. I thank the Senator.

Mr. PHIPPS. Mr. President, it seems to me that it was advisable to have that repayment provision in the amendment, but that it should be conditional, so that if the money were to be returned it would be out of surplus revenues. That refers to revenues over and above the amounts required to amortize the other portion of the advances.

Mr. HAYDEN. In all seriousness, it seems to me to be objectionable to retain the language, because so long as this language is in the bill it will be construed to mean that an effort will be made to obtain greater revenues in order that the United States may be reimbursed for the expenditures made for flood control.

Mr. PHIPPS. If so, the net result would be that the revenues to the States of Nevada and Arizona would be increased proportionately, because they would take down 37½ per cent of those surplus revenues; so that the Senator is rather hoist on his own petard, it seems to me.

Mr. HAYDEN. If I were quite certain that that were the fact I would not object.

Mr. PHIPPS. I do not see how it can be construed otherwise. This does not provide that before revenues are paid to Arizona and Nevada the return must be made to the Federal Government. It says, out of surplus revenues, and if in the bill as it now provides there is to be an allocation of 37½ per cent of the surplus revenues to the States of Arizona and Nevada, it seems to me that that is clear.

Mr. PITTMAN. If it means that, why do you not say it?

Mr. PHIPPS. It is not necessary.

Mr. PITTMAN. "To meet periodical payments, including revenues allocated to Arizona and Nevada."

Mr. PHIPPS. In that case you would be allocating the first payment of surplus revenues to Nevada and Arizona.

Mr. PITTMAN. Exactly.

Mr. PHIPPS. They get 37½ per cent.

Mr. PITTMAN. But we do not get 37½ per cent before a payment is made on the $25,000,000.

Mr. PHIPPS. The language the Senator suggests would mean that, it seems to me.

Mr. PITTMAN. What I mean is this, that the allocation does not benefit Arizona and Nevada at all, for the simple reason that the committee have recommended that out of surplus revenues, if there are any above the periodical payments, Arizona and Nevada shall have 37½ per cent of them. If you wish to say that they shall be paid out of the surplus, if any, over and above that, that is a different question. In other words, if the periodical payments must include the allocation of the $25,000,000 before there is any surplus, it is just taking a chance away of there ever being any surplus.

Mr. PHIPPS. Let me suggest this to the Senator: There seems to be some difference of opinion about this. I am quite willing to defer further consideration of this for the moment.

Mr. JOHNSON. Mr. President, I want to make a statement upon this amendment, if the Senator will permit me. I do not want to take the floor from other Senators or to proceed, unless they have concluded.

The amendment that is presented by the Senator from Colorado alters fundamentally, in my opinion, the original scheme of this bill. Because of that fact, and because of the discussion which has been quite general in the country, I want to make very plain my attitude respecting it.

One of the alluring things, from the financial standpoint, in connection with this great enterprise has been that we have ever favored, and we have sedulously always provided, for the payment of every penny which might be expended by the United States Government out of the earnings or the profits from the power generated at this dam.

Mr. President, the bill, from the time that it was introduced by me until now, has contained a provision that before there is a shovelful of earth turned, or a single dollar expended, the Secretary of the Interior should have in his possession executed contracts by which every penny, including interest, could be by the United States Government recovered, and to the United States Government from the project repaid.

We have always proceeded, from the inception of this enterprise until now, upon the single theory that we would not go into the Treasury of the United States for a dollar, or ask the taxpayers of the United States to contribute a single cent to this great enterprise. I stand to-day just where I have stood from the beginning of this design and this plan upon that principle.

I recognize what may be said and the justice of it: That flood control is a duty devolved upon the Government, and that to allocate to flood control a part of the money that will be expended upon the dam is something that is done in other sections of the country. I recognize that the amendment, therefore, is by no means inequitable. But I recognize, too, that in every place where this bill has been discussed, at every time that I have lifted my voice in its behalf, there has always been the one thing asserted that I assert to-day, that financially sound is the enterprise, and that out of the dam itself may be paid every penny that may be expended.

I say that this is so either under the original financial set-up of the Secretary of the Treasury and the Secretary of the Interior or under the set-up that was made recently by the board of engineers appointed during the interim between these two sessions of Congress.

I insist, sir, that either under the one plan or the other the original purpose of this measure financially can be consummated and can be carried out, and that sufficient revenues may be derived from the structure to enable us to do exactly what originally we contemplated, and what up to this moment we have sought to do.

Therefore it is with some regret that I see the basic and the fundamental idea of this measure now about to be altered. I recognize, of course, the reason for it, I repeat, and I understand full well just exactly the position that is assumed by my brethren in that regard.

Lest there be misunderstanding in respect to it, let me refer to it: That not only in this bill have we provided for the amortization of the full amount which might be expended before there should be in reality any money at all taken from the Treasury, but we have provided as well, as was deemed appropriate by the committee, for profits, to be given out of any profits which might be made, to the two States of Arizona and Nevada. Thirty-seven and one-half per cent—18¾ to each—were to be awarded to those two States out of profits that might be made from the project, and it is obvious, of course, that as you lessen the capital cost you increase the profits, and it is obvious, of course, therefore, why some of our brethren should feel not only the justice of allocating money to flood control in various enteprises but particularly in the enterprise that is before us.

Mr. President, let me recall the figures of the Secretary of the Interior concerning this particular matter. The Secretary of the Interior originally figured a 26,000,000 acre-feet reservoir at $41,500,000; 1,000,000-horsepower development, $31,500,000.

Mr. REED of Pennsylvania. Does that mean the building of an electric power plant?

Mr. JOHNSON. That means the building of the plant, $31,500,000. Senators will see the importance of that in a moment when I come to it.

The all-American canal in the original estimate was $31,000,000; interest, $21,000,000; total, $125,000,000.

The estimated gross revenue from sales of 3,600,000 kilowatts at three-tenths of a cent, $10,800,000; storage and delivery of water for irrigation and domestic purposes, $1,500,000; total, $12,300,000.

Estimated fixed annual charges, operating and maintenance, storage and power, $700,000; operation and maintenance, all-American canal, $500,000; interest on $125,000,000, at 4 per cent, $5,000,000; total, $6,200,000. Estimated annual surplus, therefore, $6,100,000, sufficient to repay the entire cost in 25 years.

Now, let me turn to the report of the board of engineers that recently was submitted, the Sibert report, as it has been designated, and let me recall in that connection that these engineers, in a period of a very few months and with what I might term a cursory examination, have endeavored to check and go over the reports of the reclamation engineers to which more than three years were devoted and in which forty-odd engineers of the very highest character and greatest attainments in the Nation were employed. The Sibert report says—and I may say that in the report these engineers say that they are ultraconservative and that their estimates are made, because of the magnitude of the project, in ultraconservative fashion—that the cost of the dam and reservoir would be $70,600,000; 1,000,000-horsepower development, $38,200,000; all-American canal, $38,500,000; interest during construction, $17,700,000; total, $165,000,000.

Now, the total of $165,000,000 is made up, first, of the all-American canal, $38,500,000. Under the pending bill the all-American canal is to be paid for, under the reclamation law, out of the lands which are to be benefited by the all-American canal. It is not to be paid for out of the power sales, but out of the lands; so that we might first deduct, and that can not be gainsaid, that $38,500,000.

In the bill that is before the Senate now, which was approved by the Senate committee and upon which I stand, the only obligation that rests upon the Government in relation to the construction of the power plant is—and "obligation" is not the appropriate word; the only reference in relation to the Government constructing a power plant is in exact terms that the Government has the option only to erect a plant if it sees fit.

Mr. REED of Pennsylvania. Mr. President, will the Senator permit a question?

Mr. JOHNSON. Yes, indeed; because we are going to come very shortly to one of the most important parts of the bill, and it is well that I might take a moment or two upon it.

Mr. REED of Pennsylvania. I am afraid my question will betray my ignorance on the subject. I do not understand why the construction of a power plant is left optional. If, as a matter of fact, it is not essential to the success of the project, why put it in at all?

Mr. JOHNSON. Because they were options that were accorded alternatively under the bill. The Government can lease the water.

Mr. REED of Pennsylvania. Sell water power instead of electric power, in other words?

Mr. JOHNSON. Exactly. The Government could erect a power plant and lease it or the Government could lease units of power or units of the power plant. The only reason for inserting in the bill the option to the Government to erect a power plant—I will not say the only reason, because it ought to be done, in my opinion; but that is another story, as Kipling has said. But the manner in which it happens that that option was accorded the Government was this: The original bill did not contain that option at all, but the Secretary of the Interior in his wisdom and justice reached the conclusion that it was necessary for the protection of the people of that territory, the protection of the project, and the protection of the United States Government that it have the power to erect a generating plant if the Government deemed it wise. The topography of the country was such that probably the only one successfully to operate a generating plant there, if accorded the right to construct one, would be accorded a privilege that would place him at a great advantage against any other individual. The topography, added to the economic situation, induced the Secretary of the Interior to request an amendment to the bill by which the Government should be accorded that particular privilege.

Mr. REED of Pennsylvania. Which Secretary requested that, if I may ask?

Mr. JOHNSON. Secretary Work.

Mr. REED of Pennsylvania. What I can not understand is, if a power plant is essential to the success of the scheme why it should be optional at all, and if it is not essential to the scheme why should it be permitted at all? It would seem to me the Government might sell water power as an incident to this other activity.

Mr. JOHNSON. In the Senate bill it was left with the Government for ultimate determination, the matter of administration being for the Government finally to determine. In the House bill there is a different sort of situation, because when the House bill came upon the floor of the House, at the instance of Congressman DAVENPORT, the option for leasing a part of the plant was stricken out, so that the bill is left as it comes from the House, with the Government having the command of Congress upon it to construct a power plant or generating plant at the dam. Those are the differences in that respect between the House bill and the Senate bill.

Let me return now to the figures, because the purpose I had was not, indeed, to discuss at this moment the power phases, but to demonstrate that what I said respecting the amortization of this large sum expended for this great constructive work was very easy, indeed.

Mr. WATSON. Mr. President, may I ask the Senator a question?

Mr. JOHNSON. Certainly.

Mr. WATSON. Is the erection of a power plant essential to the project?

Mr. JOHNSON. The Secretary of the Interior, after investigation, and most of us who are interested in it, deemed it essential that the Government should have the right to erect a power plant.

Mr. WATSON. But that does not, of course, directly answer my question.

Mr. JOHNSON. It answers the question because it answers it half way. After this measure shall have been adopted the consensus of view was that in order to protect the people from a monopoly, in order to protect the enterprise, in order to have the financing in the hands of the Government of a great enterprise in which we would expend $125,000,000, the Government ought to be in a position where it could protect itself, if essential, by the erection of a generating plant.

Mr. REED of Pennsylvania. Does the Senator concur in that view?

Mr. JOHNSON. I do.

Mr. REED of Pennsylvania. Where the Government has the power of regulation—where the Government has the power to write any terms it pleases in the contract for the sale of the water power—it seems to me that it has every opportunity to protect its people from imposition.

Mr. JOHNSON. No; I think not.

Mr. REED of Pennsylvania. Of course, it is a monopoly, as all of these things are natural monopolies, like street railways; but with the power to regulate, with the power to cease the sale, and the power to limit the period of the same and to fix the price of resale, it seems to me the Government has every power it could want.

Mr. JOHNSON. I disagree with the Senator, but that was not a subject I was intending to go into until we reached the question of power.

Mr. KING. Mr. President, will the Senator permit me to recur to a statement he made a moment ago?

Mr. JOHNSON. Certainly.

Mr. KING. It is important in the discussion of the question of amortization. The Senator stated that under the plan suggested by the commission the all-American canal would be constructed under the reclamation project and therefore nothing would be a charge under the terms of the bill. The Senator forgot for the moment, I think, that the interest would have to be borne by the Government for the advances which were made for the construction of the all-American canal.

Mr. JOHNSON. The Senator is right, but it would be only the interest which would have to be borne.

Mr. KING. But it would be several million dollars.

Mr. SACKETT. Mr. President, will the Senator yield?

Mr. JOHNSON. Certainly.

Mr. SACKETT. In speaking a moment ago the Senator said something about the difference between the House bill and the Senate bill. What is the position of the bill to-day? Have we the House bill substituted for the Senate bill?

Mr. JOHNSON. Yes; but we have as well what is termed an amendment in the nature of a substitute which I have offered, being the entire Senate bill to be substituted for the House bill.

Mr. SACKETT. Then it comes back again to the option on the part of the Government, whether they will build a power plant or not?

Mr. JOHNSON. The Senate bill having a mere option and the House bill having a mandatory provision.

Mr. SACKETT. Then, if we pass the Senate bill——

Mr. JOHNSON. Then the Government has a mere option that may or may not be exercised.

Mr. SACKETT. I simply wanted to get that straight in my mind.

Mr. JOHNSON. That is correct. We have not yet adopted my substitute.

Let me return again to my figures, because I want to show how easily this project can be amortized.

The commission's total is $165,000,000. The all-American canal is estimated by the commission at $38,500,000. I have just explained that the all-American canal will be paid for by the land and, therefore, it should be deducted from the $165,000,000.

The power plant is estimated at $38,200,000. Of course, it has to be included in the set-up, but if the option shall not be exercised by the Government the $38,200,000 would be deducted. It is now desired to allocate to flood control $25,000,000, of that amount, according to the amendment.

Adding these three items together, $38,500,000, $38,200,000, and $25,000,000, we have a total of $101,000,000 to be deducted from the $165,000,000, leaving $64,000,000, when under every estimate of profit that has been made from this enterprise we can go far beyond any such sum. With that sort of a set-up it is perfectly plain that there is going to be no difficulty in paying out this enterprise. If we leave the entire cost of this structure without any allotment for flood control it seems to me that it is equally obvious that we can pay out. We could pay $125,000,000 in 25 years under the statement of the Secretary of the Interior, and I have telegrams from the experts in the State of California to that effect. One of them is Mr. Ready, who is perfectly assured that there will be no question whatsoever of paying out from the power either under one scheme or under the other scheme.

That is what is presented. I am not, of course, going to oppose the allotment for flood control. It is immaterial to me that there should be greater profit to one State or to another from this enterprise. I want, if it be possible, as I have said again and again, to have this great constructive work undertaken and completed, but I want the Senate to understand that when I stood originally for a bill that would by its very terms not take a single, solitary dollar from the United States Treasury, I stood upon firm ground, and I stand upon the very ground to-day that I have stood upon during the years that have passed since this bill has been a matter of debate and a matter that has come before our people.

I wanted to make that plain before we took up this particular amendment of the Senator from Colorado. I now yield to the Senator from Washington.

Mr. SACKETT. Mr. President, may I ask the Senator a question?

Mr. JOHNSON. Yes, sir.

Mr. SACKETT. In the statement from which the Senator read, the first estimate of total cost being $125,000,000 and the commission's estimate being $165,000,000, what are the amounts included for interest?

Mr. JOHNSON. In the first statement $21,000,000 and in the second $17,700,000.

Mr. SACKETT. With a larger cost, the question I wanted to ask is, Why should not the item of interest in the case of the second estimate be considerably larger than in the first?

Mr. JOHNSON. I should think it would be, but it is not.

Mr. PHIPPS. Mr. President, may I answer that question?

Mr. SACKETT. Is it because of a difference in the period of time computed?

Mr. PHIPPS. It is. The original estimate was based upon an expenditure extending over a 10-year period of time, whereas the commission that has considered the project during the present year estimates that it can be completed within a 7-year period.

EXECUTIVE SESSION

Mr. JONES. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

ADJOURNMENT

Mr. JONES. I move that the Senate adjourn until to-morrow morning at 11 o'clock.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, December 12, 1928, at 11 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate December 11 (legislative day of December 10), 1928

FOREIGN SERVICE

To be secretary in the Diplomatic Service

George F. Kennan, of Wisconsin, now a Foreign Service officer, unclassified, and a vice consul of career, to be also a secretary in the Diplomatic Service of the United States of America.

MEMBERS OF THE MISSISSIPPI RIVER COMMISSION

Brig. Gen. Thomas H. Jackson, Corps of Engineers, United States Army, for appointment as member and president of the Mississippi River Commission provided for by the act of

Congress approved June 28, 1879, entitled "An act to provide for the appointment of a 'Mississippi River Commission' for the improvement of said river from the Head of Passes near its mouth to its headwaters," vice Brig. Gen. Charles L. Potter, retired.

Maj. Ernest Graves, retired, Corps of Engineers, United States Army, for appointment as member of the Mississippi River Commission provided for by the act of Congress approved June 28, 1879, entitled "An act to provide for the appointment of a 'Mississippi River Commission' for the improvement of said river from the Head of Passes near its mouth to its headwaters," vice Col. Charles W. Kutz, relieved.

CONFIRMATIONS

Executive nominations confirmed by the Senate December 11 (legislative day of December 10), 1928

SECRETARY OF THE DEPARTMENT OF COMMERCE

William F. Whiting.

JUDGE OF THE POLICE COURT OF THE DISTRICT OF COLUMBIA

Ralph Given.

POSTMASTERS

WITHDRAWAL

Executive nomination withdrawn from the Senate December 11 (legislative day of December 10), 1928

PROMOTION IN THE ARMY

To be captain

First Lieut. Hobart Dean Belknap, Medical Corps, from July 1, 1928.

[NOTE.—This officer resigned from the Army December 7, 1928.]

HOUSE OF REPRESENTATIVES

TUESDAY, *December 11, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Thy glory, our Father in Heaven, is revealed in its power to invade our lives and touch them to noble issues. When Thou dost remember and gratify the innocent loves of childhood, the roots of our souls are thrust more deeply into the soils of the good, the beautiful, and the true. Thou art a great God and greatly to be praised. Before the mountains were brought forth, or ever Thou hast formed the earth and the world, even from everlasting to everlasting, Thou art God. Manifest unto us the wonder of the Great Name that stands for peace and pardon. Aye, may we show forth His character in the home, in the office, in this Chamber, and everywhere we are called to go, and Thine shall be the glory forever and ever. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed without amendment bills of the House of the following titles:

H. R. 279. An act to amend section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867;

H. R. 7346. An act conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment thereon in claims which the Winnebago Tribe of Indians may have against the United States, and for other purposes;

H. R. 11983. An act to provide for issuance of perpetual easement to the department of fish and game, State of Idaho, to certain lands situated within the original boundaries of the Nez Perce Indian Reservation, State of Idaho;

H. R. 12312. An act for the relief of James Hunts Along;

H. R. 12533. An act to authorize the Secretary of Commerce to dispose of certain lighthouse reservations and to acquire certain lands for lighthouse purposes; and

H. R. 13606. An act for the relief of Russell White Bear.

The message also announced that the Senate had passed bills, a joint resolution, and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 584. An act for the relief of Frederick D. Swank;

S. 1462. An act providing for the necessary surveys, studies, investigations, and engineering of the Columbia Basin reclamation project, and for other purposes;

S. 2859. An act for the relief of Francis J. Young;

S. 3741. An act for the relief of S. L. Roberts;

S. J. Res. 167. Joint resolution limiting the operation of sections 198 and 203 of title 18 of the Code of Laws of the United States; and

S. Con. Res. 24. Concurrent resolution providing for the appointment of a joint committee to make the necessary arrangements for the inauguration of the President elect of the United States on March 4, 1929.

JOINT RESOLUTIONS AND BILL PRESENTED TO THE PRESIDENT

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that this day they presented to the President of the

United States, for his approval, bill and joint resolutions of the House of the following titles:

H. R. 13824. An act authorizing L. L. Montague, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Columbia River at or near Arlington, Oreg.;

H. J. Res. 76. Joint resolution for the relief of Leah Frank, Creek Indian, new born, roll No. 294;

H. J. Res. 260. Joint resolution for the relief of Eloise Childers, Creek Indian, minor, roll No. 354;

H. J. Res. 261. Joint resolution for the relief of Effa Cowe, Creek Indian, new born, roll No. 78; and

H. J. Res. 332. Joint resolution to appoint a congressional committee to attend the exercises celebrating the twenty-fifth anniversary of the first airplane flight made by Wilbur and Orville Wright on December 17, 1903, at Kill Devil Mills, Kitty Hawk, N. C.

LEAVE OF ABSENCE

Mr. BROWNE. Mr. Speaker, I ask indefinite leave of absence for my colleague, Mr. BECK of Wisconsin, on account of sickness.

The SPEAKER. Without objection, the leave will be granted.

There was no objection.

NAVAL AFFAIRS COMMITTEE

Mr. BRITTEN. Mr. Speaker, I desire to make a unanimous-consent request that I may address the House for one minute.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

Mr. BRITTEN. Mr. Speaker, in line with the suggestion of the majority leader last Wednesday on the floor that when the Committee on Naval Affairs has its usual Calendar Wednesday the chairman of the committee should indicate to the House the bills he expected to call up from that committee. In line with that suggestion, I would like to say these bills will be called up in the order I shall indicate:

Priority list of bills on House calendars

Bill No.	Title	Remarks
H. R. 13249	To authorize an increase in cost of alterations and repairs to certain naval vessels.	Hearings, pp. 2395, 2865; Report 1934.
H. R. 14660	To authorize alterations and repairs to the U. S. S. California.	Report 1935.
H. R. 14922	To authorize an increase in the limit of cost of two fleet submarines.	Report 1936.
H. R. 13685	To regulate the distribution and promotion of commissioned officers of the Marine Corps.	Hearings, p. 2927; Report 1937.
H. R. 12032; S. 3692	To amend the joint service pay act of June 10, 1922 (warrant officers pay bill)	Pending before Budget since Jan. 2, 1928; hearings p. 2477; Report 1560; Senate Report 998; Union Calendar 487.
H. R. 13414	To authorize appointments of acting chaplains to maximum age limit of 35 years.	Hearings, p. 3021; Report 1858; House Calendar 489.
H. R. 5713	To permit certain warrant officers to count all active service rendered under temporary appointments as warrant or commissioned officers.	Hearings, pp. 79, 2325; Report 1299; Union Calendar 417.
H. R. 5491	To permit transfer of used or obsolescent ordnance material by other bureaus or departments.	Hearings, pp. 93, 2305; Report 1298; Union Calendar 416.
H. R. 5617	To limit the date of filing claims for retainer pay	Hearings, pp. 52, 2255, 2265; Report 1347; Union Calendar 431.

As I say, these bills will be called up substantially in the order here presented on Wednesday.

Mr. BLANTON. Will the gentleman yield?

Mr. BRITTEN. Certainly.

Mr. BLANTON. Has the gentleman in mind the modernizing of the U. S. battleship *Maryland* so as to conform to modern uses?

Mr. HASTINGS. Mr. Speaker, I would like to inquire whether or not the whole of Calendar Wednesday will likely be consumed?

Mr. BRITTEN. Yes.

Mr. HASTINGS. In other words, the whole of Calendar Wednesday is likely to be consumed in the consideration of these bills?

Mr. BRITTEN. Yes.

EXTENSION OF REMARKS

Mr. STRONG of Kansas. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a statement on the consent decree as viewed by Mr. M. W. Borders, jr., attorney for the National Farmers' Union.

Mr. UNDERHILL. What did the gentleman say he wished to insert?

Mr. STRONG of Kansas. It is a statement concerning the consent decree of the packers, of which the gentleman, no doubt, has heard.

Mr. UNDERHILL. The attorney referred to has no connection with this House or with Congress, so far as I know.

Mr. STRONG of Kansas. The House is considering this matter before a subcommittee.

Mr. UNDERHILL. If we distinguish at all, we can not draw the line unless we object to them all.

The SPEAKER. Does the gentleman from Massachusetts object?

Mr. UNDERHILL. Yes.

The SPEAKER. Objection is heard.

AUSTRIAN DEBT SETTLEMENT

Mr. SNELL. Mr. Speaker, I offer a resolution from the Committee on Rules.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House Resolution 255

Resolved, That upon the adoption of this resolution, it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. J. Res. 340, to authorize the Secretary of the Treasury to cooperate with the other relief creditor governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States. That after general debate, which shall be confined to the House joint resolution and shall continue not to exceed one and one-half hours, to be equally divided and controlled by those favoring and opposing the House joint resolution, the House joint resolution shall be read for amendment under the 5-minute rule. At the conclusion of the reading of the House joint resolution for amendment the committee shall arise and report the House joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the House joint resolution and the amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SNELL. Mr. Speaker, the resolution just presented provides for an authorization to the Secretary of the Treasury to settle what is commonly referred to as the Austrian debt.

I think in beginning the consideration of this measure, the House should understand that this debt is on an entirely different basis and different in every respect from any settlement of any other foreign debt that arose out of the prosecution of the late World War. As Members will remember, in the years 1920 and 1921, the Government of Austria had entirely fallen down, and the Austrian people were starving by millions. Nine separate governments, of which the United States was one, loaned Austria $120,000,000 to buy food supplies to keep the inhabitants of Austria from starving. Of that amount, about 20 per cent came from the United States, or about $24,000,000.

As you will remember, the Grain Corporation had on hand an excess of flour. It was a coarse flour and there was no immediate market for it in the United States at that time, and before it could have been used or sold in home market it would have deteriorated to a considerable degree. We sold that under authorization by Congress to the Austrian people, and Congress well knew at that time that it would at least be a great many years before we could even expect any pay. Under the terms of the Lodge resolution of 1922 they were not to be requested to pay anything on that until 1943. Now Austria finds itself in this shape: In order to improve its economic condition and to continue the rehabilitation of its industry, which is being carried on with quite marked success, it is absolutely necessary to have in the vicinity of $100,000,000 of foreign capital. At the present time the Austrian food relief bonds—and those are what the American people hold at the present time—are the first claim on certain assets and income of the Austrian Government. They are asking us at this time to subordinate these Austrian relief bonds to the new loan that they desire to make.

As I understand the situation, the other seven governments that hold these relief bonds, together with the United States, have all agreed to the subordination asked by the Austrian Government; also that the reparations committee have agreed to subordinate their claims to this new loan, and the only thing that is holding up the whole situation is action by the American Congress.

This bill authorizes the Secretary of the Treasury to make such subordination of our original claims, as above stated, and

further provides for the funding of the total debt that Austria owes us at the present time.

In considering this claim at this time we must understand that the original loan was made to Austria more as a humanitarian proposition, or a charitable proposition, than anything else, and that at the time we made the original loan there was very little hope of ever getting any definite pay on the principal, so that we are not giving up very much by granting this request, and, personally, I believe we are more liable than otherwise to get our claim paid. We are not asked for any additional loans. But there is reason to believe that if Austria can float a new loan from private bankers and rehabilitate itself and improve its railroads, its telegraphs, and telephone systems, and get itself in an economic position to go to work and earn money, there is a possibility that some day Austria will pay us the money we loaned her to buy foodstuffs after the war. So that this is in no way on a similar basis with other foreign settlements. This is simply another example of America's interest in a distressed sister nation.

So far as the Committee on Rules is concerned, this is a unanimous report, and I doubt if there is any serious opposition at this time from Members of the House to authorizing, as the Committee on Ways and Means recommends, the enactment of House Joint Resolution 340.

Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. HAWLEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of House Joint Resolution 340.

The SPEAKER. The gentleman from Oregon moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of House Joint Resolution 340. The question is on agreeing to that motion.

The motion was agreed to.

The SPEAKER. The gentleman from Kansas, Mr. HOCH, will please take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of House Joint Resolution 340, with Mr. HOCH in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of House Joint Resolution 340, which the Clerk will report.

The Clerk read as follows:

Joint resolution (H. J. Res. 340) to authorize the Secretary of the Treasury to cooperate with the other relief creditor Governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States

Resolved, etc., That in order that the United States may cooperate with the Governments of Denmark, France, Great Britain, Italy, the Netherlands, Norway, Sweden, and Switzerland in making it possible for Austria to obtain by means of a loan the additional funds necessary in the furtherance of its reconstruction program, the Secretary of the Treasury is hereby authorized, if he determines that substantially similar action has been taken by each of such Governments in respect of the Austrian relief bonds held by it and that the Reparation Commission has given an appropriate release in respect of such loan, to subordinate the lien of the United States upon the assets and revenues of Austria pledged for the payment of the Austrian relief bond held by the United States (but without prejudicing the priority over costs of reparation stipulated in the relief bond) to a lien upon such assets and revenues as may be pledged for the payment of one or more loans floated by Austria in an aggregate net amount of not more than 725,000,000 Austrian schillings and for a period of not more than 30 years from July 1, 1929; and the Secretary of the Treasury, with the approval of the President, is hereby authorized to conclude an agreement, as set forth below in general terms, for the settlement of the indebtedness of Austria to the United States: *Provided, however,* That the terms and conditions of such settlement shall not be less favorable than the terms and conditions granted by Austria to any of the other relief creditor Governments, and should more favorable terms or conditions be granted by Austria to any of the other relief creditor Governments, the Secretary of the Treasury, with the approval of the President, is authorized to amend the proposed agreement so that the United States may enjoy a corresponding benefit.

The amount of the indebtedness to be funded is $34,630,968.68, which has been computed as follows:

Principal amount of obligation to be funded	$24,055,708.92
Interest accrued and unpaid thereon to Jan. 1, 1928, at the rate of 6 per cent per annum	10,575,259.76
Total principal and interest accrued and unpaid as of Jan. 1, 1928	34,630,968.68

In full and final settlement of this indebtedness Austria shall pay 25 equal annuities of $1,337,140 beginning on January 1, 1943.

Austria, however, shall have the option of paying instead of the aforesaid annuities 40 annuities as follows: Five annual payments of $287,556, beginning on January 1, 1929; 10 annual payments of $460,093, beginning on January 1, 1934; and 25 annual payments of $743,047, beginning on January 1, 1944.

If Austria shall exercise this option to pay in 40 annuities beginning January 1, 1929, the obligation of Austria to pay annuities during the years 1929 to 1943 will in the case of each annuity not arise if the trustees of the reconstruction loan of 1923 prior to the preceding December 1 have raised objection to the payment of the annuity in question on the due date. To the extent, if any, that any such annuity is not paid by reason of such objection on the part of the trustees, the amount thereof, together wih interest at 5 per cent per annum compounded annually to December 31, 1943, shall be repaid, together with further interest at 5 per cent per annum, by 25 equal annuities on January 1 of each of the years 1944 to 1968, inclusive.

The bonds to be issued under the agreement to be concluded under authority of this resolution shall enjoy the same security as the relief obligation of Austria now held by the United States (relief series B of 1920) except to the extent that the lien enjoyed by this obligation has been released by the Secretary of the Treasury under authority of the joint resolution of Congress approved April 6, 1922, and also to the extent that it may be further released by the Secretary of the Treasury under the authority of this resolution.

Austria shall make no payment upon or in respect of any of its obligations issued to the relief creditor nations, to wit, Denmark, France, Great Britain, the Netherlands, Italy, Norway, Sweden, and Switzerland, before, at, or after maturity, whether for principal or for interest, unless a similar and proportionate payment shall simultaneously be made upon the relief indebtedness of Austria to the United States.

Any payment to be made under the agreement may be made at the option of Austria in any United States Government obligations issued after April 6, 1917, such obligations to be taken at par and accrued interest.

The CHAIRMAN. The rule provides for an hour and a half of general debate, to be equally divided between those favoring the resolution and those opposed to it. The Chair recognizes the gentleman from Oregon [Mr. HAWLEY].

Mr. HAWLEY. Mr. Chairman, there is a member of the Committee on Ways and Means, the gentleman from Georgia [Mr. CRISP], who was also a member of the former Debt Commission, and has heard all the hearings before the committee and inspected the documentary evidence before the Funding Commission and heard all the discussion before that body. I yield 25 minutes to the gentleman from Georgia [Mr. CRISP]. [Applause.]

Mr. CRISP. Mr. Chairman and gentlemen of the committee, the chairman of my committee, the gentleman from Oregon [Mr. HAWLEY], was a little inaccurate in his statement that I had heard, as a member of the Debt Commission, all the facts relative to the economic condition of Austria. This loan was made for humanitarian purposes in 1920 and was authorized by act of Congress. It was later by act of Congress postponed as to its maturity until 1943. I have to the best of my opportunity given careful consideration to the whole subject matter and have posted myself to the extent of my ability as to the economic condition of Austria, and I am wholeheartedly supporting this settlement. This settlement was made by the Treasury Department after the Debt Commission ceased to exist.

What is the history of it? In 1919 and 1920, just after the World War, the Austrian Empire was dismembered. Its most valuable possessions, its richest territory, and its manufacturing centers had been taken from it and given to other governments set up under the peace conference, and the economic condition of Austria was deplorable. The Ways and Means Committee in 1920 had before it testimony as to the condition of suffering in Austria. Before the act of Congress was passed authorizing this indebtedness it was shown that women and children were dying by the hundreds in Austria from starvation; that mothers and infants, mere skeletons, were seen everywhere, their condition brought about by the want of food, and sickness and death were prevalent throughout Austria. The suffering and hunger there appealed to the heart of the world. The former enemies of Austria carried out the teaching of the lowly Nazarene when He said, "If your enemy hunger, feed him." So Great Britain, France, Italy, the United States, Czechoslovakia, Sweden, Norway, and other countries responded to the needs of the women and children and others in Austria by furnishing them with food, because Austria needed the food but did not have the money to pay for it. These other countries had food.

The United States had food, accumulated in the Grain Corporation, which had been accumulated for war purposes, and Congress, on the 30th of March, 1920, passed a law authorizing

this Government to sell to Austria on credit $24,000,000 worth of foodstuff to feed its people. The other countries I have mentioned also sold to Austria foodstuff, as a humanitarian proposition, on credit, and the total amount of food and essentials to human life that was furnished to Austria in 1920 by these governments amounted to $120,000,000. Great Britain furnished $44,000,000; France, $17,000,000; Italy, in the neighborhood of $21,000,000; and the United States, $24,000,000. The amount of principal due us by Austria is $24,000,000 plus, and that indebtedness was not for money furnished Austria; it was not a commercial proposition; it was a humanitarian proposition to feed the dying, and when Congress authorized it, Congress, in my judgment, was not cavilling as to whether it would ever be paid back.

We had the bond of Austria for this amount of $24,000,000, due in five years. Yet the economic condition of Austria still continued deplorable and it was essential for her to obtain some capital to develop her meager resources, so as to endeavor to furnish employment and support to her population. She could not obtain the capital in Austria, and Austria has committed her revenues to the payment of the food-relief loan of $120,000,000, so that all of the other relief creditors—Great Britain, France, Czechoslovakia, Italy, Belgium, Denmark, Holland, and Sweden—agreed to waive their prior liens in order to enable Austria to obtain a reconstruction loan of $125,000,000 for the purpose of restoring her economic condition. The nations I have mentioned not only waived their liens but guaranteed the payment of this reconstruction loan of $125,000,000, Great Britain guaranteeing the payment of 24½ per cent of it; France, 24½ per cent; Czechoslovakia, 24½ per cent; Italy, 20½ per cent; Belgium, 2 per cent; Denmark, 1 per cent; Holland, 1 per cent; and Sweden, 2 per cent. The United States was requested to waive its prior lien on the revenues of Austria to enable her to float this loan of $125,000,000, and under the act of Congress known as the Lodge resolution, which was passed April 6, 1920, Congress did waive its prior lien and postponed the maturity of the debt until 1943, but Congress and the Government of the United States did not guarantee the payment of this loan of $125,000,000. We were less generous in that respect than the former enemies of Austria, who waived the lien and guaranteed the payment of a certain part of the reconstruction loan. We simply waived our priority in order to permit Austria to obtain this loan of $125,000,000 from private bankers or other private lenders of money. That is the situation up to now.

Mr. SNELL. Will the gentleman yield for a question?

Mr. CRISP. Yes.

Mr. SNELL. Do I understand that these other governments are going to guarantee the payment of the loan which the Austrian Government now intends to obtain?

Mr. CRISP. No. The economic condition of Austria has so improved with this new capital they received of $125,000,000 that they now believe they can float this new loan of $100,000,000 on its own strength and standing alone without the guarantee of any of the governments which guaranteed the reconstruction loan of $125,000,000. As I have said, the first reconstruction loan of $125,000,000, made in 1922, was guaranteed by these countries.

Mr. SNELL. The one that is already in existence?

Mr. CRISP. Yes. That is the situation up to now. Austria owes the United States the principal for this food, $24,000,000 plus. Figuring interest on it at 6 per cent to January, 1928, she owes $34,000,000 plus. The other creditors have reduced their rate of interest to January to 5 per cent instead of 6, and if the United States reduces her interest from 6 to 5 up to this time the amount due on the indebtedness to us, both principal and interest, is $33,911,000.

Austria has about 6,500,000 people. One-third of those people reside in the city of Vienna. Her richest agricultural territory and industrial sections have been taken from her, so that about the only resources of value Austria has are her forests. She has some iron, and she has splendid water powers, but no capital to develop them. About one-third of the entire area is agricultural, but it is made up of poor, nonproductive land. Austria does not produce a sufficient amount of foodstuff to feed her people and she is compelled to import large quantities of foodstuffs to provide for her population. Austria has no coal and she has to import her coal, and the importation of coal and food supplies makes the balance of trade very largely against Austria. In 1926 the balance of trade against Austria was $156,000,000, and in 1927 the balance of trade against her was $155,000,000.

The condition in Austria by the use of this new capital has greatly improved and by economies she has practically balanced her budget, though she has no surplus revenue for any purpose. Austria is compelled to send out of Austria about $30,000,000 a year for the payment of interest and other charges on her foreign indebtedness, and about the only way she is able to get this foreign exchange to meet these obligations is from what are called invisible items, the money expended there by tourists and remittances from immigrants in different countries.

The most valuable economic asset Austria has is its central location in Europe and its railroads, its telephones and telegraph lines. These railroads and telegraph lines are nominally owned by separate corporations, but the Austrian Government owns all of the stock of these corporations. Therefore the Austrian Government itself owns the railroads and telegraph lines, just as the United States owns all of the stock of the Panama Railroad, which owns the railroad across the Canal Zone and the ship line plying from the Canal to New York. The railroads in Austria have run down. They are compelled to use unsafe bridges, the rails are light, and it is impossible for them to operate a through train to care for the through traffic, and it is proposed, if she obtains this loan, to use it in modernizing her railroads and her telegraph lines and to develop water power, which will stop the importation of much coal.

It is figured and believed with this new capital some of the 200,000 unemployed in Austria will be given employment and the economic situation of the Republic will be improved; that her productive capacity will be increased; that she will obtain more revenue and will thus be better able to meet her indebtedness to her creditors at home and abroad, and that the influx of this new capital will go a long way toward insuring her ability to pay the United States and all the other countries the amount she owes them for food furnished her in 1920.

My friends, if you have an insolvent debtor and the debtor's business is not producing sufficient revenue to meet his fixed charges, interest account, and so forth, you would be very pleased for that debtor to obtain some new capital from some one else to put in his business to be used for productive purposes, hoping his financial condition would be improved so that he could repay your indebtedness.

Let me say right here that this bill does not propose for the United States to advance another cent to Austria. It does not propose to take one penny now out of the Treasury and give it to Austria; neither does it propose for us in any way whatever to become financially liable or responsible for this new loan of $100,000,000. We are not guaranteeing it; we have no responsibility whatever in connection with it, and all that this bill proposes is for us, in cooperation with the other eight creditors, to waive the first lien we have on the revenue of Austria for the repayment of what she owes us in favor of this new rehabilitation loan of $100,000,000 to enable them to get new capital.

Mr. ROBSION of Kentucky. Will the gentleman yield for a question at that point?

Mr. CRISP. Yes.

Mr. ROBSION of Kentucky. If we did not waive this prior lien, what chance would there be for us to collect our debt now, anyhow?

Mr. CRISP. When this credit was extended it was for humanitarian purposes. It was to feed the hungry and the dying, and we did not consider, in my judgment, the question of repayment. I think to-day it is very doubtful whether we could get the money back. In my judgment if this new capital is obtained, it will enable Austria to become economically stable and economically able to pay it, and she will pay the debt. Therefore I think this act on our part is a step toward making more certain repayment to the United States of what is now owing to us.

Mr. O'CONNELL. And will give Austria ample time within which to pay it?

Mr. CRISP. Yes.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. CRISP. I yield.

Mr. LAGUARDIA. Is not this very much like a man having a second mortgage on a piece of property and subordinating his claim in order to permit of the property being put in shape in the hope of increasing its value and the revenue from it?

Mr. CRISP. That is all in the world this does.

Mr. TARVER. Will the gentleman yield?

Mr. CRISP. Certainly.

Mr. TARVER. I may not understand the gentleman's presentation of the matter fully——

Mr. CRISP. I am very unfortunate. That is my fault.

Mr. TARVER. I want to ask this question in order to clarify the matter in my own mind. The gentleman has stated, as I understand it, that the only question involved is that of relieving the existing prior lien consisting of the debt now existing in favor of this Government. I have noticed provisions of the bill which carry with them a settlement also of that existing indebtedness and providing, in the first place, for payment of 25 equal

annuities of a certain amount, and I desire to inquire of the gentleman what is the present cash value of those annuities; in other words, how much are we shaving the debt?

Mr. CRISP. I will discuss that very frankly. When I made the statement that the waiving of our prior lien was all that was involved by the bill, I was discussing then the first subject of the bill, to wit, the waiving of the lien for the new rehabilitation loan of $100,000,000. There is a second part of the bill, about which the gentleman has inquired, and when I reach that I will discuss it fully.

Mr. HASTINGS. Will the gentleman yield there for a question?

Mr. CRISP. Yes.

Mr. HASTINGS. The statement has been made that in 1920, when this food was sold to Austria upon credit, that it was perhaps not anticipated it would ever be repaid. Why was not the condition of Austria discussed at that time and taken into consideration, and why did we not make them at that time an absolute gift?

Mr. CRISP. If I mistake not, the gentleman was in Congress at that time as well as myself, and the gentleman had the same information that I had. I think one of them was that Austria did not ask that it be given to her. She asked, in her extremity, that we lend a kindly hand by selling this food to her on credit.

Mr. HASTINGS. The gentleman now states that Austria is in a much better condition than she was in 1920?

Mr. CRISP. There is no question whatever about it, and I think the new capital of $125,000,000 that she has had is largely responsible, if not entirely responsible, for the improvement; and I think if she obtains this new capital she will be still better off, and I think that will go a long way toward insuring repayment of this amount.

Gentlemen, I have been courteous and have yielded to everyone who has asked me any questions. I do not want to consume all of the time and I would much prefer to try to run through my statement of the case and then I will gladly answer all questions to the extent of my ability.

Now, seven of these relief creditors have already consented to the provisions of this bill, that they will subordinate their liens in favor of this new rehabilitation loan. The United States has not yet acted on it and the bill is before you to-day requesting your consent. Italy has not yet acted on it. All of the other governments have acted and have consented to it.

This bill proposes that the Secretary of the Treasury, with the approval of the President, shall be given authority to make this waiver provided all of the relief creditors consent to it; and with the further limitation that if Italy or any other country obtains better terms of settlement than the settlement enumerated in the bill, the United States is to have the same preferential treatment; that all of these relief creditors are to be put absolutely on a parity, each to have the same rights, no one to have superior preferences over any others, and this bill safeguards that by so providing.

Under the terms of the bill this $33,000,000 due the United States is to be amortized over a period of years.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. GARNER of Texas. Mr. Chairman, I yield to the gentleman 15 minutes more.

Mr. CRISP. This indebtedness that is to be amortized over a number of years under the terms of the bill becomes due in 1943, and under existing law Austria owes us no payment until 1943, for the act of Congress postponed the due date until 1943. So, under the terms of this settlement commencing January 1, 1943, Austria is to pay annually for 25 years $1,337,140 to the United States, and she is to make, commencing at that due day payment to the other relief creditor nations on the same basis.

Austria reserves the option, and it is in this bill, that instead of waiting until 1943 to commence her payments she may make annual payments commencing January 1, 1929. She will commence payments on her old indebtedness. That she reserves the option to do instead of waiting until 1943. She will have the option of paying 40 annuities as follows: Five annual payments of $287,556, beginning on January 1, 1929; 10 annual payments of $460,093, beginning on January 1, 1934; and 25 annual payments of $743,047, beginning on January 1, 1944.

Austria has notified all governments that if this settlement is made she expects to exercise this option and commence paying next January instead of waiting until 1943, which she has a right to do now under the law. I think that a very material gain and benefit to the United States—if you can have payments commence on this debt next year instead of waiting until 1943.

Now, Austria is bound up to this extent—that the trustees of the restriction loan of 1922 of $125,000,000 has a right to object to Austria's making any foreign payment on new debts that would disrupt the currency or the exchange. Austria says she will make this payment commencing next year, but if the trustee of the reconstruction loan made in 1922 objects to the payment of the annuity in any one year on the ground it will destroy Austria's economic stability or currency, Austria is to give her bond for that payment with interest at 5 per cent compounded annually and they are to be amortized over a number of years, subsequent to 1943.

Now, the second provision in the bill, which deals with the question that my colleague, Judge TARVER, asked me about, proposes the settlement of the indebtedness of Austria, amortized over a period of years just as this Government settled and amortized the debts with all our debtor nations over a period of years. It would be impossible for Austria in her economic condition to maintain herself as a going government and pay at once in one sum the amount of money owing the other relief creditors and the United States the amount of which to-day is $178,000,000.

Austria's total indebtedness is about $330,000,000, and her total revenue is $185,000,000, and she has very high income taxes, both individual and corporation.

So this bill proposes to amortize this debt over a period of years as set out in the bill, either to wait until it is due and commencing in 1943, making annual payments of a million three hundred and thirty-seven thousand one hundred and forty dollars plus, or exercise the system of payments which she says she will do, commencing payment next year.

The present cash value of either plan, whether the 25 annual annuities or the payment commencing next year are exactly the same. The principal owing to us is $24,000,000, which with interest computed the 1st day of January, 1928, makes principal and interest $33,911,000. The present cash value of either one of these settlements is 30.2. So there is a scaling of the indebtedness reducing it to the present cash value of 70 per cent.

Italy's indebtedness was settled on a present cash value of 24 per cent. Czechoslovakia present cash value of 30 per cent; and most of the smaller nations were settled with on about the same reduction as to the present cash value.

If this agreement is carried out and complied with over a period of years, the United States will receive back the $33,000,000 with $9,372,792 interest.

But I would not, if I could, mislead any of my colleagues, and I frankly say that this settlement of this indebtedness does scale the amount due the United States if the principal and all interest was paid, for as I say, the present cash value is 30.2 per cent. But I do not believe it possible for us to collect from Austria 100 cents on the dollar plus interest. I believe this the best settlement obtainable at this time.

Gentlemen, you can not collect blood out of a turnip, you can not collect money from an insolvent debtor, and every one of our foreign debt settlements have been made on capacity to pay. While I concede capacity to pay is an uncertain thing, not capable of being reduced to mathematical certainty, yet there are certain fundamental things that give some idea as to the capacity to pay. As I have stated to you, Austria has no manufacturing plants, and of her agricultural land, one-third of all her territory, is not very productive. It does not produce food to sustain her people. Two hundred thousand people are out of employment. The weekly wage of brick masons in Austria is $9.99, while in Philadelphia it is $78. The average per capita income of the people of Austria is $157 a year. Out of Austria's 6,500,000 people, 2,100,000 pay income taxes, while in the United States, out of 120,000,000, only 2,471,000 pay income taxes.

In Austria a citizen has an exemption for the purposes of income tax of $200 a year. Of those paying income tax in Austria, 610,000 report an income of $286 a year or less, 525,000 an income of $430 a year or less, 462,000 an income of $686 a year or less, 357,000 an income of $1,460 or less, 105,000 an income of $3,100 a year or less, and 42,000 report incomes in excess of $3,100. Those are the taxes that the people of Austria are bearing. That gives you some idea as to their economic situation, and I am constrained to believe, in view of the situation there, in view of the settlements that have been made with other nations, that 30.2 per cent fairly represents the amount of her capacity to pay; but be that as it may, considering the history of this loan, considering that all of the debtor nations, the nations who owe us millions of dollars, nations whose economic condition and whose wealth are not comparable with ours, have agreed to the terms of this settlement, I do not believe the United States Government, the greatest Government, the richest Government in the world, can afford to alone stand up and block it. If you do not agree to this, the effect of it will be to destroy the agreements and put us

in the position of being the only one of nine nations who for humanitarian purposes sold on credit food to Austria who now objects to this agreement.

Mr. MILLER. Mr. Chairman, will the gentleman yield?

Mr. CRISP. Yes.

Mr. MILLER. If Austria makes this settlement in 25 equal payments, commencing in 1943, which is 15 years in the future, will any interest be paid on this loan during that period of 15 years before the payment commences?

Mr. CRISP. No; and that is where the reduction of the debt comes. There is no scaling of the principal, and there is no scaling of the interest computed at 5 per cent up to last January.

Mr. MILLER. Six per cent.

Mr. CRISP. It is 6 per cent, but the others scaled it down to 5 per cent, and this bill authorizes a scaling down to 5 per cent, so this bill provides that the principal and interest up to January, 1928, at 5 per cent is paid. Where you have the scaling, and where you reduce the debt from 100 cents on the dollar down to its present cash value of 34 per cent is the failure to get interest during the future years and not having the money right now available for use.

Mr. HASTINGS. There is no interest at any time.

Mr. CRISP. No.

Mr. HASTINGS. For the 25 years after 1943?

Mr. CRISP. You will get only the $33,000,000 under this payment.

Mr. HASTINGS. Divided up into 25 payments.

Mr. CRISP. Yes; under the latter option.

Mr. BRAND of Georgia. Has the gentleman any information as to the amount of interest Austria has paid on the first reconstruction loan?

Mr. CRISP. I have no information as to the amount, but it is undisputed that Austria has made every payment due on all her foreign indebtedness. She has paid the entire interest due on it, and I may add that the Reparation Commission, interested in war reparations, has also consented to the terms of this bill. If we object, we will be the only nation objecting.

Mr. BRAND of Georgia. They have in good faith made payments on the interest?

Mr. CRISP. Yes; absolutely.

Mr. HASTINGS. I would like to ask about the cost of Austria's military establishment at the present time.

Mr. CRISP. I can not answer the gentleman. I do not know.

Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by printing at the conclusion thereof a statement prepared by the Undersecretary of the Treasury, Mr. Mills, going more into details as to this transaction than I have gone, and also to print a copy of the bond of obligation that Austria will make if this agreement is settled. I do that so that in the future, if anyone is examining the record as to what transpired and the nature of the bond, he can have the whole matter before him by examining the CONGRESSIONAL RECORD.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

There was no objection.

The matter referred to is as follows:

STATEMENT BY UNDERSECRETARY OF THE TREASURY MILLS BEFORE THE WAYS AND MEANS COMMITTEE FRIDAY, DECEMBER 7, 1928, SUBMITTING A PROPOSED AGREEMENT FOR THE SETTLEMENT OF THE RELIEF INDEBTEDNESS OF AUSTRIA TO THE UNITED STATES

At the last session of Congress, in response to a message from the President, House Joint Resolution 247 was introduced by Mr. BURTON and reported by the Ways and Means Committee to the House. Under the terms of the resolution the Secretary of the Treasury is authorized, in cooperation with the other so-called relief creditor governments, to subordinate the lien of the United States upon the assets and revenues of Austria pledged for the payment of the Austrian relief bond held by the United States to a lien upon such assets and revenues as may be pledged for the payment of one or more loans floated by Austria in an aggregate net amount of not more than 725,000,000 Austrian schillings and for a period of not more than 30 years; and the Secretary of the Treasury is further authorized, with the approval of the President, to conclude an agreement for the settlement of the indebtedness of Austria to the United States.

At the time of the hearing before the Ways and Means Committee on House Joint Resolution 247, in April, 1928, negotiations for the settlement of the Austrian debt with the relief creditors were proceeding, but inasmuch as there are nine relief creditors, and Austria is obligated to settle with them all on the same basis, until an agreement with other creditors was actually reached the Treasury Department was not in a position to submit to the Congress the terms of a proposed agreement for the settlement of the relief indebtedness to the United States.

Now, however, the settlement proposed by the Austrian Government has been accepted by seven of the nine creditor nations, namely, Denmark, France, Great Britain, the Netherlands, Norway, Sweden, and Switzerland. Negotiations with Italy, to whom Austria makes a similar offer of settlement, are now being carried on. So that the Secretary of the Treasury is at the present time enabled to submit to the Congress the agreement for the settlement of the relief indebtedness of Austria to the United States, which he is prepared to execute should the Congress grant him the authority.

The committee will remember that all of the relief bonds are of similar tenor and contain the following clause:

"The Government of Austria agrees that no payment will be made upon or in respect of any of the obligations of said series issued by the Government of Austria before, at, or after maturity, whether for principal or for interest, unless a similar payment shall simultaneously be made upon all obligations of the said series issued by the Government of Austria in proportion to the respective obligations of said series."

The terms of settlement, therefore, offered the United States are the precise terms offered the other creditor Governments and already accepted by seven of them.

The principal of the indebtedness of Austria to the United States amounts to $24,055,708.92. The bond matures by extension in 1943 and bears 6 per cent interest. With interest at 6 per cent the total indebtedness as of January 1, 1928, is $34,630,968.68. However, the other relief creditors reduced the interest rate to 5 per cent on January 1, 1925. If we make a corresponding adjustment in our interest rate, the total indebtedness, principal and interest, as of January 1, 1928, amounts to $33,911,904.39.

In settlement of this indebtedness Austria offers to pay, beginning on January 1, 1943, 20 yearly annuities of $1,337,140, reserving the option, however, to substitute the following schedule of payments: 5 yearly payments of $287,556, beginning January 1, 1929; 10 yearly payments of $460,093, beginning January 1, 1934; and 25 yearly payments of $743,047, beginning January 1, 1944.

On a basis of 5 per cent the present-day value of the smaller payments to be begun on January 1 next under the alternative schedule is the same as that of the larger and postponed payments to be begun January 1, 1943.

I may add that the Austrian Government has informed us it means to exercise the option.

In this event the payments are to be subject to the following provision:

"*Provided, however,* That if Austria shall exercise this option the obligation of Austria to pay annuities during the years 1929 to 1943 will in the case of each annuity not arise if the trustees of the reconstruction loan of 1923 prior to the preceding December 1 have raised objection to the payment of the annuity in question on the due date. To the extent, if any, that any such annuity is not paid by reason of such objection on the part of the trustees, the amount thereof, together with interest at 5 per cent per annum compounded annually to December 31, 1943, shall be repaid together with further interest at 5 per cent per annum by 25 equal annuities on January 1 of each of the years 1944 to 1968, inclusive. Austria shall issue its bonds to the United States for each of the 25 annuities similar in form to the bonds first to be issued hereunder, but dated January 1, 1943, bearing interest at the rate of 5 per cent per annum and maturing serially on January 1 of each succeeding year."

This provision is made necessary by the fact that under the terms of the so-called Lodge resolution priority over the lien which the United States holds was granted to the bonds of the so-called reconstruction loan of 1923, which matures in 1943.

On a basis of 4¼ per cent the present-day value of the payments proposed under the option is 30.2 per cent of $33,911,904.39. This total is reached, you will remember, by figuring interest at 6 per cent to January 1, 1925, and 5 per cent to January 1, 1928. This compares favorably with the present-day value of 24.6 per cent of the amount due provided for in the debt-settlement agreement with Italy and of 30.3 per cent in that with Yugoslavia. If, however, we figure past interest on the basis, let us say, of the Belgian settlement, the total amount owed is $30,383,562.70 and the present-day value of the proposed payments is 33.7 per cent of this amount.

The Treasury feels that Austria's offer of settlement is a fair and reasonable one. Austria is a small country with very limited resources. Her economic system was dislocated and torn apart by the dismemberment of the old Austrian Empire. What was previously a large, self-sufficient economic entity became a number of independent units separated by political frontiers and trade barriers. About one-third of a population of some 6,500,000 is concentrated in the city of Vienna. About one-half of the total area of Austria is used for agricultural purposes. The rest consists of forests and unproductive land. While progress is being made in agricultural development, Austria does not produce enough for her own needs and has to import large quantities of foodstuffs. There is iron ore in the country, but the development of

the steel and iron industry is handicapped by the entire lack of coal. This shortage of coal is a serious handicap to industry and the large coal imports exercise an adverse effect on trade balances. Austria has two important assets, extensive forests, which have led to the building up of paper and paper-products industry, and abundant water power, which, however, needs capital for development.

The trade balance has been consistently adverse. In 1926 imports exceeded exports by $156,000,000; in 1927 by $155,000,000. This, of course, makes foreign payments over a term of years difficult, if not impossible, were it not for the so-called invisible items, such as tourists' expenditures, emigrant remittances, traffic receipts, etc., which up to the present time have been sufficient to offset the adverse trade balance, to which must be added about $30,000,000 a year which Austria has to send abroad to cover the service of her foreign debts, including the reconstruction loan but not the relief debts.

Unemployment is a serious problem. At the end of 1925, 1926, and 1927 there were over 200,000 unemployed. How low the standard of living must be is indicated by an estimated per capita income of only $157 and the following table of wages:

Wages of bricklayers and masons per week as of July, 1928:	
Vienna	$9.99
Berlin	16.25
London	20.20
Philadelphia	78.00
Wages of metal workers in Vienna:	
Skilled workers, per week	10.00
Auxiliary workers, per week	9.00
Unskilled workers, per week	7.00
Relative real wages as of July, 1928, taken from the International Labor Review, which uses the London figures as the standard, are:	
London	100
Philadelphia	179
Prague	48
Vienna	48

The revenue of the Federal Government as estimated in the 1929 budget amounts to $187,000,000, of which $38,000,000 are to be transferred to the Provinces and towns. Approximately $46,000,000 are derived from direct taxes and approximately $141,000,000 from indirect taxes. The maximum income-tax rate on individuals is 45 per cent and the exemption $200. The corporation income-tax rate is 25 per cent. Out of a population of some 6,500,000 there are 2,100,000 individuals paying income tax as compared with 2,471,000 in the United States out of a population of 120,000,000. Of those paying income tax, 610,000 report an income of $286 or less, 525,000 an income of $430 or less, 462,000 an income of $686 or less, 357,000 an income of $1,460 or less, 105,000 an income of $3,100 or less, and 42,000 people report an income in excess of $3,100.

The public debts of Austria are as follows: Reconstruction loan, $139,000,000; pre-war debts, $33,000,000; relief creditors, $178,000,000; owed to the national bank, $16,700,000; or a total of $366,700,000, to which must be added the debts of the Provinces and towns, amounting to $72,000,000.

The cost of the debt service amounts to $29,700,000 a year, of which $22,700,000 must be paid abroad, to which foreign payments the payments on the debts of the Provinces and towns, amounting to about $8,000,000, should be added.

The budget has been balanced for the last three years, if we exclude the amounts set aside for capital investments. Thus in 1927 the total revenue amounted to $157,000,000, current expenditures amounted to $141,000,000, but $20,000,000 in addition was spent on so-called productive investments such as railroad reconstruction. The currency has been stabilized and the position of their national bank has been improving steadily.

The problem of payment of Austria's foreign relief debt is not primarily a budgetary but an economic one. As already stated, in so far as current expenditures are concerned, the budget can fairly be said to be balanced. The difficulty is that, as explained to the committee last spring, Austria needs to expend a very considerable sum for the rehabilitation of her physical plant, more particularly her railroad, telephone, and telegraph lines. The Austrian budget is not adequate to furnish the necessary funds. The private capital available for investment in Austria is totally inadequate. It is necessary, therefore, for Austria to borrow the needed capital abroad, and this can not be done unless the investments are productive and secondly unless the character of the investments themselves is such as to furnish the means of meeting interest and sinking-fund payments abroad in foreign currencies. Austria must increase her productive capacity. In order to increase her productive capacity she must have new capital from abroad. She can not obtain that new capital from abroad unless the relief creditors are willing to enable her to do so by making a reasonable settlement of the existing indebtedness. From which it follows that an unreasonable and exacting attitude on the part of her creditors may well impair their own ability ultimately to collect their debt when it falls due in 1943.

No one knows better than the members of this committee how impossible it is to estimate with any exactitude capacity to pay. The facts and figures presented are not conclusive, but they do serve to outline the general situation and indicate clearly enough that Austria is not in a position to meet heavy payments.

In this connection it can not be overlooked that the European creditors, who presumably are more familiar with Austria's capacity than we are and whose own needs are certainly greater than ours, have agreed that this is all that Austria can fairly be asked to pay. Taking this as well as all other circumstances into consideration, the State and Treasury Departments are strongly of the opinion that Austria's offer should be accepted.

The proposed settlement has been submitted to the former members of the Foreign Debt Commission who are in Washington and met with their unanimous approval.

I submit herewith the proposed agreement and the proposed terms of renewal bonds, together with a list of relief creditors, the amounts owed each, and the amounts they will receive under the terms of the settlement:

Relief debt (in dollars)

	Original debt	Debt on Jan. 1, 1928[1]	Settlement			Total
			1929–1933	1934–1943	1944–1968	
Denmark	321,618	476,833	19,032	60,998	246,278	326,337
France	17,607,331	26,072,503	1,042,260	3,335,256	13,466,090	17,843,610
England	44,024,618	65,011,610	2,598,868	8,316,415	33,577,511	44,492,795
Netherlands	6,720,974	9,689,425	387,340	1,239,494	5,004,455	6,631,289
Norway	415,186	635,995	25,424	81,358	328,483	435,265
Sweden	19,889	29,059	1,161	3,717	15,008	19,887
Switzerland	4,639,898	6,893,338	275,565	881,812	3,560,315	4,717,692
Italy	22,210,897	31,427,617	1,256,307	4,020,200	16,231,550	21,508,057
United States	24,055,709	35,966,461	1,437,780	4,600,950	18,576,175	24,614,175
Total	120,016,120	174,202,841	7,043,737	22,540,200	91,005,865	120,589,107

[1] Interest included on basis of the rate of 6 per cent per annum, compounded semiannually to Jan. 1, 1925, and thereafter of the rate of 5 per cent per annum, compounded annually.

Agreement made the — day of ———, 1929, at the city of Washington, District of Columbia, between the Federal Government of the Republic of Austria, hereinafter called Austria, party of the first part, and the Government of the United States of America, hereinafter called the United States, party of the second part

Whereas Austria is indebted to the United States as of January 1, 1928, upon an obligation designated as bond No. 1, relief series B of 1920, in the principal amount of $24,055,708.92, together with interest accrued and unpaid thereon; and

Whereas Austria desires to liquidate said indebtedness to the United States, both interest and principal, through the issue of bonds to the United States, and the United States is prepared to accept bonds from Austria upon the terms hereinafter set forth;

Now, therefore, in consideration of the premises and of the mutual covenants herein contained, it is agreed as follows:

1. Amount of indebtedness: The amount of indebtedness to be liquidates is $34,630,968.68, which has been computed as follows:

Principal of relief obligations	$24,055,708.92
Accrued and unpaid interest from Sept. 4, 1920, to Jan. 1, 1928, at 6 per cent per annum	10,575,259.76
Total indebtedness as of Jan. 1, 1928	34,630,968.68

2. Payment: In order to provide for the liquidation of the indebtedness, Austria agrees to pay and the United States to accept the sum of $33,428,500, to be paid in 25 equal annual installments of $1,337,140 each, on the 1st day of January, 1943, and on the 1st day of January of each of the subsequent years to 1967, inclusive. In lieu of these 25 payments Austria may, at its option, issue to the United States, at par, bonds of Austria in the aggregate principal amount of $24,614,885, dated January 1, 1928, and maturing serially on the several dates and in the amounts fixed in the following schedule:

Jan. 1—	
1929	$287,556
1930	287,556
1931	287,556
1932	287,556
1933	287,556
1934	460,093
1935	460,093
1936	460,093
1937	460,093
1938	460,093
1939	460,093
1940	460,093
1941	460,093
1942	460,093
1943	460,093
1944	743,047
1945	743,047
1946	743,047
1947	743,047
1948	743,047
1949	743,047
1950	743,047
1951	743,047
1952	743,047
1953	743,047
1954	743,047
1955	743,047
1956	743,047
1957	743,047
1958	743,047
1959	743,047
1960	743,047
1961	743,047
1962	743,047
1963	743,047
1964	743,047
1965	743,047
1966	743,047
1967	743,047
1968	743,047
Total	24,614,885

Provided, however, That if Austria shall exercise this option, the obligation of Austria to pay annuities during the years 1929 to 1943 will in the case of each annuity not arise if the trustees of the reconstruction loan of 1923 prior to the preceding December 1 have raised objection to the payment of the annuity in question on the due date. To the extent, if any, that any such annuity is not paid by reason of such objection on the part of the trustees, the amount thereof, together with interest at 5 per cent per annum compounded annually to December 31, 1943, shall be repaid, together with further interest at 5 per cent per annum, by 25 equal annuities on January 1 of each of the years 1944 to 1968, inclusive. Austria shall issue its bond to the United States for each of the 25 annuities similar in form to the bonds first to be issued hereunder, but dated January 1, 1943, bearing interest at the rate of 5 per cent per annum, and maturing serially on January 1 of each succeeding year.

Austria agrees that no payment shall be made upon or in respect of any of its obligations issued to the relief creditor nations, to wit, Denmark, France, Great Britain, Holland, Italy, Norway, Sweden, and Switzerland before, at, or after maturity, whether for principal or for interest, unless a similar and proportionate payment shall simultaneously be made upon the relief indebtedness of Austria to the United States as set forth above.

3. Form of bond: All bonds issued or to be issued hereunder to the United States shall be payable to the Government of the United States of America, or order, and shall be signed for Austria by its duly authorized representative. The bonds to be dated January 1, 1928, and maturing January 1, 1929, and annually thereafter to January 1, 1943, inclusive, shall be substantially in the form set forth in the exhibit hereto annexed and marked "Exhibit A," and shall be issued in 15 pieces with maturities and in denominations as herein above set forth, and shall bear no interest except that in the event that any bond is not paid on the date of its maturity interest shall be paid as specified in paragraph 2 above. The bonds to be dated January 1, 1928, and maturing January 1, 1944, and annually thereafter to January 1, 1968, inclusive, shall be substantially in the form set forth in the exhibit hereto annexed and marked "Exhibit B," and shall be issued in 25 pieces, with maturities and in denominations as herein above set forth, and shall bear no interest.

4. Method of payment: All bonds issued or to be issued hereunder shall be payable as to both principal and interest in United States gold coin of the present standard of value, or, at the option of Austria, upon not less than 30 days' advance notice to the United States, in any obligations of the United States issued after April 6, 1917, to be taken at par and accrued interest to the date of payment hereunder.

All payments, whether in cash or in obligations of the United States, to be made by Austria on account of the principal of or interest on any bonds issued or to be issued hereunder and held by the United States shall be made at the Treasury of the United States in Washington or, at the option of the Secretary of the Treasury of the United States, at the Federal Reserve Bank of New York, and if in cash shall be made in funds immediately available on the date of maturity, or if in obligations of the United States shall be in form acceptable to the Secretary of the Treasury of the United States under the general regulations of the Treasury Department governing transactions in United States obligations.

5. Exemption from taxation: The principal and interest of all bonds issued or to be issued hereunder shall be paid without deduction for, and shall be exempt from, any and all taxes or other public dues, present or future, imposed by or under authority of Austria or any political or local taxing authority within Austria.

6. Security: Austria represents that the Reparation Commission, pursuant to the powers conferred upon it, has recognized that the bonds to be issued under this agreement shall enjoy the same security as the bonds of relief series B of 1920, and shall be a first charge upon all the assets and revenues of Austria, and shall have priority over costs of reparation under the treaty of St. Germain, or under any treaty or agreement supplementary thereto, or under any arrangements concluded between Austria and the allied and associated powers during the armistice signed on November 3, 1918, and the Austrian Government agrees that nothing in this agreement shall prejudice or affect the provisions contained in the bonds of relief series B of 1920 constituting such bonds a first charge upon all the assets and revenues of Austria (without prejudice, however, to the lien enjoyed by the reconstruction loan of 1923), so that if the Government of Austria should at any time without the assent of the holder of this bond pay or attempt to pay any sum whether in respect of reparation or by way of compensation for any nonfulfillment of the obligations of Austria under article 184 of the said treaty, the amount owing under the terms of bond No. 1, relief series B of 1920, for principal moneys and for any arrears of interest thereon at 6 per cent per annum, compounded semi-annually from September 4, 1920, to January 1, 1925, and thereafter at 5 per cent per annum, compounded annually, shall forthwith be paid in cash by the Austrian Government in priority to any such payments under the said treaty.

7. Compliance with legal requirements: Austria represents and agrees that the execution and delivery of this agreement have in all respects been duly authorized, and that all acts, conditions, and legal formalities which should have been completed prior to the making of this agreement have been completed as required by the laws of Austria and in conformity therewith.

8. Cancellation and surrender of obligations: Upon the execution of this agreement the delivery to the United States of the principal amount of bonds of Austria to be issued hereunder, together with satisfactory evidence of authority for the execution of this agreement by the representative of Austria and for the execution of the bonds to be issued hereunder, the United States will cancel and surrender to Austria at the Treasury of the United States in Washington the relief obligation of Austria now held by the United States.

9. Notices: Any notice, request, or consent under the hand of the Secretary of the Treasury of the United States shall be deemed and taken as the notice, request, or consent of the United States, and shall be sufficient if delivered at the Legation of Austria at Washington or at the office of the Ministry of Finance at Vienna; and any notice, request, or election from or by Austria shall be sufficient if delivered to the American Legation at Vienna or to the Secretary of the Treasury at the Treasury of the United States in Washington. The United States, in its discretion, may waive any notice required hereunder, but any such waiver shall be in writing and shall not extend to or affect any subsequent notice or impair any right of the United States to require notice hereunder.

10. Counterparts: This agreement shall be executed in two counterparts, each of which shall have the force and effect of an original.

In witness whereof, Austria has caused this agreement to be executed on its behalf by its duly authorized representative at Washington, and the United States has likewise caused this agreement to be executed on its behalf by the Secretary of the Treasury, with the approval of the President, pursuant to the act of Congress approved ——— ——— all on the day and the year first above written.

THE FEDERAL GOVERNMENT OF THE REPUBLIC OF AUSTRIA,

By ——— ———

THE GOVERNMENT OF THE UNITED STATES OF AMERICA,

By ——— ———

Secretary of the Treasury.

Approved.

———— ————, *President.*

EXHIBIT A

(Form of bond 1929–1943)

THE REPUBLIC OF AUSTRIA

[Series B–1920, No. —. (Renewal bond)]

The Republic of Austria, hereinafter called Austria, for value received, promises to pay to the Government of the United States of America, hereinafter called the United States, or order, on January 1, ——, the sum of $———. This bond is payable as to both principal and interest in gold coin of the United States of America of the present standard of value, or, at the option of Austria, upon not less than 30 days' advance notice to the United States, in any obligations of the

United States issued after April 6, 1917, to be taken at par and accrued interest to the date of payment hereunder. Nevertheless, the obligation of Austria to pay this bond shall not arise if the trustees of the League of Nations loan have, prior to the 1st day of December preceding the maturity date of this bond, raised objection to the payment of this bond on the due date. If this bond is not paid on its due date by reason of such objection on the part of the trustees, the amount thereof, together with interest at 5 per cent compounded annually to January 1, 1943, shall be repaid, together with further interest at 5 per cent in 25 equal annual installments on the 1st of January of each of the years 1944 to 1968, inclusive.

This bond is payable as to both principal and interest without deduction for, and is exempt from, any and all taxes and other charges, present or future, imposed by or under authority of Austria or its possessions or any political or taxing authority within Austria. This bond is payable as to both principal and interest at the Treasury of the United States in Washington, D. C., or at the option of the Secretary of the Treasury of the United States at the Federal Reserve Bank of New York.

This obligation is one of a series of obligations of similar tenor, but in different amounts and payable in different currencies, designated as "Relief Series B of 1920 (renewal bonds)."

Austria agrees that no payment will be made upon or in respect of any of the obligations of the "Relief Bond Series B–1920" due on January 1, 1925, or upon or in respect of any of the obligations "Relief Series B of 1920 (renewal bonds)," or of any other obligations issued by Austria in renewal of the said "Relief Bonds Series B–1920" before, at, or after maturity, whether for principal or for interest, unless a similar payment shall simultaneously be made upon all the obligations of "Relief Series B of 1920 (renewal bonds)" issued by Austria in proportion to the respective obligations of said series.

The payment of this obligation is secured in the same manner and to the same extent as the obligation of Austria in the principal amount of $24,055,708.92, designated as bond No. 1, Relief Series B of 1920.

Austria agrees that if at any time it should pay or attempt to pay any sum whether in respect of reparation or by way of compensation for any nonfulfillment of the obligations of Austria under Article 184 of the said treaty, the amount owing under the terms of bond No. 1, Relief Series B of 1920, for principal moneys and for any arrears of interest thereon at 6 per cent per annum, compounded semiannually from September 4, 1920, to January 1, 1925, and thereafter at 5 per cent per annum, compounded annually, shall forthwith be paid in cash by the Austrian Government in priority to any such payments under the said treaty.

This bond is issued under an agreement, dated ——— ———, between Austria and the United States, to which this bond is subject and to which reference is made for a further statement of its terms and conditions.

In witness whereof Austria has caused this bond to be executed in its behalf at the city of Washington, D. C., by its duly authorized representative at Washington.

THE GOVERNMENT OF THE REPUBLIC OF AUSTRIA.

By ——— ———.

Dated January 1, 1928.

EXHIBIT B

(Form of bond 1944–1968)

THE REPUBLIC OF AUSTRIA

[Series B–1920, No. —. (Renewal bond)]

The Republic of Austria, hereinafter called Austria, for value received, promises to pay to the Government of the United States of America, hereinafter called the United States, or order, on January 1, ——, the sum of ——— dollars ($———). This bond is payable as to both principal and interest in gold coin of the United States of America of the present standard of value, or, at the option of Austria, upon not less than 30 days' advance notice to the United States, in any obligations of the United States issued after April 6, 1917, to be taken at par and accrued interest to the date of payment hereunder.

This bond is payable without deduction for, and is exempt from, any and all taxes and other charges, present or future, imposed by or under authority of Austria or its possessions or any political or taxing authority within Austria. This bond is payable as to both principal and interest at the Treasury of the United States in Washington, D. C., or at the option of the Secretary of the Treasury of the United States at the Federal Reserve Bank of New York.

This obligation is one of a series of obligations of similar tenor but in different amounts and payable in different currencies, designated as "Relief Series B of 1920 (renewal bonds)."

Austria agrees that no payment will be made upon or in respect of any of the obligations of the "Relief Bond Series B–1920" due on January 1, 1925, or upon or in respect of any of the obligations "Relief Series B of 1920 (renewal bonds)" or of any other obligations issued by Austria in renewal of the said "Relief Bonds Series B–1920" before, at, or after maturity, whether for principal or for interest, unless a similar payment shall simultaneously be made upon all the obligations of "Relief Series B of 1920 (renewal bonds)" issued by Austria in proportion to the respective obligations of said series.

The payment of this obligation is secured in the same manner and to the same extent as the obligation of Austria in the principal amount of $24,055,708.92, designated as bond No. 1, Relief Series B of 1920.

Austria agrees that if at any time it should pay or attempt to pay any sum whether in respect of reparation or by way of compensation for any nonfulfillment of the obligations of Austria under article 184 of the said treaty, the amount owing under the terms of bond No. 1, Relief Series B of 1920, for principal moneys and for any arrears of interest thereon at 6 per cent per annum, compounded semiannually from September 4, 1920, to January 1, 1925, and thereafter at 5 per cent per annum, compounded annually, shall forthwith be paid in cash by the Austrian Government in priority to any such payments under the said treaty.

This bond is issued under an agreement dated ———, between Austria and the United States, to which this bond is subject and to which reference is made for a further statement of its terms and conditions.

In witness whereof Austria has caused this bond to be executed in its behalf at the city of Washington, D. C., by its duly authorized representative at Washington.

THE GOVERNMENT OF THE REPUBLIC OF AUSTRIA.

By ——— ———

Dated January 1, 1928.

Mr. HAWLEY. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. LAGUARDIA].

Mr. LAGUARDIA. Mr. Chairman and gentlemen of the committee, it seems that in considering the funding or settlement of these various debt settlements we are apt to lose sight of the fact that they are simply unavoidable and inevitable incidentals of the tremendous cost of war. One can not help being impressed with the fact that we are able to extend help of this kind to nations, not only nations with which we were associated in the war but even enemy nations, only as a war measure, while in peace time, as has been many times repeated, the same kind of help, regardless of the benefits that might be brought about, would be clearly unconstitutional. We could not do as much even to prevent a war. It does seem strange that what might well be done for world peace—what is generally necessary after every war—can only be brought about after actual warfare has taken its terrible toll.

In considering the amounts involved here to-day and the amount involved yesterday in the Greek debt the committee might get an idea of what a trifling matter it is after all if you stop to consider that a 2-hour barrage laid down by an artillery division of an army corps would cost more than the amount here involved. Two hours of scientific, wholesale murder and destruction costs more than an amount necessary for the construction of a new republic—the use of the money to be enjoyed by a whole nation for a generation.

The cost of peace is so little in comparison to the cost of war that one can not help to wonder why there are so many limitations and prohibitions to the spending of public funds for humanity in time of peace and none for war purposes.

One of the very few hopes realized out of the war is the elimination of the Hapsburg dynasty and the Hohenzollern dynasty and the creation of the Republics of Czechoslovakia, Poland, Austria, Lithuania, and Germany.

Mr. O'CONNELL. And Ukrainia.

Mr. LAGUARDIA. And Ukrainia as an independent state. Now, what I desire to bring out at this time is this, gentlemen: That when two private individuals enter into an agreement it is optional with them whether they will make that agreement binding on the heirs, assigns, or successors of the contracting parties. The same is true in an agreement of this kind, a debt settlement between two nations. I desire to state at this time that it is our intention to make this agreement with the Republic of Austria, and to declare that it is not our intention to pass any of the benefits in this bill contained to any dynasty that might succeed to the present republican form of government. The Austrian Republic, let us hope, is permanent. We know it is stable and has been most successful. There has been more real reform, more welfare legislation, more security for the workers in five years of the Austrian Republic than in a century under the Hapsburg dynasty.

There is a tendency in Europe, not very strong, I am pleased to say, but there is a tendency on the part of a few, a minority, to return to monarchial form of government. There is an underground, secret movement in Bavaria to bring back a Hohenzollern. There is a decided, open movement in Hungary, formerly a part of the dual empire of Austria-Hungary, to restore on the throne of Hungary one of the despised Hapsburgs.

Gentlemen, I feel that the whole purpose of our assistance to these countries, the whole purpose of our interest in the welfare of the people of these countries, would be absolutely lost if a Hohenzollern or a Hapsburg were to be returned to power. I think I may say that it is the sense of the House, as well as that of the American people, that they would look with disfavor on the return of a Hapsburg to the throne of Hungary or the return of a Hohenzollern to the throne of any part of the present Republic of Germany. Let the people of these new republics know that the people of the United States are with them heart and soul and will continue our help for the permanency of free government based on equal rights. We know that the peace of the world is safe in the hands of the people. It is not safe when in the keeping of kings and emperors. [Applause.]

Mr. HAWLEY. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. CHINDBLOM].

Mr. CHINDBLOM. Mr. Chairman and gentlemen of the committee, I shall devote myself only to the last suggestion of the gentleman from Texas, my good friend, Mr. GARNER, in which he said that the people and the Government of Austria should pay the indebtedness which they have already incurred for food, clothing, and other relief; in other words, for the necessities of life, before they incur an indebtedness for other purposes. I do not recall just how the gentleman characterized "the other purposes," but his meaning was that the obligations already incurred by Austria, amounting, as I recall it, to about $120,000,000 to various governments under the so-called relief loans, are of a higher character and more appealing and more essential, more sacred, perhaps, than the indebtedness which it is proposed Austria may be enabled to incur under the postponement arrangement in this bill.

The fact is that Austria finds herself in probably the most difficult situation of all of the new countries of Europe. Her entire economic, industrial, and commercial structure was established prior to the war upon the basis of the various constituent parts of the former empire. To-day, Austria is composed only of a very small part of what was formerly the territory of the Austro-Hungarian Empire and it has little diversification of industry such as is necessary for the successful operation of the business activities of a people.

One of the important sources of revenue for Austria to-day, I am told, is the flood of tourists who go there for the purpose of seeing her marvelous collection of treasures of art. In order that Austria may be attractive to the world and in order that Austria may receive the income from this source of tourists which would righthfully belong to her, it is necessary that she have proper communciations with the countries surrounding her. It has therefore become absolutely essential that Austria shall be enabled to rehabilitate her railroad system. In addition, her railroad system is a part of the transcontinental line across Europe, and if the Austrian portion of that transcontinental line is not rehabilitated and maintained not only available, but advantageous, for usage, it will follow that the transcontinental railroad will take some other route and Austria will lose the benefit and advantage which it has always had from this source.

Austria's telephone system, her telegraph system, and all the means of communication during the years following the war have necessarily been neglected so that it is now necessary that she secure money in order to rebuild and reconstruct these facilities. Without these facilities, her future is quite hopeless, and therefore it has been proposed that the nations of the world who have liens upon the revenues of Austria on account of the relief loans shall make it possible for Austria to borrow money elsewhere for the rehabilitation, principally, of these communication facilities.

In addition to this, if this arrangement is made, Austria will be able to borrow this money upon much better terms than it would be possible for her to obtain it in the event this arrangement was not made.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. HAWLEY. Mr. Chairman, I yield the gentleman five additional minutes.

Mr. CHINDBLOM. Those who have studied the map of Europe as it appears since the war, and who have studied the history of the development on the Continent since the war, will readily realize that Austria, situated in the very heart of Europe, cut off from sea communication, separated from most of the territory which formerly was a part of the empire, deprived of much of the material resources, and especially of the raw materials which belonged to the empire before the war, confined to a small strip of territory, a considerable portion of which consists of a large city, will have great difficulty in readjusting her finances, her industries, and her economic development to the new situation.

It is for the purpose of making it possible for Austria to obtain money to rehabilitate its economic and industrial structure, make it possible for Austria to become self-supporting and retain some of the revenues to which it is naturally entitled, that this bill has been proposed, and it is a part of a large international arrangement. All of the other countries, which are European nations, have agreed to this plan. It can not be put into effect without the consent of the American Government. Of the $120,000,000 of relief loans, we advanced, as I recall it, $24,000,000, and that is a considerable part of the indebtedness, and our position in the world to-day in both domestic and international finance is such that unless we consent to this arrangement, it can not and will not be made.

Of all the proposals which have come to us for the settlement of loans with countries in Europe, I think this is the most deserving. To me it is the most appealing. I believe the situation of Austria following the war has been the most unhappy of all of the countries whose internal conditions were disturbed by that great catastrophe. It would be very appropriate, indeed, if this bill could pass with practical unanimity. [Applause.]

Mr. HAWLEY. Mr. Chairman, I think it is not necessary to restate the arguments in behalf of this measure that have been so well presented, and will only say that I think this proposal is for the distinct advantage of the United States and Austria. I understand that there is no more general debate desired and I ask that the bill be read for amendments.

The Clerk read the bill.

Mr. BLANTON. Mr. Chairman, I move to strike out the last paragraph.

Mr. Chairman, it is a strange fact to me that the credit of the city of Vienna is reputed to be stronger and greater and better than the credit of the entire Austrian Government. I am with my colleague Mr. GARNER on this bill and shall vote against it. It is a new kind of doctrine to me—that which our colleague from New York [Mr. O'CONNOR] preaches—that the credit of the city of New York is better and more substantial than the credit of the Federal Government of the United States.

Mr. O'CONNOR of New York. It is about 20 years ago when the credit of New York City was better than the credit of the Nation—the revenue was greater and the budget bigger.

Mr. BLANTON. It has not been many months since that same kind of doctrine was preached in this House and Nation that the interest and appetite of the great city of New York were paramount to the interests of the people of the United States—to the detriment of many of us, the people have passed on that question.

Mr. O'CONNOR of New York. Of course, some things happened in primaries before that.

Mr. BLANTON. Oh, yes; but the Houston convention took place before most of the primaries.

Mr. O'CONNOR of New York. The gentleman started out with the city of Vienna, and it is a long way to Houston.

Mr. BLANTON. I deny that the credit of any city in this Nation is better than that of the Nation itself.

Mr. BURTON. If the gentleman will yield; does he not recognize that the comparative credit of a nation and an integral part of it—the comparative credit of Austria and Vienna—depends very largely upon the indebtedness of each.

Mr. BLANTON. Yes; the stability of the credit of the city of New York affects the United States in a way, but it is not greater and is not better than the credit of the Government itself.

Mr. BURTON. I do not think the gentleman understood my point. Suppose the indebtedness of Austria is $200,000,000 and the indebtedness of Vienna is $5,000,000. Would not that be an important factor in the question of whether the credit of the city of Vienna was better than that of the Republic of Austria? Is not the determinate question the comparative amount of indebtedness of the two; and I ask again, can the gentleman from Texas state what the indebtedness of Vienna is and what the indebtedness of Austria is?

Mr. BLANTON. I want to answer the gentleman from Ohio by asking him a question. Does he agree with the statement made by my friend from New York [Mr. O'CONNOR] that the credit of the city of New York is better than the credit of this Government? Does the gentleman from Ohio agree with that statement?

Mr. BURTON. That would depend entirely upon circumstances.

Mr. BLANTON. The United States Government can look to the assets of any State or city in the country.

Mr. O'CONNOR of New York. I am not so sure of that.

Mr. BLANTON. It can and will do it if the necessity for it ever comes.

Mr. O'CONNOR of New York. The revenues of the city are sometimes more than the revenues of the State.

Mr. BLANTON. I can not forget in this Chamber 12 years ago the speeches made by these self-same gentlemen urging a declaration of war on a certain country.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. BLANTON. I ask for three minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. BLANTON. Then they were thinking more about the rights of the people of the United States than they were of the needs of the Austrian Government, and it was the act of that Government that caused this country to declare a state of war to exist. We have done our part; we are not called upon, as my colleague [Mr. GARNER] has argued, to reduce our debt to 31 cents on the dollar, and also release our first lien securing the loan in order that international banks may be secured in their loans.

I think we have gone far enough. I did not vote for the settlement passed yesterday, which proposed to lend Greece $12,000,000 to try to collect back $6,000,000 of old debt. I did not vote for that, and I shall not vote for this one. I do not think any argument has been advanced yet that would show the soundness of the proposition of passing this bill. Of course, it can not be defeated, but I shall be one who will vote against it.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn. Under the rule, there being no further amendments, the committee will automatically rise.

Accordingly, the committee rose; and the Speaker having resumed the chair, Mr. HOCH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration House Joint Resolution 340, to authorize the Secretary of the Treasury to cooperate with the other relief creditor governments in making it possible for Austria to float a loan in order to obtain funds for the furtherance of its reconstruction program, and to conclude an agreement for the settlement of the indebtedness of Austria to the United States, and had directed him to report the same back to the House with the recommendation that it do pass.

The SPEAKER. Under the rule the previous question is ordered. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is, Shall the resolution pass?

The question was taken; and on a division (demanded by Mr. BLANTON) there were—ayes 140, noes 26.

So the joint resolution was agreed to.

On motion of Mr. HAWLEY, a motion to reconsider the vote by which the joint resolution was agreed to was laid on the table.

INTERIOR DEPARTMENT APPROPRIATIONS

Mr. CRAMTON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 15089) making appropriations for the Department of the Interior for the fiscal year ending June 30, 1930, and for other purposes. Pending that, I ask unanimous consent that the time for general debate be equally divided between the gentleman from Colorado [Mr. TAYLOR] and myself.

The SPEAKER. The gentleman from Michigan moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the Interior Department appropriation bill, and pending that asks unanimous consent that the general debate be divided equally, to be controlled by the gentleman from Michigan [Mr. CRAMTON] and the gentleman from Colorado [Mr. TAYLOR]. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the motion of the gentleman from Michigan.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 15089, the Interior Department appropriation bill, with Mr. CHINDBLOM in the chair.

The Clerk read the title of the bill.

Mr. CRAMTON. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. CRAMTON. Mr. Chairman and gentlemen of the committee, this is the eighth time that I have had the privilege of bringing into this House the Interior Department appropriation bill. The gentlemen associated with me on the subcommittee in charge of the bill, the gentleman from Ohio [Mr. MURPHY], the gentleman from Idaho [Mr. FRENCH], the gentleman from Colorado [Mr. TAYLOR], and the gentleman from Oklahoma [Mr. HASTINGS], have nearly all of them been engaged for nearly that long upon this bill. I might state also that a majority of that subcommittee comes from States where they have been for many years in their daily lives in contact with the problems of this department, which particularly concern the West. We have all been impressed this year in the preparation of this bill with the difficulty under the rules of the general Committee on Appropriations in framing a bill entirely satisfactory to us. Since the adoption of the Budget system it has been the policy of the general Committee on Appropriations to keep each bill reported to the House within the total recommended by the Budget.

Without cooperation effectively between the legislative and the executive branches of the Government there could not be any useful and beneficial operation of a Budget system. Congress has given effective support to the Executive in his effort to hold down expenditures, so that each year since we have had the Budget system the total of appropriations made by the Congress has been somewhat lower than the figures estimated by the Budget. It has been our effort to cut below the Budget where it was possible, but in no case to report a bill that was higher in its total than the Budget. After these several years of paring and scaling down on the Interior Department appropriation bill, a bill that was not inflated in the war period, but that has been reduced in the period of deflation since that time, a pretty lean proposition came to the Congress this year from the Budget for the Interior Department. I think there are many more items which the committee felt should be increased, if it were possible, if the financial resources permitted it, than there are items that could well be decreased.

HON. ROY O. WEST, SECRETARY OF THE INTERIOR

In the preparation of this bill we have had the full cooperation of the Department of the Interior and the new Secretary of the Interior, Hon. Roy O. West. He appeared before the committee. I had not had acquaintance with the new Secretary prior to his appointment, but have had an excellent and full opportunity to learn of his work as Secretary and to learn of his general attitude toward the problems of his department and the policies of his administration through some 10 days of travel with him in the field and through various conferences pertaining to matters of policy affecting the department. In my judgment, the new Secretary is destined, if he is given the opportunity by length of service, to become one of the great Secretaries of the Interior, and I personally believe the best interests of the department would be served thereby. Secretary West, handicapped by his residence in the East and a consequent lack of contact with the problems before he entered upon his office, has made use of every opportunity to acquire the necessary personal knowledge by examination of the problems in the field and has the capacity to absorb the material facts of a situation very rapidly.

In addition he has an attitude toward the public interest that is clearly uninfluenced by any personal or sectional or private interest that has commended him very highly in my regard, and I am sure the regard of the committee. The department under his administration has been making splendid progress, with a strengthening of morale in all branches of the department.

In my remarks to-day it will not be my effort to speak in detail of the provisions of the bill; that is manifestly impossible, because it is a bill of 118 pages, with a multitude of items.

I will leave the discussion of most of these matters under the 5-minute rule when the bill is read for amendment, and in the main I speak to you now only of the general policies that govern the framing of this bill.

SALARY INCREASES BY REALLOCATIONS BY CLASSIFICATION BOARD

There is an item early in the bill that should be called to your attention. It is on page 3 of the bill, where you will find a provision which reads:

When specifically approved by the Secretary of the Interior, transfers may be made between the appropriations in this act under the respective

jurisdiction of any bureau, office, institution, or service, in order to meet increases in compensation resulting from the reallocation by the Personnel Classification Board of positions under any such organization unit. Any such transfers shall be reported to Congress in the annual Budget.

That matter is deemed necessary because of the situation that was called to the attention of the committee by Governor Spry, Commissioner of the General Land Office, a very capable, independent, and efficient executive as our committee has come to know. He explained to the committee the difficulty that confronts any bureau in the event that a number of appeals for reallocation are granted in that bureau by the Federal Personnel Classification Board in case of any items where the money had already been entirely allocated, the law requiring those increases of salary to be immediately effective upon the action of the Federal Classification Board. The only way that those increases of salary could be paid—if the item had been absorbed under the previous allocation—the only way those increases of salary could be paid would be to furlough some other employees of that particular unit without pay. That would not be required in many instances. It would not be required in a large item where there is always slack caused by vacancies, and so forth.

It would probably not be required in an appropriation item covering other things than salaries where money would be held in hand during the year in some degree. But in a comparatively small item devoted entirely to salaries it is very possible that that could happen. If those increases were brought about in the early part of the year, a deficiency could be brought to the attention of the Congress and relief granted; but if the situation should develop after the 4th of March, then the only way apparently to meet the situation would be to furlough other employees without pay. That would not be fair, and I would not want to advocate that. It would be not only unfair to the individual furloughed but it would be highly destructive to the efficiency of the unit.

Mr. O'CONNELL. But is that right?

Mr. CRAMTON. No; and we seek to correct it. I will ask unanimous consent to revise and extend my remarks by inserting such extracts from the hearings or other papers or comment as I may think desirable.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to revise and extend his remarks by inserting extracts from hearings, pamphlets, and so forth, and such comment as he may think desirable. Is there objection? [After a pause.] The Chair hears none.

Mr. CRAMTON. And in doing it I desire to include the statement of Governor Spry which inspired the thought of the committee on this proposition:

For instance, on October 10, 1928, this bureau was advised through the department of the amount of the approved estimates therefor. Three days later the bureau was notified that nine employees had been reallocated to a higher grade on appeal, as of October 1. Later several other reallocations on appeal were allowed. These reallocations increase the pay roll $2,700 per annum, and the cost for the remaining months of this fiscal year is $2,008. There are still a number of appeals pending before the Personnel Classification Board, and, while we believe that some will be denied, we are fairly certain that several others (including several members of the law division and two employees of the division of surveys whose appeals for reallocation from professional 3 to the new vacant professional 4 have received favorable indorsement) will be allowed. Some of the recent reallocations, involving employees in the mineral division, will no doubt lead to appeals by employees in other divisions of the bureau, perhaps to the number of about 40.

If any considerable number of reallocations are made in addition to those recently received, and they are made, say, for instance, on March 5, effective as of March 1 according to the practice, there is no tribunal to which the bureau can submit a deficiency estimate, Congress having adjourned. It can not incur a deficit to be met by an appropriation the following winter and it is faced with the necessity of resorting to dismissals or furloughs. As a business proposition the rendition of adequate service to the public would suggest the maintenance of the force at existing salaries rather than the reduction of the force in order to pay those remaining higher rates of pay.

There is an erroneous impression among the employees that a reallocation carrying a higher rate of pay automatically brings about a deficiency appropriation if there are insufficient funds to meet the added expense. Other employees who do not entertain that misconception are reported to entertain the belief that the bureau is negligent in securing funds adequate to meet such emergencies, little realizing that the bureau at every opportunity endeavors to secure adequate appropriations.

I am venturing these few remarks not by way of criticism of any other agency of the Government but merely to emphasize the need for a little leeway to take care of the financial embarrassment that results by reason of the fact that another agency can create an additional charge upon our appropriations. The matter is one which sooner or later will require attention, not only as concerns our bureau but other bureaus and offices throughout the Government service.

What the committee will propose to do is to permit in such a case as that a transfer of funds from some other appropriation of that bureau or service. Of course, that takes care of the increases without these furloughs or any disruption of business. I do not believe it is a provision that will be used often, but in a few cases it will be highly beneficial. There are four safeguards around it. In the first place the emergency arises because of the action of an outside agency, the classification board. Secondly, the bureau must find the money in some other appropriation of that bureau. In the third place, it can only be done with the specific approval of the Secretary of the Interior. In the fourth place, it must be reported to the Congress in the annual Budget, and will, of course, have the scrutiny of the Committee on Appropriations.

BILL COMPARED WITH 1929 AND WITH ESTIMATES

The estimates upon which this bill is based were submitted by the President in the Budget and will be found in detail in Chapter V of that document, pages 485 to 773, inclusive, aggregating $285,245,045.78.

In addition to the regular annual appropriations, the estimated permanent and indefinite appropriations for the fiscal year 1930 aggregate $25,712,000, making the total of the estimates for the Interior Department for the fiscal year 1930, $310,957,045.78.

The permanent annual appropriations are those which occur automatically each year without annual action by Congress, having been created specifically by Congress in previous years and continuing as such until modified or discontinued.

The total regular annual appropriations for the Interior Department for the fiscal year 1929, including $522,500 in the second deficiency act, 1928, amounted to $273,178,539.

The amount recommended to be appropriated in this bill is $283,287,963.02. This sum, compared with the regular annual appropriations for 1929 and the estimates for 1930 is as follows:

It is $10,109,424.02 more than the 1929 appropriations and $1,957,082.76 less than the Budget estimates for 1930.

REVIEW OF APPROPRIATIONS, 1922 TO 1930

Under the leave granted now I will insert in my remarks, as I did last year, a review of appropriations for this department, beginning with the year 1922 by bureaus, so that anyone who is interested in following the growth or the diminishing of these appropriations in the different bureaus year by year may have the figures available.

Appropriations for Department of the Interior, 1922–1930

Year	Secretary's office	Land Office	Indian Bureau	Pension Bureau	Reclamation Bureau	Geological Survey	National Park Service	Bureau of Education
1922	$2,131,070.00	$3,125,015.00	$10,342,304.00	$266,830,920.00	$20,277,000.00	$1,614,340.00	$1,433,220.00	$586,960.00
1923	1,572,920.00	2,954,550.00	10,134,852.00	254,246,191.00	14,800,000.00	1,450,940.00	1,446,520.00	621,960.00
1924	1,461,020.00	2,942,660.00	11,317,655.00	254,774,660.00	12,250,000.00	1,670,190.00	1,689,730.00	644,260.00
1925	1,693,240.00	2,940,820.00	11,276,220.00	224,616,000.00	12,867,500.00	1,706,482.00	2,880,535.00	702,380.00
Field classification		259,180.00	1,653,061.00		373,020.00	28,941.00	102,122.00	72,735.00
Total, 1925		3,200,600.00	12,929,281.00	224,616,000.00	13,240,520.00	1,735,423.00	2,982,657.00	775,115.00
1926	797,585.00	2,633,590.00	11,918,270.00	199,095,000.00	9,999,000.00	1,879,310.00	3,218,409.00	794,495.00
1927	803,000.00	2,342,300.00	12,901,160.00	193,921,000.00	7,556,000.00	1,819,440.00	3,698,920.00	864,100.00
1928	865,600.00	2,297,550.00	16,421,486.00	268,816,000.00	11,953,800.00	1,807,880.00	4,874,685.00	921,220.00
1929	850,200.00	2,138,050.00	14,284,509.00	231,753,000.00	12,829,000.00	1,816,080.00	4,659,700.00	941,300.00
1930	917,000.00	2,189,000.00	16,268,103.02	243,211,000.00	6,449,000.00	2,040,800.00	7,340,940.00	1,071,940.00

Appropriations for Department of the Interior, 1922–1930—Continued

Year	Territories, government in	St. Elizabeths Hospital	Columbia Institution for the Deaf	Howard University	Freedmen's Hospital	Miscellaneous	Total	Total, exclusive of Pensions and Reclamation	Total, exclusive of Pensions
1922	$4,028,950.00	$1,114,500.00	$106,000.00	$280,000.00	$116,020.00		$311,986,299.00	$26,709,299.00	$46,986,299.00
1923	4,618,620.00	1,100,000.00	104,000.00	190,000.00	118,555.00	[1] $8,016.00	293,367,124.00	26,567,124.00	41,367,124.00
1924	2,150,540.00	1,146,500.00	107,000.00	232,500.00	172,800.00	[2] 2,845,309.00	293,404,824.00	31,154,824.00	43,404,824.00
1925	1,314,310.00	1,008,000.00	109,000.00	365,000.00	174,700.00		261,541,687.00	24,170,987.00	39,534,146.00
Field classification	6,600.00						2,608,459.00	2,122,639.00	
Total, 1925	1,320,910.00	1,008,000.00	109,000.00	365,000.00	174,700.00		264,150,146.00	28,409,626.00	41,650,146.00
1926	1,912,237.00	1,023,000.00	113,400.00	591,000.00	202,950.00		234,178,246.00	27,179,246.00	37,178,246.00
1927	1,995,708.00	924,000.00	113,400.00	218,000.00	166,390.00		227,323,418.00	27,767,418.00	35,323,418.00
1928	1,620,200.00	929,000.00	113,400.00	368,000.00	188,000.00		311,176,821.00	32,223,021.00	44,176,821.00
1929	1,599,200.00	1,313,000.00	130,000.00	390,000.00	474,500.00		273,178,539.00	[3] 28,596,539.00	[3] 42,425,539.00
1930 [4]	1,419,600.00	1,430,000.00	120,000.00	600,000.00	260,180.00		283,287,963.02	[5] 33,627,963.02	[5] 40,076,963.02

[1] Miscellaneous relief acts.
[2] Increase of compensation.
[3] Does not include $19,950,000 appropriated to the civil service retirement fund.
[4] Proposed in accompanying bill.
[5] Does not include $20,500,000 appropriated to the civil service retirement fund.

INDIAN AFFAIRS

A subject of prime importance which has had particularly careful study on the part of the committee in connection with this bill is the budget for the Bureau of Indian Affairs.

The appropriations recommended from Government funds are $2,187,594.02 greater than such appropriations for 1929. The committee figure is $312,987.24 above the Budget estimate. Of these proposed appropriations the amount reimbursable by the Indians is $1,685,261, as against $2,060,689 for 1929. The nonreimbursable appropriation from Government funds for 1929 was $12,223,820.29 and for 1930 was $14,786,842.02. This increase of $2,563,022.02 in expenditure of nonreimbursable public funds is chiefly devoted to health and education.

REIMBURSABLE ITEMS

And in that connection let me say that it has been the policy of this committee in the last two or three years to treat reimbursable items in this way. It had been fashionable for a number of years to make appropriations from the Treasury for the benefit of the Indians and to provide that they should be reimbursable by the Indians. In many cases that has been done when the Indians were known to have no money, and when it was known that there was no likelihood that they would ever have money to pay it; but it made it look nice and rather sugar-coated the pill.

It seemed to the committee that we should not provide for reimbursement unless there was reasonable ground that reimbursement would sometime come. It seemed as if Uncle Sam should get credit for being generous when he is generous and not carry a lot of dead accounts. In other cases it has been the custom, when the Indians had a large amount of money on hand, to let it be reimbursable. It seemed to us that if the Indians had the funds and it was a proper expenditure of that money, then instead of entering the reimbursable charge against the books, we should appropriate the money and close the transaction. The amount of nonreimbursable appropriations from Government funds for 1929 was $12,223,820 and for 1930 they are $14,696,842.02. This is an increase of $2,473,022 in the expenditure of nonreimbursable funds, and this increase is chiefly devoted to health and education.

CONSERVATION OF HEALTH

The appropriation for such funds for conservation of health in 1929 was $1,489,500; for 1930 it is $2,699,600, or an increase of $1,210,100, and an increase of $366,600 above the Budget estimate; and those increases with reference to health come largely through the continued construction of hospitals for the care of Indians.

I will insert in my remarks a statement of the appropriations for health purposes in years past. Mr. FRENCH, of the committee, brought out this information, as I recall, that beginning in 1910 there was an appropriation of $10,000. So recent as that was the appropriation of money for the first time directly for the benefit of health among the Indians. I do not doubt that before that time considerable expenditures were made incidental to the work of administration and otherwise concealed in other items; but that was the first item exclusively for that purpose. In the past six or seven years our committee has followed carefully a policy of a somewhat rapid increase in that item. We have not thought it was desirable, and it was not possible suddenly in one year to build all the hospitals that one might think were needed. We did not think the best results would be accomplished in that way; but constant investigation has been made, and each year new institutions have been provided, and the total has increased each year, and of course the expenses for maintenance have been increased thereby as well. So the item has been growing up rapidly. The table since 1910 is as follows:

Statement of appropriations for health purposes and hospital facilities from 1910 to 1928

Year	Appropriation	Hospitals [1]	Capacity	Patients treated
1910	[2] $5,000 + [2] 12,000	[3]	[3]	[3]
1911	40,000	50	1,268	8,408
1912	60,000	[4] 53	1,256	9,515
1913	90,000	48	1,358	9,775
1914	200,000	[5] 51	1,432	11,590
1915	300,000	74	2,045	12,201
1916	300,000	81	2,283	15,666
1917	350,000	81	2,273	16,940
1918	350,000	87	2,511	17,440
1919	375,000	88	2,474	19,107
1920	350,000	85	2,190	16,954
1921	350,000	85	[3]	[3]
1922	370,000	73	2,411	[3]
1923	370,000	77	2,518	[3]
1924	370,000	80	2,475	[3]
1925	500,000	82	2,573	28,748
1926	750,000	87	2,750	30,606
1927	756,000	88	2,852	29,439
1928	948,000	89	3,069	[6] 34,100
1929	1,440,000	[7] 92	3,186	

[1] "Hospitals" includes Canton Asylum, tuberculosis sanatoria, sanatorium schools, school infirmaries, and other converted or improvised housing facilities where bed patients were quartered and given treatment.
[2] $5,000 for vaccinations and $12,000 for trachoma work.
[3] Data not available.
[4] Includes rooms in dormitories used for ill pupils.
[5] Does not include rooms in dormitories used for ill pupils.
[6] Figures incomplete.
[7] Hospitals in actual operation. Nine additional hospitals are under construction and in process of being made ready for operation.

This year there is a greater increase than in any year before, going from $1,489,500 in 1929 to $2,699,600 proposed in this bill.

Further, the committee have found that in other years the pressure for funds has been so acute and the effort to spread the money around so strenuous that sometimes an institution was planned and constructed which was not adequate to the needs it was to meet when it was constructed. For instance, I visited a reservation this past summer where they have a great deal of tuberculosis and a great deal of venereal disease. The tribe has large funds to its credit, and their funds were being used to build a new hospital, but I found that the money appropriated last year for the construction of that hospital was not sufficient to include an isolation ward where contagious diseases might be cared for properly, and that they would not have sufficient room for desirable tuberculosis wards. This bill carries a supplemental item for that.

In an endeavor to avoid that error in the future we have, as to each new hospital proposed in this bill, asked the head of the Indian Health Service, Doctor Guthrie, a very distinguished and capable man who is on loan to the Indian Service from the Public Health Service—we asked him to indicate to the committee whether the Budget item in each case of new construction was sufficient to build the kind of an institution that was needed at that point, and on his advice most of these Budget estimates for new hospitals have been increased.

The following will be of interest as demonstrating the definite advance that is being made in the two years, 1929 and 1930, in additional hospital facilities:

New construction authorized for 1929

Fort Defiance Sanatorium, 80 to 100 beds	$55,000
Soboba Hospital, 30 beds	30,000
Fort Berthold Hospital, 20 beds	20,000
Claremore Hospital, 34 beds	50,000
Total	155,000

New construction requested for 1930 in estimates

Colorado River Hospital, 30 beds and cottage	$40,000
Oraibi Sanatorium, 50 beds	60,000
Fort Belknap Hospital, 30 beds	35,000
Tongue River Hospital, 30 beds and connecting with water and sewer systems	45,000
Turtle Mountain Hospital, 30 to 35 beds	40,000
Pine Ridge Hospital, 40 or more beds	60,000
Total	280,000

Bed capacity of new hospitals authorized for 1929

	Beds
Fort Berthold	20
Claremore	34
Fort Bidwell	25
Soboba	30
Fort Defiance Sanatorium	80–100
Santa Fe School	60
San Carlos (Rice Station)	30
Total beds	279–299

NOTE.—Soboba Hospital is a replacement with same capacity; Santa Fe School Hospital will add 25 beds; and San Carlos Hospital will add 18 beds to present total. In other words, these new hospitals will provide a net increase of 202 to 222 beds.

Increases in bed capacity by enlargements authorized at existing hospitals for the fiscal year 1929

	Beds
Hoopa Valley Hospital	10–12
Winnebago Hospital	10–12
Sac and Fox Sanatorium	20
Total	40–44

The bed capacity at the end of the fiscal year 1928 was 3,069 beds, and at the end of 1929 will be 3,531 to 3,555 beds, a net increase of 462 to 486 beds. This increase is due to the opening of new hospitals since July 1, hospitals to be opened, new construction, and enlargements, as follows:

	Beds
Fort Apache, new hospital added	24
Western Navajo, new hospital added	25
Albuquerque School, new hospital added	25
Tohatchi Hospital	15
Chin Lee Hospital	15
Havasupai Hospital (infirmary)	6
Taos Hospital	12
Yakima Sanatorium	40
Kayenta Sanatorium (converted school plant)	50
Cheyenne and Arapaho Hospital (roofs of wings raised during reroofing operations)	28
New construction above noted	202–222
Enlargements above noted	40–44
Total beds to be added	482–506
Southern Pueblos, temporary trachoma hospital discontinued	20
Net increase in bed capacity	462–486

To the above are to be added the committee items:

	Beds
Cheyenne River and Standing Rock Sanatorium	50
Pawnee and Ponca Hospital	40
Total	90

Altogether making a net increase of at least 552 beds in the two years' program.

All of the above is in the form of gratuity appropriations from the Treasury for the benefit of the Indians. In addition, much health work is being done with tribal Indian funds where such funds are available. In 1928, $191,810 was expended, in 1929, $250,000 is estimated, and for 1930, $275,000 is proposed.

When we had finished the consideration of the Budget estimates we asked Doctor Guthrie to call to the attention of the committee the most urgent property needs of the health service among the Indians. We explained to him that we realized the full measure of his needs would run into a much larger sum than we could consider, but for him to suggest the items most needed that would come within a reasonable limit.

As the result of that two other hospitals were inserted in the bill—the Pawnee and Ponca, in Oklahoma, and the Cheyenne River and Standing Rock Sanatorium, in South Dakota. In addition, as the result of his appeal and response to that request, provision was made for several additional field nurses.

I am trying to emphasize that the matter of health among the Indians has been having careful consideration by the committees of Congress as well as by the department, and this bill before you is one that is very generous and is far-reaching in its provisions with reference to that subject.

EDUCATION

For education the expenditure from Government funds for 1929 was $7,317,000 and that proposed for 1930 is $7,994,000, which is an increase of $677,000 above the current year. It appears to be a decrease of $65,000 below the Budget, but that is caused by the transfer of $94,600 that was in the Budget for the further operation of the nonreservation boarding school at Rapid City, S. Dak., and which, in accordance with the approval of the department, is in this bill transferred to the health item, and is to be operated as a sanatorium school where children having tuberculosis may receive treatment and also some education at the same time. I may say that is only in harmony with the policy for some time to provide those sanatorium schools for Indian children.

To-day there are 81,620 Indian children between the ages of 6 and 18 years, 76,491 of whom are eligible for school attendance. During the fiscal year 1928, 9,777 Indian pupils were enrolled in nonreservation boarding schools, 10,584 were enrolled in reservation boarding schools, 672 in tribal boarding schools, 4,141 in Government day schools, 7,547 in mission boarding schools, 74 in mission day schools, and 34,163 enrolled in the public schools of the various States where Indian reservations are located. There are 19 nonreservation boarding schools, 7 tribal boarding schools, 49 reservation boarding schools, and 129 day schools, or a total of 204 schools maintained by the Government for the education of Indian pupils. In addition there are 81 mission, private, or State schools maintained for the benefit of the Indians.

THE AMERICAN GOVERNMENT AND THE INDIAN

I have studied this Indian problem to the best of my ability ever since I have had the responsibility as a member of this committee. It was with a feeling of great reluctance that I accepted the chairmanship of the Interior bill when that bill was first organized after the adoption of the Budget system. Our late chairman and splendid leader, who was the beloved friend of every member of the committee, Mr. Madden, asked me to take that chairmanship, but I was reluctant to do so, because I realized my lack of familiarity with the problems of the West. However, having accepted it in response to his urging, I felt it my duty to study the problems involved, and I have taken every opportunity that the busy life of a Congressman permits to come in contact with those problems in the West, and, of course, have been unhampered by personal considerations or political considerations that might have obtained if the problems affected my district in any great degree.

I have been impressed by this fact, which I want to emphasize to the House, because every American has a right to have the truth told to him about his Government. Anyone who gives an American distorted facts or misinformation which causes that American to have less of confidence in his Government and less of admiration for its institutions than the facts justify and warrant does a very sorry thing. I want to emphasize to you that notwithstanding in the public press day by day there are stories carried about the treatment of the Indians by the American Government, and notwithstanding the fact that frequently some magazine, desiring to appeal, apparently, to those who are affected most by that which attacks and to those who are more interested in that which tears down than they are in that which seeks to build up, prints these stories and statements about the terrible treatment of the American Indian by this Government, that, as a matter of fact, in all the history of the world there has never been a government in any country that has sought to do as much or has been as generous with any aboriginal race as America has with the American Indian. There is no question about it.

If you will in our hearings read the statement of Assistant Commissioner Meritt as to what has been done for the Pueblos of New Mexico in the last few years, you will find that I am not making any overstatement. Mr. Meritt made that statement to those Pueblos, and if it were not true it would have been readily challenged, and another statement which Mr. Meritt made a few weeks ago to the Navajos of Arizona and New Mexico. Much has been said about the wrongs done to those peoples by the white men and by this Government, but if you will read those statements you will find a listing of the generous acts of this Government toward those Indians, and there are many others that might be mentioned. A statement appears in the hearings showing the things that have been accomplished in the interest of the Indians in the last seven or eight years, and that is a record of which any American may be proud.

The Indian population at the present time is 355,901, and the total value of Indian property, including lands, timber, oil, gas,

coal, and other mineral deposits, funds on deposit in the Treasury, and individual holdings of livestock and other property, is approximately $1,648,075,274. The State of Oklahoma has the largest Indian population, which totals 119,335. Arizona, South Dakota, and New Mexico all have populations of more than 20,000 Indians. The following table shows the distribution of the Indian population of the United States.

Alabama	405
Arizona	46,901
Arkansas	106
California	18,912
Colorado	835
Connecticut	159
Delaware	2
District of Columbia	37
Florida	506
Georgia	125
Idaho	3,865
Illinois	194
Indiana	125
Iowa	397
Kansas	1,541
Kentucky	57
Louisiana	1,066
Maine	839
Maryland	32
Massachusetts	555
Michigan	7,607
Minnesota	15,310
Mississippi	1,496
Missouri	171
Montana	13,734
Nebraska	4,323
Nevada	4,920
New Hampshire	28
New Jersey	100
New Mexico	22,786
New York	4,419
North Carolina	12,309
North Dakota	10,390
Ohio	151
Oklahoma	119,335
Oregon	6,731
Pennsylvania	337
Rhode Island	110
South Carolina	304
South Dakota	23,124
Tennessee	56
Texas	2,109
Utah	1,574
Vermont	24
Virginia	824
Washington	13,573
West Virginia	7
Wisconsin	11,427
Wyoming	1,963

The average American is interested in the Indian. He looks on him as a romantic figure. It appeals to his imagination and he likes to stand as a champion of the rights of that figure. As a matter of fact, the Indian in person is not always the romantic figure he appears to be when you are told about him in the magazines, on the lecture platform, or read about him in fiction. He is very much like the white man. He has very generally the same impulses and the same traits as the white man. With a population of 350,000 living in 20 or more scattered States under all sorts of differing conditions, some having tremendously large revenues, much larger than is good for them, and some of them poverty stricken; some of them who were originally agriculturists and irrigationists before the white man came on this continent; skilled in agriculture, some of them who were hunters and warriors in the old days—with all these diversities in their surroundings, in their tastes, in their training, in their financial conditions and their resources naturally nothing can be said as a generality that is true of all of them. They differ, of course, with their differing conditions.

THE AGITATOR AND THE INDIAN

It is unfortunate that the enthusiasm of the average American for the Indian is so often played upon by the agitator and the selfish man who wants to build a job for himself or the man who is just constitutionally so opposed to his Government that he can only be happy when he is picturing that Government as selfish, inefficient, and, perhaps, corrupt.

The Indian problem has been brought to the front in the last few years through several channels. In this propaganda and publicity, that has served to bring the problem prominently to public attention, there has been prominent one John Collier and his principal organization, the Indian Defense Society, which I have mentioned heretofore in this Chamber and do not need to emphasize further. Perhaps it may not be out of the way to emphasize to you that that organization played its part in the recent political campaign. With no desire to touch upon partisan subjects but to emphasize the extremes to which those who are as irresponsible and malignant as are Collier and those he controls—and in that I am not speaking of the many well-meaning people who contribute to his organization, keep it afloat and give it an air of respectability, but I am speaking of Collier and those like him who live upon the organization and seek to destroy the work that is going on. For instance, a letter was sent to one of the presidential candidates which stated:

> That the governmental bureau to which we have intrusted our guardianship is ignorantly or willfully annihilating its 250,000 wards through starvation enforced by the waste and misapplication of their income, through the creation of centers for the spread of disease, and through the denial of the health service that might serve, in some measure, to counteract the effects of the other activities.

Such a statement is an absurdity, a tissue of unreality and misrepresentation; but when it goes to the good people of the country carrying the signature of a professor of one of the great eastern universities they do not realize that in the letter such a professor is only handing on to the country that which he himself evidently knows nothing about but for which he accepts the word of John Collier, and that accuracy is entirely foreign to his nature.

Furthermore, another statement that was sent out in the campaign and illustrates the character of propaganda that is used to poison the judgment of the country toward their own Government is this from the National Council of American Indians:

> According to an Indian's statement and from my own personal observations, the Indians are very poor and hungry. They have no voice in their affairs. They are neglected. Whether sick or well, whether young or old, most of them or nearly all of them live in bad houses, wearing rags, and with little or no food. Their complaints to Government officials go unheeded. Agents' offices are locked against the Indians most of the time.

And so forth, ad nauseam.

Another organization that spreads this propaganda but is not quite as smooth in covering all of its tracks is the Indian Board of Cooperation.

It will emphasize the extent to which not only are the well-meaning people of the East victimized and exploited by such organizations but the poor Indian himself is victimized and exploited by the very ones who claim to be the only virtuous friends that the Indian has.

For instance, in the last Congress there was passed a bill introduced by the gentleman from California, Mr. LEA, which he pressed here with a great deal of vigor and with final success.

The gentleman is on the floor and can correct me if I am in error in my statement that that bill became law in the last session of Congress, on the 18th day of May, 1928; and it became law because it had the approval of the Indian Office, it had the cordial and effective support of the gentleman from California, and there was a case back of it that commended it to Congress. But notwithstanding the fact that this bill became a law on the 18th day of May, 1928, and notwithstanding the fact that Frederick G. Collett, the executive representative, so called, of the Indian Board of Cooperation (Inc.)—notwithstanding he knew of it, on the 1st day of June, 1928, a circular letter was sent out to these Indians in California, these poverty-stricken and needy Indians, asking them to contribute money to this organization in order that they might secure the passage of a law that was already on the statute books.

These people parade themselves as the only friends of the Indians and are always condemning their Government.

Let me quote from this letter. I will put it all in the RECORD. I should say that it is signed, apparently, by J. W. Henderson, but following that is a small letter "c," as is customary by Mr. Collett when he signs the name of Mr. Henderson, the president of that organization. The letter says:

> Having received many inquiries from all parts of the State with regard to the present standing of the Court of Claims bill, it seems desirable to send out a letter of general information.

They claim to be in a position to tell what the present standing of that bill is. Further the letter says:

> You will see that no effort is being spared to gain the passage of the bill and you may reasonably hope it will become a law this year.

It had already become a law.

> We know that you realize the value of gaining this legislation—

And so forth.

> The work should not be delayed for lack of the comparatively small amount of money required for our operating expense. Every expense has been reduced to a minimum, but we are now considerably in arrears in our office rent and we must, of course, meet current expenses

The letter in full follows:

INDIAN BOARD OF COOPERATION (INC.),
San Francisco, Calif., June 1, 1928.

To auxiliary officers:

Having received many inquiries from all parts of the State with regard to the present standing of the Court of Claims bill it seems desirable to send out a letter of general information. We are addressing this letter to auxiliary officers and leaders, and would ask that you try to get your people together for a meeting at an early date so that you may give them the following report:

BILL PASSED BY HOUSE OF REPRESENTATIVES

The California Indians Court of Claims bill, known as H. R. 491, has passed the House of Representatives. Previous to its passage by the House, the bill had, of course, been favorably reported on by the House Committee on Indian Affairs. We quote herewith from statements made by Congressman CLARENCE F. LEA and Congressman ENGLEBRIGHT, sponsoring our bill, during the hearings before the House Committee on Indian Affairs:

CONGRESSMAN LEA

There has been an unquestionable failure to do what the simplest demands of humanity require for those Indians in California. The * * * sum probable under this bill can be applied to their essential needs. * * * There is every reason to believe that with such aid as this bill will make possible * * * the Indian problem could be solved.

CONGRESSMAN ENGLEBRIGHT

* * * It is my belief that this matter should not be postponed further; that justice should be given to these unfortunate people and they should be compensated for their lands so as to place them in a position to take care of themselves and their descendants.

In the report of the hearings referred to above the provisions of the bill are set forth in detail, together with a statement of such offsets as will be recognized because of previous expenditures made for California Indians by the Federal Government. In our opinion, the bill has been very well framed. Every precaution has been taken to safeguard the interests of California Indians and at the same time to anticipate congressional policies on legislation involving Government expenditures. We consider the bill in the best shape that it has yet been and have every hope that this year will see its enactment into law.

The board is deeply appreciative of the splendid work which Congressman LEA has done for the bill. His message to the Committee on Indian Affairs shows his understanding of the problems of California Indians and his sincere interest in gaining relief for them.

The excellent work done in past years through the efforts of our executive representative, Mr. F. G. Collett, was of inestimable service in furthering the interests of the Indians this session.

You will see that no effort is being spared to gain the passage of the bill and that you may reasonably hope that it will become a law this year. We know that you realize the value of gaining this legislation; you should also realize that the completest cooperation of your people is necessary if we are to achieve this result. When you give them this message explain to them that we must concentrate all our efforts on the passage of this bill by the present Congress. The work should not be delayed for lack of the comparatively small amount of money required for our operating expense. Every expense has been reduced to a minimum, but we are now considerably in arrears on our office rent and we must, of course, meet current expenses.

We know that you will do your best to give your people a clear understanding of the present situation. Will you also tell them that the board stands ready at all times to answer any questions they may have and to give them the fullest information about the work, both as to the progress we are making toward gaining a settlement for them and as to the board's program and its expenditures of money received?

Very truly yours, INDIAN BOARD OF COOPERATION,
By J. W. HENDERSON, *President.*

I have also a letter from an Indian of Usona, Mariposa County, Calif., who wrote in to know about this organization. He states:

These people are collecting money from the Indians on the pretext of bringing a suit to recover damages—

And so forth.

This letter was written after the bill had become a law. You will see that some Indians are getting pretty well up-to-date, because he states:

I wondered if it was the bunk and if they were afraid to keep on using the mail.

[Laughter.]

And he was entirely accurate, although "bunk" is a much politer term than ought to be used.

Mr. LEA. Will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. LEA. The gentleman has stated the facts in reference to the matter. As soon as I heard of this letter I protested against its publication and insisted that methods be pursued to inform these Indians that they had been misinformed through the letter, and I was advised subsequently that an effort had been made to overcome the misinformation that had been given by the letter, which was entirely unjustified.

Mr. CRAMTON. The man, Mr. Collett, was under indictment for using the mails to defraud. I have a letter here in which he says that that is not necessarily evidence of guilt; that many unconscionable people are likely to indict an innocent fellow like himself. I have not information as to whether the indictment is still pending or whether it has been dismissed. I sought to get that information to-day, but did not succeed, but understand the indictment is still pending. A new one might well have followed the above vicious attempt to get money from the Indians to secure passage of a bill already law.

Mr. LEAVITT. Will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. LEAVITT. I think it should be in the RECORD at this point that when the gentleman from California [Mr. LEA] had his bill before the Committee on Indian Affairs Mr. Collett and his organization had no influence whatever in the hearings, took no part in the passage of the bill, and it was passed entirely on its merits through the committee through the representations made of the facts by the gentleman from California [Mr. LEA] and in the same way was passed by the House.

Mr. LEA. In that connection I might state that the Indian Board of Cooperation was not represented at the hearings on this bill at the last session of Congress.

Mr. CRAMTON. But they were so busy at home raising money to put the bill through that they did not have time to come here.

Mr. LEA. They were not present at the hearings at the last Congress.

Mr. RANKIN. Will the gentleman yield?

Mr. CRAMTON. I will yield.

Mr. RANKIN. Is it not a fact that these Indians as well as the American people are being exploited by representatives of the Indian Bureau to a large extent?

Mr. CRAMTON. I would have to let that be the statement of the gentleman from Mississippi. I have no information of that kind, and my belief is quite to the contrary. Our committee has made every possible effort to check up and develop anything of that kind.

Mr. RANKIN. I will say that I have evidence, which has been put in the record, of such attempts of exploitation.

Mr. CRAMTON. Well, I would be glad if the gentleman would do that in his own time.

Mr. RANKIN. Will the gentleman permit another question with reference to the General Land Office?

Mr. CRAMTON. I would prefer to have that taken up when I reach that matter, if the gentleman will remind me when I reach that point in the bill.

These organizations are undesirable. But we have many worthy people in their membership, but those who get the salary and carry on the work I fear are not of this character.

There has been the past few months an investigation of the Indian affairs going on, and I came in contact with the work of that while I was in the West in August or September. I found in many cases people who did not have much to commend their responsibility, sometimes people with more responsibility, but in some cases representatives who did not have much to commend them, who were bearing credentials of a governmental character going upon the Indian reservation, spending three or four weeks there, without any contact with the superintendent of the agency, consorting with everyone who had a grievance, accumulating all sorts of complaints, trivial or otherwise, and then that sort of stuff being spread out nationally in committee hearings, gets in to the public press and goes uncontradicted because the hearing is only on one side, and is sensationally carried by the newspapers and magazines when really the truth in many cases is not developed. I know from personal observation that such doings have been destructive of the efforts of the Government in behalf of the Indians in many cases.

SOME VERY WORTHY ORGANIZATIONS

There is another kind of an organization—I want it understood that there are different kinds of organizations doing this work—there are other organizations that sincerely want to do something to help the Indians. Sometimes their enthusiasm or haste to come to a conclusion before they develop the facts leads them to erroneous conclusions, and puts them in a position that gives more credit to their enthusiasm and zeal than to their judgment.

COST OF FEEDING CHILDREN IN BOARDING SCHOOLS

I am frank to say that I would put in this other class the Indian Rights Association, which is a historic association, and its membership and officers are all of high character. They are about to hold a conference, and I have here before me a letter which they put out addressed to the Budget in connection with the pending bill in which they say, in speaking of the undesirable character of the care of the Indians by the Government:

For instance, at present, the Indian Bureau is expected to feed the thirty thousand and odd Indian children in Government boarding schools on an average allowance of 11 cents a day. Manifestly that can not be done, and if continued it will result in undermining the health of the children and become a national scandal.

That organization is not the author of that statement, though it ought to know better because of its own long contact with the field. They have accepted the statement put out by some one that has gone all over the Nation through the newspapers and magazines. The statement is not true that the average per diem food cost has been 11 cents. In the hearings, on page 662, you will see that is developed, and it is demonstrated in detail, that eliminating the salary and fuel, and so forth, and these are material items in the food cost, the average of food supplies alone is 20.4 cents and not 11 cents. The Indian Bureau statement shows:

Cost of food supplies purchased	$362,892.51
Transportation of purchased supplies	33,094.56
Value of supplies produced and consumed	194,006.00
Total value of food supplies	589,993.07
Cost of fuel used for cooking, including transportation	31,177.65
Salaries of cooks and dining-room matrons	85,800.00
Total expense of feeding pupils	706,970.72
Average daily attendance of pupils at the 28 schools	10,680
Pupil days, based upon 270-day school year	2,881,600
Average cost per pupil per day (cents)	24.7
Average cost per day of food supplies alone (cents)	20.4

I do not feel justified in loading up the RECORD with the full itemized statement, but you will find it all in the hearings at about pages 661 and 662. That statement in detail shows that the amount per pupil per day is 24.7 cents.

There is talk also about Indian children starving in these schools. I have visited many of those schools, and I have always given particular attention to their menu and to the care of the children. I have never seen any evidence of the children suffering from lack of food or from an undesirable character of food. Quite the contrary. It is true that oftentimes children will be seen in those schools who give evidence of lack of proper nutrition, but you must remember where these children have come from, the primitive sort of homes that they have come from to the schools. Give them a while in the school, and that look of malnutrition passes away, and they are very much different looking children after a time.

SURVEY BY INSTITUTE FOR GOVERNMENTAL RESEARCH

I say that statement came from a reputable source. The publication that has probably had the most influence and that attracts the most attention is the report of the Institute for Governmental Research, a report made after an investigation upon the request of former Secretary of the Interior, Doctor Work. It was made by the Governmental Research Bureau, financed by private funds. A very extensive investigation was carried on, and the report is a sizeable volume. It has in it much that is helpful, and I think the general effect of the report will be helpful in challenging public attention. It is not always reliable, as witness the 11-cent story, which it originated. There are also these things to be considered in connection with the report in order to get a fair picture of the situation. As to anything that the Indian Service needs and as to anything that the Indians need to bring them up to a desirable plane, I think it must be in that report. I presume nothing has been omitted there that the Indians or that the bureau needs in order to serve them. To get a fair picture of the situation there should be considered in connection with it some record of what has been done for the Indians and what progress the Indian has made, what money has been expended by the Government in his behalf.

Also you should consider this. When you read of the great prevalence of tuberculosis or of trachoma and other diseases among them, it must be remembered that the Indian himself must bear a share of the responsibility for those conditions. Many years ago, and not long ago, many Indian tribes did not take readily to treatment by the white man's physician. To-day there are some places where they still rate the advice of their medicine man much higher than that of the skilled physician. That has to be overcome.

THE PRESENT HAS MUCH OF HOPE

In my judgment within the last few years a great change has come over the situation. There is much more of hopefulness in the situation as to the Indians than there ever has been before, and I look for the next 20 years to do more for the Indian than you can dream of, in the line of health, because the Indians are more and more making use of these facilities which we are providing, constantly in greater measure. Also, in the matter of education. In the old days the Indian boy when he went home from the Indian school woke up in the morning and put on the blanket, because his father and mother did not approve of his wearing the American clothes, and they stole the clothing and burned it and he had nothing but the blanket to put on; but that boy having grown up is more sympathetic with his boy who comes home from school now, and there are more other boys in the neighborhood who have been to school, and so the new education is taking on more and more among them. I give this to you not as my judgment, but as the judgment of those most in contact with the Indian, in whom I have great confidence.

Mr. COLTON. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. COLTON. Is it not also a fact that much of this so-called medical neglect of children is due to the parents themselves, who have withheld information from the proper authorities when their children were sick?

Mr. CRAMTON. Absolutely. I have mentioned health and also education. There is a third factor and that is with reference to their industrial condition. The Indians are showing a rapid increase of desire to improve their industrial situation. Time does not permit us to go into those things as much as I should like, but I believe that the Government, with reasonable effectiveness, not without mistakes, not without occasional wrongdoing on the part of a representative of the Government, not without the mistakes of judgment, but with reasonable effectiveness and with a wholly commendable generosity, is doing more for this primitive people than any other nation in the world ever did for its people.

THE BUDGET AND THE INDIAN

When it is suggested that not enough money is asked for by the Indian Service and not enough is appropriated by Congress, it is well to remember the situation in which the Indian Service finds itself and the situation confronting the Federal Government with such a multitude of demands upon the Treasury. The following extract from our hearings, sets forth this situation:

Mr. BURKE. We have been assailed repeatedly—and when I say "we" I mean the Indian Bureau—with not asking for sufficient money to meet the needs of the Indian Service. I want to say to this committee that the estimates as transmitted do not represent the amounts that we originally ask for; that our estimates, both last year and this year, have been very materially reduced by the Bureau of the Budget, and therefore, when they were presented here, they were not in accordance with what we asked for. I say this without any criticism of the action of the Budget, because it has its responsibility and is governed by the funds that are available for the administration of the different departments of the Government. Recognizing that situation, we accept the estimates without protest. I simply wanted to be on record as saying that the statement that we do not ask sufficient is not true.

Mr. CRAMTON. Mr. Commissioner, in connection with that, for the information of anyone who reads this statement, I think that this further section of the picture ought to appear.

When the estimates come before this committee the Indian Bureau, under the general policy of the President, is forbidden to ask for anything that has not been approved by the Budget. This committee, however, has made its own personal investigations, and it became satisfied a number of years ago that the medical service, the educational facilities, and the items for industrial assistance should be expanded more rapidly than were being expanded. So, whenever this committee has felt it desirable to do so, we have asked the Indian Bureau to give us information as to needs not fully covered by the Budget. That request being made by this committee, the bureau has a perfect right to give the information, and always has responded very fully. So, on numerous occasions, with the full indorsement of the Indian Bureau, this committee has recommended appropriations, particularly for those purposes, in excess of what was recommended by the Budget.—

This committee, however, has responsibilities much wider than merely the Indian question. We have to do with all the problems of the Interior Department, and we are members of the General Committee on Appropriations, which has to do with the entire conduct of the Government of the United States in its financial aspects. That committee, in its enlarged membership and consolidated authority, following the adoption of the Budget, adopted a policy that was absolutely essential to the successful operation of the Budget system when it adopted the rule that while we would decrease items of the Budget wherever we felt it safe

to do so, and while we might also increase items here and there, as seemed to us desirable, we would not report a bill with a total higher than the total of that bill in the Budget.

The successful operation of the Budget system could only be secured by the cooperation of the executive and legislative branches, and that cooperation on the part of Congress was tied up with that rule that we would not, in the period of retrenchment, exceed the Budget totals. If we started in exceeding them, it was hard to tell where the end would be.

For the past eight years the welfare of the country has been pretty well tied up with the success of the Budget system, because a reduction of taxation by the Federal Government was imperative to our industrial recovery. That reduction of taxation could only come through the success of the Budget policy.

Therefore this committee is not always able to let its enthusiasm or its good judgment influence it to increase items, even where we think such increases may be justified. As a matter of fact, I am satisfied that the bill before us, in the items affecting the Indian Service and other branches of the Interior Department could very easily be increased $5,000,000 or $10,000,000 for purposes that would seem entirely justifiable to this committee. There are instances where the money would be used to excellent advantage. But if the same rule were followed as to all the branches of the Government service, the increase in the appropriations for this year could easily be $1,000,000,000. It is not the belief of the Appropriations Committee or the administration that the country wants the expenditures of the Government increased $1,000,000,000 with the consequent necessity of increased Federal taxation.

Therefore, we, in handling this bill, can not just look at the needs of one service alone, or of one branch of that service alone. We have to keep in mind the limitations as to the total, just as a man who has a salary of $50 a week must plan his budget on a basis of not more than $50 a week. And so, even though, as we go through this bill, there are certain items that we might like to see increased perhaps more than they will be increased, we must keep within certain limitations.

But it is only fair to the Government of the United States and its general treatment of the Indians to say that in my own judgment—and I think probably the judgment of this committee—while not as much money is given as you could use to good advantage in the Indian Service, there are no such serious results following from the failure to get those increases as the propagandists and the enthusiastists are apt to picture. Certainly no children are starving from the laxity of the Government in caring for them.

Mr. KNUTSON. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Yes.

REOPENING OF WHITE EARTH SCHOOL FOR CHIPPEWAS

Mr. KNUTSON. I was detained in a committee meeting this afternoon and was not in the Chamber when the gentleman opened his statement. Has the gentleman explained the necessity for reopening the school at White Earth, Minn., and what I consider a very large appropriation taken out of the tribal funds for that purpose?

Mr. CRAMTON. No; and I shall answer that question and in connection with it refer to a matter of policy that is actuating the committee with reference to the use of tribal funds. First, as to the White Earth School. That was a school built with Chippewa funds, a boarding school, with a number of buildings, as I recall, large enough to accommodate 200 or 250 pupils. I visited the school this summer. It was closed about 1918 or 1919, and closed very carelessly.

I do not criticize the policy that closed the schools as much as I do the carelessness shown in its closing, so far as the protection of property was concerned. They simply went out and left it and did not even remove the water from the plumbing, with the result that the water froze in the wintertime, and when it is reopened new plumbing must be placed all through it. It is, however, a collection of excellent brick buildings, placed on granite foundations, with high ceilings in the rooms, hardwood floors, a well-equipped group of buildings, with an excellent dairy farm and good dairy barns adjacent, with a hospital right at hand. The Indian Service, following a visit of Mr. Meritt to the institution, recommended its opening, and we have been glad to second that suggestion.

The CHAIRMAN. The gentleman from Michigan has consumed one hour.

Mr. CRAMTON. Mr. Chairman, I shall have to ask unanimous consent to be recognized for 20 minutes additional.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to proceed for 20 minutes additional. Is there objection?

There was no objection.

Mr. CRAMTON. Mr. Chairman, the Chippewa Indians are sending many of their children to nonreservation schools, schools off the reservations, to the Wahpeton school in North Dakota, and to others.

Some of them could just as well be taken care of in the reservation schools. Some of the Chippewa children, Chippewa orphans, and illegitimate children are not properly cared for in the reservation schools, and of course many of them go to the public schools. Now, there may be some division of sentiment as to this reopening on the part of the Chippewas. I think it is very easy to find a division of sentiment there on most any question, and it is probably natural it should be on this question, but I believe those who are away from the reservation and who have no children to send there would not be as interested as others, and the correspondence which appears in the hearings seems to be good evidence of the feeling of a great many of them. Clearly those removed from the locality, not having to do with the institutions for the benefit of the Indians and those who do have to do with it have different views. The money carried in the bill—$40,000—is for repair and equipment and $70,000 for the maintenance of the boarding school.

Mr. KNUTSON. The thing I wanted to bring out is we will assume there are 500 children——

Mr. CRAMTON. There will not be that many in this institution. It is my recollection there are about 240, but I am not sure.

Mr. KNUTSON. That would make nearly $300 per capita.

Mr. CRAMTON. I am speaking without definite recollection.

Mr. KNUTSON. Does the gentleman think the children could be taken care of in another way at less expense than sending them to such a school?

Mr. CRAMTON. It has not been suggested as yet; I do not know.

Mr. KNUTSON. I think the gentleman's figures are probably correct. Has it been the gentleman's observation these children are developed much more rapidly if they are placed in white schools along with white children?

Mr. CRAMTON. The particular item can be taken up under the 5-minute rule, and I do not want to dwell too long on this item. It touches also a question of policy.

The committee agrees entirely with the department that where it is possible we should put Indian children in the public schools with white children. But when the condition is such that it does not lend itself to that, something else has to be done. Sometimes it is by having a day school exclusively for Indians in that vicinity and sometimes by having a boarding school on the reservation, and sometimes the Indians have homes not accessible to a school, the children must be sent away to some Government reservation school. But the best place when the conditions permit is a day school, public school, where they mix with the white children.

PROPER EXPENDITURE OF INDIAN MONEYS

On the question of policy I might mention this: Where the Indians have accumulated a good deal of money from leases, from oil, and so forth, there is a problem of what to do with that money. This man, Collett, in his letter to the Indians in California has advised these people that while the bill passed by the gentleman from California [Mr. LEA], which provided that the judgment acquired under that bill should not be used in per capita payments but used in health and educational activities for the benefit of the Indians and Indian children, does not mean anything. He said in a circular of July 25, 1928, signed by Collett:

> Section 6 of the bill was amended by the congressional committees to provide how the money, when won, should be spent, and to provide that the Indians shall not receive per capita payment. Although these amendments seem to bar the Indians from sharing, and sharing alike, in any amount that shall be won, it does not do so. By the time the court shall decide how much is due the Indian, there will be many changes among the Members of Congress. A new Secretary of the Interior has gone into office since this bill was passed. The time to work for a per capita payment is not now but after the court has made its decision. Then Congress will have to make an appropriation for the amount that the court has found due. How this money will be spent and to whom paid is a decision which will be made by Congress after the court's decision.
>
> The Indians, through their efforts, should raise the money needed for attorney fees and for their general organization work. Please call a meeting for your auxiliary members for August 4 or 5, or as soon thereafter as possible, and read this bill and letter to them. Your auxiliary leaders should begin at once to collect membership dues. Expense money is greatly needed.

Collett, in July, asks money from these poor Indians for attorney fees, impliedly to prosecute their claims before the Court of Claims, although he knew that May 18 the jurisdictional bill became law and provided that the attorney general of California should handle the case.

He says after they get judgment they will get the per capita payment all right. The way for the agitator to make a friend of the Indians is to tell the Indians they are going to get immediate possession of their money and it will be distributed among them. If it is done, in two weeks they will have dissipated it and after recovering from his blow-out the Indian is back where he was. In regard to these Indians we are responsible for the proper expenditure of their money, and it is all foolishness to say we must expend it in accordance with their mood or whim.

Mr. LEA. Will the gentleman yield?

Mr. CRAMTON. I will.

Mr. LEA. I would like to place myself on record as agreeing with the gentleman with reference to the question of per capita payments to Indians in California. I think it is a waste of money. The money should be spent in a proper manner for their development instead of paying it out cash and having the Indians waste it.

Mr. CRAMTON. That is our responsibility, to try to figure out how best it can be used for their benefit, to their best advantage. It does not do them any good to let them waste it through per capita payments any more than it does to pile it up in the Treasury to their credit. It is desirable for us to study how to utilize that money for the best interests of the Indians in the years to come.

In one item in the bill we have reflected that view when we have given $869,000 from their funds for use in industrial assistance, the item reading—

Industrial assistance: For the construction of homes for individual members of the tribes; the purchase for sale to them of seed, animals, machinery, tools, implements, building material, and other equipment and supplies; and for advances to old, disabled, or indigent Indians for their support, payable from tribal funds on deposit in the Treasury, reimbursable, to be expended in the discretion of the Secretary of the Interior, and to enable Indians to become self-supporting, as follows: Colorado River, Arizona, $25,000; Fort Apache, Arizona, $50,000; Southern Ute, Colorado, $50,000; Ute Mountain, Colorado, $50,000; Fort Hall, Idaho, $50,000; Consolidated Chippewa, Minnesota, $50,000; Red Lake, Minnesota, $50,000; Flathead, Montana, $50,000; Fort Peck, Montana, $50,000; Pyramid Lake, Nevada, $19,479.60; Jicarilla, New Mexico, $50,000; Mescalero, New Mexico, $25,000; Klamath, Oregon, $50,000; Warm Springs, Oregon, $25,000; Cheyenne River, South Dakota, $50,000; Pine Ridge, South Dakota, $50,000; Uintah, Utah, $50,000; Colville, Washington, $25,000; Menominee, Wisconsin, $50,000; Shoshone, Wyoming, $50,000; in all, $869,479.60, to be immediately available: *Provided*, That the expenditures for the purposes above set forth shall be under conditions to be prescribed by the Secretary of the Interior for repayment to the United States on or before June 30, 1935, except in the case of loans on irrigable lands for permanent improvement of said lands, in which the period for repayment may run for not exceeding 20 years, in the discretion of the Secretary of the Interior.

We have for a long time made provision for advances from Government funds to individuals for the purchase of stock, tools, seed, and so forth, and they have made a splendid repayment. Of $3,632,000 advanced, there has been repaid $3,184,890. I do not know of any white outfit in this country that has a better record for repaying their loans to the Government than those Indians. This year we have extended that policy somewhat to make such advances from tribal funds when available to be advanced by the tribe to the individual Indians; and then, when it has done its work, to repay it to the tribe.

Mr. KNUTSON. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Certainly.

Mr. KNUTSON. This bill, I see, carries $15,000 out of the Chippewa tribal funds for indigent Indians. In a conference had with the Commissioner and Assistant Commissioner the other day they expressed the opinion that they could use $30,000 to good advantage. There are a number of indigent Indians up there, and it is my understanding that the per capita payment is a thing of the past. That is up to the gentleman's committee.

Mr. CRAMTON. I would not say that. We are opposed to per capita payments and have left out one item which had a per capita provision.

Mr. KNUTSON. If that is to be the future policy, to do away with the per capita payments, it seems to me we should make greater provision for the care of the Indians. This bill carries, as I say, only $15,000 for the Chippewa. When that item is reached I am going to assume the responsibility of moving to make that $30,000. Of course, the money may not all be expended.

Mr. CRAMTON. I am glad the gentleman mentioned that. I have visited the Menominee Indians recently. Some of the chief men are thoughtful men and they have urged that such a thing be done. Under the policy of not dividing up their funds, when these men are old they will have no use of that fund, and so these Indians said that those old people are entitled to have some of that money—not as a charity, but as a sort of advance on their undivided share. The bill does carry an increase for that purpose, the money to be distributed not as a ration but as a sort of a pension to the indigent Indians who can use it to advantage.

Mr. WILLIAMSON. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Certainly.

Mr. WILLIAMSON. The gentleman said a moment ago that something like 85 per cent of these funds loaned to American Indians had been repaid. Have those repayments been made from their earnings in industry and farm operations or from individual funds credited to the Indians?

Mr. CRAMTON. My impression would be that very generally it was the result of their investments. The general idea brought out in our committee was that there had been a great increase in the flocks and herds in recent years and that they have made a notable advance.

SURVEYS OF PUBLIC LANDS

Mr. RANKIN. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. RANKIN. I notice one item as to public lands. The appropriation for 1929 for surveying public lands was $750,000, and the estimate for 1930 is $780,000, while the amount recommended in the bill is $762,500. It seems to me that it is an unusual amount for just surveying public lands belonging to the United States in comparison with other items.

Mr. CRAMTON. I am sure the gentleman from Mississippi, if he will consult the hearings, will find a very full exposition of just what work is carried on under that and of the use that will be made of the money in years to come.

Mr. RANKIN. I have not had a chance to read the hearings, which I understand were largely taken during vacation.

Mr. CRAMTON. I think the hearings as to those items are as full as could be expected in any hearings, and I am sure the gentleman will be satisfied if he will consult them.

Mr. RANKIN. Here we are asked to appropriate three-quarters of a million dollars for the survey of public lands. Now, the salaries of the General Land Office amount of $675,000, and the salaries in the solicitor's office amount to $116,500, while the contingent expenses are $118,000, and printing and binding $256,500.

Mr. CRAMTON. I would rather the gentleman would just ask a question than make a speech.

Mr. RANKIN. Yes; and if the gentleman is going to give us information on this subject, I would like to get the information that is desired now.

Mr. CRAMTON. If the gentleman will ask me any specific question, I shall be glad to answer. In the progress of the bill under the 5-minute rule I shall be glad to answer any questions I can.

Mr. RANKIN. I was merely going to ask the gentleman as to these figures that I have quoted here. Those figures amount to something like $850,000 for the General Land Office, and aside from that it seems that we expend $750,000 for the survey of public lands, and the question is what all that money goes for?

Mr. CRAMTON. That is work in the field, which involves considerable expense. There are thousands and thousands of acres where it is demanded that we furnish surveys.

I am sorry I can not give the gentleman out of my head the exact figures as to how many acres were surveyed during the current year or how many remain to be surveyed, but it is a very large amount, and under the 5-minute rule I will have the figures at hand and can give the information.

Mr. FRENCH. If the gentleman will permit, this item ought to be considered more definitely under the 5-minute rule, but in the hearings, on page 99, it appears from a statement made by Governor Spry, Commissioner of the General Land Office, that—

The General Land Office has on hand approved requests for surveys and resurveys covering 739 townships (17,026,560 acres), which will cost approximately $1,478,000.

Then that is divided up by States, and we are carrying here a rather sizable item because the demand is large.

Mr. RANKIN. Let me ask the gentleman from Idaho if he does not think that is about as much as this land is worth?

Mr. CRAMTON. Let me say this: I know that no bureau in the Government has made a more strenuous effort than has been made by Governor Spry in the Land Office to cut down the expenses of administration, and I do not know of any bureau that has been more successful in doing it. I can not say offhand, but I think the overhead expense of that office has been decreased at least 20 per cent, and possibly more, in the last three or four years.

Mr. RANKIN. Of course, the gentleman understands this is not overhead expense.

Mr. CRAMTON. I was speaking of the other items. Of course, this is constructive work in the field. It used to be done under contract and now it is done by the Government itself. When it was done under contract it was done in such a slovenly fashion that now much of it has to be done over again, and I have never had any suggestion of any undue cost in the work of surveying, and I am sure any of these gentlemen from the West in touch with the public-land situation will agree it is a necessity that those lands be surveyed if we are to proceed with any development through mineral leases or otherwise.

Mr. COLTON. Will the gentleman yield for a statement?

Mr. CRAMTON. Yes.

Mr. COLTON. There can be no revenue derived from our public lands until they are surveyed, which means that if the work is to go forward at all this item has to be taken care of.

Mr. CRAMTON. It must be taken care of.

Mr. LEAVITT. I would like to add a brief observation along that line, that until these lands are surveyed they can not pass into private ownership, under the homestead or mineral laws, or in any other way, and can not be placed on the tax rolls of the western country until they are surveyed. So this work is greatly in the interest of the development of that country.

Mr. CRAMTON. I will be glad in that connection to insert a statement showing the revenue the Treasury is receiving from the public lands. I do not dare trust my recollection to give it offhand.

Mr. RANKIN. May I ask the gentleman from Michigan another question, and I will say to him that I shall be glad to have all possible information on this subject because the information given by the two gentlemen is hardly full enough. I see on page 33 of the report an item for the Alaskan Railroad, $1,300,000. I want to know if that is the excess of the expenses of running the Alaskan Railroad over the revenues derived from it?

Mr. CRAMTON. That is the figure for the current year, as I recall, $1,300,000, and for the next year the amount is $1,200,000.

Mr. RANKIN. Yes.

Mr. CRAMTON. The amount carried for 1929 was $1,300,000 and for 1930 the amount carried is $1,200,000. That is the estimated operating deficit. That is a deficit which has been reduced gradually and still being reduced. The pending bill proposes a reduction of $100,000 for next year as compared with this year in the operating deficit.

Under permission given to extend my remarks, I give the following comparison of annual expenditures of the General Land Office:

Annual expenditures for conduct of business of General Land Office, office and field, fiscal years 1922 to 1928, inclusive

Fiscal year ending June 30—	Total expenditures, office and field
1922	$3,200,168.86
1923	2,985,715.95
1924	2,936,238.29
1925	2,909,095.35
1926	2,370,170.19
1927	2,284,020.33
1928	2,187,042.72

In 1928 there were 3,744,690 acres surveyed and 1,470,900 acres resurveyed.

As to this work, Governor Spry, Commissioner of the General Land Office, said in our hearings:

The cadastral survey of the General Land Office is a constituent factor in the material development of the public domain. Under it agricultural settlement, and private enterprise founded on the natural resources, enjoy not only the benefits of the orderly processes of acquisition and lease but the practical advantages of systematic location under "Physical boundaries on the ground."

Survey expansion and restoration are not administratively optional but are regulated largely, both as to location and extent, by congressional authorization and direction to meet the legitimate demands of settlers and claimants, the States, land-grant railroads, and of mineral development, timber use and protection, stock raising, and other interests. They are also undertaken to further the operation of the mineral leasing act approved February 25, 1920, to promote the mining of coal, phosphate, oil, oil shale, gas, and sodium, and to serve as a contributory factor in the consummation of certain types of field projects executed in cooperation with other Federal agencies.

The General Land Office has on hand approved requests for surveys and resurveys covering 739 townships (17,026,560 acres), which will cost approximately $1,478,000.

* * * * * * *

All of these surveys and resurveys can not, of course, be completed during the next or the following fiscal year, but the figures are given for the purpose of showing that the public lands, including those lands within the exterior boundaries of national forests, are being surveyed in response to demands for such service.

* * * * * * *

The wider uses made of the public lands to-day through settlement, by private enterprise under the mineral leasing act, and by the Government in scientific investigation and research work, call for cadastral surveys to meet the requirements of title, lease, location, and administration.

Original surveys and resurveys under the rectangular system were executed in 22 States and Alaska under 257 groups, 109 of which, in 20 States, were of resurveys. So much of this work as may still be gauged on a mileage basis aggregated 19,317 linear miles, surveyed at an average cost of $20.87 per mile.

Miscellaneous surveys included 89 field investigations, largely of erroneous and fictitious survey conditions, in 16 States; investigation of the Cimarron base line, Oklahoma; the location of section boundaries for the State Highway Commission of Montana; and corrective surveys of faulty older surveys in Montana and New Mexico. Surveys to determine riparian conditions resulting from accretions and avulsions, to define swamp and overflow lands, and to return lands erroneously omitted at the time of the original survey, were made in New Mexico, Oregon, Louisiana, Wisconsin, Minnesota, and Arkansas. Also under this head surveys related to but not essentially a part of the rectangular system include 57 islands in Alaska, California, Idaho, Wyoming, Louisiana, Illinois, Mississippi, Wisconsin, Minnesota, and Florida; 7 town sites in Alaska including forest eliminations from the towns of Wrangell, Ketchikan, Cordova, and Juneau, as well as 16 lighthouse reservations, 16 isolated homesteads, 2 cemetery sites, and the Fort Liscum Military Reservation. This diversified class also embraces 14 mineral segregation surveys; special tract surveys in New Mexico, Wyoming, and Florida; field investigations along the east boundary of Rancho Santa Ana y Quien Sabez, Calif.; and surveys of the Ortiz Mine grant and Mora grant, New Mexico; Flag Island Military Reservation, Gulf of Mexico; and of St. Andrews Sound Military Reservation and Oyster Key, Fla. A gravel pit for the Santa Fe Railroad was surveyed, a town lot in Pensacola, Fla., was identified, and the position of Antelope Springs, Ariz., determined.

Original surveys of lands deemed valuable for oil were continued throughout the year in eastern and southeastern Utah, and initiated during June in western Wyoming, while the resurveys of oil-shale areas in western Colorado were steadily carried forward with a view to completing all authorized projects of this character at an early date.

Surveys and resurveys for and in cooperation with other governmental agencies are steadily increasing in volume and broadening in scope. Upon application by the Forest Service surveys were executed in all Western States and in Alaska, Florida, and Michigan. For the National Park Service surveys in and of a part of the boundaries of the Glacier National Park, Mont., and resurveys in the Rocky Mountain National Park, Colo., were continued, while the survey of boundaries of the Grand Canyon National Park, Ariz., was initiated. Surveys to identify coal-leasing units in Utah and resurveys for oil-leasing units along the east boundary of the Navajo Treaty Reservation, N. Mex., were made for the Bureau of Mines. Field investigations for the Federal Power Commission were carried on in California, and the rectangular net in the Great Salt Lake Basin, Utah, was extended in cooperation with the Geological Survey.

Surveys on Indian reservations were made under various appropriations. In Montana practically the entire field corps of that district was engaged during the latter part of the year on surveys on the Northern Cheyenne Reservation, payable under special act. In Arizona investigations in 14 townships covered by the San Carlos irrigation project, which includes the Coolidge Dam, were paid for from the general appropriations, while the subsequent resurvey of these townships was executed under both Indian and regular appropriations, the division of cost being made on a basis of 68 per cent and 32 per cent, respectively. Surveys were also completed in Arizona of the boundaries of the Theodore Roosevelt Indian School and the Mojave Reservation. Other surveys on Indian lands include subdivisions, resurveys, allotments, and segregations on the Hoopa Valley Reservation, Calif.; Flathead Reservation, Mont.; San Felipe Pueblo, N. Mex.; Cheyenne River Reservation, S. Dak.; Kiowa, Comanche, and Apache Reservations, Okla.; Leech Lake Reservation, Minn.; the Pyramid Lake Reservation, Nev.; and extension surveys and resurveys involving riparian rights as a basis for court action on the Iowa and Winnebago Reservations, Nebr. Special surveys relating to Indian lands, but payable from the regular appropriation, were made on the east boundary of the Navajo Reservation, N. Mex.; south and west boundaries of the Shoshone Reservation, Wyo.; various Indian allotments within the Klamath National Forest, Calif., and three townships in Utah in which Indian allotment applications had been filed under the act of February 8, 1887. (24 Stat. 288.)

He sets forth in detail the proposed expenditures for 1930 which are along the same general lines. The item consists of the following:

Agricultural lands surveys	$275,000
Mineral lands surveys	65,000
Cooperative surveys	35,000
Miscellaneous surveys	120,000
Resurveys	130,000
Office personnel and maintenance	155,000
Total	780,000
Total field	625,000
Total office	155,000
Total field and office	780,000

MEDICAL EXAMINATIONS UNDER BUREAU OF PENSIONS

I feel I must take the time to call attention to two or three matters which, in justice to the House, I think should be mentioned, and especially in view of the fact that the gentleman from Minnesota [Mr. KNUTSON], chairman of the Committee on Pensions, is present. Under the Pension Office there is an item for examining fees for surgeons.

The Budget proposed an estimate of $450,000. In our examination of that we found that the physician receives a fee of $3 for each examination, whether there is one or a great number of examinations in one day. There are three men on a board and if the full board meets and it has as many as 30 examinations a day, as they do in some of the larger cities, it runs into a lot of money. At the same time the Bureau of Pensions is very positive, and it is the view not only of the commissioner, as expressed to our committee, but the view of the other heads of the service, including the head of the medical investigation bureau, that the examination is not always as good an examination as it ought to be. While the board acts, one man is pretty likely, of course, to dominate the board and to make the examinations. It is quite a job although not particularly difficult. Here is one of the reports required and there is quite a bit of it.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. CRAMTON. Mr. Chairman, I ask unanimous consent to proceed for 30 additional minutes.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to proceed for 30 additional minutes. Is there objection?

There was no objection.

Mr. CRAMTON. The American Medical Association and other medical organizations have a rule that the minimum fee for such an examination must be $5, and that is their arrangement with the life-insurance societies, all of them paying $5 for an examination by one physician. The result is that we are not always able to get for their examiners as good a physician as we ought to have, and when we do get a physician he is subject to some criticism by his fellows for working for less than the union scale, so that he does not always make as careful an examination as he would if he were getting what they consider the proper fee. So the committee has recommended this language, which I bring particularly to the attention of the House for its consideration:

That hereafter all necessary medical examinations of claimants or pensioners shall be made by one physician or surgeon duly appointed under the act of July 25, 1882, and duly designated for such examination by the Commissioner of Pensions, except when in the judgment of the said commissioner the examination should be made by more than one: *Provided further*, That the fee paid any physician making such examination, alone or otherwise, shall be $5 for each examination, foreign or domestic.

Under the operation of this provision the old boards are continued. The commissioner will designate a certain member of that board to make a certain examination, or if he feels it desirable he can designate an examination by the full board. Naturally, he will designate the member of the board who resides most conveniently to the pensioner. These physicians are likely to be in different towns and perhaps meet for board meetings at the county seat, but instead of the pensioner having to go to the county seat as now, or instead of his having to wait until the pension board day, he will step into the doctor's office, perhaps in his own town, at his own convenience, and at the convenience of the doctor, and have his examination, a more thorough examination and report than before.

The statement of the Bureau of Pensions is that under the business done this year the saving financially to the Government, in addition to these benefits to the Government and to the pensioner, would have been $177,113, even with the increase of fee from $3 to $5. The committee has therefore recommended the adoption of this language, and by reason of that have been able to recommend a reduction of $150,000 in the item.

Mr. KNUTSON. Will the gentleman permit a parliamentary inquiry? Is not that legislation?

Mr. CRAMTON. It is within the Holman rule.

Mr. KNUTSON. As a limitation on an appropriation?

Mr. CRAMTON. No; not as a limitation, but that which effects a saving on the face of the bill is in order.

I will say to the gentleman, frankly, in my judgment it is not subject to a point of order; but I think the committee would not want to press it if there should be any strong opposition to it on the part of the gentleman's committee.

Mr. KNUTSON. It would seem that is a matter that should have been considered by the Pension Committee.

Mr. CRAMTON. If it is a matter that the committee would feel strongly about or if there should be strong opposition to it, I think the committee would not be disposed to press it. Of course, our immediate responsibility is the reduction in the face of the bill, and this does make possible a reduction of $150,000, and to be entirely frank, there were very few reductions that could be made in the bill and there were so many things where some more money could be used to advantage that it put a very strong pressure upon the committee to avail ourselves of a reduction where one could be made, especially when we felt assured that the service both to the Government and the pensioner would be improved thereby. I will be glad if the gentleman will give it his further consideration.

Mr. KNUTSON. I may say to the gentleman that where a saving of $150,000 to the Government comes in conflict with the jurisdiction of another committee, we will waive the question of jurisdiction, I think.

Mr. CRAMTON. I really have had that judgment of the gentleman from Minnesota.

CONSTRUCTION ON NEW RECLAMATION PROJECTS

I must condense to the utmost, but I would not be fair to the House if I failed to call its attention to one or two matters in connection with the reclamation fund.

In the first place, we have cut out the proposed appropriations for the further construction of two reclamation projects, the Vale project in Oregon and the Kittitas division of the Yakima project in Washington. The total reduction is something over $2,000,000.

This was done because of the showing that the Reclamation Service made before our committee. The conditions obtaining on these two projects as to probable land settlement, development and use of the projects after construction are so uncertain and unsatisfactory that we thought it best to have construction suspended until the situation might improve, and hope of improvement would come through two agencies: First, through a better cooperation on the part of the communities and the landowners affected thereby; and secondly, through the hope of some legislation by the Committee on Irrigation and Reclamation which might improve the situation.

As to one of these projects, the Kittitas division of the Yakima project, since the committee acted—in fact, this morning—our committee met with a representative of that project and a representative of the Northern Pacific Railroad that is greatly interested, and with the gentleman representing that district, Doctor SUMMERS, a further showing of facts was made; and the committee will very possibly have some amendments to offer for the consideration of the House when this item is reached.

As to the Vale, there is no further information presented, and that situation, so far as the committee view it, urgently demands the suspension of construction there until there is a better and more certain prospect of the necessary cooperation in putting that land in the hands of settlers at a reasonable price following the construction of the project.

There is a suggestion by the Commissioner of Reclamation that the situation there could best be worked out by purchase of the private lands by the Government and that that could be done at less than the appraised cost. In my judgment, if the Government should seek to buy those lands, the cost would at once go up. The situation as we now see it is very dubious for that project, and nothing further in the way of construction should follow until better conditions as to development prevail.

POWER REVENUES ON RECLAMATION PROJECTS

The committee has attempted in two or three cases to provide definitely with reference to the power revenues following in each case the facts of the particular situation, doing the fullest justice to the individual project and at the same time fully safeguarding the reclamation fund.

PURCHASE OF PRIVATE LANDS IN NATIONAL PARKS

There is an item that had consideration by the committee, and which we understood was and is now pending before the Budget Office, and we had been in hopes that a supplemental estimate would come to Congress in time for its inclusion in this bill. Much to our regret that estimate has not yet come, and hence the item is not in the bill. We still entertain the hope that a supplemental estimate for this purpose may come to Congress. In view of the consideration that our committee has given to it I feel that I should call it to the attention of the House, and I shall insert here the language the committee has had under consideration to put the House on notice that if a supplemental estimate does arrive before completion of the consideration of the bill I will offer a needed amendment. This item is an item of $1,000,000 to be used, when matched by at least an equal amount of private funds, for the elimination of privately owned lands in the national parks.

There has been a survey of this situation made and just completed within the last two or three weeks, which indicates that the amount necessary to eliminate these private holdings will run to a rather large figure. The item considered by our committee reads as follows:

For the acquisition of privately owned lands and/or standing timber within the boundaries of existing national parks and national monuments by purchase, or by condemnation under the provisions of the act of August 1, 1888 (U. S. C. p. 1302, sec. 257), whenever in the opinion of the Secretary of the Interior acquisition by condemnation proceedings is necessary or advantageous to the Government, $1,000,000, to be expended only when matched by equal amounts by donation from other sources for the same purpose, to be available until expended: *Provided*, That in addition to the amount herein appropriated the Secretary of the Interior may incur obligations and enter into contracts for additional acquisition of privately owned lands and/or standing timber in the existing national parks and national monuments not exceeding a total of $2,000,000 as matching funds from outside sources are donated for the same purpose, and his action in so doing shall be considered contractual obligations of the Federal Government: *Provided further*, That the sum herein appropriated and the appropriations herein authorized shall be available to reimburse any future donor of privately owned lands and/or standing timber within the boundaries of any existing national park or national monument to the extent of one-half the actual purchase price thereof: *Provided further*, That as part consideration for the purchase of lands, the Secretary of the Interior may, in his discretion and upon such conditions as he deems proper, lease lands purchased to the grantors for periods, however, not to exceed the life of the particular grantor, and the matching of funds under the provisions hereof shall not be governed by any cash value placed upon such leases: *Provided further*, That appropriations heretofore and herein made and authorized for the purchase of privately owned lands and/or standing timber in the national parks and national monuments shall be available for the payment in full of expenses incident to the purchase of said lands and/or standing timber.

The situation is especially acute in the Yosemite National Park. Some of that is heavily timbered, and the timber is about to be cut off where it is privately owned. About a million and a half dollars will be required for that. A contribution from one source of a million dollars has been offered as a private fund to match an equal amount to be appropriated by the Federal Government for that purpose. The situation is so acute in the Yosemite that this generous offer by the private individual should be accepted and matched by a Government fund.

The elimination of privately owned land is important for two reasons. In the first place, when privately owned there is a possible development out of harmony entirely with the public use and enjoyment of the park, and, secondly, we can not carry on and develop it as we desire with the land that we do not own.

Mr. BLANTON. Will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. BLANTON. How far is this policy going to extend of buying property within the Government-owned forests?

Mr. CRAMTON. This is not as to forests; it is as to national parks.

Mr. BLANTON. Do you expect to buy all the privately owned land within the national parks?

Mr. CRAMTON. My view is that it is imperative that we buy as fast as possible privately owned lands in every national park or monument.

Mr. BLANTON. Has the gentleman from Michigan in mind the amount that will be required?

Mr. CRAMTON. Yes; there has been a survey made and it will be between five and six million dollars.

Mr. BLANTON. Then why take five bites at a cherry?

If it is necessary to do this, why not do it all at once? Why appropriate a million now, a million next year, and a million at some other time; if it is a good thing, and that is the governmental policy, why not buy all of it at one time?

Mr. CRAMTON. That is a reasonable question and I am glad to give my view of it. It is a matter I have had in mind for four or five years.

Mr. BLANTON. One other question.

Mr. CRAMTON. I have not answered the gentleman's first question yet. One million dollars has been offered from private sources, and this appropriation is based on the matching of the contribution of these private individuals. Our committee inaugurated the policy two years ago by putting in an item of $50,000, not approved by the Budget, for this general purpose when matched by private funds. The Budget accepted that idea and in the 1929 bill estimated the second $50,000.

A survey resulted and that report is in our hands. One million dollars has been offered, particularly for the Yosemite situation. To acquire all of these lands will take some time—we do not know how much. There will be negotiations, there may be condemnation suits; and so it is not believed that even if the money is in hand it could all be spent in less than two or three years.

We have been offered this million dollars of private funds, and we believe that when the Government manifests a policy that is proposed in the language I have in mind, providing for the authorization of the purchase of the balance, we will have assurance of the full amounts of private funds needed.

Mr. BLANTON. The gentleman knows that if we put it off the privately owned land will increase in value. The gentleman will remember when this policy was first inaugurated, when the million-dollar mountain-top amendment was adopted in the House, and the worthless mountain tops were put off on the Government for $1,000,000.

Mr. CRAMTON. I do not remember the Mountaintop case. One reason why I was desirous of having the Government expenditure hooked up with the contribution from private funds was that these contributions will undoubtedly come from business men of the greatest good judgment and experience, and we would feel sure that their investigation as to the price and cost, and so forth, would be thorough and we could be satisfied to put our money up to match theirs.

QUARTERS FOR OFFICIALS AND EMPLOYEES AT ST. ELIZABETHS

Mr. BLANTON. Mr. Chairman, will the gentleman yield for another question?

Mr. CRAMTON. Yes.

Mr. BLANTON. Inasmuch as the gentleman has very liberal time——

Mr. CRAMTON. But I am afraid that I am outstaying my welcome.

Mr. BLANTON. I notice that the gentleman and his committee have put quite a number of items of legislation in this bill.

Mr. CRAMTON. Not so many of legislation.

Mr. BLANTON. A good many of them.

Mr. CRAMTON. The gentleman will recognize some of those listed are limitations.

Mr. BLANTON. But there are some legislative items. For instance, I will name one. The gentleman in the last session helped to pass the Welch bill, which it is claimed permits the already too large salary of Doctor White, of the St. Elizabeths Insane Asylum, to be raised from $7,500 to $9,000. The Comptroller General has held, however, that the $11,000 extra which the director was getting for his quarters——

Mr. CRAMTON. Oh, will the gentleman please condense his question? I am familiar with that matter.

Mr. BLANTON. It can not be condensed, because it embraces quarters and lights and coal and gas and food and servants, and everything, for him. The gentleman is seeking in this bill to make that the law.

Mr. CRAMTON. Yes.

Mr. BLANTON. So that Doctor White shall get not only his $9,000 under the Welch bill but shall get extra this $11,000 allowance each year.

Mr. CRAMTON. And if the item does not stay in the bill as we have proposed it, then those who are charged with the responsibility of administering the insane asylum, and who are required by the nature of their duties to be there 24 hours a day, to live there—and I refer not only to the superintendent but to 50 or 100 others—and if the opinion of the Comptroller General, which I do not understand to be final——

Mr. BLANTON. Oh, yes; it is final, for I have talked with him personally about it.

Mr. CRAMTON. I repeat my statement, notwithstanding. If the opinion of the Comptroller General, which I do not

understand to be final but has been suggested, is made final, the result will be that Doctor White will get $9,000 a year salary and be charged $11,000 a year for living in quarters where he and his family must come in daily contact in the corridors with the insane. I do not believe that even Doctor White, even though everything that the gentleman from Texas thinks about Doctor White were true, ought to work for nothing and be charged $2,000 a year for the privilege of administering one of the greatest insane asylums of the country.

Mr. BLANTON. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Just for a question.

Mr. BLANTON. This item is going out of the bill because it is legislation, and I intend to make the point of order against it when it is reached.

Mr. CRAMTON. Oh, I hope the gentleman will not.

Mr. BLANTON. And as to the other chiefs of the Government whose salaries have been raised by the Welch bill from $7,500 a year to $9,000 a year, does the gentleman expect to give them each $11,000 a year for maintenance?

Mr. CRAMTON. Doctor White's salary and his quarters are not connected questions. He is required to live where he does by the nature of his duties, and when the gentleman from Texas makes this point of order that item will go out and the gentleman from Texas will take the responsibility and I am acquitted of it.

Mr. BLANTON. Oh, I am going to take the responsibility for it.

Mr. CRAMTON. Very well, but I ask the gentleman not to brag about it so much, because I do not think it is worth it. So far as this increase of salary is concerned, I want to answer the gentleman's question fairly and squarely. I think the gentleman was not here last week, much to our regret, but the matter of those salary increases has heretofore been brought up. Our committee feels that those salary increases that were brought about under the ruling of the Comptroller General, should not have been granted in such wholesale fashion.

Mr. BLANTON. And what is the committee going to do about it?

Mr. CRAMTON. The full committee has that matter under consideration, and any action to be taken by the full committee will come probably in a deficiency appropriation bill, where it would be equally applicable to all of the departments, and not to one alone.

Mr. BLANTON. Then the gentleman does have in mind some proper legislative enactment that would stop this sort of thing?

Mr. CRAMTON. I have not that responsibility. I say the committee has it under consideration, and any action that is taken——

Mr. BLANTON. I think it was an infamous outrage upon the people.

Mr. CRAMTON. Oh, do not put too strong language into the middle of my speech.

Mr. BLANTON. I refer to the wrongful construction of the Welch Act which would permit all of those chiefs' salaries to be raised from $7,500 to $9,000.

Mr. CRAMTON. Whatever action is taken must come in a general bill affecting all departments.

Mr. BLANTON. The gentleman knows that that was never contemplated by the Congress when the bill was passed.

Mr. CRAMTON. In my judgment it was not contemplated, but I do not adopt any of the gentleman's language.

Mr. BLANTON. No; but it was an outrage, was it not?

Mr. CRAMTON. I have just one more thing here and then I shall have finished.

ACQUIRING PARK LANDS

Mr. MORTON D. HULL. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. MORTON D. HULL. Reverting back to the lands to be acquired, the gentleman said somebody was offering a million dollars. Is the name of the donor public?

Mr. CRAMTON. I am not in a position to give it out.

Mr. KNUTSON. What steps are being taken to save the Sequoia Forests?

Mr. CRAMTON. Does the gentleman mean the redwoods of California, outside of the park?

Mr. KNUTSON. Yes.

Mr. CRAMTON. The gentleman might have in mind the timber in the Yosemite. It is not Sequoia, but it is beautiful timber greatly needed for the park. That, of course, is involved in this million for the Yosemite. There are other holdings in California that I am not entirely familiar with. I think they call them the redwoods. They are outside of any park area.

Mr. KNUTSON. Has the committee had that up at all?

Mr. CRAMTON. It is not before us in any way, of course, as they are not in a park.

DEPARTMENTAL COOPERATION

I have taken more time than I had intended, but I am not entirely responsible for that. In the course of the study of this bill one need became apparent to our committee, and that was the need of a greater cooperation between the different agencies of the Government. We ought not to have to set up in each department an organization to do the same thing. If the Department of Agriculture is carrying on certain studies of land and certain work in connection with the teaching of the best methods of agriculture we ought not to have to set up in the Interior Department the same kind of an organization.

I have a statement here from Doctor Meade which says when they are trying to develop reclamation projects and they call on the Department of Agriculture for information which that department has they are likely to be told they will have to wait until the information is published and printed, so that they can read it as the general public would and do not get the extracts they ought to have. The Indian Service are gentle in what they state, rather careful in their criticism of their friends in the other departments, but it is my judgment also they do not get the cooperation from the Department of Agriculture that they should with reference to teaching agricultural methods to the Indians. It all comes from the same Treasury, and they ought to be as willing to use the money Congress gives them to teach agriculture to the wards of the Nation as to teach them to your constituents and mine. Furthermore, thought has been given with reference to the work of the Geological Survey. That survey is carrying on, among other features, a topographic map of the United States.

It is contemplated it will be finished in 30 years, but it can not be done in that time. We are carrying that on under cooperation of State and Federal funds, half and half. Forty-seven per cent has now been done and 53 per cent is to be done. It is urgently needed. It is the foundation, carried on by Federal, State, and municipalities, and it ought to move as rapidly as possible. The work is a much needed work, and still, when Dr. George Otis Smith asked the War Department, with all their many planes, when he asked them to use some of their planes to make some air maps much needed they made all kinds of excuses. When he asked them to make aerial photographs the War Department said they would not make them for them unless they would first find, after advertising, that they could get it done by a private concern as cheaply as they can do it, and then the Comptroller General said you can not advertise for private bids, because you have no authority to ask for them under the law. So they were up against it. It illustrates the kind of legislation we have to put in the bill where it ties right into the expenditure in such a way it makes it imperative and directly related to it. We have this provision:

During the fiscal years 1929 and 1930, upon the request of the Secretary of the Interior, the Secretary of War or the Secretary of the Navy is authorized to furnish aerial photographs required for topographic mapping projects, in so far as the furnishing of such photographs will be economical to the Federal Government and does not conflict with military or naval operations or the other parts of the regular training program of the Army and Navy flying services, and the Secretary of the Interior is authorized to reimburse the War or Navy Department for the cost of making the photographs, and the Department of the Interior is authorized to furnish copies to any State, county, or municipal agency cooperating with the Federal Government in the mapping project for which the photographs were taken. In the event that the War or Navy Department is unable to furnish such photographs in time to meet the needs for which they are requested, the Geological Survey is authorized to contract with civilian aerial photographic concerns for the furnishing of such photographs.

It is a question whether the War Department will have excuses to prevent them from doing the work. These things are not so easy to force, but Congress owes it to the country to require these various departments to work in harmony and work efficiently, and that always means close cooperation of the various departments.

HOWARD UNIVERSITY

This bill carries an increase in the item for salaries at Howard University. That money, we are assured, is not to be used for salary increases but for greatly needed additional personnel.

It will interest the House to know that after many years, with annual points of order in the House against these items for this great national university for the colored race, a law is about to be placed on our statute books that will authorize such appropriations. That legislation was suggested by me several

years ago and was drafted by me and first introduced by me in the House in December, 1924, in the following language:

A bill to amend section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867

Be it enacted, etc., That section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867, be amended to read as follows:

"SEC. 8. Annual appropriations are hereby authorized to aid in the construction, development, improvement, and maintenance of the university, no part of which shall be used for religious instruction. The university shall at all times be open to inspection by the Bureau of Education and shall be inspected by the said bureau at least once each year. An annual report making a full exhibit of the affairs of the university shall be presented to Congress each year in the report of the Bureau of Education."

A bill in that identical language, as first suggested by me in 1924, passed the House in the last session and yesterday was passed by the Senate and has gone to the President. I trust it will soon become law. That will make possible a more definite and orderly consideration of the needs of that growing institution. I feel that the contributions by the Federal Government should be on a well-thought-out plan of permanent physical improvements.

Mr. WAINWRIGHT. Will the gentleman yield for a brief question?

Mr. CRAMTON. I will.

Mr. WAINWRIGHT. Does not the gentleman's remark in regard to the lack of cooperation rather suggest the plan sometimes to the gentleman that we might have a coordinator in reference to the various activities which the gentleman has indicated?

Mr. CRAMTON. Well, he would have a busy job to do this. It is not a situation that can always be remedied, a situation where everything required can be obtained. I think possibly a strongly expressed sentiment on the part of Congress would be very helpful. It seems to me it is a very short-sighted policy on the part of the Army or the Department of Agriculture or any other department to fail to take advantage of any opportunity to render a useful service to another branch of the Government that would result in the saving of money.

Mr. WAINWRIGHT. Of course, that occurred to me with a very much broader significance than the situation existing merely between two departments. There must be many other cases where the activities and functions of the different departments should coordinate more than they do to-day.

Mr. CRAMTON. I would not want it to be thought that any of the matters I referred to are impossible. I think great things have been done by the Budget Office. Their interdepartmental conferences accomplish many good things.

Mr. WAINWRIGHT. I am speaking now in regard to the functions of the various departments.

Mr. CRAMTON. Personally, I may say that while it is not on this bill, I think we could well have only one department of national defense.

Mr. KNUTSON. Mr. Chairman, will the gentleman yield there?

Mr. CRAMTON. Yes.

Mr. KNUTSON. One department wants an aeronautical conference called. Did it ever occur to you to call the Chief of Aeronautics of the War Department before the committee and inform him that we have had only a certain amount of money to spend for aviation, and ask him if he could contrive to cooperate with the Geological Survey in making aerial surveys, because that would have to come out of the War Department appropriation?

Mr. CRAMTON. My inquiry was directed as far as it was reasonable to go.

Mr. LEAVITT. Some progress has been made through the activities of offiicals of the Bureau of Efficiency.

Mr. O'CONNOR of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. CRAMTON. Yes.

Mr. O'CONNOR of Louisiana. There is a widespread impression among Members and Federal employees that the Committee on Appropriations is engaged in trying to work out something that is expected to be a cure to the Welch bill in so far as it has failed to provide for the underpaid and poorly paid employees.

Mr. CRAMTON. Yes. I have spoken of that. Whatever action is taken on that will be brought in by the chairman of our committee, the gentleman from Kansas [Mr. ANTHONY], and will reach all the departments.

Mr. O'CONNOR of Louisiana. This proviso, on page 2 of this bill, has nothing to do with that? I mean the proviso which is apparently a limitation with regard to the payment of salaries and which I think was carried in all of the appropriation bills last year in the same phraseology.

Mr. CRAMTON. No; it has nothing to do with that.

The CHAIRMAN. The gentleman from Michigan has consumed 1 hour and 50 minutes.

Mr. TAYLOR of Colorado. Mr. Chairman, I am not going to discuss the bill at this time. But as a member of this committee from the West it seems to me appropriate to say that the entire West should and does have a very great appreciation of the exhaustive and painstaking investigation, the conscientious self-denial, diligence, and industrious hard work that the chairman of this subcommittee has devoted to this bill.

As you all know, the Interior Department appropriation bill is a western measure. It is a bill that pertains very little to either the East or North or South. The constituents of the gentleman from Michigan or his State have little concern about the thousands of items carried in this bill or the nearly $300,000,000 that it appropriates. But this bill is of tremendous importance to the welfare and development of all the arid mountainous West, and when a man from the northern middle part of this country gives many years of his life, including his vacations, to an earnest research and study of the conditions of the over 200 Indian tribes and schools and reservations, and about 20 national parks and about 30 irrigation reclamation projects, many national monuments, public-land matters and Government surveys, and many other western activities and masters all those thousands of details, and presents them to the House as intelligently and clearly as he does every year, he is not only rendering a great service to the West but also to the entire country generally. I feel that he is entitled at least to an expression of appreciation from the western Members of this House, and I am very glad to utter it on their behalf. [Applause.]

I yield 15 minutes to the gentleman from Minnesota [Mr. KVALE].

The CHAIRMAN. The gentleman from Minnesota [Mr. KVALE] is recognized for 15 minutes.

Mr. KVALE. Mr. Chairman and gentlemen, undoubtedly a great many people in the United States were disappointed when the news dispatches conveyed the intelligence that our Quaker President elect had selected a military officer to be chairman of the inaugural committee. And far greater and keener was the disappointment when, this morning, we read that in a cablegram from the President elect outlining his desires, the program carried out for Calvin Coolidge's inaugural four years ago is to be used as a model by Col. U. S. Grant, 3d. Hoover, Doctor Work announces, informed him that he desired an inaugural modeled after his program carried out in the inauguration four years ago of Calvin Coolidge.

In May of this year, I spoke briefly on the coming inauguration parade. I do not wish to repeat in toto what I said on that occasion. But in view of what has transpired the last few days, and because of the news items carried in the papers this morning regarding the plans for the next inaugural, I deem it fitting and proper to renew my protest and my appeal of last spring. Instead of referring you to what I said at that time, I am taking the liberty of repeating portions of it here, in order, if possible, to bring the subject more forcibly to the attention of the inaugural committee, which is holding its first meeting this very afternoon.

Those of you who witnessed the inauguration parade in 1925, will agree with me that it might well have been a war parade back in 1914 under Kaiser Wilhelm or the French militarists instead of a parade celebrating the inauguration of a President of a nation whose citizens are supposed to be devoted to peace and peaceful pursuits.

I said at the time, and I say it again, that I grew sick at the sight of all those war paraphernalia. There were two troops of Cavalry as escort to the President, the Twelfth Infantry Regiment, an Engineer band, a battalion of Engineers, the Fifty-sixth Regiment Air Service, the Third Cavalry Band, the First Battalion of the Sixteenth Field Artillery, the Sixth Field Artillery Band, Tank Corps personnel with 48 tanks.

The marine and naval contingent comprised a regiment of naval men from Hampton Roads naval base, the Navy Band, the Fifth Regiment of marines from Quantico, Va., the Marine Band, a detachment of troops from Marine Barracks and the navy yard in the District of Columbia.

The whole parade seemed nothing but a display of uniforms, guns, machine guns, caissons, tanks, and all the accessories of war.

And worst of all, there were 48 rumbling, trundling tanks. Not one, mind you, but 48 of them. If guns and swords, bayonets, machine guns, tanks, and all the man-killing and man-maiming instruments of modern warfare are to be exhibited to

the gaze of a patriotic throng in attendance at the inauguration of their Chief Executive, why not complete the picture and satisfy the morbid, bloodthirsty beings hungry for such a spectacle by exhibiting as a part of the parade a few more of the instruments used in times past for taking human life?

In other words, if the inauguration of a President of the United States in a time of peace—at a time when the clamor of the whole civilized world is for the ending and the outlawry of war, when the multilateral treaty, the so-called Kellogg treaty, in my estimation more rightfully designated the Borah treaty, for the outlawry of war, has been signed by the governments of nearly all the civilized nations of the world, just now when the Pan American Conference on Arbitration and Conciliation is holding its meeting in our Capital—if the inauguration features planned by the committee in session these days are to be overshadowed by a parade glorifying the wholesale murder and slaughter called war, why not make it complete, why not show it up in all its barbaric, satanic bestiality and gruesomeness?

Let some one impersonate Socrates drinking the hemlock.

Give us an arena with real lions, and animals dressed in the clothes of human beings torn to pieces by them.

Erect a replica of the Roman instrument of torture and killing, and have some soldiers nailing a human form to the cross and hoisting it in the air.

Let forms representing human bodies be dragged at the end of triumphant chariots.

Let there be a Procrustean bed and something representing a living human being stretched to conform to the size of the bed or have its limbs sawed off for the same purpose.

The picture would be decidedly incomplete without a human torch in effigy. There must be a burning at the stake.

Of course, the gallows must have a place in the procession. The trapdoor and all, with something representing a human form dangling in the noose.

Naturally we must have a float showing some one being roasted alive over a real fire.

And by all means let us have the modern version of that hellish torture, the electric chair, in which we roast and toast people alive in our would-be Christian civilization.

Also, there must be a platform 12 feet square with a guillotine and a human head rolling into the basket.

But the real features are neglected in the modern warfare exhibit. Let us have it in all its hideousness. We see the rifles, machine guns, artillery, and tanks; why have the barbed wire, the shattering grenades, the poison gases, the flame throwers, the trench daggers with metal knuckles, the numerous other death and torture dealing weapons and instruments been omitted from the spectacle? Give us a large float with a miniature city populated by mice and guinea pigs, so that we may have a hint of what lethal gas can do and will do in the next war. Let us see war in its hideousness, with the wire, trenches, lice and vermin, reek and stench, disfigurement and gore, instantaneous death, lingering death, even living death.

In short, if the parade at the inaugural ceremonies is to portray war instead of peace, let it not be simply glorification of war by giving us a picture of beautiful uniforms, gleaming ornaments, shining weapons giving off the sunlight's glint, prancing steeds with sleek coats and polished hoofs, medals and insignia, salutes, and martial music. Let us have a true picture, an honest portrayal of man's inhumanity to man, in the hundred different ways of torturing and killing our fellow humans.

I have cited but a few examples. I might insert a list of more than 2,000 instruments of torture and killing employed by punitive groups from antiquity down to the present time. The vast majority of them, and the most inhuman among them all, the most devilishly devised, have had their origin in a so-called Christian civilization. And there are devices and instruments, methods, and plans now being perfected which challenge our very imagination and our conception of wholesale death, which, if ever used, will make the World War shambles dwindle into insignificance.

In the name of decency, in the name of humanity, in the name of every Christian in this Nation, in the very name of the Prince of Peace, I solemnly protest against making our festive events and ceremonies—and especially the inauguration of our Presidents—the occasions for glorifying war and the taking of human life. If we want the world to believe us even half civilized, let the instruments of killing, of wholesale murder and slaughter be banished forever from our public parades.

O Mr. Chairman, I am not protesting against any and all participation in such ceremonies and parades by representative groups and detachments from each arm of our national defense. Certainly our well-drilled, well-equipped, well-disciplined troops are to us as citizens a matter of pride; we recognize their proper place in our scheme of government, and any parade might well be considered incomplete without their rhythmic, swinging march.

And certainly those aged heroes of the more distant wars, who constituted the President's guard of honor, belonged in the position of honor which they were accorded in conformity with the President's wish. But, mind you, they did not exhibit the weapons and instruments they used in their war to inflict death and torture.

Nor do I protest against the military and naval bands which participated in the cavalcade. Our Army, Marine, and Navy Bands are admittedly in the forefront of such musical organizations, and their stirring strains of marches and national airs could not well be dispensed with. My protest is not directed against the participation in the parade of the men of our Army, our Navy, and the marines. My protest is against the gruesome spectacle of war and the glorifying of war being paraded before the eyes of the Nation instead of utilizing such an impressive and colorful spectacle in the interests of peace.

Had I the time I could easily point out a hundred different ways in which the parade could exemplify the pursuits of peace instead of war; in which it could be representative of all the departments in the Chief Executive's branch of our Government, instead of a War Department field day. It should not be necessary. Visualize a parade showing the marvelous advance and progress in science, in art and invention, in all fields of endeavor which make for progress in human liberty, mercy, and brotherhood. What limitless, endless opportunities for showing not instruments for the taking of human life, typical of the inhuman cruelty and hatred and revenge that finds its expression in the ghastly horror of modern war, but devices for conserving and prolonging human life; enhancing and furthering the pursuits of peace and the spirit of brotherly love between man and man.

If President-elect Herbert Hoover, the first Quaker to be elected President of the United States, sanctions the carrying out of plans for an inauguration parade as disgraceful as the one we witnessed in 1925, then I submit that the proper thing for him to do will be to send to his Quaker church a letter of withdrawal.

I here and now appeal to him, I adjure him—I believe I do so in the name of liberty-loving, peace-loving Christian men and women in the Nation—I appeal to him to make his inaugural parade not a messenger of war but a message of peace; so to arrange and order it that it shall conform to the views and opinions of the Christian civilization which he is chosen to represent and yet shall give fullest expression to the citizens who set aside that day in which to pay their respects and to honor their new President. [Applause.]

The CHAIRMAN. Does the gentleman from Minnesota yield back the balance of his time?

Mr. KVALE. Yes; I yield it back.

The CHAIRMAN. The gentleman from Minnesota yields back one minute.

Mr. TAYLOR of Colorado. Mr. Chairman, I yield 30 minutes to the gentleman from Texas [Mr. BLANTON].

The CHAIRMAN. The gentleman from Texas is recognized for 30 minutes.

Mr. BLANTON. Mr. Chairman and gentlemen of the committee, in the last Congress there was a bill passed known as the Welch bill, the design of which was to give a living wage to the small wage earners of this Government, the ones who had not been taken care of in previous legislation.

There were numbers of employees who worked for the Government for less than a thousand dollars a year. There were many of them with wives and children to support. They were unable to furnish them with the proper necessities of life. That situation appealed to Congress. The committee having the matter in charge had hearings, the purpose of which was to remedy that condition, and a bill was passed designed to meet the situation.

But after Congress adjourned "the powers that be" here in Washington, in construing that bill, wrongfully construed it to mean that the higher positions could take all the money, all of the increases, and instead of any relief being granted to these poorly paid employees most of the money was exhausted in raising the already too high salaries of bureau chiefs.

Mr. O'CONNELL. Mr. Chairman, will the gentleman yield?

Mr. BLANTON. Yes.

Mr. O'CONNELL. While the gentleman from Texas was absent the distinguished gentleman from Indiana [Mr. WOOD] called that interpretation of Mr. McCarl a monstrosity. It gave all the increases to the higher-bracket men.

Mr. BLANTON. Yes; and that is the only thing that has ever been put over the Comptroller General since he has been in office. That was put over by this other board here in Congress.

Mr. O'CONNELL. Did not the Comptroller General put it over on us?

Mr. BLANTON. No. He simply acquiesced in it being put over by another board. In other words, bureau chiefs who used to get $5,000, and who had their salaries raised by Congress to $7,500, by this interpretation now can draw $9,000, which was never intended by Congress at all.

Now, during the recess the Comptroller General has called attention to the fact that the superintendent of St. Elizabeths Insane Asylum, Doctor White, in addition to the $9,000 that he will draw under this wrongly interpreted Welch bill, is getting from this Government, in addition to his salary, the following, and here is the report of the Comptroller General of the United States, J. R. McCarl. He calls attention to the fact that Superintendent White is furnished by this Government with a residence with 19 rooms. Is there a Member of Congress out of the 435 occupying a more spacious habitation? If there is, show him to me. Here is what McCarl says this residence of 19 rooms embraces: 2 parlors, 1 library, 1 studio, 2 dining rooms, 6 bedrooms, 1 board room, 1 trunk room, 2 bathrooms, and 3 kitchen rooms. He estimates the value of the furniture which the Government is giving this superintendent free at an enormous sum. Then he shows that he is getting from the Government free laundry service worth $300; that he is getting telephone service worth $48; that he has a housekeeper who is paid $1,020; that he has one waitress for his home who is paid $960; that he is furnished one cook at $1,380 and an assistant cook at $1,080. Understand, this is not for the institution. They have numerous cooks and assistants. This is for his own private family residence, if you please. Then the Comptroller General says he is furnished his food free by the Government and that that food every year costs this Government $2,676. That he is furnished coal for his family kitchen that amounts to $195 a year; that he is furnished his cash salary and then other perquisites.

He is furnished with a fine limousine to ride around in and servants to take care of his residence, yards, and things. And this $11,000 a year the Comptroller General of the United States says he has no right by law to receive from the people's exchequer, and he has directed the Secretary of the Interior to stop it, but not a single step has been taken to stop it. On the contrary, we find our frugal friend from Michigan, the economist of the Appropriations Committee, the one who carries out the Budget policy of the President on the floor—we find him coming in to get around the McCarl decision with an item of legislation in this bill to make it the law that all of these things should be furnished this superintendent of St. Elizabeths. Thank God, we can stop this, because it is subject to a point of order, and I intend to make it when we reach the item and knock it out; and I hope this committee will not let the Senate or any of the other friends of the Department of the Interior who are taking care of this superintendent put it back into the bill; and if they do, I hope this House, when it comes to a vote, where we have to vote it up or down, will vote it down when the time comes.

It has been very opportune that on last Sunday morning—not in a Washington paper but in New York—there was published a foolish article from the former commissioner of this District, Frederick A. Fenning. I hate to disinter the dead, but he needs attention. He said the District had been hamstrung and he wanted to know who had hamstrung it. He asked the question, "Who has hamstrung the District of Columbia?" Now, there was a time when this commissioner thought that when he walked the District of Columbia walked. He imagined he was the District of Columbia.

There was a time in Washington when he was invited to every important function, but lately he can hardly find anyone who will sit by him at a public banquet. He is now conspicuous by his absence at the functions which he used to attend. He condemns Congress individually and as a whole in his article. I must read you something about this gentleman. He was investigated before our Gibson committee, composed of three Republicans and two Democrats, and I conducted the investigation and introduced the evidence against him, and here is what the Gibson committee found unanimously about him. Let me read it to you:

> The manner in which Mr. Fenning secured his business, the gross amount of fees he charged and received out of estates of insane veterans under his care, his continuance in the practice of the law and in the handling of estates of more than a hundred wards since he became commissioner, his method of writing his own bonds and receiving a portion of the premium and still charging the same to the estate of his wards, his attitude toward the enforcement of laws passed by Congress relative to the District of Columbia, and the consequent loss of confidence in him on the part of the public, makes his continuance in office incompatible with the best interests of the District.
>
> E. W. GIBSON, *Chairman.*
> FRANK L. BOWMAN.
> ROBERT G. HOUSTON.
> THOMAS L. BLANTON.
> RALPH GILBERT.

That is signed by E. W. GIBSON, of Vermont, chairman; FRANK L. BOWMAN, of West Virginia; ROBERT G. HOUSTON of Delaware; THOMAS L. BLANTON, of Texas; and RALPH GILBERT, of Kentucky. It was the unanimous report of the committee that investigated him. He was also investigated by the Judiciary Committee of this House, and I conducted same and presented the evidence, and after a long, patient hearing, a hearing by men who had been his personal friends, a hearing by men one of whom had been his neighbor in their summer homes up in Maine, a hearing by men who felt kindly toward him hitherto—here is what the majority of that committee said with respect to him. Let me quote from the Judiciary Committee report.

The majority said:

> The practice which Mr. Fenning followed of acting as agent for a bonding and surety company, writing his own bond as committee and charging the estate of his ward for the premium and receiving from the bonding company a commission upon his bond or surety is illegal and contrary to law. * * * by reason of the great number of his wards his guardianship became impersonal and he could not and did not give to his wards that personal care and supervision which after all is the more important function of a guardian or committee, and which service was doubtless considered by the court as an element in allowing his compensation. We believe legislation should be promptly enacted which would in the future preclude any one person or corporation from acting as committee for more than a limited number of patients, in order that the committee may give to the ward that personal supervision so essential to his welfare. We further believe that in the first instance a near relative should be selected for this service, if a suitable person can be found, but if not, then provision should be made for a committee to be selected by the court. * * * the business relations of Mr. Fenning with these officials were of such a close nature and extended over so many years as to suggest that Mr. Fenning was given the preference in seeking clientage among the patients confined in that institution. The practice which seems to have grown up in this District, extending over a period of some 23 years, whereby Mr. Fenning was able to become the committee of hundreds of insane patients, many of them veterans of wars to whom the Government was making liberal allowances, and from which allowances Mr. Fenning was enabled to collect commissions, which commissions during the high tide of his committeeship amounted to approximately $20,000 per year, is a practice which can not be too severely criticized and condemned, and Congress should forthwith and without delay enact legislation which will forever correct this evil and prevent anyone in the future from profiting from the misfortunes of others who in times of distress sacrificed in behalf of our country.
>
> There was evidence submitted upon the question of Mr. Fenning's connection with a certain banking institution and with a certain undertaking establishment, but taken in connection with the practice Mr. Fenning pursued in becoming committee for a large number of patients, the large amount of money coming into his hands because of such activities, points to the building up of a system through which all the profits accruing might go to Mr. Fenning or to some corporation, and is a further argument against one person acting as committee for so many unfortunates.
>
> Where insane ex-soldiers, sailors, and marines are concerned the United States Government should have officials designated to look after, without charge, the estates of such persons, and that no part of said estates should be expended in commissions or fees; but that the whole of the estates should be for the sole benefit of the veterans and their dependents.
>
> The committee should not accept pay, directly or indirectly, while occuping a fiduciary relation, other than by direct allowance by the court, and even then we think that in no case should the allowance exceed 10 per cent of the estate of the ward.
>
> It appears from the evidence that officials of the District of Columbia transact business with the District through corporations in which they are directly or indirectly interested. This is a practice which is subject to severe criticism and condemnation, and if continued necessarily leads to favoritism, and officials who follow this practice can not give impartial service to the District of Columbia. The practice should not be allowed.

Not only was he thus condemned by a majority of the committee, but I want to read you some excerpts from what certain individuals on the Judiciary Committee saw fit to put into the report themselves as their individual views. Never before in

the history of this Congress have so many members of the great Judiciary Committee filed individual opinions concerning any matter that had been under investigation by them. Let me read you just a few of them.

This is from our distinguished colleague, SAM C. MAJOR, a member of the Judiciary Committee:

I wish to say that I feel convinced that the usefulness of this commissioner in the District is at an end and that the interests of this Government and of the District can be best subserved by his immediate removal by the only authority that can remove him—the power that created him—the President of the United States.

SAM C. MAJOR.

Here is one from a former governor of the great Commonwealth of Virginia, our present colleague, Hon. A. J. MONTAGUE:

1. The evidence discloses that the respondent became the committee of an astounding number of insane patients in the St. Elizabeths Hospital, and that he in the main secured these fiduciary positions through improper and reprehensible methods which he has employed with a diligence and ingenuity worthy of a better cause.

2. That respondent was energetic and resourceful in securing improper commissions, premiums, and compensations out of his wards' estates or by reason of his relations and associations growing out of or connected directly or indirectly with these fiduciary trusts.

3. That his monopoly of these trusts, and his methods of charging them with all the law allowed, and in some instances with more than the law allowed—for example, his unlawful collections of premiums on fiduciary bonds issued by a corporation of which he was agent—evince a sordid sense of duty, resulting in unjustifiable practices.

4. That in consideration of the foregoing reasons and facts, together with the general standard of fiduciary conduct of the respondent, as shown by the evidence, I am compelled to conclude that he is unfit for any official position of high trust and responsibility.

A. J. MONTAGUE.

That was signed by a former governor of the great Commonwealth of Virginia, our distinguished colleague, Hon. A. J. MONTAGUE.

Let me quote conclusions from other members of the Judiciary Committee. Here is one from HENRY ST. GEORGE TUCKER, of Virginia, descended from a family of statesmen in this country, a former president of the American Bar Association, if you please, and here is what HENRY ST. GEORGE TUCKER says about Frederick A. Fenning:

On a review of the whole evidence in this case we feel that the practice which has existed in the District of Columbia by which one man had secured practically a monopoly of the business involving the guardianship of unfortunates, among whom are very many veterans of the late war, is to be strongly condemned. Commissioner Fenning's organization seemed to lack no element of completeness. When he determined to enter upon this line of practice, he notified the judges of the District, his fellow members of the bar, of his intention. But where were his clients to come from? He naturally casts a longing eye toward St. Elizabeths Hospital, with its spacious buildings and hundreds of inmates that might amply satisfy his ambitions; and so a friendship speedily arose between the superintendent, Doctor White, and himself, during which they became partners in a real-estate concern, and St. Elizabeths soon was sending forth her insane veterans to his door, whose estates, if not their personal care, were to rest securely in the hands of Mr. Fenning. The coming of groups of shell-shocked veterans to the hospital was fittingly celebrated always by Mr. Fenning's presence, and his entrée to the papers of these unfortunates was recognized practically as his exclusive privilege.

Feeling that the tide of business that was flowing from St. Elizabeths might not be sufficient to fill the full measure of his ambition, the Veterans' Bureau arose on the horizon as a fitting adjunct to St. Elizabeths in supplying his needs and from this source soon flowed a stream of World War veterans to complete his success.

But should these two sources of clientage be exhausted, as they might be, he was not unmindful of the Laurel Sanitarium, near by, in the State of Maryland, which offered ample fields to add to those who might be under his tutelage and care, and so he became a director in that institution.

But even these did not seem to satisfy his ambition; for finding that the undertakers who bury the dead soldiers often had to go into court for the appointment of an administrator that they might secure from the estate of the deceased their burial fees, it was soon found that he had become a stockholder in the Joseph Gawler's Sons (Inc.), an undertaker's establishment, and a director in the same concern and also counsel, and the evidence discloses that a number of bodies of these unfortunates were sent to this establishment for burial at a cost largely in excess of that provided by the Government.

The result of this campact and orderly organization for the practice of the law could have but one result, and that is, that as his income increased by the number of cases that came to him, by just that much was his care of these unfortunates under his charge diminished, for as the number increased his capacity for attention to them was thereby diminished. The greater his success attained by and through their estates, the greater necessarily was their neglect. His rise was their downfall. From the lofty peaks of his financial success, brought to him by his wards, he was forced to see in the depths below him, day by day, the halting, faltering footsteps of men bereft of reason, whose "martial drumbeat encircling the earth," in serried ranks had wrested liberty for the world from the greatest military autocrat of the ages. The dire results to the veterans as thus seen naturally followed from the character of his business.

His fees and commissions in a few years amounted to $100,000, in round figures, without his wards receiving that attention which was their rightful due. We unqualifiedly condemn this practice, and recommend that in all cases a relative should be secured as committee for these unfortunates, if it is possible to find one, and if not, that a public guardian be established by law, whose duty it shall be to care for the welfare, health, and advancement of their condition.

We heartily condemn the practice which has been carried on by Mr. Fenning for years in which, as agent for a bonding company, he wrote his own bonds, charging the expense of it to his ward's estate and receiving for himself one-fourth of his commission on each bond instead of giving it to his ward's estate.

Reviewing the whole evidence in this case in its many ramifications, and especially in relation to the welfare of the people of the District of Columbia, we are brought to the reluctant conclusion that Commissioner Fenning's usefulness as an officer of the District is at an end. Holding these views, we recommend that a copy of the evidence in these proceedings be sent with our report, if adopted by the House, to the Attorney General of the United States, that that high officer, in fulfillment of his constitutional obligations, may take such measures as will meet the requirements of the case.

H. ST. GEORGE TUCKER.

Note the foregoing was signed "H. ST. GEORGE TUCKER," who is one of the leading lawyers of the United States.

Is it any wonder that Frederick A. Fenning has finally realized that "he has been hamstrung"?

Here is another one from our distinguished friends, FRED H. DOMINICK and ZEBULON WEAVER, signed jointly by them as members of the Judiciary Committee:

We feel that the facts in this case, instead of calling for some mild rebuke and very general recommendations, demand some action by Congress looking to the removal of Mr. Fenning from office as a Commissioner of the District of Columbia, either by impeachment or otherwise, and for the relief of the unfortunate World War veterans whose estates he has been handling.

It is shown that he received more as fees and commissions from each one of these cases than he allowed the ward for clothes and spending money. He is shown to be a stockholder and director in an undertaker's establishment through which these boys were buried when they died.

He was his own bonding agent and collected and appropriated to his own use out of his wards' estate 25 per cent commissions on the premiums on said bonds, in violation of law.

It can not be disputed from the facts developed in this record that there is an unholy collusion between White and Fenning to exploit the insane wards of St. Elizabeths for pecuniary profit.

Upon all the facts in this case, as developed by this record, we think that positive action by the House is imperative, and we therefore recommend his impeachment and removal from office, and that proceedings be instituted at once by the proper authorities to remove him from his present position as guardian for these unfortunate wards and have all their estates audited; also to recover back to them the funds which he has wrongfully collected from them, and that the Department of Justice be directed to institute proper proceedings to punish him for his unlawful misconduct.

Respectfully submitted.

FRED H. DOMINICK,
ZEBULON WEAVER.

Now, listen! This man White is the man to whom our friend from Michigan is asking this House to give, in addition to his salary of $9,000 a year, this 19-room residence, if you please, and all of these other things which I have mentioned. Listen to what these gentlemen say about him:

Mr. SCHAFER. Will the gentleman yield?

Mr. BLANTON. I yield to the gentleman.

Mr. SCHAFER. Perhaps Doctor White needed a house with 19 rooms, so he could entertain his friend Fenning when he visited him in the style to which Fenning was accustomed. A man who obtained wealth even by robbing the insane soldiers of the late war as Fenning did would demand lavish entertainment.

Mr. BLANTON. No; he would not need but one back room if Fenning visited him, because nobody else of any standing would be there.

Mr. SCHAFER. As a lawyer, does not the gentleman think the testimony before the different committees of the House revealed such crimes as would have justified the internment of Mr. Fenning in the Atlanta Penitentiary?

Mr. BLANTON. He ought to be there for the rest of his natural life.

Mr. SCHAFER. I agree with the gentleman on that.

Mr. BLANTON. Here is what they said about this director of St. Elizabeths Hospital, Dr. William A. White, being a joint conspirator in wrongdoing with Fenning:

It can not be disputed from the facts developed in this record that there is an unholy collusion between White and Fenning to exploit the insane wards of St. Elizabeths for pecuniary profit.

This is signed by FRED H. DOMINICK and ZEBULON WEAVER.

Here is another conclusion from members of the Judiciary Committee signed by our distinguished colleague from Texas [Mr. SUMNERS] and our distinguished colleague from Alabama [W. B. BOWLING]:

In our view, as a central fact it has been clearly established that Mr. Fenning, having determined that he would become a professional committee or guardian for insane persons as a matter of revenue to himself, set about procuring himself to be designated as such committee. That he established such contract with St. Elizabeths Hospital for the Insane. That he received preferential opportunities for appointment as committee. That he was instrumental in procuring judgments of commitment in many cases in which he was appointed. That he charged against the estates of his wards, over and above the amount paid by him, the agent's commission, when as a matter of fact he held the agency himself. And in specific instances, as developed during the hearings, was guilty of conduct toward his wards utterly at variance with the obligations resting upon him as a guardian of this class of unfortunates.

In our view, the selection of this means of making money and the methods resorted to as disclosed by the records of the hearing before the Judiciary Committee of the House, show that Mr. Fenning is a person unfit to hold the office of Commissioner of the District of Columbia.

HATTON W. SUMNERS.
W. B. BOWLING.

That was signed by HATTON W. SUMNERS and W. B. BOWLING. But here is the climax.

After these hearings were concluded, and after we had brought the evidence against him before the people of the country, the Washington Post, which up to that very moment had defended him every step of the way, and when the resolution was first offered to investigate him had said that the resolution ought to be thrown in the wastebasket and condemned me for introducing it—here is what the Washington Post said after the investigation was over. I quote this from an editorial of the Post of June 13, 1926:

The protracted inquiry into the affairs of District Commissioner Frederick A. Fenning has resulted in a report by the House subcommittee on the District of Columbia severely criticizing that official and stating that his continuance in office is incompatible with the best interests of the District.

The people of Washington have noted with chagrin the revelation of one fact after another which, when assembled, have destroyed their confidence in Mr. Fenning and convinced them that his usefulness as a commissioner is at an end. They have reached this conclusion with reluctance, and after giving Mr. Fenning the benefit of every doubt.

Mr. Fenning has fallen short of the requirements of his high office. His retirement is desirable and necessary.

Is it any wonder that Frederick A. Fenning has at last concluded himself that "he is hamstrung"?

But I want to take my hat off to the Washington Times and the Washington Herald.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. TAYLOR of Colorado. Mr. Chairman, I yield the gentleman from Texas 10 minutes more.

Mr. BLANTON. I thank the gentleman.

I want to take off my hat in this instance at least to the Hearst publications, and this is the first time I have ever done it in my life.

Mr. SCHAFER. Will the gentleman yield?

Mr. BLANTON. Yes.

Mr. SCHAFER. It is not a Hearst publication that Fenning is an "editorial" writer for—the New York World is not a Hearst paper.

Mr. BLANTON. No; but I was speaking of Hearst's papers in Washington.

Mr. SCHAFER. Is Fenning a member of their staff?

Mr. BLANTON. I do not think so, but I want to take my hat off to the Hearst publications in Washington for rendering the people of this country a signal service. When the distinguished Judiciary Committee—and it is one of the most important committees of this House, presided over by my good friend from Pennsylvania—when this committee spent its time investigating this case and digesting all the evidence I had brought out, the Times and the Herald, which had been as reluctant to believe it as the Post, were convinced that he was unfit for office; here is what the Herald the next morning, and the Times that evening, said in great, big, box-car letters an inch long:

"Get out!" in great big letters an inch high. Who were they talking about? This same Fenning who is called up out of his grave to write articles in the New York World about Congress hamstringing the District. He asks the question, "Who hamstrung the District?" Well, if he is the District I want him to understand that I am one of those who helped to do it, and I am proud of it. We do not want any of his kind of cattle handling the business of the Government.

Here is what the Times said editorially on June 7, 1926:

GET OUT

To Commissioner FREDERICK A. FENNING:

Get out!

Resign!

As a member of the Board of District Commissioners you are an embarrassment to the President of the United States, who appointed you to office.

You are an embarrassment to the other members of the board, who are forced to serve with you.

You are a thorn in the side of the Republican Party, whose legislators approved you.

You are a disappointment to the District politicians who suggested you for office.

You are an official eyesore to America's sons who served in the war; and

The people of the District of Columbia don't want you as commissioner!

Your practices are condemned by even your political supporters.

Last-minute trickery saved you from congressional action demanding your removal from office.

You are a hard fighter. You proved your courage and your astuteness in your battle to save your job.

But the battle is over and you have lost.

If the voteless people of Washington had the right to choose their officials you would probably never have been made commissioner.

If Washingtonians had the right of recall you would have been ousted when you arbitrarily "broke" a respected police officer without giving him a hearing in his own defense.

You made a mistake when you accepted office.

You made another mistake when you continued your private practice while acting as a public official.

You make another mistake if you fail to realize that the people of Washington want you to resign. Apparently the only person who wants you to continue in office is Frederick A. Fenning.

The vote is more than 500,000 to 1 against you, Mr. Fenning.

In behalf of the residents of the District of Columbia, the Washington Times demands that you

Get out!

Well, he got out. Naturally he feels hamstrung. What caused him to be resurrected? A New York paper did. He speaks of a policeman whom the entire board here crucified, and he said that a certain Congressman ought to be condemned for having defended him.

Well, in conclusion I want to say that we have many moral duties to perform that are unpleasant. For instance, I had a duty to perform to my party. I believe in party government. I am a party man. Why, party responsibility is the only safeguard on God's earth that the people have against improper government officials. If one party does wrong the people have the right to kick it out and put in another. It became my duty recently to my party, from whom I have received favors for 20 years, to support a nominee that I did not believe in and whose policies I never believed in and whose main platform I was against—but I had to support him. I made a great personal sacrifice when I did, politically and otherwise. I had to make a personal sacrifice to defend the policeman. But it was my moral duty to do it. There was a policeman who had rendered a certain subcommittee of which I was a member a signal service in the matter that we were investigating. I would have been an ingrate, I would have been without any feeling of gratitude, if I had not stood by him. He helped us in another investigation, which showed that there were 3,000 bootleggers in Washington selling whisky unlawfully.

Mr. SCHAFER. Will the gentleman yield?

Did the gentleman support Al Smith with a view to doing away with these 3,000 whisky places? [Laughter.]

Mr. BLANTON. I did not notice that Mr. Hoover's Cabinet had stopped any of these 3,000 bootleggers from selling liquor, or that they had stopped the green-hat man, Cassidy, from operating in the House Office Building. He operated just as well after he was arrested as before. I did not notice that they ever closed up any "joint" in the District. I have not noticed that Mr. Hoover or his Republican administration has ever done one single thing substantially to enforce the liquor law of the United States other than to expend money and once in a while give a fellow a $30 fine, which is a cheap license to do the very thing the law says it shall not do.

Mr. SCHAFER. Did the gentleman from Texas vote for the amendment of the gentleman from New York [Mr. LAGUARDIA] increasing the prohibition appropriation?

Mr. BLANTON. Oh, that was not a prohibition amendment; that came from a "wet." [Laughter.]

Now here is what your distinguished chairman, the lawyer from Vermont, Mr. GIBSON, of the subcommittee of the District of Columbia, said when interrogating the foreman of the grand jury:

Chairman GIBSON. It appears, Mr. McQuade, in the testimony given before this committee, that there are 3,000 persons selling liquor in the District of Columbia. Are we to take that as an indication that the law is not being enforced?

Mr. MCQUADE. I should not say so.

Chairman GIBSON. That is quite a large number for the National Capital, is it not?

Mr. MCQUADE. Yes, sir.

Mr. GILBERT. The grand jury has been in session going on three months, with 3,000 bootleggers so plying their trade, as to be matter of public knowledge, and the grand jury, of which you are foreman, has not returned a single indictment.

Mr. MCQUADE. There have been no cases presented to the grand jury.

Now, because we put the grand-jury foreman through a course of rubbing in the committee he concluded that it was this young policeman who gave him away. When we showed that the grand-jury foreman was in collusion with the gambling houses and that he had told the policemen who had warrants in their pockets not to serve them, and thus kept gambling joints from being closed up, he concluded that this young policeman had given him away. So in the home of his brother-in-law a few nights thereafter some ridiculous charges with no foundation therefor whatever were hatched up to frame him.

Then they framed him, this brave young policeman, who had helped our committee. Do you think that I was not going to stand by him? It was a moral obligation that I owed him, and I do not regret it. They framed him and they put him out of office, but if this Congress knew all of the facts that I know about that frame-up, the Congress would require that police board to put him back. [Applause.]

The CHAIRMAN. The time of the gentleman from Texas has again expired. There being no further debate, the Clerk will read the bill for amendment under the 5-minute rule.

The Clerk read as follows:

OFFICE OF THE SECRETARY

SALARIES

Secretary of the Interior, $15,000; First Assistant Secretary, Assistant Secretary, and other personal services in the District of Columbia, $369,000, in all, $384,000: *Provided*, That in expending appropriations or portions of appropriations, contained in this act, for the payment for personal services in the District of Columbia in accordance with the classification act of 1923, as amended (U. S. C. pp. 65–71, secs. 661–673, 45 Stat. pp. 776–785), the average of the salaries of the total number of persons under any grade in any bureau, office, or other appropriation unit shall not at any time exceed the average of the compensation rates specified for the grade by such act, and in grades in which only one position is allocated the salary of such position shall not exceed the average of the compensation rates for the grade except that in unusually meritorious cases of one position in a grade advances may be made to rates higher than the average of the compensation rates of the grade but not more often than once in any fiscal year and then only to the next higher rate: *Provided*, That this restriction shall not apply (1) to grades 1, 2, 3, and 4 of the clerical-mechanical service, or (2) to require the reduction in salary of any person whose compensation was fixed, as of July 1, 1924, in accordance with the rules of section 6 of such act, (3) to require the reduction in salary of any person who is transferred from one position to another position in the same or different grade in the same or a different bureau, office, or other appropriation unit, or (4) to prevent the payment of a salary under any grade at a rate higher than the maximum rate of the grade when such higher rate is permitted by the classification act of 1923, as amended, and is specifically authorized by other law.

Mr. CRAMTON. Mr. Chairman, I offer the following amendment, which is a perfecting amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment by Mr. CRAMTON: Page 2, line 14, after the word "act," insert the words "as amended."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

CONTINGENT EXPENSES, DEPARTMENT OF THE INTERIOR

For contingent expenses of the office of the Secretary and the bureaus and offices of the department; furniture, carpets, ice, lumber, hardware, dry goods, advertising, telegraphing, telephone service, including personal services of temporary or emergency telephone operators, street-car fares for use of messengers not exceeding $150, expressage, diagrams, awnings, filing devices, typewriters, adding, addressing, and check-signing machines, and other labor-saving devices, including the repair, exchange, and maintenance thereof; constructing model and other cases and furniture; postage stamps to prepay postage on foreign mail and for special-delivery and air-mail stamps for use in the United States; traveling expenses, including necessary expenses of inspectors; fuel and light; examination of estimates for appropriations in the field for any bureau, office, or service of the department; not exceeding $500 shall be available for the payment of damages caused to private property by department motor vehicles; purchase and exchange of motor trucks, motor cycles, and bicycles, maintenance, repair, and operation of motor-propelled passenger-carrying vehicles and motor trucks, motor cycles, and bicycles to be used only for official purposes; rent of department garage; expense of taking testimony and preparing the same in connection with disbarment proceedings instituted against persons charged with improper practices before the department, its bureaus and offices; expense of translations; not exceeding $500 for newspapers, for which payment may be made in advance; stationery, including tags, labels, index cards, cloth-lined wrappers, and specimen bags, printed in the course of manufacture, and such printed envelopes as are not supplied under contracts made by the Postmaster General, for the department and its several bureaus and offices, and other absolutely necessary expenses not hereinbefore provided for, $110,000; and, in addition thereto, sums amounting to $71,000 for stationery supplies shall be deducted from other appropriations made for the fiscal year 1930, as follows: Surveying public lands, $2,000; protecting public lands and timber, $1,000; contingent expenses, local land offices, $2,500; Geological Survey, $4,000; Indian Service, $42,000; Freedmen's Hospital, $1,000; St. Elizabeths Hospital, $2,500; National Park Service, $4,000; Bureau of Reclamation, $12,000, any unexpended portion of which shall revert and be credited to the reclamation fund; and said sums so deducted shall be credited to and constitute, together with the first-named sum of $110,000, the total appropriation for contingent expenses for the department and its several bureaus and offices for the fiscal year 1930.

Mr. BLANTON. Mr. Chairman, I move to strike out the last word in order to ask a question. What is this item of "$2,500, St. Elizabeths Hospital," for?

Mr. CRAMTON. That is one of several items there authorizing transfers from appropriations elsewhere in the bill for the institutions named, to be used for the purchase of stationery.

Mr. BLANTON. It does not permit its use for any other purpose?

Mr. CRAMTON. No. The gentleman will see that it reads—

and, in addition thereto, sums amounting to $71,000 for stationery supplies, to be deducted—

And so forth.

Mr. BLANTON. But this $2,500 could not be used to pay any of Doctor White's maintenance charges?

Mr. CRAMTON. No. Those are amply provided for elsewhere under the bill.

Mr. BLANTON. I wanted to be sure that he could not get any part of this $2,500.

Mr. CRAMTON. This item has to do only with stationery supplies.

The CHAIRMAN. Without objection, the pro forma amendment is withdrawn and the Clerk will read.

The Clerk read as follows:

For expenses necessary to the purchase of goods and supplies for the Indian Service, including inspection, pay of necessary employees, and all other expenses connected therewith, including advertising, storage, and transportation of Indian goods and supplies, $600,000: *Provided*, That no part of this appropriation shall be used in payment for any services except bill therefor is rendered within one year from the time the service is performed.

Mr. BLANTON. Mr. Chairman, I make the point of order against the proviso.

Mr. CRAMTON. Mr. Chairman, I move that the committee do now rise.

Mr. BLANTON. I want the point of order pending, if we are going to rise now.

Mr. CRAMTON. Let us have the gentleman state his point of order.

Mr. BLANTON. I reserve it, so as to ask a question.

Mr. CRAMTON. I withdraw the motion to rise until I know what the point of order is.

Mr. BLANTON. I reserve it to ask a question.

Mr. CRAMTON. Very well.

Mr. BLANTON. Under the present law are they given one year in which to file an account? Does this not give them a longer time than they have by law?

Mr. CRAMTON. No. The situation is this: That proviso has been in the bill for two or three years. Before that, bills came in for these freight charges two or three of four years after the service was rendered. That seemed highly undesirable to our committee. It is a purpose for which a deficiency may be incurred——

Mr. BLANTON. If that is the case I withdraw the reservation.

Mr. CRAMTON. The agent that did the business might be off the job.

Mr. BLANTON. Why not amend by offering to insert the word "hereafter"? "*Provided*, That hereafter." If it is good, let us make it permanent right now.

Mr. CRAMTON. There is something in what the gentleman says, but he would have to make more of a change than that. As I understand it, the Clerk has read the paragraph, but not the next one. I move that the committee do now rise. We can consider then whether or not we want to amend it when we meet again.

The CHAIRMAN. Is the gentleman's point of order reserved?

Mr. BLANTON. I withdraw it. I think it is a good piece of legislation.

Mr. CRAMTON. It is not really legislation. We would not want to admit that. I move that the committee do now rise. I suggest to the gentleman from Texas that the question of amending the paragraph we can consider at the next meeting.

The CHAIRMAN. The gentleman from Texas withdraws his reservation of the point of order?

Mr. BLANTON. Yes; but it leaves the paragraph subject to amendment when we next meet.

The CHAIRMAN. The question is on the motion of the gentleman from Michigan that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CHINDBLOM, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 15089, the Department of the Interior appropriation bill, and had come to no resolution thereon.

UNITED STATES COURT OF CUSTOMS APPEALS

Mr. GRAHAM. Mr. Speaker, I have been requested by the Committee on the Judiciary of the House to ask unanimous consent that the bill (H. R. 6687) be taken from the Speaker's desk, the Senate amendments disagreed to, and ask for a conference.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent——

Mr. TAYLOR of Colorado. Mr. Speaker, I would like to ask what it is about. Our two leaders have gone from the House and they have requested me to look after unanimous consents, with the understanding that there would be no business.

The SPEAKER. The Clerk will report the title of the bill.

The Clerk read as follows:

An act (H. R. 6687) to change the title of the United States Court of Customs Appeals, and for other purposes.

The Senate amendments were read.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

Mr. TAYLOR of Colorado. Could not the gentleman just as well present this to-morrow morning?

Mr. SNELL. This is only to send the bill to conference.

The SPEAKER. The gentleman from Pennsylvania asks unanimous consent to disagree to the Senate amendments and ask for a conference. Is there objection? [After a pause.] The Chair hears none. The Chair appoints the following conferees.

The Clerk read as follows:

Mr. GRAHAM, Mr. HICKEY, and Mr. MAJOR of Missouri.

HUNTER LIGGETT AND ROBERT L. BULLARD, MAJOR GENERALS, UNITED STATES ARMY, RETIRED

Mr. FURLOW. Mr. Speaker, I ask unanimous consent that I may have until 12 o'clock to-night to file a report on the bill (S. 3269) providing for the advancement on the retired list of the Army of Hunter Liggett and Robert L. Bullard, major generals of the United States Army, retired.

The SPEAKER. Is here objection?

Mr. CHINDBLOM. Mr. Speaker, reserving the right to object, that report is by direction of the committee?

Mr. FURLOW. By direction of the committee.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

SENATE JOINT RESOLUTION AND CONCURRENT RESOLUTION REFERRED

A joint resolution and concurrent resolution of the Senate of the following titles were taken from the Speaker's table and referred to the appropriate committees, as follows:

S. J. Res. 132. Joint resolution to create a commission to secure plans and designs for and to erect a memorial building for the National Memorial Association (Inc.) in the city of Washington as a tribute to the negro's contribution to the achievements of America; to the Committee on Public Buildings and Grounds.

S. Con. Res. 24. Concurrent resolution providing for the appointment of a joint committee to make the necessary arrangements for the inauguration of the President elect of the United States on March 4, 1929; to the Committee on Rules.

ENROLLED BILLS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the House of the following titles, when the Speaker signed the same:

H. R. 279. An act to amend section 8 of an act entitled "An act to incorporate the Howard University in the District of Columbia," approved March 2, 1867;

H. R. 7346. An act conferring jurisdiction upon the Court of Claims to hear, examine, adjudicate, and enter judgment thereon in claims which the Winnebago Tribe of Indians may have against the United States, and for other purposes;

H. R. 11983. An act to provide for issuance of perpetual easements to the Department of Fish and Game, State of Idaho, to certain lands situated within the original boundaries of the Nez Perce Indian Reservation, State of Idaho;

H. R. 12312. An act for the relief of James Hunts Along;

H. R. 12533. An act to authorize the Secretary of Commerce to dispose of certain lighthouse reservations and to acquire certain lands for lighthouse purposes; and

H. R. 13606. An act for the relief of Russell White Bear.

ADJOURNMENT

Mr. CRAMTON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 6 minutes p. m.) the House adjourned until to-morrow, Wednesday, December 12, 1928, at 12 o'clock noon.

COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Wednesday, December 12, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON AGRICULTURE

(10 a. m.)

To amend the packers and stockyards act, 1921 (H. R. 13596).

COMMITTEE ON APPROPRIATIONS

(10.30 a. m.)

War Department appropriation bill.

COMMITTEE ON INDIAN AFFAIRS

(10 a. m.)

A hearing of the subcommittee to consider H. R. 10741—a bill for the relief of J. F. McMurray.

COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS

(10 a. m.)

To consider the bill proposing plans for a new House Office Building.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

660. A communication from the President of the United States, transmitting record of a judgment rendered against the

Government by the United States District Court for the Eastern District of Virginia in special cases, amounting to $6,363.98 (H. Doc. No. 460); to the Committee on Appropriations and ordered to be printed.

661. A communication from the President of the United States, transmitting schedule covering certain claims allowed by the General Accounting Office, as shown by certificates of settlement transmitted to the Treasury Department for payment, in the sum of $69.33 (H. Doc. No. 461); to the Committee on Appropriations and ordered to be printed.

662. A communication from the President of the United States, transmitting records of judgments rendered against the Government by the United States district courts, as submitted by the Attorney General through the Secretary of the Treasury (H. Doc. No. 462); to the Committee on Appropriations and ordered to be printed.

663. A communication from the President of the United States, transmitting records of judgments rendered against the Government by the United States district courts, as submitted by the Attorney General through the Secretary of the Treasury, which require an appropriation for their payment (H. Doc. No. 463); to the Committee on Appropriations and ordered to be printed.

664. A communication from the President of the United States, transmitting proposed draft of legislation affecting an existing appropriated fund, the Navy pension fund, under control of the Navy Department, authorizing payments therefrom in the amount of $42.40 (H. Doc. No. 464); to the Committee on Appropriations and ordered to be printed.

665. A communication from the President of the United States, transmitting list of judgments rendered by the Court of Claims, amounting to $897,096.89 (H. Doc. No. 465); to the Committee on Appropriations and ordered to be printed.

666. A communication from the President of the United States, transmitting supplemental estimate of appropriation for the Treasury Department for the fiscal year 1929 and prior years for refunding internal revenue and taxes illegally or erroneously collected, $75,000,000 (H. Doc. No. 466); to the Committee on Appropriations and ordered to be printed.

667. A communication from the President of the United States, transmitting deficiency estimates of appropriations for the Department of Justice for the fiscal year 1928 and prior years, amounting to $179,195.15, and a supplemental estimate of appropriation for the fiscal year 1929 amounting to $19,000, in all $198,195.15; also a draft of proposed legislation affecting an existing appropriation (H. Doc. No. 467); to the Committee on Appropriations and ordered to be printed.

668. A communication from the President of the United States, transmitting schedules of claims amounting to $939,092.75, allowed by various divisions of the General Accounting Office as covered by certificates of settlement, and for the service of the several departments and independent offices (H. Doc. No. 468); to the Committee on Appropriations and ordered to be printed.

669. A letter from the Comptroller General of the United States, transmitting report and recommendation to the Congress concerning the claim of Mrs. Thelma Phelps Lester against the United States; to the Committee on Claims.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. BOYLAN: Committee on Military Affairs. H. R. 14152. A bill to authorize the acquisition of two tracts of land required in connection with the coast defense of the Atlantic seaboard; without amendment (Rept. No. 1939). Referred to the Committee of the Whole House on the state of the Union.

Mr. REECE: Committee on Military Affairs. H. R. 14153. A bill to authorize an additional appropriation of $150,000 for construction of a hospital annex at Marion Branch; without amendment (Rept. No. 1940). Referred to the Committee of the Whole House on the state of the Union.

Mr. McSWAIN: Committee on Military Affairs. H. R. 14154. A bill to authorize appropriations for construction at the Army medical center, District of Columbia, and for other purposes; without amendment (Rept. No. 1941). Referred to the Committee of the Whole House on the state of the Union.

Mr. FISHER: Committee on Military Affairs. H. R. 14155. A bill to authorize appropriations for construction at military posts, and for other purposes; without amendment (Rept. No. 1942). Referred to the Committee of the Whole House on the state of the Union.

Mr. WAINWRIGHT: Committee on Military Affairs. H. R. 14156. A bill to authorize an appropriation for the construction of a cannon powder blending unit at Picatinny Arsenal, Dover, N. J.; without amendment (Rept. No. 1943). Referred to the Committee of the Whole House on the state of the Union.

Mr. MORIN: Committee on Military Affairs. H. R. 14813. A bill to authorize an appropriation for completing the new cadet mess hall, United States Military Academy; without amendment (Rept. No. 1944). Referred to the Committee of the Whole House on the state of the Union.

Mr. GLYNN: Committee on Military Affairs. H. R. 15013. A bill to amend the act entitled "An act to authorize the Board of Managers of the National Home for Disabled Volunteer Soldiers to accept title to the State camp for veterans at Bath, N. Y.," approved May 26, 1928; without amendment (Rept. No. 1945). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. WAINWRIGHT: Committee on Military Affairs. H. R. 13990. A bill to authorize the President to present the distinguished flying cross to Orville Wright; with amendment (Rept. No. 1946). Referred to the Committee of the Whole House.

Mr. FURLOW: Committee on Military Affairs. S. 3269. An act providing for the advancement on the retired list of the Army of Hunter Liggett and Robert L. Bullard, major generals, United States Army, retired; with amendments (Rept. No. 1947). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 7603) granting an increase of pension to Phoebe R. Weaver; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 14063) granting a pension to Rachel Caroline Pardoe; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 14497) granting an increase of pension to Mary J. Darling; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 14632) granting a pension to Carrie E. Baldwin; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ROY G. FITZGERALD: A bill (H. R. 15201) to extend the time for commencing and completing the construction of a bridge across the Ohio River at or near Maysville, Ky., and Aberdeen, Ohio; to the Committee on Interstate and Foreign Commerce.

By Mr. WHITEHEAD: A bill (H. R. 15202) granting the consent of Congress to the Danville & Western Railway Co. to rebuild and reconstruct and to maintain and operate the existing railroad bridge across the Dan River in Pittsylvania County, Va.; to the Committee on Interstate and Foreign Commerce.

By Mr. BLACK of New York: A bill (H. R. 15203) providing for a revolving fund for the enforcement of the narcotic acts; to the Committee on the Judiciary.

By Mr. BOYLAN: A bill (H. R. 15204) to provide for the refitting of the frigate *Constitution;* to the Committee on Naval Affairs.

By Mr. BRITTEN: A bill (H. R. 15205) to amend the act of May 4, 1898, as amended by the act of March 3, 1899, relating to the number of acting assistant surgeons in the Navy to be appointed by the President; to the Committee on Naval Affairs.

Also, a bill (H. R. 15206) to provide for advancement in rank of certain officers on the retired list of the Navy; to the Committee on Naval Affairs.

By Mr. CRAIL: A bill (H. R. 15207) to declare the 11th day of November, celebrated and known as Armistice Day, a legal public holiday; to the Committee on the Judiciary.

By Mr. FISHER: A bill (H. R. 15208) to amend section 259 of the Judicial Code; to the Committee on the Judiciary.

By Mr. HOFFMAN: A bill (H. R. 15209) to grant relief to those States which brought State-owned property into the Federal service in 1917; to the Committee on Military Affairs.

Also, a bill (H. R. 15210) to authorize promotion upon retirement of officers of the Army in recognition of World War service; to the Committee on Military Affairs.

By Mr. REED of New York: A bill (H. R. 15211) to amend section 7 of the act entitled "An act to provide for the promotion of vocational education; to provide for cooperation with the States in the promotion of such education in agriculture and the trades and in industries; to provide for cooperation with the States in the preparation of teachers of vocational subjects; and to appropriate money and regulate its expenditure," approved February 23, 1917, as amended; to the Committee on Education.

By Mr. KINDRED: A bill (H. R. 15212) to establish a national institute of health, to authorize increased appropriations for the Hygienic Laboratory, and to authorize the Government to accept donations for use in ascertaining the cause, prevention, and cure of disease affecting human beings; to the Committee on Interstate and Foreign Commerce.

By Mr. LEAVITT: A bill (H. R. 15213) to authorize the Secretary of the Interior to develop power and to lease for power purposes structures of Indian irrigation projects, and for other purposes; to the Committee on Indian Affairs.

By Mr. PEAVEY: A bill (H. R. 15214) providing aid for Indians who are blind or blind and deaf; to the Committee on Indian Affairs.

By Mr. HOUSTON of Hawaii: A bill (H. R. 15215) to extend for a period of two years the provisions of the act entitled "An act for the promotion of the welfare and hygiene of maternity and infancy, and for other purposes," approved November 23, 1921, as amended, in so far as they apply to the Territory of Hawaii; to the Committee on Interstate and Foreign Commerce.

By Mr. JOHNSON of Indiana: A bill (H. R. 15216) to provide for the return of unused premiums collected on policies issued on the lives of seamen during the World War; to the Committee on Interstate and Foreign Commerce.

By Mr. LEAVITT: A bill (H. R. 15217) to amend section 3 of the act of July 17, 1914, entitled "An act to provide for agricultural entry of lands withdrawn, classified, or reported as containing phosphate, nitrate, potash, oil, gas, or asphaltic minerals"; to the Committee on the Public Lands.

By Mr. MAPES: A bill (H. R. 15218) to amend section 8 of the act entitled "An act for preventing the manufacture, sale, or transportation of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and for other purposes," approved June 30, 1906, as amended; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BECK of Pennsylvania: A bill (H. R. 15219) for the relief of Margaret Thomkin; to the Committee on Military Affairs.

By Mr. BOYLAN: A bill (H. R. 15220) for the relief of Francis X. Callahan; to the Committee on Military Affairs.

By Mr. BRIGHAM: A bill (H. R. 15221) granting an increase of pension to Ednah Augusta Chappel Ross; to the Committee on Pensions.

By Mr. BROWNE: A bill (H. R. 15222) granting a pension to Edwin H. Tarbox; to the Committee on Pensions.

Also, a bill (H. R. 15223) granting an increase of pension to Elizabeth Wright; to the Committee on Invalid Pensions.

By Mr. BURTON: A bill (H. R. 15224) for the relief of Upson-Walton Co.; to the Committee on Claims.

By Mr. CHRISTOPHERSON: A bill (H. R. 15225) authorizing the President to reappoint Capt. James Day Edgar, United States Army (retired), to the position and rank of captain, Medical Corps, in the United States Army; to the Committee on Military Affairs.

By Mr. COCHRAN of Missouri: A bill (H. R. 15226) for the relief of Edith Cook; to the Committee on Claims.

Also, a bill (H. R. 15227) to extend the benefits of the United States employees' compensation act to R. W. Dickerson; to the Committee on Claims.

By Mr. CRAIL: A bill (H. R. 15228) granting to Edward Everett Sherrard a commission as captain in the Medical Corps, United States Army, as of July 1, 1918, and an honorable discharge as of November 11, 1918; to the Committee on Military Affairs.

Also, a bill (H. R. 15229) granting a pension to Warren L. Raynes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15230) granting an increase of pension to Alice French; to the Committee on Invalid Pensions.

By Mr. FOSS: A bill (H. R. 15231) granting a pension to Margaret Bartlett; to the Committee on Pensions.

Also, a bill (H. R. 15232) to correct the military record of Louis Miner; to the Committee on Military Affairs.

By Mr. HOFFMAN: A bill (H. R. 15233) for the relief of James W. Walters; to the Committee on Claims.

By Mr. HOGG: A bill (H. R. 15234) granting a pension to Emanuel Caywood; to the Committee on Invalid Pensions.

By Mr. HOLADAY: A bill (H. R. 15235) granting a pension to George E. Rodgers; to the Committee on Invalid Pensions.

By Mr. HUDSPETH: A bill (H. R. 15236) granting a pension to Mark Y. Judd; to the Committee on Pensions.

By Mr. KNUTSON: A bill (H. R. 15237) granting a pension to Urtilla N. Schroeder; to the Committee on Pensions.

By Mr. KURTZ: A bill (H. R. 15238) granting a pension to Anna N. Carson; to the Committee on Invalid Pensions.

By Mr. McCORMACK: A bill (H. R. 15239) authorizing the President of the United States to present in the name of Congress a medal of honor to Lieut. Lester P. Maitland, Air Corps, United States Army; to the Committee on Military Affairs.

Also, a bill (H. R. 15240) authorizing the President of the United States to present in the name of Congress a medal of honor to Lieut. Albert F. Hegenberger, Air Corps, United States Army; to the Committee on Military Affairs.

By Mr. McDUFFIE: A bill (H. R. 15241) for the retirement of James Floyd North, United States Marine Corps; to the Committee on Naval Affairs.

By Mr. McLEOD: A bill (H. R. 15242) for reimbursement to Charles C. Kellogg; to the Committee on Claims.

By Mr. McSWEENEY: A bill (H. R. 15243) granting a pension to Emmor Burris; to the Committee on Invalid Pensions.

By Mr. MURPHY: A bill (H. R. 15244) for the relief of Henry P. McMaster; to the Committee on Military Affairs.

By Mr. NELSON of Wisconsin: A bill (H. R. 15245) to refund Edgerton Creamery Co., Edgerton, Wis., income tax erroneously and illegally collected; to the Committee on Ways and Means.

By Mrs. NORTON of New Jersey: A bill (H. R. 15246) granting an increase of pension to Mary E. Fox; to the Committee on Invalid Pensions.

By Mr. SPEAKS: A bill (H. R. 15247) granting a pension to Matilda Cranmer; to the Committee on Pensions.

By Mr. STRONG of Kansas: A bill (H. R. 15248) granting an increase of pension to Mary A. Ford; to the Committee on Invalid Pensions.

By Mr. UNDERWOOD: A bill (H. R. 15249) granting a pension to Etta F. Penrod; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15250) granting a pension to Elizabeth Clark; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15251) granting an increase of pension to Emma Turner; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15252) granting an increase of pension to Mahala Ann Thompson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15253) granting an increase of pension to Sarah C. Rambo; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15254) granting an increase of pension to Hattie McKeever; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15255) granting an increase of pension to Alice Keck; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15256) granting an increase of pension to Martha Hammond; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15257) granting an increase of pension to Mary Evans; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15258) granting an increase of pension to Margaret Bailey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15259) granting an increase of pension to Phoebe E. Baker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15260) granting an increase of pension to Caroline Ball; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15261) granting an increase of pension to Victoria E. Boring; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15262) granting an increase of pension to Addie Fishpaugh; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15263) granting an increase of pension to Ellen McCabe; to the Committee on Invalid Pensions.

Also, a bill (H. R. 15264) granting an increase of pension to Ellen McQuade; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

7939. By Mr. BLOOM: Petition of United States Customs Inspectors' Association of the Port of New York, indorsing the

Dale-Lehlbach retirement bill (S. 1727); to the Committee on the Civil Service.

7940. Also, resolution adopted by the Trustees and Superintendents of the Schools for the Blind in the United States, expressing appreciation to Congress for the increased appropriation for books and tangible apparatus and disapproving the diversion of these funds for the purpose of furnishing books free to the National Library for the Blind or to any other library; to the Committee on Appropriations.

7941. Also, petition of officers and members of County Cork Men's B., P. & P. Association, indorsing the Dale-Lehlbach retirement bill (S. 1727); to the Committee on the Civil Service.

7942. By Mr. CRAIL: Petition of American Legion Post 46, Culver City, Calif., favoring additional hospital facilities at Soldiers' Home, Pacific Branch, Los Angeles County, Calif.; to the Committee on Military Affairs.

7943. Also, petition favoring additional hospital facilities at Soldiers' Home, Pacific Branch, Los. Angeles County, Calif.; to the Committee on Military Affairs.

7944. Also, petition favoring additional hospital facilities at the Soldiers' Home, Pacific Branch, Los Angeles County, Calif.; to the Committee on Military Affairs.

7945. Also, petition of John A. Martin Post, No. 153, Grand Army of the Republic, of Sawtelle, Calif., favoring additional hospital facilities at the Soldiers' Home, Pacific Branch, Los Angeles County, Calif.; to the Committee on Military Affairs.

7946. By Mr. CRAMTON: Resolutions of the Michigan district of the Evangelical Lutheran Synod at its meeting held at Saginaw, Mich., June 20 to 26, 1928, protesting against the passage of legislation proposing a Federal department of education; to the Committee on Education.

7947. By Mr. ENGLEBRIGHT: Petition of California Forest Protective Association, urging the United States Department of Agriculture to take steps to prevent spread of European larch canker disease; to the Committee on Agriculture.

7948. By Mr. KINDRED: Petition of the Central Union Label Council of Greater New York, protesting against the passage of the Cuban parcel post bill (H. R. 9195), amending sections 2804 and 3402 of the Revised Statutes, as being a measure that would, if enacted, throw out of employment many cigar makers in the United States, and urging the United States Congress to defeat this legislation; to the Committee on the Post Office and Post Roads.

7949. Also, resolution of the County Cork Men's B., P. & P. Association, approving and indorsing the Dale-Lehlbach retirement bill (S. 1727) and petitioning the United States Congress to do all in their power to bring this bill to a vote at the earliest possible moment during the present session of Congress; to the Committee on the Civil Service.

7950. By Mr. LINDSAY: Petition of County Cork Men's B., P. & P. Association, in a resolution approving and indorsing the Dale-Lehlbach retirement bill and requesting that the bill be brought to a vote at an early date; to the Committee on the Civil Service.

7951. By Mr. O'CONNOR of New York: Resolutions of the American Printing House for the Blind, expressing appreciation of the attitude of Congress toward blind pupils in the schools of the United States; to the Committee on Appropriations.

7952. Also, a resolution of the County Cork Men's B., P. & P. Association, New York City, indorsing the Dale-Lehlbach retirement bill; to the Committee on the Civil Service.

7953. By Mr. O'CONNELL: Petition of the New York Institute for the Education of the Blind, thanking the Congress for the increased appropriation to $75,000 for books and tangible apparatus from $50,000; to the Committee on Appropriations.

7954. Also, petition of the County Cork Men's B., P. & P. Association of New York City, favoring the passage of the Dale-Lehlbach retirement bill; to the Committee on the Civil Service.

7955. Also, petition of the United States Customs Inspectors Association of the Port of New York, favoring the passage of the Dale-Lehlbach bill; to the Committee on the Civil Service.

7956. By Mr. QUAYLE: Petition of County Cork Men's B., P. & P. Association, urging the passage of the Dale-Lehlbach civil service retirement bill; to the Committee on the Civil Service.

7957. Also, petition of United States Customs Inspectors' Association of the Port of New York, member National Association United States Customs Inspectors, and member Civil Service Forum, New York State, urging the passage of the Dale-Lehlbach civil service retirement bill; to the Committee on the Civil Service.

7958. Also, petition of Central Union Labor Council of Greater New York, against the passage of the Cuban parcel post bill (H. R. 9195); to the Committee on the Post Office and Post Roads.

SENATE

WEDNESDAY, *December 12, 1928*

The Senate met at 11 o'clock a. m.

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:
